as important. The careful consideration of this matter, and the arranging and ordering on a common principle of all our institutions relating both to men and women, greatly conduces to the happiness of the state. But at present, such is the unfortunate condition of mankind, that no man of sense will even venture to speak of common tables in places and cities in which they have never been established at all; and how can any one avoid being utterly ridiculous, who attempts to compel women to show in public how much they eat and drink? There is nothing at which the sex is more likely to take offence. For women are accustomed to creep into dark places, and when dragged out into the light they will exert their utmost powers of resistance, and be far too much for the legislator. And therefore, as I said before, in most places they will not endure to have the truth spoken without raising a tremendous outcry, but in this state perhaps they may. And if we may assume that our whole discussion about the state has not been mere idle talk, I should like to prove to you, if you will consent to listen, that this institution is good and proper; but if you had rather not, I will refrain.

CLEINIAS: There is nothing which we should both of us like better, Stranger, than to hear what you have to say.

ATHENIAN: Very good; and you must not be surprised if I go back a little, for we have plenty of leisure, and there is nothing to prevent us from considering in every point of view the subject of law.

CLEINIAS: True.

ATHENIAN: Then let us return once more to what we were saying at first. Every man should understand that the human race either had no beginning at all, and will never have an end, but always will be and has been; or that it began an immense while ago.

CLEINIAS: Certainly.

ATHENIAN: Well, and have there not been constitutions and destructions of states, and all sorts of pursuits both orderly and disorderly, and diverse desires of meats and drinks always, and in all the world, and all sorts of changes of the seasons in which animals may be expected to have undergone innumerable transformations of themselves?

CLEINIAS: No doubt.

ATHENIAN: And may we not suppose that vines appeared, which had previously no existence, and also olives, and the gifts of Demeter and her daughter, of which one Triptolemus was the minister, and that, before these existed, animals took to devouring each other as they do still?
CLEINIAS: True.

ATHENIAN: Again, the practice of men sacrificing one another still exists among many nations; while, on the other hand, we hear of other human beings who did not even venture to taste the flesh of a cow and had no animal sacrifices, but only cakes and fruits dipped in honey, and similar pure offerings, but no flesh of animals; from these they abstained under the idea that they ought not to eat them, and might not stain the altars of the Gods with blood. For in those days men are said to have lived a sort of Orphic life, having the use of all lifeless things, but abstaining from all living things.

CLEINIAS: Such has been the constant tradition, and is very likely true.

ATHENIAN: Some one might say to us, What is the drift of all this?

CLEINIAS: A very pertinent question, Stranger.

ATHENIAN: And therefore I will endeavour, Cleinias, if I can, to draw the natural inference.

CLEINIAS: Proceed.

ATHENIAN: I see that among men all things depend upon three wants and desires, of which the end is virtue, if they are rightly led by them, or the opposite if wrongly. Now these are eating and drinking, which begin at birth--every animal has a natural desire for them, and is violently excited, and rebels against him who says that he must not satisfy all his pleasures and appetites, and get rid of all the corresponding pains--and the third and greatest and sharpest want and desire breaks out last, and is the fire of sexual lust, which kindles in men every species of wantonness and madness. And these three disorders we must endeavour to master by the three great principles of fear and law and right reason; turning them away from that which is called pleasantest to the best, using the Muses and the Gods who preside over contests to extinguish their increase and influx.

But to return:--After marriage let us speak of the birth of children, and after their birth of their nurture and education. In the course of discussion the several laws will be perfected, and we shall at last arrive at the common tables. Whether such associations are to be confined to men, or extended to women also, we shall see better when we approach and take a nearer view of them; and we may then determine what previous institutions are required and will have to precede them. As I said before, we shall see them more in detail, and shall be better able to lay down the laws which are proper or suited to them.
CLEINIAS: Very true.

ATHENIAN: Let us keep in mind the words which have now been spoken; for hereafter there may be need of them.

CLEINIAS: What do you bid us keep in mind?

ATHENIAN: That which we comprehended under the three words--first, eating, secondly, drinking, thirdly, the excitement of love.

CLEINIAS: We shall be sure to remember, Stranger.

ATHENIAN: Very good. Then let us now proceed to marriage, and teach persons in what way they shall beget children, threatening them, if they disobey, with the terrors of the law.

CLEINIAS: What do you mean?

ATHENIAN: The bride and bridegroom should consider that they are to produce for the state the best and fairest specimens of children which they can. Now all men who are associated in any action always succeed when they attend and give their mind to what they are doing, but when they do not give their mind or have no mind, they fail; wherefore let the bridegroom give his mind to the bride and to the begetting of children, and the bride in like manner give her mind to the bridegroom, and particularly at the time when their children are not yet born. And let the women whom we have chosen be the overseers of such matters, and let them in whatever number, large or small, and at whatever time the magistrates may command, assemble every day in the temple of Eileithyia during a third part of the day, and being there assembled, let them inform one another of any one whom they see, whether man or woman, of those who are begetting children, disregarding the ordinances given at the time when the nuptial sacrifices and ceremonies were performed. Let the begetting of children and the supervision of those who are begetting them continue ten years and no longer, during the time when marriage is fruitful. But if any continue without children up to this time, let them take counsel with their kindred and with the women holding the office of overseer and be divorced for their mutual benefit. If, however, any dispute arises about what is proper and for the interest of either party, they shall choose ten of the guardians of the law and abide by their permission and appointment. The women who preside over these matters shall enter into the houses of the young, and partly by admonitions and partly by threats make them give over their folly and error: if they persist, let the women go and tell the guardians of the law, and the guardians shall prevent them. But if they too cannot prevent them, they shall bring the matter before the people; and let them write up their names and make oath that they cannot reform such and such an one; and let him who is thus written up, if he cannot in
a court of law convict those who have inscribed his name, be deprived of the privileges of a citizen in the following respects:--let him not go to weddings nor to the thanksgivings after the birth of children; and if he go, let any one who pleases strike him with impunity; and let the same regulations hold about women: let not a woman be allowed to appear abroad, or receive honour, or go to nuptial and birthday festivals, if she in like manner be written up as acting disorderly and cannot obtain a verdict. And if, when they themselves have done begetting children according to the law, a man or woman have connexion with another man or woman who are still begetting children, let the same penalties be inflicted upon them as upon those who are still having a family; and when the time for procreation has passed let the man or woman who refrains in such matters be held in esteem, and let those who do not refrain be held in the contrary of esteem—that is to say, disesteem. Now, if the greater part of mankind behave modestly, the enactments of law may be left to slumber; but, if they are disorderly, the enactments having been passed, let them be carried into execution. To every man the first year is the beginning of life, and the time of birth ought to be written down in the temples of their fathers as the beginning of existence to every child, whether boy or girl. Let every phratria have inscribed on a whited wall the names of the successive archons by whom the years are reckoned. And near to them let the living members of the phratria be inscribed, and when they depart life let them be erased. The limit of marriageable ages for a woman shall be from sixteen to twenty years at the longest,—for a man, from thirty to thirty-five years; and let a woman hold office at forty, and a man at thirty years. Let a man go out to war from twenty to sixty years, and for a woman, if there appear any need to make use of her in military service, let the time of service be after she shall have brought forth children up to fifty years of age; and let regard be had to what is possible and suitable to each.

BOOK VII.

And now, assuming children of both sexes to have been born, it will be proper for us to consider, in the next place, their nurture and education; this cannot be left altogether unnoticed, and yet may be thought a subject fitted rather for precept and admonition than for law. In private life there are many little things, not always apparent, arising out of the pleasures and pains and desires of individuals, which run counter to the intention of the legislator, and make the characters of the citizens various and dissimilar:--this is an evil in states; for by reason of their smallness and frequent occurrence, there would be an unseemliness and want of propriety in making them penal by law; and if made penal, they are the destruction of the written law because mankind get the habit of frequently transgressing the law in small matters. The result is that you cannot legislate about them, and still less can you be silent. I speak somewhat darkly, but I shall endeavour also to bring my wares into the light of
day, for I acknowledge that at present there is a want of clearness in what I am saying.

CLEINIAS: Very true.

ATHENIAN. Am I not right in maintaining that a good education is that which tends most to the improvement of mind and body?

CLEINIAS: Undoubtedly.

ATHENIAN: And nothing can be plainer than that the fairest bodies are those which grow up from infancy in the best and straightest manner?

CLEINIAS: Certainly.

ATHENIAN: And do we not further observe that the first shoot of every living thing is by far the greatest and fullest? Many will even contend that a man at twenty-five does not reach twice the height which he attained at five.

CLEINIAS: True.

ATHENIAN: Well, and is not rapid growth without proper and abundant exercise the source endless evils in the body?

CLEINIAS: Yes.

ATHENIAN: And the body should have the most exercise when it receives most nourishment?

CLEINIAS: But, Stranger, are we to impose this great amount of exercise upon newly-born infants?

ATHENIAN: Nay, rather on the bodies of infants still unborn.

CLEINIAS: What do you mean, my good sir? In the process of gestation?

ATHENIAN: Exactly. I am not at all surprised that you have never heard of this very peculiar sort of gymnastic applied to such little creatures, which, although strange, I will endeavour to explain to you.

CLEINIAS: By all means.

ATHENIAN: The practice is more easy for us to understand than for you, by reason of certain amusements which are carried to excess by us at Athens. Not only boys, but often older persons, are in the habit of keeping quails and cocks (compare Republic), which they train to fight one another. And
they are far from thinking that the contests in which they stir them up to fight with one another are sufficient exercise; for, in addition to this, they carry them about tucked beneath their armpits, holding the smaller birds in their hands, the larger under their arms, and go for a walk of a great many miles for the sake of health, that is to say, not their own health, but the health of the birds; whereby they prove to any intelligent person, that all bodies are benefited by shakings and movements, when they are moved without weariness, whether the motion proceeds from themselves, or is caused by a swing, or at sea, or on horseback, or by other bodies in whatever way moving, and that thus gaining the mastery over food and drink, they are able to impart beauty and health and strength. But admitting all this, what follows? Shall we make a ridiculous law that the pregnant woman shall walk about and fashion the embryo within as we fashion wax before it hardens, and after birth swathe the infant for two years? Suppose that we compel nurses, under penalty of a legal fine, to be always carrying the children somewhere or other, either to the temples, or into the country, or to their relations' houses, until they are well able to stand, and to take care that their limbs are not distorted by leaning on them when they are too young (compare Arist. Pol.),—they should continue to carry them until the infant has completed its third year; the nurses should be strong, and there should be more than one of them. Shall these be our rules, and shall we impose a penalty for the neglect of them? No, no; the penalty of which we were speaking will fall upon our own heads more than enough.

CLEINIAS: What penalty?

ATHENIAN: Ridicule, and the difficulty of getting the feminine and servant-like dispositions of the nurses to comply.

CLEINIAS: Then why was there any need to speak of the matter at all?

ATHENIAN: The reason is, that masters and freemen in states, when they hear of it, are very likely to arrive at a true conviction that without due regulation of private life in cities, stability in the laying down of laws is hardly to be expected (compare Republic); and he who makes this reflection may himself adopt the laws just now mentioned, and, adopting them, may order his house and state well and be happy.

CLEINIAS: Likely enough.

ATHENIAN: And therefore let us proceed with our legislation until we have determined the exercises which are suited to the souls of young children, in the same manner in which we have begun to go through the rules relating to their bodies.

CLEINIAS: By all means.
ATHENIAN: Let us assume, then, as a first principle in relation both to the body and soul of very young creatures, that nursing and moving about by day and night is good for them all, and that the younger they are, the more they will need it (compare Arist. Pol.); infants should live, if that were possible, as if they were always rocking at sea. This is the lesson which we may gather from the experience of nurses, and likewise from the use of the remedy of motion in the rites of the Corybantes; for when mothers want their restless children to go to sleep they do not employ rest, but, on the contrary, motion--rocking them in their arms; nor do they give them silence, but they sing to them and lap them in sweet strains; and the Bacchic women are cured of their frenzy in the same manner by the use of the dance and of music.

CLEINIAS: Well, Stranger, and what is the reason of this?

ATHENIAN: The reason is obvious.

CLEINIAS: What?

ATHENIAN: The affection both of the Bacchantes and of the children is an emotion of fear, which springs out of an evil habit of the soul. And when some one applies external agitation to affections of this sort, the motion coming from without gets the better of the terrible and violent internal one, and produces a peace and calm in the soul, and quiets the restless palpitation of the heart, which is a thing much to be desired, sending the children to sleep, and making the Bacchantes, although they remain awake, to dance to the pipe with the help of the Gods to whom they offer acceptable sacrifices, and producing in them a sound mind, which takes the place of their frenzy. And, to express what I mean in a word, there is a good deal to be said in favour of this treatment.

CLEINIAS: Certainly.

ATHENIAN: But if fear has such a power we ought to infer from these facts, that every soul which from youth upward has been familiar with fears, will be made more liable to fear (compare Republic), and every one will allow that this is the way to form a habit of cowardice and not of courage.

CLEINIAS: No doubt.

ATHENIAN: And, on the other hand, the habit of overcoming, from our youth upwards, the fears and terrors which beset us, may be said to be an exercise of courage.

CLEINIAS: True.
ATHENIAN: And we may say that the use of exercise and motion in the earliest years of life greatly contributes to create a part of virtue in the soul.

CLEINIAS: Quite true.

ATHENIAN: Further, a cheerful temper, or the reverse, may be regarded as having much to do with high spirit on the one hand, or with cowardice on the other.

CLEINIAS: To be sure.

ATHENIAN: Then now we must endeavour to show how and to what extent we may, if we please, without difficulty implant either character in the young.

CLEINIAS: Certainly.

ATHENIAN: There is a common opinion, that luxury makes the disposition of youth discontented and irascible and vehemently excited by trifles; that on the other hand excessive and savage servitude makes men mean and abject, and haters of their kind, and therefore makes them undesirable associates.

CLEINIAS: But how must the state educate those who do not as yet understand the language of the country, and are therefore incapable of appreciating any sort of instruction?

ATHENIAN: I will tell you how:--Every animal that is born is wont to utter some cry, and this is especially the case with man, and he is also affected with the inclination to weep more than any other animal.

CLEINIAS: Quite true.

ATHENIAN: Do not nurses, when they want to know what an infant desires, judge by these signs?--when anything is brought to the infant and he is silent, then he is supposed to be pleased, but, when he weeps and cries out, then he is not pleased. For tears and cries are the inauspicious signs by which children show what they love and hate. Now the time which is thus spent is no less than three years, and is a very considerable portion of life to be passed ill or well.

CLEINIAS: True.

ATHENIAN: Does not the discontented and ungracious nature appear to you to be full of lamentations and sorrows more than a good man ought to be?
CLEINIAS: Certainly.

ATHENIAN: Well, but if during these three years every possible care were taken that our nursling should have as little of sorrow and fear, and in general of pain as was possible, might we not expect in early childhood to make his soul more gentle and cheerful? (Compare Arist. Pol.)

CLEINIAS: To be sure, Stranger--more especially if we could procure him a variety of pleasures.

ATHENIAN: There I can no longer agree, Cleinias: you amaze me. To bring him up in such a way would be his utter ruin; for the beginning is always the most critical part of education. Let us see whether I am right.

CLEINIAS: Proceed.

ATHENIAN: The point about which you and I differ is of great importance, and I hope that you, Megillus, will help to decide between us. For I maintain that the true life should neither seek for pleasures, nor, on the other hand, entirely avoid pains, but should embrace the middle state (compare Republic), which I just spoke of as gentle and benign, and is a state which we by some divine presage and inspiration rightly ascribe to God. Now, I say, he among men, too, who would be divine ought to pursue after this mean habit--he should not rush headlong into pleasures, for he will not be free from pains; nor should we allow any one, young or old, male or female, to be thus given any more than ourselves, and least of all the newly-born infant, for in infancy more than at any other time the character is engrained by habit. Nay, more, if I were not afraid of appearing to be ridiculous, I would say that a woman during her year of pregnancy should of all women be most carefully tended, and kept from violent or excessive pleasures and pains, and should at that time cultivate gentleness and benevolence and kindness.

CLEINIAS: You need not ask Megillus, Stranger, which of us has most truly spoken; for I myself agree that all men ought to avoid the life of unmingled pain or pleasure, and pursue always a middle course. And having spoken well, may I add that you have been well answered?

ATHENIAN: Very good, Cleinias; and now let us all three consider a further point.

CLEINIAS: What is it?

ATHENIAN: That all the matters which we are now describing are commonly called by the general name of unwritten customs, and what are termed the laws of our ancestors are all of similar nature. And the reflection which lately arose in our minds, that we can neither call these things laws, nor
yet leave them unmentioned, is justified; for they are the bonds of the whole state, and come in between the written laws which are or are hereafter to be laid down; they are just ancestral customs of great antiquity, which, if they are rightly ordered and made habitual, shield and preserve the previously existing written law; but if they depart from right and fall into disorder, then they are like the props of builders which slip away out of their place and cause a universal ruin--one part drags another down, and the fair super-structure falls because the old foundations are undermined. Reflecting upon this, Cleinias, you ought to bind together the new state in every possible way, omitting nothing, whether great or small, of what are called laws or manners or pursuits, for by these means a city is bound together, and all these things are only lasting when they depend upon one another; and, therefore, we must not wonder if we find that many apparently trifling customs or usages come pouring in and lengthening out our laws.

CLEINIAS: Very true: we are disposed to agree with you.

ATHENIAN: Up to the age of three years, whether of boy or girl, if a person strictly carries out our previous regulations and makes them a principal aim, he will do much for the advantage of the young creatures. But at three, four, five, and even six years the childish nature will require sports; now is the time to get rid of self-will in him, punishing him, but not so as to disgrace him. We were saying about slaves, that we ought neither to add insult to punishment so as to anger them, nor yet to leave them unpunished lest they become self-willed; and a like rule is to be observed in the case of the free-born. Children at that age have certain natural modes of amusement which they find out for themselves when they meet. And all the children who are between the ages of three and six ought to meet at the temples of the villages, the several families of a village uniting on one spot. The nurses are to see that the children behave properly and orderly--they themselves and all their companies are to be under the control of twelve matrons, one for each company, who are annually selected to inspect them from the women previously mentioned [i.e. the women who have authority over marriage], whom the guardians of the law appoint. These matrons shall be chosen by the women who have authority over marriage, one out of each tribe; all are to be of the same age; and let each of them, as soon as she is appointed, hold office and go to the temples every day, punishing all offenders, male or female, who are slaves or strangers, by the help of some of the public slaves; but if any citizen disputes the punishment, let her bring him before the wardens of the city; or, if there be no dispute, let her punish him herself. After the age of six years the time has arrived for the separation of the sexes--let boys live with boys, and girls in like manner with girls. Now they must begin to learn--the boys going to teachers of horsemanship and the use of the bow, the javelin, and sling, and the girls too, if they do not object, at any rate until they know how to manage these weapons, and
especially how to handle heavy arms; for I may note, that the practice which now prevails is almost universally misunderstood.

CLEINIAS: In what respect?

ATHENIAN: In that the right and left hand are supposed to be by nature differently suited for our various uses of them; whereas no difference is found in the use of the feet and the lower limbs; but in the use of the hands we are, as it were, maimed by the folly of nurses and mothers; for although our several limbs are by nature balanced, we create a difference in them by bad habit. In some cases this is of no consequence, as, for example, when we hold the lyre in the left hand, and the plectrum in the right, but it is downright folly to make the same distinction in other cases. The custom of the Scythians proves our error; for they not only hold the bow from them with the left hand and draw the arrow to them with their right, but use either hand for both purposes. And there are many similar examples in charioteering and other things, from which we may learn that those who make the left side weaker than the right act contrary to nature. In the case of the plectrum, which is of horn only, and similar instruments, as I was saying, it is of no consequence, but makes a great difference, and may be of very great importance to the warrior who has to use iron weapons, bows and javelins, and the like; above all, when in heavy armour, he has to fight against heavy armour. And there is a very great difference between one who has learnt and one who has not, and between one who has been trained in gymnastic exercises and one who has not been. For as he who is perfectly skilled in the Pancratium or boxing or wrestling, is not unable to fight from his left side, and does not limp and draggle in confusion when his opponent makes him change his position, so in heavy-armed fighting, and in all other things, if I am not mistaken, the like holds--he who has these double powers of attack and defence ought not in any case to leave them either unused or untrained, if he can help; and if a person had the nature of Geryon or Briareus he ought to be able with his hundred hands to throw a hundred darts. Now, the magistrates, male and female, should see to all these things, the women superintending the nursing and amusements of the children, and the men superintending their education, that all of them, boys and girls alike, may be sound hand and foot, and may not, if they can help, spoil the gifts of nature by bad habits.

Education has two branches--one of gymnastic, which is concerned with the body, and the other of music, which is designed for the improvement of the soul. And gymnastic has also two branches--dancing and wrestling; and one sort of dancing imitates musical recitation, and aims at preserving dignity and freedom, the other aims at producing health, agility, and beauty in the limbs and parts of the body, giving the proper flexion and extension to each of them, a harmonious motion being diffused everywhere, and forming a suitable accompaniment to the dance. As regards wrestling,
the tricks which Antaeus and Cercyon devised in their systems out of a vain spirit of competition, or the tricks of boxing which Epeius or Amycus invented, are useless and unsuitable for war, and do not deserve to have much said about them; but the art of wrestling erect and keeping free the neck and hands and sides, working with energy and constancy, with a composed strength, for the sake of health--these are always useful, and are not to be neglected, but to be enjoined alike on masters and scholars, when we reach that part of legislation; and we will desire the one to give their instructions freely, and the others to receive them thankfully. Nor, again, must we omit suitable imitations of war in our choruses; here in Crete you have the armed dances of the Curetes, and the Lacedaemonians have those of the Dioscuri. And our virgin lady, delighting in the amusement of the dance, thought it not fit to amuse herself with empty hands; she must be clothed in a complete suit of armour, and in this attire go through the dance; and youths and maidens should in every respect imitate her, esteeming highly the favour of the Goddess, both with a view to the necessities of war, and to festive occasions: it will be right also for the boys, until such time as they go out to war, to make processions and supplications to all the Gods in goodly array, armed and on horseback, in dances and marches, fast or slow, offering up prayers to the Gods and to the sons of Gods; and also engaging in contests and preludes of contests, if at all, with these objects. For these sorts of exercises, and no others, are useful both in peace and war, and are beneficial alike to states and to private houses. But other labours and sports and exercises of the body are unworthy of freemen, O Megillus and Cleinias.

I have now completely described the kind of gymnastic which I said at first ought to be described; if you know of any better, will you communicate your thoughts?

CLEINIAS: It is not easy, Stranger, to put aside these principles of gymnastic and wrestling and to enunciate better ones.

ATHENIAN: Now we must say what has yet to be said about the gifts of the Muses and of Apollo: before, we fancied that we had said all, and that gymnastic alone remained; but now we see clearly what points have been omitted, and should be first proclaimed; of these, then, let us proceed to speak.

CLEINIAS: By all means.

ATHENIAN: Let me tell you once more--although you have heard me say the same before--that caution must be always exercised, both by the speaker and by the hearer, about anything that is very singular and unusual. For my tale is one which many a man would be afraid to tell, and yet I have a confidence which makes me go on.
CLEINIAS: What have you to say, Stranger?

ATHENIAN: I say that in states generally no one has observed that the plays of childhood have a great deal to do with the permanence or want of permanence in legislation. For when plays are ordered with a view to children having the same plays, and amusing themselves after the same manner, and finding delight in the same playthings, the more solemn institutions of the state are allowed to remain undisturbed. Whereas if sports are disturbed, and innovations are made in them, and they constantly change, and the young never speak of their having the same likings, or the same established notions of good and bad taste, either in the bearing of their bodies or in their dress, but he who devises something new and out of the way in figures and colours and the like is held in special honour, we may truly say that no greater evil can happen in a state; for he who changes the sports is secretly changing the manners of the young, and making the old to be dishonoured among them and the new to be honoured. And I affirm that there is nothing which is a greater injury to all states than saying or thinking thus. Will you hear me tell how great I deem the evil to be?

CLEINIAS: You mean the evil of blaming antiquity in states?

ATHENIAN: Exactly.

CLEINIAS: If you are speaking of that, you will find in us hearers who are disposed to receive what you say not unfavourably but most favourably.

ATHENIAN: I should expect so.

CLEINIAS: Proceed.

ATHENIAN: Well, then, let us give all the greater heed to one another's words. The argument affirms that any change whatever except from evil is the most dangerous of all things; this is true in the case of the seasons and of the winds, in the management of our bodies and the habits of our minds--true of all things except, as I said before, of the bad. He who looks at the constitution of individuals accustomed to eat any sort of meat, or drink any drink, or to do any work which they can get, may see that they are at first disordered by them, but afterwards, as time goes on, their bodies grow adapted to them, and they learn to know and like variety, and have good health and enjoyment of life; and if ever afterwards they are confined again to a superior diet, at first they are troubled with disorders, and with difficulty become habituated to their new food. A similar principle we may imagine to hold good about the minds of men and the natures of their souls. For when they have been brought up in certain laws, which by some Divine Providence have remained unchanged
during long ages, so that no one has any memory or tradition of their ever having been otherwise than they are, then every one is afraid and ashamed to change that which is established. The legislator must somehow find a way of implanting this reverence for antiquity, and I would propose the following way: People are apt to fancy, as I was saying before, that when the plays of children are altered they are merely plays, not seeing that the most serious and detrimental consequences arise out of the change; and they readily comply with the child's wishes instead of deterring him, not considering that these children who make innovations in their games, when they grow up to be men, will be different from the last generation of children, and, being different, will desire a different sort of life, and under the influence of this desire will want other institutions and laws; and no one of them reflects that there will follow what I just now called the greatest of evils to states. Changes in bodily fashions are no such serious evils, but frequent changes in the praise and censure of manners are the greatest of evils, and require the utmost prevision.

CLEINIAS: To be sure.

ATHENIAN: And now do we still hold to our former assertion, that rhythms and music in general are imitations of good and evil characters in men? What say you?

CLEINIAS: That is the only doctrine which we can admit.

ATHENIAN: Must we not, then, try in every possible way to prevent our youth from even desiring to imitate new modes either in dance or song? nor must any one be allowed to offer them varieties of pleasures.

CLEINIAS: Most true.

ATHENIAN: Can any of us imagine a better mode of effecting this object than that of the Egyptians?

CLEINIAS: What is their method?

ATHENIAN: To consecrate every sort of dance or melody. First we should ordain festivals--calculating for the year what they ought to be, and at what time, and in honour of what Gods, sons of Gods, and heroes they ought to be celebrated; and, in the next place, what hymns ought to be sung at the several sacrifices, and with what dances the particular festival is to be honoured. This has to be arranged at first by certain persons, and, when arranged, the whole assembly of the citizens are to offer sacrifices and libations to the Fates and all the other Gods, and to consecrate the several odes to Gods and heroes; and if any one offers any other hymns or dances to any one of the Gods, the priests and priestesses, acting in concert with the guardians of the law, shall, with the sanction of
religion and the law, exclude him, and he who is excluded, if he do not submit, shall be liable all his life long to have a suit of impiety brought against him by any one who likes.

CLEINIAS: Very good.

ATHENIAN: In the consideration of this subject, let us remember what is due to ourselves.

CLEINIAS: To what are you referring?

ATHENIAN: I mean that any young man, and much more any old one, when he sees or hears anything strange or unaccustomed, does not at once run to embrace the paradox, but he stands considering, like a person who is at a place where three paths meet, and does not very well know his way--he may be alone or he may be walking with others, and he will say to himself and them, 'Which is the way?' and will not move forward until he is satisfied that he is going right. And this is what we must do in the present instance: A strange discussion on the subject of law has arisen, which requires the utmost consideration, and we should not at our age be too ready to speak about such great matters, or be confident that we can say anything certain all in a moment.

CLEINIAS: Most true.

ATHENIAN: Then we will allow time for reflection, and decide when we have given the subject sufficient consideration. But that we may not be hindered from completing the natural arrangement of our laws, let us proceed to the conclusion of them in due order; for very possibly, if God will, the exposition of them, when completed, may throw light on our present perplexity.

CLEINIAS: Excellent, Stranger; let us do as you propose.

ATHENIAN: Let us then affirm the paradox that strains of music are our laws (nomoi), and this latter being the name which the ancients gave to lyric songs, they probably would not have very much objected to our proposed application of the word. Some one, either asleep or awake, must have had a dreamy suspicion of their nature. And let our decree be as follows: No one in singing or dancing shall offend against public and consecrated models, and the general fashion among the youth, any more than he would offend against any other law. And he who observes this law shall be blameless; but he who is disobedient, as I was saying, shall be punished by the guardians of the laws, and by the priests and priestesses. Suppose that we imagine this to be our law.

CLEINIAS: Very good.
ATHENIAN: Can any one who makes such laws escape ridicule? Let us see. I think that our only safety will be in first framing certain models for composers. One of these models shall be as follows: If when a sacrifice is going on, and the victims are being burnt according to law— if, I say, any one who may be a son or brother, standing by another at the altar and over the victims, horribly blasphemes, will not his words inspire despondency and evil omens and forebodings in the mind of his father and of his other kinsmen?

CLEINIAS: Of course.

ATHENIAN: And this is just what takes place in almost all our cities. A magistrate offers a public sacrifice, and there come in not one but many choruses, who take up a position a little way from the altar, and from time to time pour forth all sorts of horrible blasphemies on the sacred rites, exciting the souls of the audience with words and rhythms and melodies most sorrowful to hear; and he who at the moment when the city is offering sacrifice makes the citizens weep most, carries away the palm of victory. Now, ought we not to forbid such strains as these? And if ever our citizens must hear such lamentations, then on some unblest and inauspicious day let there be choruses of foreign and hired minstrels, like those hirelings who accompany the departed at funerals with barbarous Carian chants. That is the sort of thing which will be appropriate if we have such strains at all; and let the apparel of the singers be, not circlets and ornaments of gold, but the reverse. Enough of all this. I will simply ask once more whether we shall lay down as one of our principles of song—

CLEINIAS: What?

ATHENIAN: That we should avoid every word of evil omen; let that kind of song which is of good omen be heard everywhere and always in our state. I need hardly ask again, but shall assume that you agree with me.

CLEINIAS: By all means; that law is approved by the suffrages of us all.

ATHENIAN: But what shall be our next musical law or type? Ought not prayers to be offered up to the Gods when we sacrifice?

CLEINIAS: Certainly.

ATHENIAN: And our third law, if I am not mistaken, will be to the effect that our poets, understanding prayers to be requests which we make to the Gods, will take especial heed that they do not by mistake ask for evil instead of good. To make such a prayer would surely be too ridiculous.
CLEINIAS: Very true.

ATHENIAN: Were we not a little while ago quite convinced that no silver or golden Plutus should dwell in our state?

CLEINIAS: To be sure.

ATHENIAN: And what has it been the object of our argument to show? Did we not imply that the poets are not always quite capable of knowing what is good or evil? And if one of them utters a mistaken prayer in song or words, he will make our citizens pray for the opposite of what is good in matters of the highest import; than which, as I was saying, there can be few greater mistakes. Shall we then propose as one of our laws and models relating to the Muses--

CLEINIAS: What? will you explain the law more precisely?

ATHENIAN: Shall we make a law that the poet shall compose nothing contrary to the ideas of the lawful, or just, or beautiful, or good, which are allowed in the state? nor shall he be permitted to communicate his compositions to any private individuals, until he shall have shown them to the appointed judges and the guardians of the law, and they are satisfied with them. As to the persons whom we appoint to be our legislators about music and as to the director of education, these have been already indicated. Once more then, as I have asked more than once, shall this be our third law, and type, and model--What do you say?

CLEINIAS: Let it be so, by all means.

ATHENIAN: Then it will be proper to have hymns and praises of the Gods, intermingled with prayers; and after the Gods prayers and praises should be offered in like manner to demigods and heroes, suitable to their several characters.

CLEINIAS: Certainly.

ATHENIAN: In the next place there will be no objection to a law, that citizens who are departed and have done good and energetic deeds, either with their souls or with their bodies, and have been obedient to the laws, should receive eulogies; this will be very fitting.

CLEINIAS: Quite true.

ATHENIAN: But to honour with hymns and panegyrics those who are still alive is not safe; a man should run his course, and make a fair ending, and then we will praise him; and let praise be given equally to women as well as men who have been distinguished in virtue. The order of songs and
dances shall be as follows: There are many ancient musical compositions and dances which are excellent, and from these the newly-founded city may freely select what is proper and suitable; and they shall choose judges of not less than fifty years of age, who shall make the selection, and any of the old poems which they deem sufficient they shall include; any that are deficient or altogether unsuitable, they shall either utterly throw aside, or examine and amend, taking into their counsel poets and musicians, and making use of their poetical genius; but explaining to them the wishes of the legislator in order that they may regulate dancing, music, and all choral strains, according to the mind of the judges; and not allowing them to indulge, except in some few matters, their individual pleasures and fancies. Now the irregular strain of music is always made ten thousand times better by attaining to law and order, and rejecting the honeyed Muse—not however that we mean wholly to exclude pleasure, which is the characteristic of all music. And if a man be brought up from childhood to the age of discretion and maturity in the use of the orderly and severe music, when he hears the opposite he detests it, and calls it illiberal; but if trained in the sweet and vulgar music, he deems the severer kind cold and displeasing. So that, as I was saying before, while he who hears them gains no more pleasure from the one than from the other, the one has the advantage of making those who are trained in it better men, whereas the other makes them worse.

CLEINIAS: Very true.

ATHENIAN: Again, we must distinguish and determine on some general principle what songs are suitable to women, and what to men, and must assign to them their proper melodies and rhythms. It is shocking for a whole harmony to be inharmonical, or for a rhythm to be unrhythmical, and this will happen when the melody is inappropriate to them. And therefore the legislator must assign to these also their forms. Now both sexes have melodies and rhythms which of necessity belong to them; and those of women are clearly enough indicated by their natural difference. The grand, and that which tends to courage, may be fairly called manly; but that which inclines to moderation and temperance, may be declared both in law and in ordinary speech to be the more womanly quality. This, then, will be the general order of them.

Let us now speak of the manner of teaching and imparting them, and the persons to whom, and the time when, they are severally to be imparted. As the shipwright first lays down the lines of the keel, and thus, as it were, draws the ship in outline, so do I seek to distinguish the patterns of life, and lay down their keels according to the nature of different men's souls; seeking truly to consider by what means, and in what ways, we may go through the voyage of life best. Now human affairs are hardly worth considering in earnest, and yet we must be in earnest about them--a sad necessity constrains us. And having got thus far, there will be a fitness
in our completing the matter, if we can only find some suitable method of doing so. But what do I mean? Some one may ask this very question, and quite rightly, too.

CLEINIAS: Certainly.

ATHENIAN: I say that about serious matters a man should be serious, and about a matter which is not serious he should not be serious; and that God is the natural and worthy object of our most serious and blessed endeavours, for man, as I said before, is made to be the plaything of God, and this, truly considered, is the best of him; wherefore also every man and woman should walk seriously, and pass life in the noblest of pastimes, and be of another mind from what they are at present.

CLEINIAS: In what respect?

ATHENIAN: At present they think that their serious pursuits should be for the sake of their sports, for they deem war a serious pursuit, which must be managed well for the sake of peace; but the truth is, that there neither is, nor has been, nor ever will be, either amusement or instruction in any degree worth speaking of in war, which is nevertheless deemed by us to be the most serious of our pursuits. And therefore, as we say, every one of us should live the life of peace as long and as well as he can. And what is the right way of living? Are we to live in sports always? If so, in what kind of sports? We ought to live sacrificing, and singing, and dancing, and then a man will be able to propitiate the Gods, and to defend himself against his enemies and conquer them in battle. The type of song or dance by which he will propitiate them has been described, and the paths along which he is to proceed have been cut for him. He will go forward in the spirit of the poet:

'Telemachus, some things thou wilt thyself find in thy heart, but other things God will suggest; for I deem that thou wast not born or brought up without the will of the Gods.'

And this ought to be the view of our alumni; they ought to think that what has been said is enough for them, and that any other things their Genius and God will suggest to them—he will tell them to whom, and when, and to what Gods severally they are to sacrifice and perform dances, and how they may propitiate the deities, and live according to the appointment of nature; being for the most part puppets, but having some little share of reality.

MEGILLUS: You have a low opinion of mankind, Stranger.

ATHENIAN: Nay, Megillus, be not amazed, but forgive me: I was comparing them with the Gods; and under that feeling I spoke. Let us grant, if you
wish, that the human race is not to be despised, but is worthy of some consideration.

Next follow the buildings for gymnasia and schools open to all; these are to be in three places in the midst of the city; and outside the city and in the surrounding country, also in three places, there shall be schools for horse exercise, and large grounds arranged with a view to archery and the throwing of missiles, at which young men may learn and practise. Of these mention has already been made; and if the mention be not sufficiently explicit, let us speak further of them and embody them in laws. In these several schools let there be dwellings for teachers, who shall be brought from foreign parts by pay, and let them teach those who attend the schools the art of war and the art of music, and the children shall come not only if their parents please, but if they do not please; there shall be compulsory education, as the saying is, of all and sundry, as far as this is possible; and the pupils shall be regarded as belonging to the state rather than to their parents. My law would apply to females as well as males; they shall both go through the same exercises. I assert without fear of contradiction that gymnastic and horsemanship are as suitable to women as to men. Of the truth of this I am persuaded from ancient tradition, and at the present day there are said to be countless myriads of women in the neighbourhood of the Black Sea, called Sauromatides, who not only ride on horseback like men, but have enjoined upon them the use of bows and other weapons equally with the men. And I further affirm, that if these things are possible, nothing can be more absurd than the practice which prevails in our own country, of men and women not following the same pursuits with all their strength and with one mind, for thus the state, instead of being a whole, is reduced to a half, but has the same imposts to pay and the same toils to undergo; and what can be a greater mistake for any legislator to make than this?

CLEINIAS: Very true; yet much of what has been asserted by us, Stranger, is contrary to the custom of states; still, in saying that the discourse should be allowed to proceed, and that when the discussion is completed, we should choose what seems best, you spoke very properly, and I now feel compunction for what I have said. Tell me, then, what you would next wish to say.

ATHENIAN: I should wish to say, Cleinias, as I said before, that if the possibility of these things were not sufficiently proven in fact, then there might be an objection to the argument, but the fact being as I have said, he who rejects the law must find some other ground of objection; and, failing this, our exhortation will still hold good, nor will any one deny that women ought to share as far as possible in education and in other ways with men. For consider; if women do not share in their whole life with men, then they must have some other order of life.
CLEINIAS: Certainly.

ATHENIAN: And what arrangement of life to be found anywhere is preferable to this community which we are now assigning to them? Shall we prefer that which is adopted by the Thracians and many other races who use their women to till the ground and to be shepherds of their herds and flocks, and to minister to them like slaves? Or shall we do as we and people in our part of the world do—getting together, as the phrase is, all our goods and chattels into one dwelling, we entrust them to our women, who are the stewards of them, and who also preside over the shuttles and the whole art of spinning? Or shall we take a middle course, as in Lacedaemon, Megillus—letting the girls share in gymnastic and music, while the grown-up women, no longer employed in spinning wool, are hard at work weaving the web of life, which will be no cheap or mean employment, and in the duty of serving and taking care of the household and bringing up the children, in which they will observe a sort of mean, not participating in the toils of war; and if there were any necessity that they should fight for their city and families, unlike the Amazons, they would be unable to take part in archery or any other skilled use of missiles, nor could they, after the example of the Goddess, carry shield or spear, or stand up nobly for their country when it was being destroyed, and strike terror into their enemies, if only because they were seen in regular order? Living as they do, they would never dare at all to imitate the Sauromatides, who, when compared with ordinary women, would appear to be like men. Let him who will, praise your legislators, but I must say what I think. The legislator ought to be whole and perfect, and not half a man only; he ought not to let the female sex live softly and waste money and have no order of life, while he takes the utmost care of the male sex, and leaves half of life only blest with happiness, when he might have made the whole state happy.

MEGILLUS: What shall we do, Cleinias? Shall we allow a stranger to run down Sparta in this fashion?

CLEINIAS: Yes; for as we have given him liberty of speech we must let him go on until we have perfected the work of legislation.

MEGILLUS: Very true.

ATHENIAN: Then now I may proceed?

CLEINIAS: By all means.

ATHENIAN: What will be the manner of life among men who may be supposed to have their food and clothing provided for them in moderation, and who have entrusted the practice of the arts to others, and whose husbandry committed to slaves paying a part of the produce, brings them a return sufficient for men living temperately; who, moreover, have common tables
in which the men are placed apart, and near them are the common tables of their families, of their daughters and mothers, which day by day, the officers, male and female, are to inspect—thay shall see to the behaviour of the company, and so dismiss them; after which the presiding magistrate and his attendants shall honour with libations those Gods to whom that day and night are dedicated, and then go home? To men whose lives are thus ordered, is there no work remaining to be done which is necessary and fitting, but shall each one of them live fattening like a beast? Such a life is neither just nor honourable, nor can he who lives it fail of meeting his due; and the due reward of the idle fatted beast is that he should be torn in pieces by some other valiant beast whose fatness is worn down by brave deeds and toil. These regulations, if we duly consider them, will never be exactly carried into execution under present circumstances, nor as long as women and children and houses and all other things are the private property of individuals; but if we can attain the second-best form of polity, we shall be very well off. And to men living under this second polity there remains a work to be accomplished which is far from being small or insignificant, but is the greatest of all works, and ordained by the appointment of righteous law. For the life which may be truly said to be concerned with the virtue of body and soul is twice, or more than twice, as full of toil and trouble as the pursuit after Pythian and Olympic victories, which debars a man from every employment of life. For there ought to be no bye-work interfering with the greater work of providing the necessary exercise and nourishment for the body, and instruction and education for the soul. Night and day are not long enough for the accomplishment of their perfection and consummation; and therefore to this end all freemen ought to arrange the way in which they will spend their time during the whole course of the day, from morning till evening and from evening till the morning of the next sunrise. There may seem to be some impropriety in the legislator determining minutely the numberless details of the management of the house, including such particulars as the duty of wakefulness in those who are to be perpetual watchmen of the whole city; for that any citizen should continue during the whole of any night in sleep, instead of being seen by all his servants, always the first to awake and get up—this, whether the regulation is to be called a law or only a practice, should be deemed base and unworthy of a freeman; also that the mistress of the house should be awakened by her hand-maidens instead of herself first awakening them, is what the slaves, male and female, and the serving-boys, and, if that were possible, everybody and everything in the house should regard as base. If they rise early, they may all of them do much of their public and of their household business, as magistrates in the city, and masters and mistresses in their private houses, before the sun is up. Much sleep is not required by nature, either for our souls or bodies, or for the actions which they perform. For no one who is asleep is good for anything, any more than if he were dead; but he of us who has the most regard for life and reason keeps awake as long as he can, reserving only so much time for sleep as is expedient for health;
and much sleep is not required, if the habit of moderation be once rightly formed. Magistrates in states who keep awake at night are terrible to the bad, whether enemies or citizens, and are honoured and reverenced by the just and temperate, and are useful to themselves and to the whole state.

A night which is passed in such a manner, in addition to all the above-mentioned advantages, infuses a sort of courage into the minds of the citizens. When the day breaks, the time has arrived for youth to go to their schoolmasters. Now neither sheep nor any other animals can live without a shepherd, nor can children be left without tutors, or slaves without masters. And of all animals the boy is the most unmanageable, inasmuch as he has the fountain of reason in him not yet regulated; he is the most insidious, sharp-witted, and insubordinate of animals. Wherefore he must be bound with many bridles; in the first place, when he gets away from mothers and nurses, he must be under the management of tutors on account of his childishness and foolishness; then, again, being a freeman, he must be controlled by teachers, no matter what they teach, and by studies; but he is also a slave, and in that regard any freeman who comes in his way may punish him and his tutor and his instructor, if any of them does anything wrong; and he who comes across him and does not inflict upon him the punishment which he deserves, shall incur the greatest disgrace; and let the guardian of the law, who is the director of education, see to him who coming in the way of the offences which we have mentioned, does not chastise them when he ought, or chastises them in a way which he ought not; let him keep a sharp look-out, and take especial care of the training of our children, directing their natures, and always turning them to good according to the law.

But how can our law sufficiently train the director of education himself; for as yet all has been imperfect, and nothing has been said either clear or satisfactory? Now, as far as possible, the law ought to leave nothing to him, but to explain everything, that he may be an interpreter and tutor to others. About dances and music and choral strains, I have already spoken both as to the character of the selection of them, and the manner in which they are to be amended and consecrated. But we have not as yet spoken, O illustrious guardian of education, of the manner in which your pupils are to use those strains which are written in prose, although you have been informed what martial strains they are to learn and practise; what relates in the first place to the learning of letters, and secondly, to the lyre, and also to calculation, which, as we were saying, is needful for them all to learn, and any other things which are required with a view to war and the management of house and city, and, looking to the same object, what is useful in the revolutions of the heavenly bodies--the stars and sun and moon, and the various regulations about these matters which are necessary for the whole state--I am speaking of the arrangements of days in periods of months, and of months in years, which are to be observed, in order that seasons and sacrifices and festivals may have
their regular and natural order, and keep the city alive and awake, the
Gods receiving the honours due to them, and men having a better
understanding about them: all these things, O my friend, have not yet been
sufficiently declared to you by the legislator. Attend, then, to what I am
now going to say: We were telling you, in the first place, that you were
not sufficiently informed about letters, and the objection was to this
effect--that you were never told whether he who was meant to be a
respectable citizen should apply himself in detail to that sort of
learning, or not apply himself at all; and the same remark holds good of
the study of the lyre. But now we say that he ought to attend to them. A
fair time for a boy of ten years old to spend in letters is three years;
the age of thirteen is the proper time for him to begin to handle the
lyre, and he may continue at this for another three years, neither more
nor less, and whether his father or himself like or dislike the study, he
is not to be allowed to spend more or less time in learning music than the
law allows. And let him who disobeys the law be deprived of those youthful
honours of which we shall hereafter speak. Hear, however, first of all,
what the young ought to learn in the early years of life, and what their
instructors ought to teach them. They ought to be occupied with their
letters until they are able to read and write; but the acquisition of
perfect beauty or quickness in writing, if nature has not stimulated them
to acquire these accomplishments in the given number of years, they should
let alone. And as to the learning of compositions committed to writing
which are not set to the lyre, whether metrical or without rhythmical
divisions, compositions in prose, as they are termed, having no rhythm or
harmony--seeing how dangerous are the writings handed down to us by many
writers of this class--what will you do with them, O most excellent
guardians of the law? or how can the lawgiver rightly direct you about
them? I believe that he will be in great difficulty.

CLEINIAS: What troubles you, Stranger? and why are you so perplexed in
your mind?

ATHENIAN: You naturally ask, Cleinias, and to you and Megillus, who are my
partners in the work of legislation, I must state the more difficult as
well as the easier parts of the task.

CLEINIAS: To what do you refer in this instance?

ATHENIAN: I will tell you. There is a difficulty in opposing many myriads
of mouths.

CLEINIAS: Well, and have we not already opposed the popular voice in many
important enactments?

ATHENIAN: That is quite true; and you mean to imply that the road which we
are taking may be disagreeable to some but is agreeable to as many others,
or if not to as many, at any rate to persons not inferior to the others, and in company with them you bid me, at whatever risk, to proceed along the path of legislation which has opened out of our present discourse, and to be of good cheer, and not to faint.

CLEINIAS: Certainly.

ATHENIAN: And I do not faint; I say, indeed, that we have a great many poets writing in hexameter, trimeter, and all sorts of measures--some who are serious, others who aim only at raising a laugh--and all mankind declare that the youth who are rightly educated should be brought up in them and saturated with them; some insist that they should be constantly hearing them read aloud, and always learning them, so as to get by heart entire poets; while others select choice passages and long speeches, and make compendiums of them, saying that these ought to be committed to memory, if a man is to be made good and wise by experience and learning of many things. And you want me now to tell them plainly in what they are right and in what they are wrong.

CLEINIAS: Yes, I do.

ATHENIAN: But how can I in one word rightly comprehend all of them? I am of opinion, and, if I am not mistaken, there is a general agreement, that every one of these poets has said many things well and many things the reverse of well; and if this be true, then I do affirm that much learning is dangerous to youth.

CLEINIAS: How would you advise the guardian of the law to act?

ATHENIAN: In what respect?

CLEINIAS: I mean to what pattern should he look as his guide in permitting the young to learn some things and forbidding them to learn others. Do not shrink from answering.

ATHENIAN: My good Cleinias, I rather think that I am fortunate.

CLEINIAS: How so?

ATHENIAN: I think that I am not wholly in want of a pattern, for when I consider the words which we have spoken from early dawn until now, and which, as I believe, have been inspired by Heaven, they appear to me to be quite like a poem. When I reflected upon all these words of ours, I naturally felt pleasure, for of all the discourses which I have ever learnt or heard, either in poetry or prose, this seemed to me to be the justest, and most suitable for young men to hear; I cannot imagine any better pattern than this which the guardian of the law who is also the
director of education can have. He cannot do better than advise the teachers to teach the young these words and any which are of a like nature, if he should happen to find them, either in poetry or prose, or if he come across unwritten discourses akin to ours, he should certainly preserve them, and commit them to writing. And, first of all, he shall constrain the teachers themselves to learn and approve them, and any of them who will not, shall not be employed by him, but those whom he finds agreeing in his judgment, he shall make use of and shall commit to them the instruction and education of youth. And here and on this wise let my fanciful tale about letters and teachers of letters come to an end.

CLEINIAS: I do not think, Stranger, that we have wandered out of the proposed limits of the argument; but whether we are right or not in our whole conception, I cannot be very certain.

ATHENIAN: The truth, Cleinias, may be expected to become clearer when, as we have often said, we arrive at the end of the whole discussion about laws.

CLEINIAS: Yes.

ATHENIAN: And now that we have done with the teacher of letters, the teacher of the lyre has to receive orders from us.

CLEINIAS: Certainly.

ATHENIAN: I think that we have only to recollect our previous discussions, and we shall be able to give suitable regulations touching all this part of instruction and education to the teachers of the lyre.

CLEINIAS: To what do you refer?

ATHENIAN: We were saying, if I remember rightly, that the sixty years old choristers of Dionysus were to be specially quick in their perceptions of rhythm and musical composition, that they might be able to distinguish good and bad imitation, that is to say, the imitation of the good or bad soul when under the influence of passion, rejecting the one and displaying the other in hymns and songs, charming the souls of youth, and inviting them to follow and attain virtue by the way of imitation.

CLEINIAS: Very true.

ATHENIAN: And with this view the teacher and the learner ought to use the sounds of the lyre, because its notes are pure, the player who teaches and his pupil rendering note for note in unison; but complexity, and variation of notes, when the strings give one sound and the poet or composer of the melody gives another--also when they make concords and harmonies in which
lesser and greater intervals, slow and quick, or high and low notes, are combined—or, again, when they make complex variations of rhythms, which they adapt to the notes of the lyre—all that sort of thing is not suited to those who have to acquire speedy and useful knowledge of music in three years; for opposite principles are confusing, and create a difficulty in learning, and our young men should learn quickly, and their mere necessary acquirements are not few or trifling, as will be shown in due course. Let the director of education attend to the principles concerning music which we are laying down. As to the songs and words themselves which the masters of choruses are to teach and the character of them, they have been already described by us, and are the same which, when consecrated and adapted to the different festivals, we said were to benefit cities by affording them an innocent amusement.

CLEINIAS: That, again, is true.

ATHENIAN: Then let him who has been elected a director of music receive these rules from us as containing the very truth; and may he prosper in his office! Let us now proceed to lay down other rules in addition to the preceding about dancing and gymnastic exercise in general. Having said what remained to be said about the teaching of music, let us speak in like manner about gymnastic. For boys and girls ought to learn to dance and practise gymnastic exercises—ought they not?

CLEINIAS: Yes.

ATHENIAN: Then the boys ought to have dancing masters, and the girls dancing mistresses to exercise them.

CLEINIAS: Very good.

ATHENIAN: Then once more let us summon him who has the chief concern in the business, the superintendent of youth [i.e. the director of education]; he will have plenty to do, if he is to have the charge of music and gymnastic.

CLEINIAS: But how will an old man be able to attend to such great charges?

ATHENIAN: O my friend, there will be no difficulty, for the law has already given and will give him permission to select as his assistants in this charge any citizens, male or female, whom he desires; and he will know whom he ought to choose, and will be anxious not to make a mistake, from a due sense of responsibility, and from a consciousness of the importance of his office, and also because he will consider that if young men have been and are well brought up, then all things go swimmingly, but if not, it is not meet to say, nor do we say, what will follow, lest the regarders of omens should take alarm about our infant state. Many things
have been said by us about dancing and about gymnastic movements in
general; for we include under gymnastics all military exercises, such as
archery, and all hurling of weapons, and the use of the light shield, and
all fighting with heavy arms, and military evolutions, and movements of
armies, and encampings, and all that relates to horsemanship. Of all these
things there ought to be public teachers, receiving pay from the state,
and their pupils should be the men and boys in the state, and also the
girls and women, who are to know all these things. While they are yet
girls they should have practised dancing in arms and the whole art of
fighting--when grown-up women, they should apply themselves to evolutions
and tactics, and the mode of grounding and taking up arms; if for no other
reason, yet in case the whole military force should have to leave the city
and carry on operations of war outside, that those who will have to guard
the young and the rest of the city may be equal to the task; and, on the
other hand, when enemies, whether barbarian or Hellenic, come from without
with mighty force and make a violent assault upon them, and thus compel
them to fight for the possession of the city, which is far from being an
impossibility, great would be the disgrace to the state, if the women had
been so miserably trained that they could not fight for their young, as
birds will, against any creature however strong, and die or undergo any
danger, but must instantly rush to the temples and crowd at the altars and
shrines, and bring upon human nature the reproach, that of all animals man
is the most cowardly!

CLEINIAS: Such a want of education, Stranger, is certainly an unseemly
thing to happen in a state, as well as a great misfortune.

ATHENIAN: Suppose that we carry our law to the extent of saying that women
ought not to neglect military matters, but that all citizens, male and
female alike, shall attend to them?

CLEINIAS: I quite agree.

ATHENIAN: Of wrestling we have spoken in part, but of what I should call
the most important part we have not spoken, and cannot easily speak
without showing at the same time by gesture as well as in word what we
mean; when word and action combine, and not till then, we shall explain
clearly what has been said, pointing out that of all movements wrestling
is most akin to the military art, and is to be pursued for the sake of
this, and not this for the sake of wrestling.

CLEINIAS: Excellent. ATHENIAN: Enough of wrestling; we will now proceed to
speak of other movements of the body. Such motion may be in general called
dancing, and is of two kinds: one of nobler figures, imitating the
honourable, the other of the more ignoble figures, imitating the mean; and
of both these there are two further subdivisions. Of the serious, one kind
is of those engaged in war and vehement action, and is the exercise of a
noble person and a manly heart; the other exhibits a temperate soul in the enjoyment of prosperity and modest pleasures, and may be truly called and is the dance of peace. The warrior dance is different from the peaceful one, and may be rightly termed Pyrrhic; this imitates the modes of avoiding blows and missiles by dropping or giving way, or springing aside, or rising up or falling down; also the opposite postures which are those of action, as, for example, the imitation of archery and the hurling of javelins, and of all sorts of blows. And when the imitation is of brave bodies and souls, and the action is direct and muscular, giving for the most part a straight movement to the limbs of the body--that, I say, is the true sort; but the opposite is not right. In the dance of peace what we have to consider is whether a man bears himself naturally and gracefully, and after the manner of men who duly conform to the law. But before proceeding I must distinguish the dancing about which there is any doubt, from that about which there is no doubt. Which is the doubtful kind, and how are the two to be distinguished? There are dances of the Bacchic sort, both those in which, as they say, they imitate drunken men, and which are named after the Nymphs, and Pan, and Silenuses, and Satyrs; and also those in which purifications are made or mysteries celebrated--all this sort of dancing cannot be rightly defined as having either a peaceful or a warlike character, or indeed as having any meaning whatever, and may, I think, be most truly described as distinct from the warlike dance, and distinct from the peaceful, and not suited for a city at all. There let it lie; and so leaving it to lie, we will proceed to the dances of war and peace, for with these we are undoubtedly concerned. Now the unwarlike muse, which honours in dance the Gods and the sons of the Gods, is entirely associated with the consciousness of prosperity; this class may be subdivided into two lesser classes, of which one is expressive of an escape from some labour or danger into good, and has greater pleasures, the other expressive of preservation and increase of former good, in which the pleasure is less exciting--in all these cases, every man when the pleasure is greater, moves his body more, and less when the pleasure is less; and, again, if he be more orderly and has learned courage from discipline he moves less, but if he be a coward, and has no training or self-control, he makes greater and more violent movements, and in general when he is speaking or singing he is not altogether able to keep his body still; and so out of the imitation of words in gestures the whole art of dancing has arisen. And in these various kinds of imitation one man moves in an orderly, another in a disorderly manner; and as the ancients may be observed to have given many names which are according to nature and deserving of praise, so there is an excellent one which they have given to the dances of men who in their times of prosperity are moderate in their pleasures--the giver of names, whoever he was, assigned to them a very true, and poetical, and rational name, when he called them Emmeleiai, or dances of order, thus establishing two kinds of dances of the nobler sort, the dance of war which he called the Pyrrhic, and the dance of peace which he called Emmeleia, or the dance of order; giving to each their
appropriate and becoming name. These things the legislator should indicate in general outline, and the guardian of the law should enquire into them and search them out, combining dancing with music, and assigning to the several sacrificial feasts that which is suitable to them; and when he has consecrated all of them in due order, he shall for the future change nothing, whether of dance or song. Thenceforward the city and the citizens shall continue to have the same pleasures, themselves being as far as possible alike, and shall live well and happily.

I have described the dances which are appropriate to noble bodies and generous souls. But it is necessary also to consider and know uncomely persons and thoughts, and those which are intended to produce laughter in comedy, and have a comic character in respect of style, song, and dance, and of the imitations which these afford. For serious things cannot be understood without laughable things, nor opposites at all without opposites, if a man is really to have intelligence of either; but he cannot carry out both in action, if he is to have any degree of virtue. And for this very reason he should learn them both, in order that he may not in ignorance do or say anything which is ridiculous and out of place--he should command slaves and hired strangers to imitate such things, but he should never take any serious interest in them himself, nor should any freeman or freewoman be discovered taking pains to learn them; and there should always be some element of novelty in the imitation. Let these then be laid down, both in law and in our discourse, as the regulations of laughable amusements which are generally called comedy. And, if any of the serious poets, as they are termed, who write tragedy, come to us and say--'O strangers, may we go to your city and country or may we not, and shall we bring with us our poetry--what is your will about these matters?'--how shall we answer the divine men? I think that our answer should be as follows: Best of strangers, we will say to them, we also according to our ability are tragic poets, and our tragedy is the best and noblest; for our whole state is an imitation of the best and noblest life, which we affirm to be indeed the very truth of tragedy. You are poets and we are poets, both makers of the same strains, rivals and antagonists in the noblest of dramas, which true law can alone perfect, as our hope is. Do not then suppose that we shall all in a moment allow you to erect your stage in the agora, or introduce the fair voices of your actors, speaking above our own, and permit you to harangue our women and children, and the common people, about our institutions, in language other than our own, and very often the opposite of our own. For a state would be mad which gave you this licence, until the magistrates had determined whether your poetry might be recited, and was fit for publication or not. Wherefore, O ye sons and scions of the softer Muses, first of all show your songs to the magistrates, and let them compare them with our own, and if they are the same or better we will give you a chorus; but if not, then, my friends, we cannot. Let these, then, be the customs ordained by law about all dances and the teaching of them, and let matters relating to slaves be separated
from those relating to masters, if you do not object.

CLEINIAS: We can have no hesitation in assenting when you put the matter thus.

ATHENIAN: There still remain three studies suitable for freemen. Arithmetic is one of them; the measurement of length, surface, and depth is the second; and the third has to do with the revolutions of the stars in relation to one another. Not every one has need to toil through all these things in a strictly scientific manner, but only a few, and who they are to be we will hereafter indicate at the end, which will be the proper place; not to know what is necessary for mankind in general, and what is the truth, is disgraceful to every one: and yet to enter into these matters minutely is neither easy, nor at all possible for every one; but there is something in them which is necessary and cannot be set aside, and probably he who made the proverb about God originally had this in view when he said, that 'not even God himself can fight against necessity;' he meant, if I am not mistaken, divine necessity; for as to the human necessities of which the many speak, when they talk in this manner, nothing can be more ridiculous than such an application of the words.

CLEINIAS: And what necessities of knowledge are there, Stranger, which are divine and not human?

ATHENIAN: I conceive them to be those of which he who has no use nor any knowledge at all cannot be a God, or demi-god, or hero to mankind, or able to take any serious thought or charge of them. And very unlike a divine man would he be, who is unable to count one, two, three, or to distinguish odd and even numbers, or is unable to count at all, or reckon night and day, and who is totally unacquainted with the revolution of the sun and moon, and the other stars. There would be great folly in supposing that all these are not necessary parts of knowledge to him who intends to know anything about the highest kinds of knowledge; but which these are, and how many there are of them, and when they are to be learned, and what is to be learned together and what apart, and the whole correlation of them, must be rightly apprehended first; and these leading the way we may proceed to the other parts of knowledge. For so necessity grounded in nature constrains us, against which we say that no God contends, or ever will contend.

CLEINIAS: I think, Stranger, that what you have now said is very true and agreeable to nature.

ATHENIAN: Yes, Cleinias, that is so. But it is difficult for the legislator to begin with these studies; at a more convenient time we will make regulations for them.
CLEINIAS: You seem, Stranger, to be afraid of our habitual ignorance of the subject: there is no reason why that should prevent you from speaking out.

ATHENIAN: I certainly am afraid of the difficulties to which you allude, but I am still more afraid of those who apply themselves to this sort of knowledge, and apply themselves badly. For entire ignorance is not so terrible or extreme an evil, and is far from being the greatest of all; too much cleverness and too much learning, accompanied with an ill bringing up, are far more fatal.

CLEINIAS: True.

ATHENIAN: All freemen I conceive, should learn as much of these branches of knowledge as every child in Egypt is taught when he learns the alphabet. In that country arithmetical games have been invented for the use of mere children, which they learn as a pleasure and amusement. They have to distribute apples and garlands, using the same number sometimes for a larger and sometimes for a lesser number of persons; and they arrange pugilists and wrestlers as they pair together by lot or remain over, and show how their turns come in natural order. Another mode of amusing them is to distribute vessels, sometimes of gold, brass, silver, and the like, intermixed with one another, sometimes of one metal only; as I was saying they adapt to their amusement the numbers in common use, and in this way make more intelligible to their pupils the arrangements and movements of armies and expeditions, and in the management of a household they make people more useful to themselves, and more wide awake; and again in measurements of things which have length, and breadth, and depth, they free us from that natural ignorance of all these things which is so ludicrous and disgraceful.

CLEINIAS: What kind of ignorance do you mean?

ATHENIAN: O my dear Cleinias, I, like yourself, have late in life heard with amazement of our ignorance in these matters; to me we appear to be more like pigs than men, and I am quite ashamed, not only of myself, but of all Hellenes.

ATHENIAN: I will; or rather I will show you my meaning by a question, and do you please to answer me: You know, I suppose, what length is?

CLEINIAS: Certainly.

ATHENIAN: And what breadth is?
CLEINIAS: To be sure.

ATHENIAN: And you know that these are two distinct things, and that there is a third thing called depth?

CLEINIAS: Of course.

ATHENIAN: And do not all these seem to you to be commensurable with themselves?

CLEINIAS: Yes.

ATHENIAN: That is to say, length is naturally commensurable with length, and breadth with breadth, and depth in like manner with depth?

CLEINIAS: Undoubtedly.

ATHENIAN: But if some things are commensurable and others wholly incommensurable, and you think that all things are commensurable, what is your position in regard to them?

CLEINIAS: Clearly, far from good.

ATHENIAN: Concerning length and breadth when compared with depth, or breadth and length when compared with one another, are not all the Hellenes agreed that these are commensurable with one another in some way?

CLEINIAS: Quite true.

ATHENIAN: But if they are absolutely incommensurable, and yet all of us regard them as commensurable, have we not reason to be ashamed of our compatriots; and might we not say to them: O ye best of Hellenes, is not this one of the things of which we were saying that not to know them is disgraceful, and of which to have a bare knowledge only is no great distinction?

CLEINIAS: Certainly.

ATHENIAN: And there are other things akin to these, in which there spring up other errors of the same family.

CLEINIAS: What are they?

ATHENIAN: The natures of commensurable and incommensurable quantities in their relation to one another. A man who is good for anything ought to be able, when he thinks, to distinguish them; and different persons should compete with one another in asking questions, which will be a far better
and more graceful way of passing their time than the old man's game of draughts.

CLEINIAS: I dare say; and these pastimes are not so very unlike a game of draughts.

ATHENIAN: And these, as I maintain, Cleinias, are the studies which our youth ought to learn, for they are innocent and not difficult; the learning of them will be an amusement, and they will benefit the state. If any one is of another mind, let him say what he has to say.

CLEINIAS: Certainly.

ATHENIAN: Then if these studies are such as we maintain, we will include them; if not, they shall be excluded.

CLEINIAS: Assuredly: but may we not now, Stranger, prescribe these studies as necessary, and so fill up the lacunae of our laws?

ATHENIAN: They shall be regarded as pledges which may be hereafter redeemed and removed from our state, if they do not please either us who give them, or you who accept them.

CLEINIAS: A fair condition.

ATHENIAN: Next let us see whether we are or are not willing that the study of astronomy shall be proposed for our youth.

CLEINIAS: Proceed.

ATHENIAN: Here occurs a strange phenomenon, which certainly cannot in any point of view be tolerated.

CLEINIAS: To what are you referring?

ATHENIAN: Men say that we ought not to enquire into the supreme God and the nature of the universe, nor busy ourselves in searching out the causes of things, and that such enquiries are impious; whereas the very opposite is the truth.

CLEINIAS: What do you mean?

ATHENIAN: Perhaps what I am saying may seem paradoxical, and at variance with the usual language of age. But when any one has any good and true notion which is for the advantage of the state and in every way acceptable to God, he cannot abstain from expressing it.
CLEINIAS: Your words are reasonable enough; but shall we find any good or true notion about the stars?

ATHENIAN: My good friends, at this hour all of us Hellenes tell lies, if I may use such an expression, about those great Gods, the Sun and the Moon.

CLEINIAS: Lies of what nature?

ATHENIAN: We say that they and divers other stars do not keep the same path, and we call them planets or wanderers.

CLEINIAS: Very true, Stranger; and in the course of my life I have often myself seen the morning star and the evening star and divers others not moving in their accustomed course, but wandering out of their path in all manner of ways, and I have seen the sun and moon doing what we all know that they do.

ATHENIAN: Just so, Megillus and Cleinias; and I maintain that our citizens and our youth ought to learn about the nature of the Gods in heaven, so far as to be able to offer sacrifices and pray to them in pious language, and not to blaspheme about them.

CLEINIAS: There you are right, if such a knowledge be only attainable; and if we are wrong in our mode of speaking now, and can be better instructed and learn to use better language, then I quite agree with you that such a degree of knowledge as will enable us to speak rightly should be acquired by us. And now do you try to explain to us your whole meaning, and we, on our part, will endeavour to understand you.

ATHENIAN: There is some difficulty in understanding my meaning, but not a very great one, nor will any great length of time be required. And of this I am myself a proof; for I did not know these things long ago, nor in the days of my youth, and yet I can explain them to you in a brief space of time; whereas if they had been difficult I could certainly never have explained them all, old as I am, to old men like yourselves.

CLEINIAS: True; but what is this study which you describe as wonderful and fitting for youth to learn, but of which we are ignorant? Try and explain the nature of it to us as clearly as you can.

ATHENIAN: I will. For, O my good friends, that other doctrine about the wandering of the sun and the moon and the other stars is not the truth, but the very reverse of the truth. Each of them moves in the same path—not in many paths, but in one only, which is circular, and the varieties are only apparent. Nor are we right in supposing that the swiftest of them is the slowest, nor conversely, that the slowest is the quickest. And if what I say is true, only just imagine that we had a similar notion about
horses running at Olympia, or about men who ran in the long course, and
that we addressed the swiftest as the slowest and the slowest as the
swiftest, and sang the praises of the vanquished as though he were the
victor—in that case our praises would not be true, nor very agreeable to
the runners, though they be but men; and now, to commit the same error
about the Gods which would have been ludicrous and erroneous in the case
of men—is not that ludicrous and erroneous?

CLEINIAS: Worse than ludicrous, I should say.

ATHENIAN: At all events, the Gods cannot like us to be spreading a false
report of them.

CLEINIAS: Most true, if such is the fact.

ATHENIAN: And if we can show that such is really the fact, then all these
matters ought to be learned so far as is necessary for the avoidance of
impiety; but if we cannot, they may be let alone, and let this be our
decision.

CLEINIAS: Very good.

ATHENIAN: Enough of laws relating to education and learning. But hunting
and similar pursuits in like manner claim our attention. For the
legislator appears to have a duty imposed upon him which goes beyond mere
legislation. There is something over and above law which lies in a region
between admonition and law, and has several times occurred to us in the
course of discussion; for example, in the education of very young children
there were things, as we maintain, which are not to be defined, and to
regard them as matters of positive law is a great absurdity. Now, our laws
and the whole constitution of our state having been thus delineated, the
praise of the virtuous citizen is not complete when he is described as the
person who serves the laws best and obeys them most, but the higher form
of praise is that which describes him as the good citizen who passes
through life undefiled and is obedient to the words of the legislator,
both when he is giving laws and when he assigns praise and blame. This is
the truest word that can be spoken in praise of a citizen; and the true
legislator ought not only to write his laws, but also to interweave with
them all such things as seem to him honourable and dishonourable. And the
perfect citizen ought to seek to strengthen these no less than the
principles of law which are sanctioned by punishments. I will adduce an
example which will clear up my meaning, and will be a sort of witness to
my words. Hunting is of wide extent, and has a name under which many
things are included, for there is a hunting of creatures in the water, and
of creatures in the air, and there is a great deal of hunting of land
animals of all kinds, and not of wild beasts only. The hunting after man
is also worthy of consideration; there is the hunting after him in war,
and there is often a hunting after him in the way of friendship, which is praised and also blamed; and there is thieving, and the hunting which is practised by robbers, and that of armies against armies. Now the legislator, in laying down laws about hunting, can neither abstain from noting these things, nor can he make threatening ordinances which will assign rules and penalties about all of them. What is he to do? He will have to praise and blame hunting with a view to the exercise and pursuits of youth. And, on the other hand, the young man must listen obediently; neither pleasure nor pain should hinder him, and he should regard as his standard of action the praises and injunctions of the legislator rather than the punishments which he imposes by law. This being premised, there will follow next in order moderate praise and censure of hunting; the praise being assigned to that kind which will make the souls of young men better, and the censure to that which has the opposite effect. And now let us address young men in the form of a prayer for their welfare: O friends, we will say to them, may no desire or love of hunting in the sea, or of angling or of catching the creatures in the waters, ever take possession of you, either when you are awake or when you are asleep, by hook or with weels, which latter is a very lazy contrivance; and let not any desire of catching men and of piracy by sea enter into your souls and make you cruel and lawless hunters. And as to the desire of thieving in town or country, may it never enter into your most passing thoughts; nor let the insidious fancy of catching birds, which is hardly worthy of freemen, come into the head of any youth. There remains therefore for our athletes only the hunting and catching of land animals, of which the one sort is called hunting by night, in which the hunters sleep in turn and are lazy; this is not to be commended any more than that which has intervals of rest, in which the wild strength of beasts is subdued by nets and snares, and not by the victory of a laborious spirit. Thus, only the best kind of hunting is allowed at all—of quadrupeds, which is carried on with horses and dogs and men's own persons, and they get the victory over the animals by running them down and striking them and hurling at them, those who have a care of godlike manhood taking them with their own hands. The praise and blame which is assigned to all these things has now been declared; and let the law be as follows: Let no one hinder these who verily are sacred hunters from following the chase wherever and whithersoever they will; but the hunter by night, who trusts to his nets and gins, shall not be allowed to hunt anywhere. The fowler in the mountains and waste places shall be permitted, but on cultivated ground and on consecrated wilds he shall not be permitted; and any one who meets him may stop him. As to the hunter in waters, he may hunt anywhere except in harbours or sacred streams or marshes or pools, provided only that he do not pollute the water with poisonous juices. And now we may say that all our enactments about education are complete.

CLEINIAS: Very good.
BOOK VIII.

ATHENIAN: Next, with the help of the Delphian oracle, we have to institute festivals and make laws about them, and to determine what sacrifices will be for the good of the city, and to what Gods they shall be offered; but when they shall be offered, and how often, may be partly regulated by us.

CLEINIAS: The number--yes.

ATHENIAN: Then we will first determine the number; and let the whole number be 365--one for every day--so that one magistrate at least will sacrifice daily to some God or demi-god on behalf of the city, and the citizens, and their possessions. And the interpreters, and priests, and priestesses, and prophets shall meet, and, in company with the guardians of the law, ordain those things which the legislator of necessity omits; and I may remark that they are the very persons who ought to take note of what is omitted. The law will say that there are twelve feasts dedicated to the twelve Gods, after whom the several tribes are named; and that to each of them they shall sacrifice every month, and appoint choruses, and musical and gymnastic contests, assigning them so as to suit the Gods and seasons of the year. And they shall have festivals for women, distinguishing those which ought to be separated from the men's festivals, and those which ought not. Further, they shall not confuse the infernal deities and their rites with the Gods who are termed heavenly and their rites, but shall separate them, giving to Pluto his own in the twelfth month, which is sacred to him, according to the law. To such a deity warlike men should entertain no aversion, but they should honour him as being always the best friend of man. For the connexion of soul and body is no way better than the dissolution of them, as I am ready to maintain quite seriously. Moreover, those who would regulate these matters rightly should consider, that our city among existing cities has no fellow, either in respect of leisure or command of the necessaries of life, and that like an individual she ought to live happily. And those who would live happily should in the first place do no wrong to one another, and ought not themselves to be wronged by others; to attain the first is not difficult, but there is great difficulty in acquiring the power of not being wronged. No man can be perfectly secure against wrong, unless he has become perfectly good; and cities are like individuals in this, for a city if good has a life of peace, but if evil, a life of war within and without. Wherefore the citizens ought to practise war--not in time of war, but rather while they are at peace. And every city which has any sense, should take the field at least for one day in every month, and for more if the magistrates think fit, having no regard to winter cold or summer heat; and they should go out en masse, including their wives and their children, when the magistrates determine to lead forth the whole people, or in separate portions when summoned by them; and they should always provide that there should be games and sacrificial feasts, and they should have
tournaments, imitating in as lively a manner as they can real battles. And they should distribute prizes of victory and valour to the competitors, passing censures and encomiums on one another according to the characters which they bear in the contests and in their whole life, honouring him who seems to be the best, and blaming him who is the opposite. And let poets celebrate the victors—not however every poet, but only one who in the first place is not less than fifty years of age; nor should he be one who, although he may have musical and poetical gifts, has never in his life done any noble or illustrious action; but those who are themselves good and also honourable in the state, creators of noble actions—let their poems be sung, even though they be not very musical. And let the judgment of them rest with the instructor of youth and the other guardians of the laws, who shall give them this privilege, and they alone shall be free to sing; but the rest of the world shall not have this liberty. Nor shall any one dare to sing a song which has not been approved by the judgment of the guardians of the laws, not even if his strain be sweeter than the songs of Thamyris and Orpheus; but only such poems as have been judged sacred and dedicated to the Gods, and such as are the works of good men, in which praise or blame has been awarded and which have been deemed to fulfil their design fairly.

The regulations about war, and about liberty of speech in poetry, ought to apply equally to men and women. The legislator may be supposed to argue the question in his own mind: Who are my citizens for whom I have set in order the city? Are they not competitors in the greatest of all contests, and have they not innumerable rivals? To be sure, will be the natural reply. Well, but if we were training boxers, or pancratiasts, or any other sort of athletes, would they never meet until the hour of contest arrived; and should we do nothing to prepare ourselves previously by daily practice? Surely, if we were boxers, we should have been learning to fight for many days before, and exercising ourselves in imitating all those blows and wards which we were intending to use in the hour of conflict; and in order that we might come as near to reality as possible, instead of cestuses we should put on boxing-gloves, that the blows and the wards might be practised by us to the utmost of our power. And if there were a lack of competitors, the ridicule of fools would not deter us from hanging up a lifeless image and practising at that. Or if we had no adversary at all, animate or inanimate, should we not venture in the dearth of antagonists to spar by ourselves? In what other manner could we ever study the art of self-defence?

CLEINIAS: The way which you mention, Stranger, would be the only way.

ATHENIAN: And shall the warriors of our city, who are destined when occasion calls to enter the greatest of all contests, and to fight for their lives, and their children, and their property, and the whole city, be worse prepared than boxers? And will the legislator, because he is
afraid that their practising with one another may appear to some ridiculous, abstain from commanding them to go out and fight; will he not ordain that soldiers shall perform lesser exercises without arms every day, making dancing and all gymnastic tend to this end; and also will he not require that they shall practise some gymnastic exercises, greater as well as lesser, as often as every month; and that they shall have contests one with another in every part of the country, seizing upon posts and lying in ambush, and imitating in every respect the reality of war; fighting with boxing-gloves and hurling javelins, and using weapons somewhat dangerous, and as nearly as possible like the true ones, in order that the sport may not be altogether without fear, but may have terrors and to a certain degree show the man who has and who has not courage; and that the honour and dishonour which are assigned to them respectively, may prepare the whole city for the true conflict of life? If any one dies in these mimic contests, the homicide is involuntary, and we will make the slayer, when he has been purified according to law, to be pure of blood, considering that if a few men should die, others as good as they will be born; but that if fear is dead, then the citizens will never find a test of superior and inferior natures, which is a far greater evil to the state than the loss of a few.

CLEINIAS: We are quite agreed, Stranger, that we should legislate about such things, and that the whole state should practise them.

ATHENIAN: And what is the reason that dances and contests of this sort hardly ever exist in states, at least not to any extent worth speaking of? Is this due to the ignorance of mankind and their legislators?

CLEINIAS: Perhaps.

ATHENIAN: Certainly not, sweet Cleinias; there are two causes, which are quite enough to account for the deficiency.

CLEINIAS: What are they?

ATHENIAN: One cause is the love of wealth, which wholly absorbs men, and never for a moment allows them to think of anything but their own private possessions; on this the soul of every citizen hangs suspended, and can attend to nothing but his daily gain; mankind are ready to learn any branch of knowledge, and to follow any pursuit which tends to this end, and they laugh at every other: that is one reason why a city will not be in earnest about such contests or any other good and honourable pursuit. But from an insatiable love of gold and silver, every man will stoop to any art or contrivance, seemly or unseemly, in the hope of becoming rich; and will make no objection to performing any action, holy, or unholy and utterly base; if only like a beast he have the power of eating and drinking all kinds of things, and procuring for himself in every sort of
way the gratification of his lusts.

CLEINIAS: True.

ATHENIAN: Let this, then, be deemed one of the causes which prevent states from pursuing in an efficient manner the art of war, or any other noble aim, but makes the orderly and temperate part of mankind into merchants, and captains of ships, and servants, and converts the valiant sort into thieves and burglars, and robbers of temples, and violent, tyrannical persons; many of whom are not without ability, but they are unfortunate.

CLEINIAS: What do you mean?

ATHENIAN: Must not they be truly unfortunate whose souls are compelled to pass through life always hungering?

CLEINIAS: Then that is one cause, Stranger; but you spoke of another.

ATHENIAN: Thank you for reminding me.

CLEINIAS: The insatiable lifelong love of wealth, as you were saying, is one cause which absorbs mankind, and prevents them from rightly practising the arts of war: Granted; and now tell me, what is the other?

ATHENIAN: Do you imagine that I delay because I am in a perplexity?

CLEINIAS: No; but we think that you are too severe upon the money-loving temper, of which you seem in the present discussion to have a peculiar dislike.

ATHENIAN: That is a very fair rebuke, Cleinias; and I will now proceed to the second cause.

CLEINIAS: Proceed.

ATHENIAN: I say that governments are a cause--democracy, oligarchy, tyranny, concerning which I have often spoken in the previous discourse; or rather governments they are not, for none of them exercises a voluntary rule over voluntary subjects; but they may be truly called states of discord, in which while the government is voluntary, the subjects always obey against their will, and have to be coerced; and the ruler fears the subject, and will not, if he can help, allow him to become either noble, or rich, or strong, or valiant, or warlike at all. These two are the chief causes of almost all evils, and of the evils of which I have been speaking they are notably the causes. But our state has escaped both of them; for her citizens have the greatest leisure, and they are not subject to one another, and will, I think, be made by these laws the reverse of lovers of
money. Such a constitution may be reasonably supposed to be the only one existing which will accept the education which we have described, and the martial pastimes which have been perfected according to our idea.

CLEINIAS: True.

ATHENIAN: Then next we must remember, about all gymnastic contests, that only the warlike sort of them are to be practised and to have prizes of victory; and those which are not military are to be given up. The military sort had better be completely described and established by law; and first, let us speak of running and swiftness.

CLEINIAS: Very good.

ATHENIAN: Certainly the most military of all qualities is general activity of body, whether of foot or hand. For escaping or for capturing an enemy, quickness of foot is required; but hand-to-hand conflict and combat need vigour and strength.

CLEINIAS: Very true.

ATHENIAN: Neither of them can attain their greatest efficiency without arms.

CLEINIAS: How can they?

ATHENIAN: Then our herald, in accordance with the prevailing practice, will first summon the runner--he will appear armed, for to an unarmed competitor we will not give a prize. And he shall enter first who is to run the single course bearing arms; next, he who is to run the double course; third, he who is to run the horse-course; and fourthly, he who is to run the long course; the fifth whom we start, shall be the first sent forth in heavy armour, and shall run a course of sixty stadia to some temple of Ares--and we will send forth another, whom we will style the more heavily armed, to run over smoother ground. There remains the archer; and he shall run in the full equipments of an archer a distance of 100 stadia over mountains, and across every sort of country, to a temple of Apollo and Artemis; this shall be the order of the contest, and we will wait for them until they return, and will give a prize to the conqueror in each.

CLEINIAS: Very good.

ATHENIAN: Let us suppose that there are three kinds of contests--one of boys, another of beardless youths, and a third of men. For the youths we will fix the length of the contest at two-thirds, and for the boys at half of the entire course, whether they contend as archers or as heavy-armed.
Touching the women, let the girls who are not grown up compete naked in the stadium and the double course, and the horse-course and the long course, and let them run on the race-ground itself; those who are thirteen years of age and upwards until their marriage shall continue to share in contests if they are not more than twenty, and shall be compelled to run up to eighteen; and they shall descend into the arena in suitable dresses. Let these be the regulations about contests in running both for men and women.

Respecting contests of strength, instead of wrestling and similar contests of the heavier sort, we will institute conflicts in armour of one against one, and two against two, and so on up to ten against ten. As to what a man ought not to suffer or do, and to what extent, in order to gain the victory—as in wrestling, the masters of the art have laid down what is fair and what is not fair, so in fighting in armour—we ought to call in skilful persons, who shall judge for us and be our assessors in the work of legislation; they shall say who deserves to be victor in combats of this sort, and what he is not to do or have done to him, and in like manner what rule determines who is defeated; and let these ordinances apply to women until they are married as well as to men. The pancration shall have a counterpart in a combat of the light-armed; they shall contend with bows and with light shields and with javelins and in the throwing of stones by slings and by hand: and laws shall be made about it, and rewards and prizes given to him who best fulfils the ordinances of the law.

Next in order we shall have to legislate about the horse contests. Now we do not need many horses, for they cannot be of much use in a country like Crete, and hence we naturally do not take great pains about the rearing of them or about horse races. There is no one who keeps a chariot among us, and any rivalry in such matters would be altogether out of place; there would be no sense nor any shadow of sense in instituting contests which are not after the manner of our country. And therefore we give our prizes for single horses—for colts who have not yet cast their teeth, and for those who are intermediate, and for the full-grown horses themselves; and thus our equestrian games will accord with the nature of the country. Let them have conflict and rivalry in these matters in accordance with the law, and let the colonels and generals of horse decide together about all courses and about the armed competitors in them. But we have nothing to say to the unarmed either in gymnastic exercises or in these contests. On the other hand, the Cretan Bowman or javelin-man who fights in armour on horseback is useful, and therefore we may as well place a competition of this sort among our amusements. Women are not to be forced to compete by laws and ordinances; but if from previous training they have acquired the habit and are strong enough and like to take part, let them do so, girls as well as boys, and no blame to them.
Thus the competition in gymnastic and the mode of learning it have been described; and we have spoken also of the toils of the contest, and of daily exercises under the superintendence of masters. Likewise, what relates to music has been, for the most part, completed. But as to rhapsodes and the like, and the contests of choruses which are to perform at feasts, all this shall be arranged when the months and days and years have been appointed for Gods and demi-gods, whether every third year, or again every fifth year, or in whatever way or manner the Gods may put into men's minds the distribution and order of them. At the same time, we may expect that the musical contests will be celebrated in their turn by the command of the judges and the director of education and the guardians of the law meeting together for this purpose, and themselves becoming legislators of the times and nature and conditions of the choral contests and of dancing in general. What they ought severally to be in language and song, and in the admixture of harmony with rhythm and the dance, has been often declared by the original legislator; and his successors ought to follow him, making the games and sacrifices duly to correspond at fitting times, and appointing public festivals. It is not difficult to determine how these and the like matters may have a regular order; nor, again, will the alteration of them do any great good or harm to the state. There is, however, another matter of great importance and difficulty, concerning which God should legislate, if there were any possibility of obtaining from Him an ordinance about it. But seeing that divine aid is not to be had, there appears to be a need of some bold man who specially honours plainness of speech, and will say outright what he thinks best for the city and citizens--ordaining what is good and convenient for the whole state amid the corruptions of human souls, opposing the mightiest lusts, and having no man his helper but himself standing alone and following reason only.

CLEINIAS: What is this, Stranger, that you are saying? For we do not as yet understand your meaning.

ATHENIAN: Very likely; I will endeavour to explain myself more clearly. When I came to the subject of education, I beheld young men and maidens holding friendly intercourse with one another. And there naturally arose in my mind a sort of apprehension--I could not help thinking how one is to deal with a city in which youths and maidens are well nurtured, and have nothing to do, and are not undergoing the excessive and servile toils which extinguish wantonness, and whose only cares during their whole life are sacrifices and festivals and dances. How, in such a state as this, will they abstain from desires which thrust many a man and woman into perdition; and from which reason, assuming the functions of law, commands them to abstain? The ordinances already made may possibly get the better of most of these desires; the prohibition of excessive wealth is a very considerable gain in the direction of temperance, and the whole education of our youth imposes a law of moderation on them; moreover, the eye of the
rulers is required always to watch over the young, and never to lose sight of them; and these provisions do, as far as human means can effect anything, exercise a regulating influence upon the desires in general. But how can we take precautions against the unnatural loves of either sex, from which innumerable evils have come upon individuals and cities? How shall we devise a remedy and way of escape out of so great a danger? Truly, Cleinias, here is a difficulty. In many ways Crete and Lacedaemon furnish a great help to those who make peculiar laws; but in the matter of love, as we are alone, I must confess that they are quite against us. For if any one following nature should lay down the law which existed before the days of Laius, and denounce these lusts as contrary to nature, adducing the animals as a proof that such unions were monstrous, he might prove his point, but he would be wholly at variance with the custom of your states. Further, they are repugnant to a principle which we say that a legislator should always observe; for we are always enquiring which of our enactments tends to virtue and which not. And suppose we grant that these loves are accounted by law to the honourable, or at least not disgraceful, in what degree will they contribute to virtue? Will such passions implant in the soul of him who is seduced the habit of courage, or in the soul of the seducer the principle of temperance? Who will ever believe this? or rather, who will not blame the effeminacy of him who yields to pleasures and is unable to hold out against them? Will not all men censure as womanly him who imitates the woman? And who would ever think of establishing such a practice by law? certainly no one who had in his mind the image of true law. How can we prove that what I am saying is true? He who would rightly consider these matters must see the nature of friendship and desire, and of these so-called loves, for they are of two kinds, and out of the two arises a third kind, having the same name; and this similarity of name causes all the difficulty and obscurity.

CLEINIAS: How is that?

ATHENIAN: Dear is the like in virtue to the like, and the equal to the equal; dear also, though unlike, is he who has abundance to him who is in want. And when either of these friendships becomes excessive, we term the excess love.

CLEINIAS: Very true.

ATHENIAN: The friendship which arises from contraries is horrible and coarse, and has often no tie of communion; but that which arises from likeness is gentle, and has a tie of communion which lasts through life. As to the mixed sort which is made up of them both, there is, first of all, a difficulty in determining what he who is possessed by this third love desires; moreover, he is drawn different ways, and is in doubt between the two principles; the one exhorting him to enjoy the beauty of youth, and the other forbidding him. For the one is a lover of the body,
and hungers after beauty, like ripe fruit, and would fain satisfy himself without any regard to the character of the beloved; the other holds the desire of the body to be a secondary matter, and looking rather than loving and with his soul desiring the soul of the other in a becoming manner, regards the satisfaction of the bodily love as wantonness; he reverences and respects temperance and courage and magnanimity and wisdom, and wishes to live chastely with the chaste object of his affection. Now the sort of love which is made up of the other two is that which we have described as the third. Seeing then that there are these three sorts of love, ought the law to prohibit and forbid them all to exist among us? Is it not rather clear that we should wish to have in the state the love which is of virtue and which desires the beloved youth to be the best possible; and the other two, if possible, we should hinder? What do you say, friend Megillus?

MEGILLUS: I think, Stranger, that you are perfectly right in what you have been now saying.

Athenian: I knew well, my friend, that I should obtain your assent, which I accept, and therefore have no need to analyze your custom any further. Cleinias shall be prevailed upon to give me his assent at some other time. Enough of this; and now let us proceed to the laws.

MEGILLUS: Very good.

ATHENIAN: Upon reflection I see a way of imposing the law, which, in one respect, is easy, but, in another, is of the utmost difficulty.

MEGILLUS: What do you mean?

ATHENIAN: We are all aware that most men, in spite of their lawless natures, are very strictly and precisely restrained from intercourse with the fair, and this is not at all against their will, but entirely with their will.

MEGILLUS: When do you mean?

ATHENIAN: When any one has a brother or sister who is fair; and about a son or daughter the same unwritten law holds, and is a most perfect safeguard, so that no open or secret connexion ever takes place between them. Nor does the thought of such a thing ever enter at all into the minds of most of them.

MEGILLUS: Very true.

ATHENIAN: Does not a little word extinguish all pleasures of that sort?
MEGILLUS: What word?

ATHENIAN: The declaration that they are unholy, hated of God, and most infamous; and is not the reason of this that no one has ever said the opposite, but every one from his earliest childhood has heard men speaking in the same manner about them always and everywhere, whether in comedy or in the graver language of tragedy? When the poet introduces on the stage a Thyestes or an Oedipus, or a Macareus having secret intercourse with his sister, he represents him, when found out, ready to kill himself as the penalty of his sin.

MEGILLUS: You are very right in saying that tradition, if no breath of opposition ever assails it, has a marvellous power.

ATHENIAN: Am I not also right in saying that the legislator who wants to master any of the passions which master man may easily know how to subdue them? He will consecrate the tradition of their evil character among all, slaves and freemen, women and children, throughout the city: that will be the surest foundation of the law which he can make.

MEGILLUS: Yes; but will he ever succeed in making all mankind use the same language about them?

ATHENIAN: A good objection; but was I not just now saying that I had a way to make men use natural love and abstain from unnatural, not intentionally destroying the seeds of human increase, or sowing them in stony places, in which they will take no root; and that I would command them to abstain too from any female field of increase in which that which is sown is not likely to grow? Now if a law to this effect could only be made perpetual, and gain an authority such as already prevents intercourse of parents and children--such a law, extending to other sensual desires, and conquering them, would be the source of ten thousand blessings. For, in the first place, moderation is the appointment of nature, and deters men from all frenzy and madness of love, and from all adulteries and immoderate use of meats and drinks, and makes them good friends to their own wives. And innumerable other benefits would result if such a law could only be enforced. I can imagine some lusty youth who is standing by, and who, on hearing this enactment, declares in scurrilous terms that we are making foolish and impossible laws, and fills the world with his outcry. And therefore I said that I knew a way of enacting and perpetuating such a law, which was very easy in one respect, but in another most difficult. There is no difficulty in seeing that such a law is possible, and in what way; for, as I was saying, the ordinance once consecrated would master the soul of every man, and terrify him into obedience. But matters have now come to such a pass that even then the desired result seems as if it could not be attained, just as the continuance of an entire state in the practice of common meals is also deemed impossible. And although this
latter is partly disproven by the fact of their existence among you, still
even in your cities the common meals of women would be regarded as
unnatural and impossible. I was thinking of the rebelliousness of the
human heart when I said that the permanent establishment of these things
is very difficult.

MEGILLUS: Very true.

ATHENIAN: Shall I try and find some sort of persuasive argument which will
prove to you that such enactments are possible, and not beyond human
nature?

CLEINIAS: By all means.

ATHENIAN: Is a man more likely to abstain from the pleasures of love and
to do what he is bidden about them, when his body is in a good condition,
or when he is in an ill condition, and out of training?

CLEINIAS: He will be far more temperate when he is in training.

ATHENIAN: And have we not heard of Iccus of Tarentum, who, with a view to
the Olympic and other contests, in his zeal for his art, and also because
he was of a manly and temperate disposition, never had any connexion with
a woman or a youth during the whole time of his training? And the same is
said of Crison and Astylus and Diopompus and many others; and yet,
Cleinias, they were far worse educated in their minds than your and my
citizens, and in their bodies far more lusty.

CLEINIAS: No doubt this fact has been often affirmed positively by the
ancestors of these athletes.

ATHENIAN: And had they the courage to abstain from what is ordinarily
deemed a pleasure for the sake of a victory in wrestling, running, and the
like; and shall our young men be incapable of a similar endurance for the
sake of a much nobler victory, which is the noblest of all, as from their
youth upwards we will tell them, charming them, as we hope, into the
belief of this by tales and sayings and songs?

CLEINIAS: Of what victory are you speaking?

ATHENIAN: Of the victory over pleasure, which if they win, they will live
happily; or if they are conquered, the reverse of happily. And, further,
may we not suppose that the fear of impiety will enable them to master
that which other inferior people have mastered?

CLEINIAS: I dare say.
ATHENIAN: And since we have reached this point in our legislation, and have fallen into a difficulty by reason of the vices of mankind, I affirm that our ordinance should simply run in the following terms: Our citizens ought not to fall below the nature of birds and beasts in general, who are born in great multitudes, and yet remain until the age for procreation virgin and unmarried, but when they have reached the proper time of life are coupled, male and female, and lovingly pair together, and live the rest of their lives in holiness and innocence, abiding firmly in their original compact: surely, we will say to them, you should be better than the animals. But if they are corrupted by the other Hellenes and the common practice of barbarians, and they see with their eyes and hear with their ears of the so-called free love everywhere prevailing among them, and they themselves are not able to get the better of the temptation, the guardians of the law, exercising the functions of lawgivers, shall devise a second law against them.

CLEINIAS: And what law would you advise them to pass if this one failed?

ATHENIAN: Clearly, Cleinias, the one which would naturally follow.

CLEINIAS: What is that?

ATHENIAN: Our citizens should not allow pleasures to strengthen with indulgence, but should by toil divert the aliment and exuberance of them into other parts of the body; and this will happen if no immodesty be allowed in the practice of love. Then they will be ashamed of frequent intercourse, and they will find pleasure, if seldom enjoyed, to be a less imperious mistress. They should not be found out doing anything of the sort. Concealment shall be honourable, and sanctioned by custom and made law by unwritten prescription; on the other hand, to be detected shall be esteemed dishonourable, but not, to abstain wholly. In this way there will be a second legal standard of honourable and dishonourable, involving a second notion of right. Three principles will comprehend all those corrupt natures whom we call inferior to themselves, and who form but one class, and will compel them not to transgress.

CLEINIAS: What are they?

ATHENIAN: The principle of piety, the love of honour, and the desire of beauty, not in the body but in the soul. These are, perhaps, romantic aspirations; but they are the noblest of aspirations, if they could only be realised in all states, and, God willing, in the matter of love we may be able to enforce one of two things--either that no one shall venture to touch any person of the freeborn or noble class except his wedded wife, or sow the unconsecrated and bastard seed among harlots, or in barren and unnatural lusts; or at least we may abolish altogether the connection of men with men; and as to women, if any man has to do with any but those who
come into his house duly married by sacred rites, whether they be bought or acquired in any other way, and he offends publicly in the face of all mankind, we shall be right in enacting that he be deprived of civic honours and privileges, and be deemed to be, as he truly is, a stranger. Let this law, then, whether it is one, or ought rather to be called two, be laid down respecting love in general, and the intercourse of the sexes which arises out of the desires, whether rightly or wrongly indulged.

MEGILLUS: I, for my part, Stranger, would gladly receive this law. Cleinias shall speak for himself, and tell you what is his opinion.

CLEINIAS: I will, Megillus, when an opportunity offers; at present, I think that we had better allow the Stranger to proceed with his laws.

MEGILLUS: Very good.

ATHENIAN: We had got about as far as the establishment of the common tables, which in most places would be difficult, but in Crete no one would think of introducing any other custom. There might arise a question about the manner of them--whether they shall be such as they are here in Crete, or such as they are in Lacedaemon--or is there a third kind which may be better than either of them? The answer to this question might be easily discovered, but the discovery would do no great good, for at present they are very well ordered.

Leaving the common tables, we may therefore proceed to the means of providing food. Now, in cities the means of life are gained in many ways and from divers sources, and in general from two sources, whereas our city has only one. For most of the Hellenes obtain their food from sea and land, but our citizens from land only. And this makes the task of the legislator less difficult--half as many laws will be enough, and much less than half; and they will be of a kind better suited to free men. For he has nothing to do with laws about shipowners and merchants and retailers and inn-keepers and tax collectors and mines and moneylending and compound interest and innumerable other things--bidding good-bye to these, he gives laws to husbandmen and shepherds and bee-keepers, and to the guardians and superintendents of their implements; and he has already legislated for greater matters, as for example, respecting marriage and the procreation and nurture of children, and for education, and the establishment of offices--and now he must direct his laws to those who provide food and labour in preparing it.

Let us first of all, then, have a class of laws which shall be called the laws of husbandmen. And let the first of them be the law of Zeus, the God of boundaries. Let no one shift the boundary line either of a fellow-citizen who is a neighbour, or, if he dwells at the extremity of the land, of any stranger who is conterminous with him, considering that this is
truly 'to move the immovable,' and every one should be more willing to
move the largest rock which is not a landmark, than the least stone which
is the sworn mark of friendship and hatred between neighbours; for Zeus,
the god of kindred, is the witness of the citizen, and Zeus, the god of
strangers, of the stranger, and when aroused, terrible are the wars which
they stir up. He who obeys the law will never know the fatal consequences
of disobedience, but he who despises the law shall be liable to a double
penalty, the first coming from the Gods, and the second from the law. For
let no one wilfully remove the boundaries of his neighbour's land, and if
any one does, let him who will inform the landowners, and let them bring
him into court, and if he be convicted of re-dividing the land by stealth
or by force, let the court determine what he ought to suffer or pay. In
the next place, many small injuries done by neighbours to one another,
through their multiplication, may cause a weight of enmity, and make
neighbourhood a very disagreeable and bitter thing. Wherefore a man ought
to be very careful of committing any offence against his neighbour, and
especially of encroaching on his neighbour's land; for any man may easily
do harm, but not every man can do good to another. He who encroaches on
his neighbour's land, and transgresses his boundaries, shall make good the
damage, and, to cure him of his impudence and also of his meanness, he
shall pay a double penalty to the injured party. Of these and the like
matters the wardens of the country shall take cognizance, and be the
judges of them and assessors of the damage; in the more important cases,
as has been already said, the whole number of them belonging to any one of
the twelve divisions shall decide, and in the lesser cases the commanders:
or, again, if any one pastures his cattle on his neighbour's land, they
shall see the injury, and adjudge the penalty. And if any one, by decoying
the bees, gets possession of another's swarms, and draws them to himself
by making noises, he shall pay the damage; or if any one sets fire to his
own wood and takes no care of his neighbour's property, he shall be fined
at the discretion of the magistrates. And if in planting he does not leave
a fair distance between his own and his neighbour's land, he shall be
punished, in accordance with the enactments of many lawgivers, which we
may use, not deeming it necessary that the great legislator of our state
should determine all the trifles which might be decided by any body; for
example, husbandmen have had of old excellent laws about waters, and there
is no reason why we should propose to divert their course: He who likes
may draw water from the fountain-head of the common stream on to his own
land, if he do not cut off the spring which clearly belongs to some other
owner; and he may take the water in any direction which he pleases, except
through a house or temple or sepulchre, but he must be careful to do no
harm beyond the channel. And if there be in any place a natural dryness of
the earth, which keeps in the rain from heaven, and causes a deficiency in
the supply of water, let him dig down on his own land as far as the clay,
and if at this depth he finds no water, let him obtain water from his
neighbours, as much as is required for his servants' drinking, and if his
neighbours, too, are limited in their supply, let him have a fixed
measure, which shall be determined by the wardens of the country. This he shall receive each day, and on these terms have a share of his neighbours' water. If there be heavy rain, and one of those on the lower ground injures some tiller of the upper ground, or some one who has a common wall, by refusing to give them an outlet for water; or, again, if some one living on the higher ground recklessly lets off the water on his lower neighbour, and they cannot come to terms with one another, let him who will call in a warden of the city, if he be in the city, or if he be in the country, a warden of the country, and let him obtain a decision determining what each of them is to do. And he who will not abide by the decision shall suffer for his malignant and morose temper, and pay a fine to the injured party, equivalent to double the value of the injury, because he was unwilling to submit to the magistrates.

Now the participation of fruits shall be ordered on this wise. The goddess of Autumn has two gracious gifts: one the joy of Dionysus which is not treasured up; the other, which nature intends to be stored. Let this be the law, then, concerning the fruits of autumn: He who tastes the common or storing fruits of autumn, whether grapes or figs, before the season of vintage which coincides with Arcturus, either on his own land or on that of others--let him pay fifty drachmae, which shall be sacred to Dionysus, if he pluck them from his own land; and if from his neighbour's land, a mina, and if from any others', two-thirds of a mina. And he who would gather the 'choice' grapes or the 'choice' figs, as they are now termed, if he take them off his own land, let him pluck them how and when he likes; but if he take them from the ground of others without their leave, let him in that case be always punished in accordance with the law which ordains that he should not move what he has not laid down. And if a slave touches any fruit of this sort, without the consent of the owner of the land, he shall be beaten with as many blows as there are grapes on the bunch, or figs on the fig-tree. Let a metic purchase the 'choice' autumnal fruit, and then, if he pleases, he may gather it; but if a stranger is passing along the road, and desires to eat, let him take of the 'choice' grape for himself and a single follower without payment, as a tribute of hospitality. The law however forbids strangers from sharing in the sort which is not used for eating; and if any one, whether he be master or slave, takes of them in ignorance, let the slave be beaten, and the freeman dismissed with admonitions, and instructed to take of the other autumnal fruits which are unfit for making raisins and wine, or for laying by as dried figs. As to pears, and apples, and pomegranates, and similar fruits, there shall be no disgrace in taking them secretly; but he who is caught, if he be of less than thirty years of age, shall be struck and beaten off, but not wounded; and no freeman shall have any right of satisfaction for such blows. Of these fruits the stranger may partake, just as he may of the fruits of autumn. And if an elder, who is more than thirty years of age, eat of them on the spot, let him, like the stranger, be allowed to partake of all such fruits, but he must carry away nothing.
If, however, he will not obey the law, let him run the risk of failing in the competition of virtue, in case any one takes notice of his actions before the judges at the time.

Water is the greatest element of nutrition in gardens, but is easily polluted. You cannot poison the soil, or the sun, or the air, which are the other elements of nutrition in plants, or divert them, or steal them; but all these things may very likely happen in regard to water, which must therefore be protected by law. And let this be the law: If any one intentionally pollutes the water of another, whether the water of a spring, or collected in reservoirs, either by poisonous substances, or by digging, or by theft, let the injured party bring the cause before the wardens of the city, and claim in writing the value of the loss; if the accused be found guilty of injuring the water by deleterious substances, let him not only pay damages, but purify the stream or the cistern which contains the water, in such manner as the laws of the interpreters order the purification to be made by the offender in each case.

With respect to the gathering in of the fruits of the soil, let a man, if he pleases, carry his own fruits through any place in which he either does no harm to any one, or himself gains three times as much as his neighbour loses. Now of these things the magistrates should be cognizant, as of all other things in which a man intentionally does injury to another or to the property of another, by fraud or force, in the use which he makes of his own property. All these matters a man should lay before the magistrates, and receive damages, supposing the injury to be not more than three minae; or if he have a charge against another which involves a larger amount, let him bring his suit into the public courts and have the evil-doer punished. But if any of the magistrates appear to adjudge the penalties which he imposes in an unjust spirit, let him be liable to pay double to the injured party. Any one may bring the offences of magistrates, in any particular case, before the public courts. There are innumerable little matters relating to the modes of punishment, and applications for suits, and summonses and the witnesses to summonses—for example, whether two witnesses should be required for a summons, or how many—and all such details, which cannot be omitted in legislation, but are beneath the wisdom of an aged legislator. These lesser matters, as they indeed are in comparison with the greater ones, let a younger generation regulate by law, after the patterns which have preceded, and according to their own experience of the usefulness and necessity of such laws; and when they are duly regulated let there be no alteration, but let the citizens live in the observance of them.

Now of artisans, let the regulations be as follows: In the first place, let no citizen or servant of a citizen be occupied in handicraft arts; for he who is to secure and preserve the public order of the state, has an art which requires much study and many kinds of knowledge, and does not admit
of being made a secondary occupation; and hardly any human being is capable of pursuing two professions or two arts rightly, or of practising one art himself, and superintending some one else who is practising another. Let this, then, be our first principle in the state: No one who is a smith shall also be a carpenter, and if he be a carpenter, he shall not superintend the smith's art rather than his own, under the pretext that in superintending many servants who are working for him, he is likely to superintend them better, because more revenue will accrue to him from them than from his own art; but let every man in the state have one art, and get his living by that. Let the wardens of the city labour to maintain this law, and if any citizen incline to any other art rather than the study of virtue, let them punish him with disgrace and infamy, until they bring him back into his own right course; and if any stranger profess two arts, let them chastise him with bonds and money penalties, and expulsion from the state, until they compel him to be one only and not many.

But as touching payments for hire, and contracts of work, or in case any one does wrong to any of the citizens, or they do wrong to any other, up to fifty drachmae, let the wardens of the city decide the case; but if a greater amount be involved, then let the public courts decide according to law. Let no one pay any duty either on the importation or exportation of goods; and as to frankincense and similar perfumes, used in the service of the Gods, which come from abroad, and purple and other dyes which are not produced in the country, or the materials of any art which have to be imported, and which are not necessary--no one should import them; nor, again, should any one export anything which is wanted in the country. Of all these things let there be inspectors and superintendents, taken from the guardians of the law; and they shall be the twelve next in order to the five seniors. Concerning arms, and all implements which are required for military purposes, if there be need of introducing any art, or plant, or metal, or chains of any kind, or animals for use in war, let the commanders of the horse and the generals have authority over their importation and exportation; the city shall send them out and also receive them, and the guardians of the law shall make fit and proper laws about them. But let there be no retail trade for the sake of moneymaking, either in these or any other articles, in the city or country at all.

With respect to food and the distribution of the produce of the country, the right and proper way seems to be nearly that which is the custom of Crete; for all should be required to distribute the fruits of the soil into twelve parts, and in this way consume them. Let the twelfth portion of each as for instance of wheat and barley, to which the rest of the fruits of the earth shall be added, as well as the animals which are for sale in each of the twelve divisions, be divided in due proportion into three parts; one part for freemen, another for their servants, and a third for craftsmen and in general for strangers, whether sojourners who may be dwelling in the city, and like other men must live, or those who come on
some business which they have with the state, or with some individual. Let only this third part of all necessaries be required to be sold; out of the other two-thirds no one shall be compelled to sell. And how will they be best distributed? In the first place, we see clearly that the distribution will be of equals in one point of view, and in another point of view of unequals.

CLEINIAS: What do you mean?

ATHENIAN: I mean that the earth of necessity produces and nourishes the various articles of food, sometimes better and sometimes worse.

CLEINIAS: Of course.

ATHENIAN: Such being the case, let no one of the three portions be greater than either of the other two--neither that which is assigned to masters or to slaves, nor again that of the stranger; but let the distribution to all be equal and alike, and let every citizen take his two portions and distribute them among slaves and freemen, he having power to determine the quantity and quality. And what remains he shall distribute by measure and number among the animals who have to be sustained from the earth, taking the whole number of them.

In the second place, our citizens should have separate houses duly ordered; and this will be the order proper for men like them. There shall be twelve hamlets, one in the middle of each twelfth portion, and in each hamlet they shall first set apart a market-place, and the temples of the Gods, and of their attendant demi-gods; and if there be any local deities of the Magnetes, or holy seats of other ancient deities, whose memory has been preserved, to these let them pay their ancient honours. But Hestia, and Zeus, and Athene will have temples everywhere together with the God who presides in each of the twelve districts. And the first erection of houses shall be around these temples, where the ground is highest, in order to provide the safest and most defensible place of retreat for the guards. All the rest of the country they shall settle in the following manner: They shall make thirteen divisions of the craftsmen; one of them they shall establish in the city, and this, again, they shall subdivide into twelve lesser divisions, among the twelve districts of the city, and the remainder shall be distributed in the country round about; and in each village they shall settle various classes of craftsmen, with a view to the convenience of the husbandmen. And the chief officers of the wardens of the country shall superintend all these matters, and see how many of them, and which class of them, each place requires; and fix them where they are likely to be least troublesome, and most useful to the husbandman. And the wardens of the city shall see to similar matters in the city.

Now the wardens of the agora ought to see to the details of the agora.
Their first care, after the temples which are in the agora have been seen to, should be to prevent any one from doing any wrong in dealings between man and man; in the second place, as being inspectors of temperance and violence, they should chastise him who requires chastisement. Touching articles of sale, they should first see whether the articles which the citizens are under regulations to sell to strangers are sold to them, as the law ordains. And let the law be as follows: On the first day of the month, the persons in charge, whoever they are, whether strangers or slaves, who have the charge on behalf of the citizens, shall produce to the strangers the portion which falls to them, in the first place, a twelfth portion of the corn—the stranger shall purchase corn for the whole month, and other cereals, on the first market day; and on the tenth day of the month the one party shall sell, and the other buy, liquids sufficient to last during the whole month; and on the twenty-third day there shall be a sale of animals by those who are willing to sell to the people who want to buy, and of implements and other things which husbandmen sell, (such as skins and all kinds of clothing, either woven or made of felt and other goods of the same sort) and which strangers are compelled to buy and purchase of others. As to the retail trade in these things, whether of barley or wheat set apart for meal and flour, or any other kind of food, no one shall sell them to citizens or their slaves, nor shall any one buy of a citizen; but let the stranger sell them in the market of strangers, to artisans and their slaves, making an exchange of wine and food, which is commonly called retail trade. And butchers shall offer for sale parts of dismembered animals to the strangers, and artisans, and their servants. Let any stranger who likes buy fuel from day to day wholesale, from those who have the care of it in the country, and let him sell to the strangers as much as he pleases and when he pleases. As to other goods and implements which are likely to be wanted, they shall sell them in the common market, at any place which the guardians of the law and the wardens of the market and city, choosing according to their judgment, shall determine; at such places they shall exchange money for goods, and goods for money, neither party giving credit to the other; and he who gives credit must be satisfied, whether he obtain his money or not, for in such exchanges he will not be protected by law. But whenever property has been bought or sold, greater in quantity or value than is allowed by the law, which has determined within what limits a man may increase and diminish his possessions, let the excess be registered in the books of the guardians of the law; or in case of diminution, let there be an erasure made. And let the same rule be observed about the registration of the property of the metics. Any one who likes may come and be a metic on certain conditions; a foreigner, if he likes, and is able to settle, may dwell in the land, but he must practise an art, and not abide more than twenty years from the time at which he has registered himself; and he shall pay no sojourner's tax, however small, except good conduct, nor any other tax for buying and selling. But when the twenty years have expired, he shall take his property with him and depart. And if in the course of
these years he should chance to distinguish himself by any considerable
benefit which he confers on the state, and he thinks that he can persuade
the council and assembly, either to grant him delay in leaving the
country, or to allow him to remain for the whole of his life, let him go
and persuade the city, and whatever they assent to at his instance shall
take effect. For the children of the metics, being artisans, and of
fifteen years of age, let the time of their sojourn commence after their
fifteenth year; and let them remain for twenty years, and then go where
they like; but any of them who wishes to remain, may do so, if he can
persuade the council and assembly. And if he depart, let him erase all the
entries which have been made by him in the register kept by the
magistrates.

BOOK IX.

Next to all the matters which have preceded in the natural order of
legislation will come suits of law. Of suits those which relate to
agriculture have been already described, but the more important have not
been described. Having mentioned them severally under their usual names,
we will proceed to say what punishments are to be inflicted for each
offence, and who are to be the judges of them.

CLEINIAS: Very good.

ATHENIAN: There is a sense of disgrace in legislating, as we are about to
do, for all the details of crime in a state which, as we say, is to be
well regulated and will be perfectly adapted to the practice of virtue. To
assume that in such a state there will arise some one who will be guilty
of crimes as heinous as any which are ever perpetrated in other states,
and that we must legislate for him by anticipation, and threaten and make
laws against him if he should arise, in order to deter him, and punish his
acts, under the idea that he will arise--this, as I was saying, is in a
manner disgraceful. Yet seeing that we are not like the ancient
legislators, who gave laws to heroes and sons of gods, being, according to
the popular belief, themselves the offspring of the gods, and legislating
for others, who were also the children of divine parents, but that we are
only men who are legislating for the sons of men, there is no
uncharitableness in apprehending that some one of our citizens may be like
a seed which has touched the ox's horn, having a heart so hard that it
cannot be softened any more than those seeds can be softened by fire.
Among our citizens there may be those who cannot be subdued by all the
strength of the laws; and for their sake, though an ungracious task, I
will proclaim my first law about the robbing of temples, in case any one
should dare to commit such a crime. I do not expect or imagine that any
well-brought-up citizen will ever take the infection, but their servants,
and strangers, and strangers' servants may be guilty of many impieties.
And with a view to them especially, and yet not without a provident eye to
the weakness of human nature generally, I will proclaim the law about
robbers of temples and similar incurable, or almost incurable, criminals.
Having already agreed that such enactments ought always to have a short
prelude, we may speak to the criminal, whom some tormenting desire by
night and by day tempts to go and rob a temple, the fewest possible words
of admonition and exhortation: O sir, we will say to him, the impulse
which moves you to rob temples is not an ordinary human malady, nor yet a
visitation of heaven, but a madness which is begotten in a man from
ancient and unexpiated crimes of his race, an ever-recurring curse--
against this you must guard with all your might, and how you are to guard
we will explain to you. When any such thought comes into your mind, go and
perform expiations, go as a suppliant to the temples of the Gods who avert
evils, go to the society of those who are called good men among you; hear
them tell and yourself try to repeat after them, that every man should
honour the noble and the just. Fly from the company of the wicked--fly and
turn not back; and if your disorder is lightened by these remedies, well
and good, but if not, then acknowledge death to be nobler than life, and
depart hence.

Such are the preludes which we sing to all who have thoughts of unholy and
treasonable actions, and to him who hearkens to them the law has nothing
to say. But to him who is disobedient when the prelude is over, cry with a
loud voice--He who is taken in the act of robbing temples, if he be a
slave or stranger, shall have his evil deed engraven on his face and
hands, and shall be beaten with as many stripes as may seem good to the
judges, and be cast naked beyond the borders of the land. And if he
suffers this punishment he will probably return to his right mind and be
improved; for no penalty which the law inflicts is designed for evil, but
always makes him who suffers either better or not so much worse as he
would have been. But if any citizen be found guilty of any great or
unmentionable wrong, either in relation to the Gods, or his parents, or
the state, let the judge deem him to be incurable, remembering that after
receiving such an excellent education and training from youth upward, he
has not abstained from the greatest of crimes. His punishment shall be
death, which to him will be the least of evils; and his example will
benefit others, if he perish ingloriously, and be cast beyond the borders
of the land. But let his children and family, if they avoid the ways of
their father, have glory, and let honourable mention be made of them, as
having nobly and manfully escaped out of evil into good. None of them
should have their goods confiscated to the state, for the lots of the
citizens ought always to continue the same and equal.

Touching the exaction of penalties, when a man appears to have done
anything which deserves a fine, he shall pay the fine, if he have anything
in excess of the lot which is assigned to him; but more than that he shall
not pay. And to secure exactness, let the guardians of the law refer to
the registers, and inform the judges of the precise truth, in order that none of the lots may go uncultivated for want of money. But if any one seems to deserve a greater penalty, let him undergo a long and public imprisonment and be dishonoured, unless some of his friends are willing to be surety for him, and liberate him by assisting him to pay the fine. No criminal shall go unpunished, not even for a single offence, nor if he have fled the country; but let the penalty be according to his deserts—death, or bonds, or blows, or degrading places of sitting or standing, or removal to some temple on the borders of the land; or let him pay fines, as we said before. In cases of death, let the judges be the guardians of the law, and a court selected by merit from the last year's magistrates. But how the causes are to be brought into court, how the summonses are to be served, and the like, these things may be left to the younger generation of legislators to determine; the manner of voting we must determine ourselves.

Let the vote be given openly; but before they come to the vote let the judges sit in order of seniority over against plaintiff and defendant, and let all the citizens who can spare time hear and take a serious interest in listening to such causes. First of all the plaintiff shall make one speech, and then the defendant shall make another; and after the speeches have been made the eldest judge shall begin to examine the parties, and proceed to make an adequate enquiry into what has been said; and after the oldest has spoken, the rest shall proceed in order to examine either party as to what he finds defective in the evidence, whether of statement or omission; and he who has nothing to ask shall hand over the examination to another. And on so much of what has been said as is to the purpose all the judges shall set their seals, and place the writings on the altar of Hestia. On the next day they shall meet again, and in like manner put their questions and go through the cause, and again set their seals upon the evidence; and when they have three times done this, and have had witnesses and evidence enough, they shall each of them give a holy vote, after promising by Hestia that they will decide justly and truly to the utmost of their power; and so they shall put an end to the suit.

Next, after what relates to the Gods, follows what relates to the dissolution of the state: Whoever by permitting a man to power enslaves the laws, and subjects the city to factions, using violence and stirring up sedition contrary to law, him we will deem the greatest enemy of the whole state. But he who takes no part in such proceedings, and, being one of the chief magistrates of the state, has no knowledge of treason, or, having knowledge of it, by reason of cowardice does not interfere on behalf of his country, such an one we must consider nearly as bad. Every man who is worth anything will inform the magistrates, and bring the conspirator to trial for making a violent and illegal attempt to change the government. The judges of such cases shall be the same as of the robbers of temples; and let the whole proceeding be carried on in the same
way, and the vote of the majority condemn to death. But let there be a
general rule, that the disgrace and punishment of the father is not to be
visited on the children, except in the case of some one whose father,
grandfather, and great-grandfather have successively undergone the penalty
of death. Such persons the city shall send away with all their possessions
to the city and country of their ancestors, retaining only and wholly
their appointed lot. And out of the citizens who have more than one son of
not less than ten years of age, they shall select ten whom their father or
grandfather by the mother's or father's side shall appoint, and let them
send to Delphi the names of those who are selected, and him whom the God
chooses they shall establish as heir of the house which has failed; and
may he have better fortune than his predecessors!

CLEINIAS: Very good.

ATHENIAN: Once more let there be a third general law respecting the judges
who are to give judgment, and the manner of conducting suits against those
who are tried on an accusation of treason; and as concerning the remaining
or departure of their descendants--there shall be one law for all three,
for the traitor, and the robber of temples, and the subverter by violence
of the laws of the state. For a thief, whether he steal much or little,
let there be one law, and one punishment for all alike: in the first
place, let him pay double the amount of the theft if he be convicted, and
if he have so much over and above the allotment--if he have not, he shall
be bound until he pay the penalty, or persuade him who has obtained the
sentence against him to forgive him. But if a person be convicted of a
theft against the state, then if he can persuade the city, or if he will
pay back twice the amount of the theft, he shall be set free from his
bonds.

CLEINIAS: What makes you say, Stranger, that a theft is all one, whether
the thief may have taken much or little, and either from sacred or secular
places--and these are not the only differences in thefts--seeing, then,
that they are of many kinds, ought not the legislator to adapt himself to
them, and impose upon them entirely different penalties?

ATHENIAN: Excellent. I was running on too fast, Cleinias, and you impinged
upon me, and brought me to my senses, reminding me of what, indeed, had
occurred to my mind already, that legislation was never yet rightly worked
out, as I may say in passing. Do you remember the image in which I likened
the men for whom laws are now made to slaves who are doctored by slaves?
For of this you may be very sure, that if one of those empirical
physicians, who practise medicine without science, were to come upon the
gentleman physician talking to his gentleman patient, and using the
language almost of philosophy, beginning at the beginning of the disease
and discoursing about the whole nature of the body, he would burst into a
hearty laugh--he would say what most of those who are called doctors
always have at their tongue's end: Foolish fellow, he would say, you are not healing the sick man, but you are educating him; and he does not want to be made a doctor, but to get well.

CLEINIAS: And would he not be right?

ATHENIAN: Perhaps he would; and he might remark upon us, that he who discourses about laws, as we are now doing, is giving the citizens education and not laws; that would be rather a telling observation.

CLEINIAS: Very true.

ATHENIAN: But we are fortunate.

CLEINIAS: In what way?

ATHENIAN: Inasmuch as we are not compelled to give laws, but we may take into consideration every form of government, and ascertain what is best and what is most needful, and how they may both be carried into execution; and we may also, if we please, at this very moment choose what is best, or, if we prefer, what is most necessary--which shall we do?

CLEINIAS: There is something ridicilous, Stranger, in our proposing such an alternative, as if we were legislators, simply bound under some great necessity which cannot be deferred to the morrow. But we, as I may by the grace of Heaven affirm, like gatherers of stones or beginners of some composite work, may gather a heap of materials, and out of this, at our leisure, select what is suitable for our projected construction. Let us then suppose ourselves to be at leisure, not of necessity building, but rather like men who are partly providing materials, and partly putting them together. And we may truly say that some of our laws, like stones, are already fixed in their places, and others lie at hand.

ATHENIAN: Certainly, in that case, Cleinias, our view of law will be more in accordance with nature. For there is another matter affecting legislators, which I must earnestly entreat you to consider.

CLEINIAS: What is it?

ATHENIAN: There are many writings to be found in cities, and among them there are discourses composed by legislators as well as by other persons.

CLEINIAS: To be sure.

ATHENIAN: Shall we give heed rather to the writings of those others--poets and the like, who either in metre or out of metre have recorded their advice about the conduct of life, and not to the writings of legislators?
or shall we give heed to them above all?

CLEINIAS: Yes; to them far above all others.

ATHENIAN: And ought the legislator alone among writers to withhold his opinion about the beautiful, the good, and the just, and not to teach what they are, and how they are to be pursued by those who intend to be happy?

CLEINIAS: Certainly not.

ATHENIAN: And is it disgraceful for Homer and Tyrtaeus and other poets to lay down evil precepts in their writings respecting life and the pursuits of men, but not so disgraceful for Lycurgus and Solon and others who were legislators as well as writers? Is it not true that of all the writings to be found in cities, those which relate to laws, when you unfold and read them, ought to be by far the noblest and the best? and should not other writings either agree with them, or if they disagree, be deemed ridiculous? We should consider whether the laws of states ought not to have the character of loving and wise parents, rather than of tyrants and masters, who command and threaten, and, after writing their decrees on walls, go their ways; and whether, in discoursing of laws, we should not take the gentler view of them which may or may not be attainable—at any rate, we will show our readiness to entertain such a view, and be prepared to undergo whatever may be the result. And may the result be good, and if God be gracious, it will be good!

CLEINIAS: Excellent; let us do as you say.

ATHENIAN: Then we will now consider accurately, as we proposed, what relates to robbers of temples, and all kinds of thefts, and offences in general; and we must not be annoyed if, in the course of legislation, we have enacted some things, and have not made up our minds about some others; for as yet we are not legislators, but we may soon be. Let us, if you please, consider these matters.

CLEINIAS: By all means.

ATHENIAN: Concerning all things honourable and just, let us then endeavour to ascertain how far we are consistent with ourselves, and how far we are inconsistent, and how far the many, from whom at any rate we should profess a desire to differ, agree and disagree among themselves.

CLEINIAS: What are the inconsistencies which you observe in us?

ATHENIAN: I will endeavour to explain. If I am not mistaken, we are all agreed that justice, and just men and things and actions, are all fair, and, if a person were to maintain that just men, even when they are
deformed in body, are still perfectly beautiful in respect of the excellent justice of their minds, no one would say that there was any inconsistency in this.

CLEINIAS: They would be quite right.

ATHENIAN: Perhaps; but let us consider further, that if all things which are just are fair and honourable, in the term 'all' we must include just sufferings which are the correlatives of just actions.

CLEINIAS: And what is the inference?

ATHENIAN: The inference is, that a just action in partaking of the just partakes also in the same degree of the fair and honourable.

CLEINIAS: Certainly.

ATHENIAN: And must not a suffering which partakes of the just principle be admitted to be in the same degree fair and honourable, if the argument is consistently carried out?

CLEINIAS: True.

ATHENIAN: But then if we admit suffering to be just and yet dishonourable, and the term 'dishonourable' is applied to justice, will not the just and the honourable disagree?

CLEINIAS: What do you mean?

ATHENIAN: A thing not difficult to understand; the laws which have been already enacted would seem to announce principles directly opposed to what we are saying.

CLEINIAS: To what?

ATHENIAN: We had enacted, if I am not mistaken, that the robber of temples, and he who was the enemy of law and order, might justly be put to death, and we were proceeding to make divers other enactments of a similar nature. But we stopped short, because we saw that these sufferings are infinite in number and degree, and that they are, at once, the most just and also the most dishonourable of all sufferings. And if this be true, are not the just and the honourable at one time all the same, and at another time in the most diametrical opposition?

CLEINIAS: Such appears to be the case.

ATHENIAN: In this discordant and inconsistent fashion does the language of
the many rend asunder the honourable and just.

CLEINIAS: Very true, Stranger.

ATHENIAN: Then now, Cleinias, let us see how far we ourselves are consistent about these matters.

CLEINIAS: Consistent in what?

ATHENIAN: I think that I have clearly stated in the former part of the discussion, but if I did not, let me now state--

CLEINIAS: What?

ATHENIAN: That all bad men are always involuntarily bad; and from this I must proceed to draw a further inference.

CLEINIAS: What is it?

ATHENIAN: That the unjust man may be bad, but that he is bad against his will. Now that an action which is voluntary should be done involuntarily is a contradiction; wherefore he who maintains that injustice is involuntary will deem that the unjust does injustice involuntarily. I too admit that all men do injustice involuntarily, and if any contentious or disputatious person says that men are unjust against their will, and yet that many do injustice willingly, I do not agree with him. But, then, how can I avoid being inconsistent with myself, if you, Cleinias, and you, Megillus, say to me--Well, Stranger, if all this be as you say, how about legislating for the city of the Magnetes--shall we legislate or not--what do you advise? Certainly we will, I should reply. Then will you determine for them what are voluntary and what are involuntary crimes, and shall we make the punishments greater of voluntary errors and crimes and less for the involuntary? or shall we make the punishment of all to be alike, under the idea that there is no such thing as voluntary crime?

CLEINIAS: Very good, Stranger; and what shall we say in answer to these objections?

ATHENIAN: That is a very fair question. In the first place, let us--

CLEINIAS: Do what?

ATHENIAN: Let us remember what has been well said by us already, that our ideas of justice are in the highest degree confused and contradictory. Bearing this in mind, let us proceed to ask ourselves once more whether we have discovered a way out of the difficulty. Have we ever determined in what respect these two classes of actions differ from one another? For in
all states and by all legislators whatsoever, two kinds of actions have been distinguished—the one, voluntary, the other, involuntary; and they have legislated about them accordingly. But shall this new word of ours, like an oracle of God, be only spoken, and get away without giving any explanation or verification of itself? How can a word not understood be the basis of legislation? Impossible. Before proceeding to legislate, then, we must prove that they are two, and what is the difference between them, that when we impose the penalty upon either, every one may understand our proposal, and be able in some way to judge whether the penalty is fitly or unfitly inflicted.

CLEINIAS: I agree with you, Stranger; for one of two things is certain: either we must not say that all unjust acts are involuntary, or we must show the meaning and truth of this statement.

ATHENIAN: Of these two alternatives, the one is quite intolerable—not to speak what I believe to be the truth would be to me unlawful and unholy. But if acts of injustice cannot be divided into voluntary and involuntary, I must endeavour to find some other distinction between them.

CLEINIAS: Very true, Stranger; there cannot be two opinions among us upon that point.

ATHENIAN: Reflect, then; there are hurts of various kinds done by the citizens to one another in the intercourse of life, affording plentiful examples both of the voluntary and involuntary.

CLEINIAS: Certainly.

ATHENIAN: I would not have any one suppose that all these hurts are injuries, and that these injuries are of two kinds—one, voluntary, and the other, involuntary; for the involuntary hurts of all men are quite as many and as great as the voluntary. And please to consider whether I am right or quite wrong in what I am going to say; for I deny, Cleinias and Megillus, that he who harms another involuntarily does him an injury involuntarily, nor should I legislate about such an act under the idea that I am legislating for an involuntary injury. But I should rather say that such a hurt, whether great or small, is not an injury at all; and, on the other hand, if I am right, when a benefit is wrongly conferred, the author of the benefit may often be said to injure. For I maintain, O my friends, that the mere giving or taking away of anything is not to be described either as just or unjust; but the legislator has to consider whether mankind do good or harm to one another out of a just principle and intention. On the distinction between injustice and hurt he must fix his eye; and when there is hurt, he must, as far as he can, make the hurt good by law, and save that which is ruined, and raise up that which is fallen, and make that which is dead or wounded whole. And when compensation has
been given for injustice, the law must always seek to win over the doers and sufferers of the several hurts from feelings of enmity to those of friendship.

CLEINIAS: Very good.

ATHENIAN: Then as to unjust hurts (and gains also, supposing the injustice to bring gain), of these we may heal as many as are capable of being healed, regarding them as diseases of the soul; and the cure of injustice will take the following direction.

CLEINIAS: What direction?

ATHENIAN: When any one commits any injustice, small or great, the law will admonish and compel him either never at all to do the like again, or never voluntarily, or at any rate in a far less degree; and he must in addition pay for the hurt. Whether the end is to be attained by word or action, with pleasure or pain, by giving or taking away privileges, by means of fines or gifts, or in whatsoever way the law shall proceed to make a man hate injustice, and love or not hate the nature of the just—this is quite the noblest work of law. But if the legislator sees any one who is incurable, for him he will appoint a law and a penalty. He knows quite well that to such men themselves there is no profit in the continuance of their lives, and that they would do a double good to the rest of mankind if they would take their departure, inasmuch as they would be an example to other men not to offend, and they would relieve the city of bad citizens. In such cases, and in such cases only, the legislator ought to inflict death as the punishment of offences.

CLEINIAS: What you have said appears to me to be very reasonable, but will you favour me by stating a little more clearly the difference between hurt and injustice, and the various complications of the voluntary and involuntary which enter into them?

ATHENIAN: I will endeavour to do as you wish: Concerning the soul, thus much would be generally said and allowed, that one element in her nature is passion, which may be described either as a state or a part of her, and is hard to be striven against and contended with, and by irrational force overturns many things.

CLEINIAS: Very true.

ATHENIAN: And pleasure is not the same with passion, but has an opposite power, working her will by persuasion and by the force of deceit in all things.

CLEINIAS: Quite true.
ATHENIAN: A man may truly say that ignorance is a third cause of crimes. Ignorance, however, may be conveniently divided by the legislator into two sorts: there is simple ignorance, which is the source of lighter offences, and double ignorance, which is accompanied by a conceit of wisdom; and he who is under the influence of the latter fancies that he knows all about matters of which he knows nothing. This second kind of ignorance, when possessed of power and strength, will be held by the legislator to be the source of great and monstrous crimes, but when attended with weakness, will only result in the errors of children and old men; and these he will treat as errors, and will make laws accordingly for those who commit them, which will be the mildest and most merciful of all laws.

CLEINIAS: You are perfectly right.

ATHENIAN: We all of us remark of one man that he is superior to pleasure and passion, and of another that he is inferior to them; and this is true.

CLEINIAS: Certainly.

ATHENIAN: But no one was ever yet heard to say that one of us is superior and another inferior to ignorance.

CLEINIAS: Very true.

ATHENIAN: We are speaking of motives which incite men to the fulfilment of their will; although an individual may be often drawn by them in opposite directions at the same time.

CLEINIAS: Yes, often.

ATHENIAN: And now I can define to you clearly, and without ambiguity, what I mean by the just and unjust, according to my notion of them: When anger and fear, and pleasure and pain, and jealousies and desires, tyrannize over the soul, whether they do any harm or not--I call all this injustice. But when the opinion of the best, in whatever part of human nature states or individuals may suppose that to dwell, has dominion in the soul and orders the life of every man, even if it be sometimes mistaken, yet what is done in accordance therewith, and the principle in individuals which obeys this rule, and is best for the whole life of man, is to be called just; although the hurt done by mistake is thought by many to be involuntary injustice. Leaving the question of names, about which we are not going to quarrel, and having already delineated three sources of error, we may begin by recalling them somewhat more vividly to our memory: One of them was of the painful sort, which we denominate anger and fear.

CLEINIAS: Quite right.
ATHENIAN: There was a second consisting of pleasures and desires, and a third of hopes, which aimed at true opinion about the best. The latter being subdivided into three, we now get five sources of actions, and for these five we will make laws of two kinds.

CLEINIAS: What are the two kinds?

ATHENIAN: There is one kind of actions done by violence and in the light of day, and another kind of actions which are done in darkness and with secret deceit, or sometimes both with violence and deceit; the laws concerning these last ought to have a character of severity.

CLEINIAS: Naturally.

ATHENIAN: And now let us return from this digression and complete the work of legislation. Laws have been already enacted by us concerning the robbers of the Gods, and concerning traitors, and also concerning those who corrupt the laws for the purpose of subverting the government. A man may very likely commit some of these crimes, either in a state of madness or when affected by disease, or under the influence of extreme old age, or in a fit of childish wantonness, himself no better than a child. And if this be made evident to the judges elected to try the cause, on the appeal of the criminal or his advocate, and he be judged to have been in this state when he committed the offence, he shall simply pay for the hurt which he may have done to another; but he shall be exempt from other penalties, unless he have slain some one, and have on his hands the stain of blood. And in that case he shall go to another land and country, and there dwell for a year; and if he return before the expiration of the time which the law appoints, or even set his foot at all on his native land, he shall be bound by the guardians of the law in the public prison for two years, and then go free.

Having begun to speak of homicide, let us endeavour to lay down laws concerning every different kind of homicide; and, first of all, concerning violent and involuntary homicides. If any one in an athletic contest, and at the public games, involuntarily kills a friend, and he dies either at the time or afterwards of the blows which he has received; or if the like misfortune happens to any one in war, or military exercises, or mimic contests of which the magistrates enjoin the practice, whether with or without arms, when he has been purified according to the law brought from Delphi relating to these matters, he shall be innocent. And so in the case of physicians: if their patient dies against their will, they shall be held guiltless by the law. And if one slay another with his own hand, but unintentionally, whether he be unarmed or have some instrument or dart in his hand; or if he kill him by administering food or drink, or by the application of fire or cold, or by suffocating him, whether he do the deed
by his own hand, or by the agency of others, he shall be deemed the agent, and shall suffer one of the following penalties: If he kill the slave of another in the belief that he is his own, he shall bear the master of the dead man harmless from loss, or shall pay a penalty of twice the value of the dead man, which the judges shall assess; but purifications must be used greater and more numerous than for those who committed homicide at the games--what they are to be, the interpreters whom the God appoints shall be authorised to declare. And if a man kills his own slave, when he has been purified according to law, he shall be quit of the homicide. And if a man kills a freeman unintentionally, he shall undergo the same purification as he did who killed the slave. But let him not forget also a tale of olden time, which is to this effect: He who has suffered a violent end, when newly dead, if he has had the soul of a freeman in life, is angry with the author of his death; and being himself full of fear and panic by reason of his violent end, when he sees his murderer walking about in his own accustomed haunts, he is stricken with terror and becomes disordered, and this disorder of his, aided by the guilty recollection of the other, is communicated by him with overwhelming force to the murderer and his deeds. Wherefore also the murderer must go out of the way of his victim for the entire period of a year, and not himself be found in any spot which was familiar to him throughout the country. And if the dead man be a stranger, the homicide shall be kept from the country of the stranger during a like period. If any one voluntarily obeys this law, the next of kin to the deceased, seeing all that has happened, shall take pity on him, and make peace with him, and show him all gentleness. But if any one is disobedient, and either ventures to go to any of the temples and sacrifice unpurified, or will not continue in exile during the appointed time, the next of kin to the deceased shall proceed against him for murder; and if he be convicted, every part of his punishment shall be doubled. And if the next of kin do not proceed against the perpetrator of the crime, then the pollution shall be deemed to fall upon his own head--the murdered man will fix the guilt upon his kinsman, and he who has a mind to proceed against him may compel him to be absent from his country during five years, according to law. If a stranger unintentionally kill a stranger who is dwelling in the city, he who likes shall prosecute the cause according to the same rules. If he be a metic, let him be absent for a year, or if he be an entire stranger, in addition to the purification, whether he have slain a stranger, or a metic, or a citizen, he shall be banished for life from the country which is in possession of our laws. And if he return contrary to law, let the guardians of the law punish him with death; and let them hand over his property, if he have any, to him who is next of kin to the sufferer. And if he be wrecked, and driven on the coast against his will, he shall take up his abode on the seashore, wetting his feet in the sea, and watching for an opportunity of sailing; but if he be brought by land, and is not his own master, let the magistrate whom he first comes across in the city, release him and send him unharmed over the border.
If any one slays a freeman with his own hand, and the deed be done in passion, in the case of such actions we must begin by making a distinction. For a deed is done from passion either when men suddenly, and without intention to kill, cause the death of another by blows and the like on a momentary impulse, and are sorry for the deed immediately afterwards; or again, when after having been insulted in deed or word, men pursue revenge, and kill a person intentionally, and are not sorry for the act. And, therefore, we must assume that these homicides are of two kinds, both of them arising from passion, which may be justly said to be in a mean between the voluntary and involuntary; at the same time, they are neither of them anything more than a likeness or shadow of either. He who treasures up his anger, and avenges himself, not immediately and at the moment, but with insidious design, and after an interval, is like the voluntary; but he who does not treasure up his anger, and takes vengeance on the instant, and without malice prepense, approaches to the involuntary; and yet even he is not altogether involuntary, but is only the image or shadow of the involuntary; wherefore about homicides committed in hot blood, there is a difficulty in determining whether in legislating we shall reckon them as voluntary or as partly involuntary.

The best and truest view is to regard them respectively as likenesses only of the voluntary and involuntary, and to distinguish them accordingly as they are done with or without premeditation. And we should make the penalties heavier for those who commit homicide with angry premeditation, and lighter for those who do not premeditate, but smite upon the instant; for that which is like a greater evil should be punished more severely, and that which is like a less evil should be punished less severely: this shall be the rule of our laws.

CLEINIAS: Certainly.

ATHENIAN: Let us proceed: If any one slays a freeman with his own hand, and the deed be done in a moment of anger, and without premeditation, let the offender suffer in other respects as the involuntary homicide would have suffered, and also undergo an exile of two years, that he may learn to school his passions. But he who slays another from passion, yet with premeditation, shall in other respects suffer as the former; and to this shall be added an exile of three instead of two years--his punishment is to be longer because his passion is greater. The manner of their return shall be on this wise: (and here the law has difficulty in determining exactly; for in some cases the murderer who is judged by the law to be the worse may really be the less cruel, and he who is judged the less cruel may be really the worse, and may have executed the murder in a more savage manner, whereas the other may have been gentler. But in general the degrees of guilt will be such as we have described them. Of all these things the guardians of the law must take cognizance): When a homicide of either kind has completed his term of exile, the guardians shall send twelve judges to the borders of the land; these during the interval shall...
have informed themselves of the actions of the criminals, and they shall judge respecting their pardon and reception; and the homicides shall abide by their judgment. But if after they have returned home, any one of them in a moment of anger repeats the deed, let him be an exile, and return no more; or if he returns, let him suffer as the stranger was to suffer in a similar case. He who kills his own slave shall undergo a purification, but if he kills the slave of another in anger, he shall pay twice the amount of the loss to his owner. And if any homicide is disobedient to the law, and without purification pollutes the agora, or the games, or the temples, he who pleases may bring to trial the next of kin to the dead man for permitting him, and the murderer with him, and may compel the one to exact and the other to suffer a double amount of fines and purifications; and the accuser shall himself receive the fine in accordance with the law. If a slave in a fit of passion kills his master, the kindred of the deceased man may do with the murderer (provided only they do not spare his life) whatever they please, and they will be pure; or if he kills a freeman, who is not his master, the owner shall give up the slave to the relatives of the deceased, and they shall be under an obligation to put him to death, but this may be done in any manner which they please. And if (which is a rare occurrence, but does sometimes happen) a father or a mother in a moment of passion slays a son or daughter by blows, or some other violence, the slayer shall undergo the same purification as in other cases, and be exiled during three years; but when the exile returns the wife shall separate from the husband, and the husband from the wife, and they shall never afterwards beget children together, or live under the same roof, or partake of the same sacred rites with those whom they have deprived of a child or of a brother. And he who is impious and disobedient in such a case shall be brought to trial for impiety by any one who pleases. If in a fit of anger a husband kills his wedded wife, or the wife her husband, the slayer shall undergo the same purification, and the term of exile shall be three years. And when he who has committed any such crime returns, let him have no communication in sacred rites with his children, neither let him sit at the same table with them, and the father or son who disobeys shall be liable to be brought to trial for impiety by any one who pleases. If a brother or a sister in a fit of passion kills a brother or a sister, they shall undergo purification and exile, as was the case with parents who killed their offspring: they shall not come under the same roof, or share in the sacred rites of those whom they have deprived of their brethren, or of their children. And he who is disobedient shall be justly liable to the law concerning impiety, which relates to these matters. If any one is so violent in his passion against his parents, that in the madness of his anger he dares to kill one of them, if the murdered person before dying freely forgives the murderer, let him undergo the purification which is assigned to those who have been guilty of involuntary homicide, and do as they do, and he shall be pure. But if he be not acquitted, the perpetrator of such a deed shall be amenable to many laws--he shall be amenable to the extreme punishments for
assault, and impiety, and robbing of temples, for he has robbed his parent of life; and if a man could be slain more than once, most justly would he who in a fit of passion has slain father or mother, undergo many deaths. How can he, whom, alone of all men, even in defence of his life, and when about to suffer death at the hands of his parents, no law will allow to kill his father or his mother who are the authors of his being, and whom the legislator will command to endure any extremity rather than do this--how can he, I say, lawfully receive any other punishment? Let death then be the appointed punishment of him who in a fit of passion slays his father or his mother. But if brother kills brother in a civil broil, or under other like circumstances, if the other has begun, and he only defends himself, let him be free from guilt, as he would be if he had slain an enemy; and the same rule will apply if a citizen kill a citizen, or a stranger a stranger. Or if a stranger kill a citizen or a citizen a stranger in self-defence, let him be free from guilt in like manner; and so in the case of a slave who has killed a slave; but if a slave have killed a freeman in self-defence, let him be subject to the same law as he who has killed a father; and let the law about the remission of penalties in the case of parricide apply equally to every other remission. Whenever any sufferer of his own accord remits the guilt of homicide to another, under the idea that his act was involuntary, let the perpetrator of the deed undergo a purification and remain in exile for a year, according to law.

Enough has been said of murders violent and involuntary and committed in passion: we have now to speak of voluntary crimes done with injustice of every kind and with premeditation, through the influence of pleasures, and desires, and jealousies.

CLEINIAS: Very good.

ATHENIAN: Let us first speak, as far as we are able, of their various kinds. The greatest cause of them is lust, which gets the mastery of the soul maddened by desire; and this is most commonly found to exist where the passion reigns which is strongest and most prevalent among the mass of mankind: I mean where the power of wealth breeds endless desires of never-to-be-satisfied acquisition, originating in natural disposition, and a miserable want of education. Of this want of education, the false praise of wealth which is bruited about both among Hellenes and barbarians is the cause; they deem that to be the first of goods which in reality is only the third. And in this way they wrong both posterity and themselves, for nothing can be nobler and better than that the truth about wealth should be spoken in all states--namely, that riches are for the sake of the body, as the body is for the sake of the soul. They are good, and wealth is intended by nature to be for the sake of them, and is therefore inferior to them both, and third in order of excellence. This argument teaches us that he who would be happy ought not to seek to be rich, or rather he
should seek to be rich justly and temperately, and then there would be no
murders in states requiring to be purged away by other murders. But now,
as I said at first, avarice is the chiefest cause and source of the worst
trials for voluntary homicide. A second cause is ambition: this creates
jealousies, which are troublesome companions, above all to the jealous man
himself, and in a less degree to the chiefs of the state. And a third
cause is cowardly and unjust fear, which has been the occasion of many
murders. When a man is doing or has done something which he desires that
no one should know him to be doing or to have done, he will take the life
of those who are likely to inform of such things, if he have no other
means of getting rid of them. Let this be said as a prelude concerning
crimes of violence in general; and I must not omit to mention a tradition
which is firmly believed by many, and has been received by them from those
who are learned in the mysteries: they say that such deeds will be
punished in the world below, and also that when the perpetrators return to
this world they will pay the natural penalty which is due to the sufferer,
and end their lives in like manner by the hand of another. If he who is
about to commit murder believes this, and is made by the mere prelude to
dread such a penalty, there is no need to proceed with the proclamation of
the law. But if he will not listen, let the following law be declared and
registered against him: Whoever shall wrongfully and of design slay with
his own hand any of his kinsmen, shall in the first place be deprived of
legal privileges; and he shall not pollute the temples, or the agora, or
the harbours, or any other place of meeting, whether he is forbidden of
men or not; for the law, which represents the whole state, forbids him,
and always is and will be in the attitude of forbidding him. And if a
cousin or nearer relative of the deceased, whether on the male or female
side, does not prosecute the homicide when he ought, and have him
proclaimed an outlaw, he shall in the first place be involved in the
pollution, and incur the hatred of the Gods, even as the curse of the law
stirs up the voices of men against him; and in the second place he shall
be liable to be prosecuted by any one who is willing to inflict
retribution on behalf of the dead. And he who would avenge a murder shall
observe all the precautionary ceremonies of lavation, and any others which
the God commands in cases of this kind. Let him have proclamation made,
and then go forth and compel the perpetrator to suffer the execution of
justice according to the law. Now the legislator may easily show that
these things must be accomplished by prayers and sacrifices to certain
Gods, who are concerned with the prevention of murders in states. But who
these Gods are, and what should be the true manner of instituting such
trials with due regard to religion, the guardians of the law, aided by the
interpreters, and the prophets, and the God, shall determine, and when
they have determined let them carry on the prosecution at law. The cause
shall have the same judges who are appointed to decide in the case of
those who plunder temples. Let him who is convicted be punished with
death, and let him not be buried in the country of the murdered man, for
this would be shameless as well as impious. But if he fly and will not
stand his trial, let him fly for ever; or, if he set foot anywhere on any part of the murdered man's country, let any relation of the deceased, or any other citizen who may first happen to meet with him, kill him with impunity, or bind and deliver him to those among the judges of the case who are magistrates, that they may put him to death. And let the prosecutor demand surety of him whom he prosecutes; three sureties sufficient in the opinion of the magistrates who try the cause shall be provided by him, and they shall undertake to produce him at the trial. But if he be unwilling or unable to provide sureties, then the magistrates shall take him and keep him in bonds, and produce him at the day of trial.

If a man do not commit a murder with his own hand, but contrives the death of another, and is the author of the deed in intention and design, and he continues to dwell in the city, having his soul not pure of the guilt of murder, let him be tried in the same way, except in what relates to the sureties; and also, if he be found guilty, his body after execution may have burial in his native land, but in all other respects his case shall be as the former; and whether a stranger shall kill a citizen, or a citizen a stranger, or a slave a slave, there shall be no difference as touching murder by one's own hand or by contrivance, except in the matter of sureties; and these, as has been said, shall be required of the actual murderer only, and he who brings the accusation shall bind them over at the time. If a slave be convicted of slaying a freeman voluntarily, either by his own hand or by contrivance, let the public executioner take him in the direction of the sepulchre, to a place whence he can see the tomb of the dead man, and inflict upon him as many stripes as the person who caught him orders, and if he survive, let him put him to death. And if any one kills a slave who has done no wrong, because he is afraid that he may inform of some base and evil deeds of his own, or for any similar reason, in such a case let him pay the penalty of murder, as he would have done if he had slain a citizen. There are things about which it is terrible and unpleasant to legislate, but impossible not to legislate. If, for example, there should be murders of kinsmen, either perpetrated by the hands of kinsmen, or by their contrivance, voluntary and purely malicious, which most often happen in ill-regulated and ill-educated states, and may perhaps occur even in a country where a man would not expect to find them, we must repeat once more the tale which we narrated a little while ago, in the hope that he who hears us will be the more disposed to abstain voluntarily on these grounds from murders which are utterly abominable. For the myth, or saying, or whatever we ought to call it, has been plainly set forth by priests of old; they have pronounced that the justice which guards and avenge the blood of kindred, follows the law of retaliation, and ordains that he who has done any murderous act should of necessity suffer that which he has done. He who has slain a father shall himself be slain at some time or other by his children--if a mother, he shall of necessity take a woman's nature, and lose his life at the hands of his offspring in after ages; for where the blood of a family has been polluted
there is no other purification, nor can the pollution be washed out until
the homicidal soul which did the deed has given life for life, and has
propitiated and laid to sleep the wrath of the whole family. These are the
retributions of Heaven, and by such punishments men should be deterred.
But if they are not deterred, and any one should be incited by some
fatality to deprive his father, or mother, or brethren, or children, of
life voluntarily and of purpose, for him the earthly lawgiver legislates
as follows: There shall be the same proclamations about outlawry, and
there shall be the same sureties which have been enacted in the former
cases. But in his case, if he be convicted, the servants of the judges and
the magistrates shall slay him at an appointed place without the city
where three ways meet, and there expose his body naked, and each of the
magistrates on behalf of the whole city shall take a stone and cast it
upon the head of the dead man, and so deliver the city from pollution;
after that, they shall bear him to the borders of the land, and cast him
forth unburied, according to law. And what shall he suffer who slays him
who of all men, as they say, is his own best friend? I mean the suicide,
who deprives himself by violence of his appointed share of life, not
because the law of the state requires him, nor yet under the compulsion of
some painful and inevitable misfortune which has come upon him, nor
because he has had to suffer from irremediable and intolerable shame, but
who from sloth or want of manliness imposes upon himself an unjust
penalty. For him, what ceremonies there are to be of purification and
burial God knows, and about these the next of kin should enquire of the
interpreters and of the laws thereto relating, and do according to their
injunctions. They who meet their death in this way shall be buried alone,
and none shall be laid by their side; they shall be buried ingloriously in
the borders of the twelve portions of the land, in such places as are
uncultivated and nameless, and no column or inscription shall mark the
place of their interment. And if a beast of burden or other animal cause
the death of any one, except in the case of anything of that kind
happening to a competitor in the public contests, the kinsmen of the
deceased shall prosecute the slayer for murder, and the wardens of the
country, such, and so many as the kinsmen appoint, shall try the cause,
and let the beast when condemned be slain by them, and let them cast it
beyond the borders. And if any lifeless thing deprive a man of life,
extcept in the case of a thunderbolt or other fatal dart sent from the
Gods--whether a man is killed by lifeless objects falling upon him, or by
his falling upon them, the nearest of kin shall appoint the nearest
neighbour to be a judge, and thereby acquit himself and the whole family
of guilt. And he shall cast forth the guilty thing beyond the border, as
has been said about the animals.

If a man is found dead, and his murderer be unknown, and after a diligent
search cannot be detected, there shall be the same proclamation as in the
previous cases, and the same interdict on the murderer; and having
proceeded against him, they shall proclaim in the agora by a herald, that
he who has slain such and such a person, and has been convicted of murder, shall not set his foot in the temples, nor at all in the country of the murdered man, and if he appears and is discovered, he shall die, and be cast forth unburied beyond the border. Let this one law then be laid down by us about murder; and let cases of this sort be so regarded.

And now let us say in what cases and under what circumstances the murderer is rightly free from guilt: If a man catch a thief coming into his house by night to steal, and he take and kill him, or if he slay a footpad in self-defence, he shall be guiltless. And any one who does violence to a free woman or a youth, shall be slain with impunity by the injured person, or by his or her father or brothers or sons. If a man find his wife suffering violence, he may kill the violator, and be guiltless in the eye of the law; or if a person kill another in warding off death from his father or mother or children or brethren or wife who are doing no wrong, he shall assuredly be guiltless.

Thus much as to the nurture and education of the living soul of man, having which, he can, and without which, if he unfortunately be without them, he cannot live; and also concerning the punishments which are to be inflicted for violent deaths, let thus much be enacted. Of the nurture and education of the body we have spoken before, and next in order we have to speak of deeds of violence, voluntary and involuntary, which men do to one another; these we will now distinguish, as far as we are able, according to their nature and number, and determine what will be the suitable penalties of each, and so assign to them their proper place in the series of our enactments. The poorest legislator will have no difficulty in determining that wounds and mutilations arising out of wounds should follow next in order after deaths. Let wounds be divided as homicides were divided--into those which are involuntary, and which are given in passion or from fear, and those inflicted voluntarily and with premeditation. Concerning all this, we must make some such proclamation as the following: Mankind must have laws, and conform to them, or their life would be as bad as that of the most savage beast. And the reason of this is that no man's nature is able to know what is best for human society; or knowing, always able and willing to do what is best. In the first place, there is a difficulty in apprehending that the true art of politics is concerned, not with private but with public good (for public good binds together states, but private only distracts them); and that both the public and private good as well of individuals as of states is greater when the state and not the individual is first considered. In the second place, although a person knows in the abstract that this is true, yet if he be possessed of absolute and irresponsible power, he will never remain firm in his principles or persist in regarding the public good as primary in the state, and the private good as secondary. Human nature will be always drawing him into avarice and selfishness, avoiding pain and pursuing pleasure without any reason, and will bring these to the front, obscuring
the juster and better; and so working darkness in his soul will at last fill with evils both him and the whole city. For if a man were born so divinely gifted that he could naturally apprehend the truth, he would have no need of laws to rule over him; for there is no law or order which is above knowledge, nor can mind, without impiety, be deemed the subject or slave of any man, but rather the lord of all. I speak of mind, true and free, and in harmony with nature. But then there is no such mind anywhere, or at least not much; and therefore we must choose law and order, which are second best. These look at things as they exist for the most part only, and are unable to survey the whole of them. And therefore I have spoken as I have.

And now we will determine what penalty he ought to pay or suffer who has hurt or wounded another. Any one may easily imagine the questions which have to be asked in all such cases: What did he wound, or whom, or how, or when? for there are innumerable particulars of this sort which greatly vary from one another. And to allow courts of law to determine all these things, or not to determine any of them, is alike impossible. There is one particular which they must determine in all cases—the question of fact. And then, again, that the legislator should not permit them to determine what punishment is to be inflicted in any of these cases, but should himself decide about all of them, small or great, is next to impossible.

CLEINIAS: Then what is to be the inference?

ATHENIAN: The inference is, that some things should be left to courts of law; others the legislator must decide for himself.

CLEINIAS: And what ought the legislator to decide, and what ought he to leave to the courts of law?

ATHENIAN: I may reply, that in a state in which the courts are bad and mute, because the judges conceal their opinions and decide causes clandestinely; or what is worse, when they are disorderly and noisy, as in a theatre, clapping or hooting in turn this or that orator—I say that then there is a very serious evil, which affects the whole state. Unfortunate is the necessity of having to legislate for such courts, but where the necessity exists, the legislator should only allow them to ordain the penalties for the smallest offences; if the state for which he is legislating be of this character, he must take most matters into his own hands and speak distinctly. But when a state has good courts, and the judges are well trained and scrupulously tested, the determination of the penalties or punishments which shall be inflicted on the guilty may fairly and with advantage be left to them. And we are not to be blamed for not legislating concerning all that large class of matters which judges far worse educated than ours would be able to determine, assigning to each offence what is due both to the perpetrator and to the sufferer. We
believe those for whom we are legislating to be best able to judge, and therefore to them the greater part may be left. At the same time, as I have often said, we should exhibit to the judges, as we have done, the outline and form of the punishments to be inflicted, and then they will not transgress the just rule. That was an excellent practice, which we observed before, and which now that we are resuming the work of legislation, may with advantage be repeated by us.

Let the enactment about wounding be in the following terms: If any one has a purpose and intention to slay another who is not his enemy, and whom the law does not permit him to slay, and he wounds him, but is unable to kill him, he who had the intent and has wounded him is not to be pitied--he deserves no consideration, but should be regarded as a murderer and be tried for murder. Still having respect to the fortune which has in a manner favoured him, and to the providence which in pity to him and to the wounded man saved the one from a fatal blow, and the other from an accursed fate and calamity--as a thank-offering to this deity, and in order not to oppose his will--in such a case the law will remit the punishment of death, and only compel the offender to emigrate to a neighbouring city for the rest of his life, where he shall remain in the enjoyment of all his possessions. But if he have injured the wounded man, he shall make such compensation for the injury as the court deciding the cause shall assess, and the same judges shall decide who would have decided if the man had died of his wounds. And if a child intentionally wound his parents, or a servant his master, death shall be the penalty. And if a brother or a sister intentionally wound a brother or a sister, and is found guilty, death shall be the penalty. And if a husband wound a wife, or a wife a husband, with intent to kill, let him or her undergo perpetual exile; if they have sons or daughters who are still young, the guardians shall take care of their property, and have charge of the children as orphans. If their sons are grown up, they shall be under no obligation to support the exiled parent, but they shall possess the property themselves. And if he who meets with such a misfortune has no children, the kindred of the exiled man to the degree of sons of cousins, both on the male and female side, shall meet together, and after taking counsel with the guardians of the law and the priests, shall appoint a 5040th citizen to be the heir of the house, considering and reasoning that no house of all the 5040 belongs to the inhabitant or to the whole family, but is the public and private property of the state. Now the state should seek to have its houses as holy and happy as possible. And if any one of the houses be unfortunate, and stained with impiety, and the owner leave no posterity, but dies unmarried, or married and childless, having suffered death as the penalty of murder or some other crime committed against the Gods or against his fellow-citizens, of which death is the penalty distinctly laid down in the law; or if any of the citizens be in perpetual exile, and also childless, that house shall first of all be purified and undergo expiation according to law; and then let the kinsmen
of the house, as we were just now saying, and the guardians of the law, meet and consider what family there is in the state which is of the highest repute for virtue and also for good fortune, in which there are a number of sons; from that family let them take one and introduce him to the father and forefathers of the dead man as their son, and, for the sake of the omen, let him be called so, that he may be the continuator of their family, the keeper of their hearth, and the minister of their sacred rites with better fortune than his father had; and when they have made this supplication, they shall make him heir according to law, and the offending person they shall leave nameless and childless and portionless when calamities such as these overtake him.

Now the boundaries of some things do not touch one another, but there is a borderland which comes in between, preventing them from touching. And we were saying that actions done from passion are of this nature, and come in between the voluntary and involuntary. If a person be convicted of having inflicted wounds in a passion, in the first place he shall pay twice the amount of the injury, if the wound be curable, or, if incurable, four times the amount of the injury; or if the wound be curable, and at the same time cause great and notable disgrace to the wounded person, he shall pay fourfold. And whenever any one in wounding another injures not only the sufferer, but also the city, and makes him incapable of defending his country against the enemy, he, besides the other penalties, shall pay a penalty for the loss which the state has incurred. And the penalty shall be, that in addition to his own times of service, he shall serve on behalf of the disabled person, and shall take his place in war; or, if he refuse, he shall be liable to be convicted by law of refusal to serve. The compensation for the injury, whether to be twofold or threefold or fourfold, shall be fixed by the judges who convict him. And if, in like manner, a brother wounds a brother, the parents and kindred of either sex, including the children of cousins, whether on the male or female side, shall meet, and when they have judged the cause, they shall entrust the assessment of damages to the parents, as is natural; and if the estimate be disputed, then the kinsmen on the male side shall make the estimate, or if they cannot, they shall commit the matter to the guardians of the law. And when similar charges of wounding are brought by children against their parents, those who are more than sixty years of age, having children of their own, not adopted, shall be required to decide; and if any one is convicted, they shall determine whether he or she ought to die, or suffer some other punishment either greater than death, or, at any rate, not much less. A kinsman of the offender shall not be allowed to judge the cause, not even if he be of the age which is prescribed by the law. If a slave in a fit of anger wound a freeman, the owner of the slave shall give him up to the wounded man, who may do as he pleases with him, and if he do not give him up he shall himself make good the injury. And if any one says that the slave and the wounded man are conspiring together, let him argue the point, and if he is cast, he shall pay for the wrong three times over,
but if he gains his case, the freeman who conspired with the slave shall be liable to an action for kidnapping. And if any one unintentionally wounds another he shall simply pay for the harm, for no legislator is able to control chance. In such a case the judges shall be the same as those who are appointed in the case of children suing their parents; and they shall estimate the amount of the injury.

All the preceding injuries and every kind of assault are deeds of violence; and every man, woman, or child ought to consider that the elder has the precedence of the younger in honour, both among the Gods and also among men who would live in security and happiness. Wherefore it is a foul thing and hateful to the Gods to see an elder man assaulted by a younger in the city, and it is reasonable that a young man when struck by an elder should lightly endure his anger, laying up in store for himself a like honour when he is old. Let this be the law: Every one shall reverence his elder in word and deed; he shall respect any one who is twenty years older than himself, whether male or female, regarding him or her as his father or mother; and he shall abstain from laying hands on any one who is of an age to have been his father or mother, out of reverence to the Gods who preside over birth; similarly he shall keep his hands from a stranger, whether he be an old inhabitant or newly arrived; he shall not venture to correct such an one by blows, either as the aggressor or in self-defence. If he thinks that some stranger has struck him out of wantonness or insolence, and ought to be punished, he shall take him to the wardens of the city, but let him not strike him, that the stranger may be kept far away from the possibility of lifting up his hand against a citizen, and let the wardens of the city take the offender and examine him, not forgetting their duty to the God of Strangers, and in case the stranger appears to have struck the citizen unjustly, let them inflict upon him as many blows with the scourge as he was himself inflicted, and quell his presumption. But if he be innocent, they shall threaten and rebuke the man who arrested him, and let them both go. If a person strikes another of the same age or somewhat older than himself, whether he be an old man who strikes an old man or a young man who strikes a young man, let the person struck defend himself in the natural way without a weapon and with his hands only. He who, being more than forty years of age, dares to fight with another, whether he be the aggressor or in self-defence, shall be regarded as rude and ill-mannered and slavish—this will be a disgraceful punishment, and therefore suitable to him. The obedient nature will readily yield to such exhortations, but the disobedient, who heeds not the prelude, shall have the law ready for him: If any man smite another who is older than himself, either by twenty or by more years, in the first place, he who is at hand, not being younger than the combatants, nor their equal in age, shall separate them, or be disgraced according to law; but if he be the equal in age of the person who is struck or younger, he shall defend the person injured as he would a brother or father or still older relative. Further, let him who dares to smite an elder be
tried for assault, as I have said, and if he be found guilty, let him be
imprisoned for a period of not less than a year, or if the judges approve
of a longer period, their decision shall be final. But if a stranger or
metic smite one who is older by twenty years or more, the same law shall
hold about the bystanders assisting, and he who is found guilty in such a
suit, if he be a stranger but not resident, shall be imprisoned during a
period of two years; and a metic who disobeys the laws shall be imprisoned
for three years, unless the court assign him a longer term. And let him
who was present in any of these cases and did not assist according to law
be punished, if he be of the highest class, by paying a fine of a mina; or
if he be of the second class, of fifty drachmas; or if of the third class,
by a fine of thirty drachmas; or if he be of the fourth class, by a fine
of twenty drachmas; and the generals and taxiarchs and phylarchs and
hipparchs shall form the court in such cases.

Laws are partly framed for the sake of good men, in order to instruct them
how they may live on friendly terms with one another, and partly for the
sake of those who refuse to be instructed, whose spirit cannot be subdued,
or softened, or hindered from plunging into evil. These are the persons
who cause the word to be spoken which I am about to utter; for them the
legislator legislates of necessity, and in the hope that there may be no
need of his laws. He who shall dare to lay violent hands upon his father
or mother, or any still older relative, having no fear either of the wrath
of the Gods above, or of the punishments that are spoken of in the world
below, but transgresses in contempt of ancient and universal traditions as
though he were too wise to believe in them, requires some extreme measure
of prevention. Now death is not the worst that can happen to men; far
worse are the punishments which are said to pursue them in the world
below. But although they are most true tales, they work on such souls no
prevention; for if they had any effect there would be no slayers of
mothers, or impious hands lifted up against parents; and therefore the
punishments of this world which are inflicted during life ought not in
such cases to fall short, if possible, of the terrors of the world below.
Let our enactment then be as follows: If a man dare to strike his father
or his mother, or their fathers or mothers, he being at the time of sound
mind, then let any one who is at hand come to the rescue as has been
already said, and the metic or stranger who comes to the rescue shall be
called to the first place in the games; but if he do not come he shall
suffer the punishment of perpetual exile. He who is not a metic, if he
comes to the rescue, shall have praise, and if he do not come, blame. And
if a slave come to the rescue, let him be made free, but if he do not come
to the rescue, let him receive 100 strokes of the whip, by order of the
wardens of the agora, if the occurrence take place in the agora; or if
somewhere in the city beyond the limits of the agora, any warden of the
city who is in residence shall punish him; or if in the country, then the
commanders of the wardens of the country. If those who are near at the
time be inhabitants of the same place, whether they be youths, or men, or
women, let them come to the rescue and denounce him as the impious one; and he who does not come to the rescue shall fall under the curse of Zeus, the God of kindred and of ancestors, according to law. And if any one is found guilty of assaulting a parent, let him in the first place be forever banished from the city into the country, and let him abstain from the temples; and if he do not abstain, the wardens of the country shall punish him with blows, or in any way which they please, and if he return he shall be put to death. And if any freeman eat or drink, or have any other sort of intercourse with him, or only meeting him have voluntarily touched him, he shall not enter into any temple, nor into the agora, nor into the city, until he is purified; for he should consider that he has become tainted by a curse. And if he disobeys the law, and pollutes the city and the temples contrary to law, and one of the magistrates sees him and does not indict him, when he gives in his account this omission shall be a most serious charge.

If a slave strike a freeman, whether a stranger or a citizen, let any one who is present come to the rescue, or pay the penalty already mentioned; and let the bystanders bind him, and deliver him up to the injured person, and he receiving him shall put him in chains, and inflict on him as many stripes as he pleases; but having punished him he must surrender him to his master according to law, and not deprive him of his property. Let the law be as follows: The slave who strikes a freeman, not at the command of the magistrates, his owner shall receive bound from the man whom he has stricken, and not release him until the slave has persuaded the man whom he has stricken that he ought to be released. And let there be the same laws about women in relation to women, and about men and women in relation to one another.

BOOK X.

And now having spoken of assaults, let us sum up all acts of violence under a single law, which shall be as follows: No one shall take or carry away any of his neighbour's goods, neither shall he use anything which is his neighbour's without the consent of the owner; for these are the offences which are and have been, and will ever be, the source of all the aforesaid evils. The greatest of them are excesses and insolences of youth, and are offences against the greatest when they are done against religion; and especially great when in violation of public and holy rites, or of the partly-common rites in which tribes and phratries share; and in the second degree great when they are committed against private rites and sepulchres, and in the third degree (not to repeat the acts formerly mentioned), when insults are offered to parents; the fourth kind of violence is when any one, regardless of the authority of the rulers, takes or carries away or makes use of anything which belongs to them, not having their consent; and the fifth kind is when the violation of the civil
rights of an individual demands reparation. There should be a common law embracing all these cases. For we have already said in general terms what shall be the punishment of sacrilege, whether fraudulent or violent, and now we have to determine what is to be the punishment of those who speak or act insolently toward the Gods. But first we must give them an admonition which may be in the following terms: No one who in obedience to the laws believed that there were Gods, ever intentionally did any unholy act, or uttered any unlawful word; but he who did must have supposed one of three things--either that they did not exist--which is the first possibility, or secondly, that, if they did, they took no care of man, or thirdly, that they were easily appeased and turned aside from their purpose by sacrifices and prayers.

CLEINIAS: What shall we say or do to these persons?

ATHENIAN: My good friend, let us first hear the jests which I suspect that they in their superiority will utter against us.

CLEINIAS: What jests?

ATHENIAN: They will make some irreverent speech of this sort: 'O inhabitants of Athens, and Sparta, and Cnosus,' they will reply, 'in that you speak truly; for some of us deny the very existence of the Gods, while others, as you say, are of opinion that they do not care about us; and others that they are turned from their course by gifts. Now we have a right to claim, as you yourself allowed, in the matter of laws, that before you are hard upon us and threaten us, you should argue with us and convince us--you should first attempt to teach and persuade us that there are Gods by reasonable evidences, and also that they are too good to be unrighteous, or to be propitiated, or turned from their course by gifts. For when we hear such things said of them by those who are esteemed to be the best of poets, and orators, and prophets, and priests, and by innumerable others, the thoughts of most of us are not set upon abstaining from unrighteous acts, but upon doing them and atoning for them. When lawgivers profess that they are gentle and not stern, we think that they should first of all use persuasion to us, and show us the existence of Gods, if not in a better manner than other men, at any rate in a truer; and who knows but that we shall hearken to you? If then our request is a fair one, please to accept our challenge.

CLEINIAS: But is there any difficulty in proving the existence of the Gods?

ATHENIAN: How would you prove it?

CLEINIAS: How? In the first place, the earth and the sun, and the stars and the universe, and the fair order of the seasons, and the division of
them into years and months, furnish proofs of their existence, and also there is the fact that all Hellenes and barbarians believe in them.

ATHENIAN: I fear, my sweet friend, though I will not say that I much regard, the contempt with which the profane will be likely to assail us. For you do not understand the nature of their complaint, and you fancy that they rush into impiety only from a love of sensual pleasure.

CLEINIAS: Why, Stranger, what other reason is there?

ATHENIAN: One which you who live in a different atmosphere would never guess.

CLEINIAS: What is it?

ATHENIAN: A very grievous sort of ignorance which is imagined to be the greatest wisdom.

CLEINIAS: What do you mean?

ATHENIAN: At Athens there are tales preserved in writing which the virtue of your state, as I am informed, refuses to admit. They speak of the Gods in prose as well as verse, and the oldest of them tell of the origin of the heavens and of the world, and not far from the beginning of their story they proceed to narrate the birth of the Gods, and how after they were born they behaved to one another. Whether these stories have in other ways a good or a bad influence, I should not like to be severe upon them, because they are ancient; but, looking at them with reference to the duties of children to their parents, I cannot praise them, or think that they are useful, or at all true. Of the words of the ancients I have nothing more to say; and I should wish to say of them only what is pleasing to the Gods. But as to our younger generation and their wisdom, I cannot let them off when they do mischief. For do but mark the effect of their words: when you and I argue for the existence of the Gods, and produce the sun, moon, stars, and earth, claiming for them a divine being, if we would listen to the aforesaid philosophers we should say that they are earth and stones only, which can have no care at all of human affairs, and that all religion is a cooking up of words and a make-believe.

CLEINIAS: One such teacher, O stranger, would be bad enough, and you imply that there are many of them, which is worse.

ATHENIAN: Well, then; what shall we say or do? Shall we assume that some one is accusing us among unholy men, who are trying to escape from the effect of our legislation; and that they say of us--How dreadful that you should legislate on the supposition that there are Gods! Shall we make a defence of ourselves? or shall we leave them and return to our laws, lest
the prelude should become longer than the law? For the discourse will certainly extend to great length, if we are to treat the impiously disposed as they desire, partly demonstrating to them at some length the things of which they demand an explanation, partly making them afraid or dissatisfied, and then proceed to the requisite enactments.

CLEINIAS: Yes, Stranger; but then how often have we repeated already that on the present occasion there is no reason why brevity should be preferred to length; for who is 'at our heels?' as the saying goes, and it would be paltry and ridiculous to prefer the shorter to the better. It is a matter of no small consequence, in some way or other to prove that there are Gods, and that they are good, and regard justice more than men do. The demonstration of this would be the best and noblest prelude of all our laws. And therefore, without impatience, and without hurry, let us unreservedly consider the whole matter, summoning up all the power of persuasion which we possess.

ATHENIAN: Seeing you thus in earnest, I would fain offer up a prayer that I may succeed: but I must proceed at once. Who can be calm when he is called upon to prove the existence of the Gods? Who can avoid hating and abhorring the men who are and have been the cause of this argument; I speak of those who will not believe the tales which they have heard as babes and sucklings from their mothers and nurses, repeated by them both in jest and earnest, like charms, who have also heard them in the sacrificial prayers, and seen sights accompanying them--sights and sounds delightful to children--and their parents during the sacrifices showing an intense earnestness on behalf of their children and of themselves, and with eager interest talking to the Gods, and beseeching them, as though they were firmly convinced of their existence; who likewise see and hear the prostrations and invocations which are made by Hellenes and barbarians at the rising and setting of the sun and moon, in all the vicissitudes of life, not as if they thought that there were no Gods, but as if there could be no doubt of their existence, and no suspicion of their non-existence; when men, knowing all these things, despise them on no real grounds, as would be admitted by all who have any particle of intelligence, and when they force us to say what we are now saying, how can any one in gentle terms remonstrate with the like of them, when he has to begin by proving to them the very existence of the Gods? Yet the attempt must be made; for it would be unseemly that one half of mankind should go mad in their lust of pleasure, and the other half in their indignation at such persons. Our address to these lost and perverted natures should not be spoken in passion; let us suppose ourselves to select some one of them, and gently reason with him, smothering our anger: O my son, we will say to him, you are young, and the advance of time will make you reverse many of the opinions which you now hold. Wait awhile, and do not attempt to judge at present of the highest things; and that is the highest of which you now think nothing--to know the Gods rightly and to
live accordingly. And in the first place let me indicate to you one point which is of great importance, and about which I cannot be deceived: You and your friends are not the first who have held this opinion about the Gods. There have always been persons more or less numerous who have had the same disorder. I have known many of them, and can tell you, that no one who had taken up in youth this opinion, that the Gods do not exist, ever continued in the same until he was old; the two other notions certainly do continue in some cases, but not in many; the notion, I mean, that the Gods exist, but take no heed of human things, and the other notion that they do take heed of them, but are easily propitiated with sacrifices and prayers. As to the opinion about the Gods which may some day become clear to you, I advise you to wait and consider if it be true or not; ask of others, and above all of the legislator. In the meantime take care that you do not offend against the Gods. For the duty of the legislator is and always will be to teach you the truth of these matters.

CLEINIAS: Our address, Stranger, thus far, is excellent.

ATHENIAN: Quite true, Megillus and Cleinias, but I am afraid that we have unconsciously lighted on a strange doctrine.

CLEINIAS: What doctrine do you mean?

ATHENIAN: The wisest of all doctrines, in the opinion of many.

CLEINIAS: I wish that you would speak plainer.

ATHENIAN: The doctrine that all things do become, have become, and will become, some by nature, some by art, and some by chance.

CLEINIAS: Is not that true?

ATHENIAN: Well, philosophers are probably right; at any rate we may as well follow in their track, and examine what is the meaning of them and their disciples.

CLEINIAS: By all means.

ATHENIAN: They say that the greatest and fairest things are the work of nature and of chance, the lesser of art, which, receiving from nature the greater and primeval creations, moulds and fashions all those lesser works which are generally termed artificial.

CLEINIAS: How is that?

ATHENIAN: I will explain my meaning still more clearly. They say that fire and water, and earth and air, all exist by nature and chance, and none of
them by art, and that as to the bodies which come next in order—earth, and sun, and moon, and stars—they have been created by means of these absolutely inanimate existences. The elements are severally moved by chance and some inherent force according to certain affinities among them—of hot with cold, or of dry with moist, or of soft with hard, and according to all the other accidental admixtures of opposites which have been formed by necessity. After this fashion and in this manner the whole heaven has been created, and all that is in the heaven, as well as animals and all plants, and all the seasons come from these elements, not by the action of mind, as they say, or of any God, or from art, but as I was saying, by nature and chance only. Art sprang up afterwards and out of these, mortal and of mortal birth, and produced in play certain images and very partial imitations of the truth, having an affinity to one another, such as music and painting create and their companion arts. And there are other arts which have a serious purpose, and these co-operate with nature, such, for example, as medicine, and husbandry, and gymnastic. And they say that politics co-operate with nature, but in a less degree, and have more of art; also that legislation is entirely a work of art, and is based on assumptions which are not true.

CLEINIAS: How do you mean?

ATHENIAN: In the first place, my dear friend, these people would say that the Gods exist not by nature, but by art, and by the laws of states, which are different in different places, according to the agreement of those who make them; and that the honourable is one thing by nature and another thing by law, and that the principles of justice have no existence at all in nature, but that mankind are always disputing about them and altering them; and that the alterations which are made by art and by law have no basis in nature, but are of authority for the moment and at the time at which they are made. These, my friends, are the sayings of wise men, poets and prose writers, which find a way into the minds of youth. They are told by them that the highest right is might, and in this way the young fall into impieties, under the idea that the Gods are not such as the law bids them imagine; and hence arise factions, these philosophers inviting them to lead a true life according to nature, that is, to live in real dominion over others, and not in legal subjection to them.

CLEINIAS: What a dreadful picture, Stranger, have you given, and how great is the injury which is thus inflicted on young men to the ruin both of states and families!

ATHENIAN: True, Cleinias; but then what should the lawgiver do when this evil is of long standing? should he only rise up in the state and threaten all mankind, proclaiming that if they will not say and think that the Gods are such as the law ordains (and this may be extended generally to the honourable, the just, and to all the highest things, and to all that
relates to virtue and vice), and if they will not make their actions conform to the copy which the law gives them, then he who refuses to obey the law shall die, or suffer stripes and bonds, or privation of citizenship, or in some cases be punished by loss of property and exile? Should he not rather, when he is making laws for men, at the same time infuse the spirit of persuasion into his words, and mitigate the severity of them as far as he can?

CLEINIAS: Why, Stranger, if such persuasion be at all possible, then a legislator who has anything in him ought never to weary of persuading men; he ought to leave nothing unsaid in support of the ancient opinion that there are Gods, and of all those other truths which you were just now mentioning; he ought to support the law and also art, and acknowledge that both alike exist by nature, and no less than nature, if they are the creations of mind in accordance with right reason, as you appear to me to maintain, and I am disposed to agree with you in thinking.

ATHENIAN: Yes, my enthusiastic Cleinias; but are not these things when spoken to a multitude hard to be understood, not to mention that they take up a dismal length of time?

CLEINIAS: Why, Stranger, shall we, whose patience failed not when drinking or music were the themes of discourse, weary now of discoursing about the Gods, and about divine things? And the greatest help to rational legislation is that the laws when once written down are always at rest; they can be put to the test at any future time, and therefore, if on first hearing they seem difficult, there is no reason for apprehension about them, because any man however dull can go over them and consider them again and again; nor if they are tedious but useful, is there any reason or religion, as it seems to me, in any man refusing to maintain the principles of them to the utmost of his power.

MEGILLUS: Stranger, I like what Cleinias is saying.

ATHENIAN: Yes, Megillus, and we should do as he proposes; for if impious discourses were not scattered, as I may say, throughout the world, there would have been no need for any vindication of the existence of the Gods--but seeing that they are spread far and wide, such arguments are needed; and who should come to the rescue of the greatest laws, when they are being undermined by bad men, but the legislator himself?

MEGILLUS: There is no more proper champion of them.

ATHENIAN: Well, then, tell me, Cleinias--for I must ask you to be my partner--does not he who talks in this way conceive fire and water and earth and air to be the first elements of all things? these he calls nature, and out of these he supposes the soul to be formed afterwards; and
this is not a mere conjecture of ours about his meaning, but is what he really means.

CLEINIAS: Very true.

ATHENIAN: Then, by Heaven, we have discovered the source of this vain opinion of all those physical investigators; and I would have you examine their arguments with the utmost care, for their impiety is a very serious matter; they not only make a bad and mistaken use of argument, but they lead away the minds of others: that is my opinion of them.

CLEINIAS: You are right; but I should like to know how this happens.

ATHENIAN: I fear that the argument may seem singular.

CLEINIAS: Do not hesitate, Stranger; I see that you are afraid of such a discussion carrying you beyond the limits of legislation. But if there be no other way of showing our agreement in the belief that there are Gods, of whom the law is said now to approve, let us take this way, my good sir.

ATHENIAN: Then I suppose that I must repeat the singular argument of those who manufacture the soul according to their own impious notions; they affirm that which is the first cause of the generation and destruction of all things, to be not first, but last, and that which is last to be first, and hence they have fallen into error about the true nature of the Gods.

CLEINIAS: Still I do not understand you.

ATHENIAN: Nearly all of them, my friends, seem to be ignorant of the nature and power of the soul, especially in what relates to her origin: they do not know that she is among the first of things, and before all bodies, and is the chief author of their changes and transpositions. And if this is true, and if the soul is older than the body, must not the things which are of the soul's kindred be of necessity prior to those which appertain to the body?

CLEINIAS: Certainly.

ATHENIAN: Then thought and attention and mind and art and law will be prior to that which is hard and soft and heavy and light; and the great and primitive works and actions will be works of art; they will be the first, and after them will come nature and works of nature, which however is a wrong term for men to apply to them; these will follow, and will be under the government of art and mind.

CLEINIAS: But why is the word 'nature' wrong?
ATHENIAN: Because those who use the term mean to say that nature is the first creative power; but if the soul turn out to be the primeval element, and not fire or air, then in the truest sense and beyond other things the soul may be said to exist by nature; and this would be true if you proved that the soul is older than the body, but not otherwise.

CLEINIAS: You are quite right.

ATHENIAN: Shall we, then, take this as the next point to which our attention should be directed?

CLEINIAS: By all means.

ATHENIAN: Let us be on our guard lest this most deceptive argument with its youthful looks, beguiling us old men, give us the slip and make a laughing-stock of us. Who knows but we may be aiming at the greater, and fail of attaining the lesser? Suppose that we three have to pass a rapid river, and I, being the youngest of the three and experienced in rivers, take upon me the duty of making the attempt first by myself; leaving you in safety on the bank, I am to examine whether the river is passable by older men like yourselves, and if such appears to be the case then I shall invite you to follow, and my experience will help to convey you across; but if the river is impassable by you, then there will have been no danger to anybody but myself—would not that seem to be a very fair proposal? I mean to say that the argument in prospect is likely to be too much for you, out of your depth and beyond your strength, and I should be afraid that the stream of my questions might create in you who are not in the habit of answering, giddiness and confusion of mind, and hence a feeling of unpleasantness and unsuitableness might arise. I think therefore that I had better first ask the questions and then answer them myself while you listen in safety; in that way I can carry on the argument until I have completed the proof that the soul is prior to the body.

CLEINIAS: Excellent, Stranger, and I hope that you will do as you propose.

ATHENIAN: Come, then, and if ever we are to call upon the Gods, let us call upon them now in all seriousness to come to the demonstration of their own existence. And so holding fast to the rope we will venture upon the depths of the argument. When questions of this sort are asked of me, my safest answer would appear to be as follows: Some one says to me, 'O Stranger, are all things at rest and nothing in motion, or is the exact opposite of this true, or are some things in motion and others at rest?' To this I shall reply that some things are in motion and others at rest. 'And do not things which move move in a place, and are not the things which are at rest at rest in a place?' Certainly. 'And some move or rest in one place and some in more places than one?' You mean to say, we shall rejoin, that those things which rest at the centre move in one place, just
as the circumference goes round of globes which are said to be at rest? 'Yes.' And we observe that, in the revolution, the motion which carries round the larger and the lesser circle at the same time is proportionally distributed to greater and smaller, and is greater and smaller in a certain proportion. Here is a wonder which might be thought an impossibility, that the same motion should impart swiftness and slowness in due proportion to larger and lesser circles. 'Very true.' And when you speak of bodies moving in many places, you seem to me to mean those which move from one place to another, and sometimes have one centre of motion and sometimes more than one because they turn upon their axis; and whenever they meet anything, if it be stationary, they are divided by it; but if they get in the midst between bodies which are approaching and moving towards the same spot from opposite directions, they unite with them. 'I admit the truth of what you are saying.' Also when they unite they grow, and when they are divided they waste away--that is, supposing the constitution of each to remain, or if that fails, then there is a second reason of their dissolution. 'And when are all things created and how?' Clearly, they are created when the first principle receives increase and attains to the second dimension, and from this arrives at the one which is neighbour to this, and after reaching the third becomes perceptible to sense. Everything which is thus changing and moving is in process of generation; only when at rest has it real existence, but when passing into another state it is destroyed utterly. Have we not mentioned all motions that there are, and comprehended them under their kinds and numbered them with the exception, my friends, of two?

CLEINIAS: Which are they?

ATHENIAN: Just the two, with which our present enquiry is concerned.

CLEINIAS: Speak plainer.

ATHENIAN: I suppose that our enquiry has reference to the soul?

CLEINIAS: Very true.

ATHENIAN: Let us assume that there is a motion able to move other things, but not to move itself; that is one kind; and there is another kind which can move itself as well as other things, working in composition and decomposition, by increase and diminution and generation and destruction--that is also one of the many kinds of motion.

CLEINIAS: Granted.

ATHENIAN: And we will assume that which moves other, and is changed by other, to be the ninth, and that which changes itself and others, and is coincident with every action and every passion, and is the true principle
of change and motion in all that is--that we shall be inclined to call the
tenth.

CLEINIAS: Certainly.

ATHENIAN: And which of these ten motions ought we to prefer as being the
mightiest and most efficient?

CLEINIAS: I must say that the motion which is able to move itself is ten
thousand times superior to all the others.

ATHENIAN: Very good; but may I make one or two corrections in what I have
been saying?

CLEINIAS: What are they?

ATHENIAN: When I spoke of the tenth sort of motion, that was not quite
correct.

CLEINIAS: What was the error?

ATHENIAN: According to the true order, the tenth was really the first in
generation and power; then follows the second, which was strangely enough
termed the ninth by us.

CLEINIAS: What do you mean?

ATHENIAN: I mean this: when one thing changes another, and that another,
of such will there be any primary changing element? How can a thing which
is moved by another ever be the beginning of change? Impossible. But when
the self-moving changes other, and that again other, and thus thousands
upon tens of thousands of bodies are set in motion, must not the beginning
of all this motion be the change of the self-moving principle?

CLEINIAS: Very true, and I quite agree.

ATHENIAN: Or, to put the question in another way, making answer to
ourselves: If, as most of these philosophers have the audacity to affirm,
all things were at rest in one mass, which of the above-mentioned
principles of motion would first spring up among them?

CLEINIAS: Clearly the self-moving; for there could be no change in them
arising out of any external cause; the change must first take place in
themselves.

ATHENIAN: Then we must say that self-motion being the origin of all
motions, and the first which arises among things at rest as well as among
things in motion, is the eldest and mightiest principle of change, and that which is changed by another and yet moves other is second.

CLEINIAS: Quite true.

ATHENIAN: At this stage of the argument let us put a question.

CLEINIAS: What question?

ATHENIAN: If we were to see this power existing in any earthy, watery, or fiery substance, simple or compound--how should we describe it?

CLEINIAS: You mean to ask whether we should call such a self-moving power life?

ATHENIAN: I do.

CLEINIAS: Certainly we should.

ATHENIAN: And when we see soul in anything, must we not do the same--must we not admit that this is life?

CLEINIAS: We must.

ATHENIAN: And now, I beseech you, reflect--you would admit that we have a threefold knowledge of things?

CLEINIAS: What do you mean?

ATHENIAN: I mean that we know the essence, and that we know the definition of the essence, and the name--these are the three; and there are two questions which may be raised about anything.

CLEINIAS: How two?

ATHENIAN: Sometimes a person may give the name and ask the definition; or he may give the definition and ask the name. I may illustrate what I mean in this way.

CLEINIAS: How?

ATHENIAN: Number like some other things is capable of being divided into equal parts; when thus divided, number is named 'even,' and the definition of the name 'even' is 'number divisible into two equal parts'?

CLEINIAS: True.
ATHENIAN: I mean, that when we are asked about the definition and give the name, or when we are asked about the name and give the definition—in either case, whether we give name or definition, we speak of the same thing, calling 'even' the number which is divided into two equal parts.

CLEINIAS: Quite true.

ATHENIAN: And what is the definition of that which is named 'soul'? Can we conceive of any other than that which has been already given—the motion which can move itself?

CLEINIAS: You mean to say that the essence which is defined as the self-moving is the same with that which has the name soul?

ATHENIAN: Yes; and if this is true, do we still maintain that there is anything wanting in the proof that the soul is the first origin and moving power of all that is, or has become, or will be, and their contraries, when she has been clearly shown to be the source of change and motion in all things?

CLEINIAS: Certainly not; the soul as being the source of motion, has been most satisfactorily shown to be the oldest of all things.

ATHENIAN: And is not that motion which is produced in another, by reason of another, but never has any self-moving power at all, being in truth the change of an inanimate body, to be reckoned second, or by any lower number which you may prefer?

CLEINIAS: Exactly.

ATHENIAN: Then we are right, and speak the most perfect and absolute truth, when we say that the soul is prior to the body, and that the body is second and comes afterwards, and is born to obey the soul, which is the ruler?

CLEINIAS: Nothing can be more true.

ATHENIAN: Do you remember our old admission, that if the soul was prior to the body the things of the soul were also prior to those of the body?

CLEINIAS: Certainly.

ATHENIAN: Then characters and manners, and wishes and reasonings, and true opinions, and reflections, and recollections are prior to length and breadth and depth and strength of bodies, if the soul is prior to the body.
CLEINIAS: To be sure.

ATHENIAN: In the next place, we must not of necessity admit that the soul is the cause of good and evil, base and honourable, just and unjust, and of all other opposites, if we suppose her to be the cause of all things?

CLEINIAS: We must.

ATHENIAN: And as the soul orders and inhabits all things that move, however moving, must we not say that she orders also the heavens?

CLEINIAS: Of course.

ATHENIAN: One soul or more? More than one--I will answer for you; at any rate, we must not suppose that there are less than two--one the author of good, and the other of evil.

CLEINIAS: Very true.

ATHENIAN: Yes, very true; the soul then directs all things in heaven, and earth, and sea by her movements, and these are described by the terms--will, consideration, attention, deliberation, opinion true and false, joy and sorrow, confidence, fear, hatred, love, and other primary motions akin to these; which again receive the secondary motions of corporeal substances, and guide all things to growth and decay, to composition and decomposition, and to the qualities which accompany them, such as heat and cold, heaviness and lightness, hardness and softness, blackness and whiteness, bitterness and sweetness, and all those other qualities which the soul uses, herself a goddess, when truly receiving the divine mind she disciplines all things rightly to their happiness; but when she is the companion of folly, she does the very contrary of all this. Shall we assume so much, or do we still entertain doubts?

CLEINIAS: There is no room at all for doubt.

ATHENIAN: Shall we say then that it is the soul which controls heaven and earth, and the whole world? that it is a principle of wisdom and virtue, or a principle which has neither wisdom nor virtue? Suppose that we make answer as follows:

CLEINIAS: How would you answer?

ATHENIAN: If, my friend, we say that the whole path and movement of heaven, and of all that is therein, is by nature akin to the movement and revolution and calculation of mind, and proceeds by kindred laws, then, as is plain, we must say that the best soul takes care of the world and guides it along the good path.
CLEINIAS: True.

ATHENIAN: But if the world moves wildly and irregularly, then the evil soul guides it.

CLEINIAS: True again.

ATHENIAN: Of what nature is the movement of mind? To this question it is not easy to give an intelligent answer; and therefore I ought to assist you in framing one.

CLEINIAS: Very good.

ATHENIAN: Then let us not answer as if we would look straight at the sun, making ourselves darkness at midday--I mean as if we were under the impression that we could see with mortal eyes, or know adequately the nature of mind--it will be safer to look at the image only.

CLEINIAS: What do you mean?

ATHENIAN: Let us select of the ten motions the one which mind chiefly resembles; this I will bring to your recollection, and will then make the answer on behalf of us all.

CLEINIAS: That will be excellent.

ATHENIAN: You will surely remember our saying that all things were either at rest or in motion?

CLEINIAS: I do.

ATHENIAN: And that of things in motion some were moving in one place, and others in more than one?

CLEINIAS: Yes.

ATHENIAN: Of these two kinds of motion, that which moves in one place must move about a centre like globes made in a lathe, and is most entirely akin and similar to the circular movement of mind.

CLEINIAS: What do you mean?

ATHENIAN: In saying that both mind and the motion which is in one place move in the same and like manner, in and about the same, and in relation to the same, and according to one proportion and order, and are like the motion of a globe, we invented a fair image, which does no discredit to
our ingenuity.

CLEINIAS: It does us great credit.

ATHENIAN: And the motion of the other sort which is not after the same manner, nor in the same, nor about the same, nor in relation to the same, nor in one place, nor in order, nor according to any rule or proportion, may be said to be akin to senselessness and folly?

CLEINIAS: That is most true.

ATHENIAN: Then, after what has been said, there is no difficulty in distinctly stating, that since soul carries all things round, either the best soul or the contrary must of necessity carry round and order and arrange the revolution of the heaven.

CLEINIAS: And judging from what has been said, Stranger, there would be impiety in asserting that any but the most perfect soul or souls carries round the heavens.

ATHENIAN: You have understood my meaning right well, Cleinias, and now let me ask you another question.

CLEINIAS: What are you going to ask?

ATHENIAN: If the soul carries round the sun and moon, and the other stars, does she not carry round each individual of them?

CLEINIAS: Certainly.

ATHENIAN: Then of one of them let us speak, and the same argument will apply to all.

CLEINIAS: Which will you take?

ATHENIAN: Every one sees the body of the sun, but no one sees his soul, nor the soul of any other body living or dead; and yet there is great reason to believe that this nature, unperceived by any of our senses, is circumfused around them all, but is perceived by mind; and therefore by mind and reflection only let us apprehend the following point.

CLEINIAS: What is that?

ATHENIAN: If the soul carries round the sun, we shall not be far wrong in supposing one of three alternatives.

CLEINIAS: What are they?
ATHENIAN: Either the soul which moves the sun this way and that, resides within the circular and visible body, like the soul which carries us about every way; or the soul provides herself with an external body of fire or air, as some affirm, and violently propels body by body; or thirdly, she is without such a body, but guides the sun by some extraordinary and wonderful power.

CLEINIAS: Yes, certainly; the soul can only order all things in one of these three ways.

ATHENIAN: And this soul of the sun, which is therefore better than the sun, whether taking the sun about in a chariot to give light to men, or acting from without, or in whatever way, ought by every man to be deemed a God.

CLEINIAS: Yes, by every man who has the least particle of sense.

ATHENIAN: And of the stars too, and of the moon, and of the years and months and seasons, must we not say in like manner, that since a soul or souls having every sort of excellence are the causes of all of them, those souls are Gods, whether they are living beings and reside in bodies, and in this way order the whole heaven, or whatever be the place and mode of their existence--and will any one who admits all this venture to deny that all things are full of Gods?

CLEINIAS: No one, Stranger, would be such a madman.

ATHENIAN: And now, Megillus and Cleinias, let us offer terms to him who has hitherto denied the existence of the Gods, and leave him.

CLEINIAS: What terms?

ATHENIAN: Either he shall teach us that we were wrong in saying that the soul is the original of all things, and arguing accordingly; or, if he be not able to say anything better, then he must yield to us and live for the remainder of his life in the belief that there are Gods. Let us see, then, whether we have said enough or not enough to those who deny that there are Gods.

CLEINIAS: Certainly, quite enough, Stranger.

ATHENIAN: Then to them we will say no more. And now we are to address him who, believing that there are Gods, believes also that they take no heed of human affairs: To him we say--O thou best of men, in believing that there are Gods you are led by some affinity to them, which attracts you towards your kindred and makes you honour and believe in them. But the
fortunes of evil and unrighteous men in private as well as public life, which, though not really happy, are wrongly counted happy in the judgment of men, and are celebrated both by poets and prose writers--these draw you aside from your natural piety. Perhaps you have seen impious men growing old and leaving their children's children in high offices, and their prosperity shakes your faith--you have known or heard or been yourself an eyewitness of many monstrous impieties, and have beheld men by such criminal means from small beginnings attaining to sovereignty and the pinnacle of greatness; and considering all these things you do not like to accuse the Gods of them, because they are your relatives; and so from some want of reasoning power, and also from an unwillingness to find fault with them, you have come to believe that they exist indeed, but have no thought or care of human things. Now, that your present evil opinion may not grow to still greater impiety, and that we may if possible use arguments which may conjure away the evil before it arrives, we will add another argument to that originally addressed to him who utterly denied the existence of the Gods. And do you, Megillus and Cleinias, answer for the young man as you did before; and if any impediment comes in our way, I will take the word out of your mouths, and carry you over the river as I did just now.

CLEINIAS: Very good; do as you say, and we will help you as well as we can.

ATHENIAN: There will probably be no difficulty in proving to him that the Gods care about the small as well as about the great. For he was present and heard what was said, that they are perfectly good, and that the care of all things is most entirely natural to them.

CLEINIAS: No doubt he heard that.

ATHENIAN: Let us consider together in the next place what we mean by this virtue which we ascribe to them. Surely we should say that to be temperate and to possess mind belongs to virtue, and the contrary to vice?

CLEINIAS: Certainly.

ATHENIAN: Yes; and courage is a part of virtue, and cowardice of vice?

CLEINIAS: True.

ATHENIAN: And the one is honourable, and the other dishonourable?

CLEINIAS: To be sure.

ATHENIAN: And the one, like other meaner things, is a human quality, but the Gods have no part in anything of the sort?
CLEINIAS: That again is what everybody will admit.

ATHENIAN: But do we imagine carelessness and idleness and luxury to be virtues? What do you think?

CLEINIAS: Decidedly not.

ATHENIAN: They rank under the opposite class?

CLEINIAS: Yes.

ATHENIAN: And their opposites, therefore, would fall under the opposite class?

CLEINIAS: Yes.

ATHENIAN: But are we to suppose that one who possesses all these good qualities will be luxurious and heedless and idle, like those whom the poet compares to stingless drones?

CLEINIAS: And the comparison is a most just one.

ATHENIAN: Surely God must not be supposed to have a nature which He Himself hates? he who dares to say this sort of thing must not be tolerated for a moment.

CLEINIAS: Of course not. How could he have?

ATHENIAN: Should we not on any principle be entirely mistaken in praising any one who has some special business entrusted to him, if he have a mind which takes care of great matters and no care of small ones? Reflect; he who acts in this way, whether he be God or man, must act from one of two principles.

CLEINIAS: What are they?

ATHENIAN: Either he must think that the neglect of the small matters is of no consequence to the whole, or if he knows that they are of consequence, and he neglects them, his neglect must be attributed to carelessness and indolence. Is there any other way in which his neglect can be explained? For surely, when it is impossible for him to take care of all, he is not negligent if he fails to attend to these things great or small, which a God or some inferior being might be wanting in strength or capacity to manage?

CLEINIAS: Certainly not.
ATHENIAN: Now, then, let us examine the offenders, who both alike confess that there are Gods, but with a difference--the one saying that they may be appeased, and the other that they have no care of small matters: there are three of us and two of them, and we will say to them--In the first place, you both acknowledge that the Gods hear and see and know all things, and that nothing can escape them which is matter of sense and knowledge: do you admit this?

CLEINIAS: Yes.

ATHENIAN: And do you admit also that they have all power which mortals and immortals can have?

CLEINIAS: They will, of course, admit this also.

ATHENIAN: And surely we three and they two--five in all--have acknowledged that they are good and perfect?

CLEINIAS: Assuredly.

ATHENIAN: But, if they are such as we conceive them to be, can we possibly suppose that they ever act in the spirit of carelessness and indolence? For in us inactivity is the child of cowardice, and carelessness of inactivity and indolence.

CLEINIAS: Most true.

ATHENIAN: Then not from inactivity and carelessness is any God ever negligent; for there is no cowardice in them.

CLEINIAS: That is very true.

ATHENIAN: Then the alternative which remains is, that if the Gods neglect the lighter and lesser concerns of the universe, they neglect them because they know that they ought not to care about such matters--what other alternative is there but the opposite of their knowing?

CLEINIAS: There is none.

ATHENIAN: And, O most excellent and best of men, do I understand you to mean that they are careless because they are ignorant, and do not know that they ought to take care, or that they know, and yet like the meanest sort of men, knowing the better, choose the worse because they are overcome by pleasures and pains?

CLEINIAS: Impossible.
ATHENIAN: Do not all human things partake of the nature of soul? And is not man the most religious of all animals?

CLEINIAS: That is not to be denied.

ATHENIAN: And we acknowledge that all mortal creatures are the property of the Gods, to whom also the whole of heaven belongs?

CLEINIAS: Certainly.

ATHENIAN: And, therefore, whether a person says that these things are to the Gods great or small--in either case it would not be natural for the Gods who own us, and who are the most careful and the best of owners, to neglect us. There is also a further consideration.

CLEINIAS: What is it?

ATHENIAN: Sensation and power are in an inverse ratio to each other in respect to their ease and difficulty.

CLEINIAS: What do you mean?

ATHENIAN: I mean that there is greater difficulty in seeing and hearing the small than the great, but more facility in moving and controlling and taking care of small and unimportant things than of their opposites.

CLEINIAS: Far more.

ATHENIAN: Suppose the case of a physician who is willing and able to cure some living thing as a whole--how will the whole fare at his hands if he takes care only of the greater and neglects the parts which are lesser?

CLEINIAS: Decidedly not well.

ATHENIAN: No better would be the result with pilots or generals, or householders or statesmen, or any other such class, if they neglected the small and regarded only the great--as the builders say, the larger stones do not lie well without the lesser.

CLEINIAS: Of course not.

ATHENIAN: Let us not, then, deem God inferior to human workmen, who, in proportion to their skill, finish and perfect their works, small as well as great, by one and the same art; or that God, the wisest of beings, who is both willing and able to take care, is like a lazy good-for-nothing, or a coward, who turns his back upon labour and gives no thought to smaller and easier matters, but to the greater only.
CLEINIAS: Never, Stranger, let us admit a supposition about the Gods which is both impious and false.

ATHENIAN: I think that we have now argued enough with him who delights to accuse the Gods of neglect.

CLEINIAS: Yes.

ATHENIAN: He has been forced to acknowledge that he is in error, but he still seems to me to need some words of consolation.

CLEINIAS: What consolation will you offer him?

ATHENIAN: Let us say to the youth: The ruler of the universe has ordered all things with a view to the excellence and preservation of the whole, and each part, as far as may be, has an action and passion appropriate to it. Over these, down to the least fraction of them, ministers have been appointed to preside, who have wrought out their perfection with infinitesimal exactness. And one of these portions of the universe is thine own, unhappy man, which, however little, contributes to the whole; and you do not seem to be aware that this and every other creation is for the sake of the whole, and in order that the life of the whole may be blessed; and that you are created for the sake of the whole, and not the whole for the sake of you. For every physician and every skilled artist does all things for the sake of the whole, directing his effort towards the common good, executing the part for the sake of the whole, and not the whole for the sake of the part. And you are annoyed because you are ignorant how what is best for you happens to you and to the universe, as far as the laws of the common creation admit. Now, as the soul combining first with one body and then with another undergoes all sorts of changes, either of herself, or through the influence of another soul, all that remains to the player of the game is that he should shift the pieces; sending the better nature to the better place, and the worse to the worse, and so assigning to them their proper portion.

CLEINIAS: In what way do you mean?

ATHENIAN: In a way which may be supposed to make the care of all things easy to the Gods. If any one were to form or fashion all things without any regard to the whole--if, for example, he formed a living element of water out of fire, instead of forming many things out of one or one out of many in regular order attaining to a first or second or third birth, the transmutation would have been infinite; but now the ruler of the world has a wonderfully easy task.

CLEINIAS: How so?
ATHENIAN: I will explain: When the king saw that our actions had life, and that there was much virtue in them and much vice, and that the soul and body, although not, like the Gods of popular opinion, eternal, yet having once come into existence, were indestructible (for if either of them had been destroyed, there would have been no generation of living beings); and when he observed that the good of the soul was ever by nature designed to profit men, and the evil to harm them--he, seeing all this, contrived so to place each of the parts that their position might in the easiest and best manner procure the victory of good and the defeat of evil in the whole. And he contrived a general plan by which a thing of a certain nature found a certain seat and room. But the formation of qualities he left to the wills of individuals. For every one of us is made pretty much what he is by the bent of his desires and the nature of his soul.

CLEINIAS: Yes, that is probably true.

ATHENIAN: Then all things which have a soul change, and possess in themselves a principle of change, and in changing move according to law and to the order of destiny: natures which have undergone a lesser change move less and on the earth's surface, but those which have suffered more change and have become more criminal sink into the abyss, that is to say, into Hades and other places in the world below, of which the very names terrify men, and which they picture to themselves as in a dream, both while alive and when released from the body. And whenever the soul receives more of good or evil from her own energy and the strong influence of others--when she has communion with divine virtue and becomes divine, she is carried into another and better place, which is perfect in holiness; but when she has communion with evil, then she also changes the place of her life.

'This is the justice of the Gods who inhabit Olympus.'

O youth or young man, who fancy that you are neglected by the Gods, know that if you become worse you shall go to the worse souls, or if better to the better, and in every succession of life and death you will do and suffer what like may fitly suffer at the hands of like. This is the justice of heaven, which neither you nor any other unfortunate will ever glory in escaping, and which the ordaining powers have specially ordained; take good heed thereof, for it will be sure to take heed of you. If you say: I am small and will creep into the depths of the earth, or I am high and will fly up to heaven, you are not so small or so high but that you shall pay the fitting penalty, either here or in the world below or in some still more savage place whither you shall be conveyed. This is also the explanation of the fate of those whom you saw, who had done unholy and evil deeds, and from small beginnings had grown great, and you fancied that from being miserable they had become happy; and in their actions, as
in a mirror, you seemed to see the universal neglect of the Gods, not knowing how they make all things work together and contribute to the great whole. And thinkest thou, bold man, that thou needest not to know this? he who knows it not can never form any true idea of the happiness or unhappiness of life or hold any rational discourse respecting either. If Cleinias and this our reverend company succeed in proving to you that you know not what you say of the Gods, then will God help you; but should you desire to hear more, listen to what we say to the third opponent, if you have any understanding whatsoever. For I think that we have sufficiently proved the existence of the Gods, and that they care for men: The other notion that they are appeased by the wicked, and take gifts, is what we must not concede to any one, and what every man should disprove to the utmost of his power.

CLEINIAS: Very good; let us do as you say.

ATHENIAN: Well, then, by the Gods themselves I conjure you to tell me--if they are to be propitiated, how are they to be propitiated? Who are they, and what is their nature? Must they not be at least rulers who have to order unceasingly the whole heaven?

CLEINIAS: True.

ATHENIAN: And to what earthly rulers can they be compared, or who to them? How in the less can we find an image of the greater? Are they charioteers of contending pairs of steeds, or pilots of vessels? Perhaps they might be compared to the generals of armies, or they might be likened to physicians providing against the diseases which make war upon the body, or to husbandmen observing anxiously the effects of the seasons on the growth of plants; or perhaps to shepherds of flocks. For as we acknowledge the world to be full of many goods and also of evils, and of more evils than goods, there is, as we affirm, an immortal conflict going on among us, which requires marvellous watchfulness; and in that conflict the Gods and demigods are our allies, and we are their property. Injustice and insolence and folly are the destruction of us, and justice and temperance and wisdom are our salvation; and the place of these latter is in the life of the Gods, although some vestige of them may occasionally be discerned among mankind. But upon this earth we know that there dwell souls possessing an unjust spirit, who may be compared to brute animals, which fawn upon their keepers, whether dogs or shepherds, or the best and most perfect masters; for they in like manner, as the voices of the wicked declare, prevail by flattery and prayers and incantations, and are allowed to make their gains with impunity. And this sin, which is termed dishonesty, is an evil of the same kind as what is termed disease in living bodies or pestilence in years or seasons of the year, and in cities and governments has another name, which is injustice.
CLEINIAS: Quite true.

ATHENIAN: What else can he say who declares that the Gods are always lenient to the doers of unjust acts, if they divide the spoil with them? As if wolves were to toss a portion of their prey to the dogs, and they, mollified by the gift, suffered them to tear the flocks. Must not he who maintains that the Gods can be propitiated argue thus?

CLEINIAS: Precisely so.

ATHENIAN: And to which of the above-mentioned classes of guardians would any man compare the Gods without absurdity? Will he say that they are like pilots, who are themselves turned away from their duty by 'libations of wine and the savour of fat,' and at last overturn both ship and sailors?

CLEINIAS: Assuredly not.

ATHENIAN: And surely they are not like charioteers who are bribed to give up the victory to other chariots?

CLEINIAS: That would be a fearful image of the Gods.

ATHENIAN: Nor are they like generals, or physicians, or husbandmen, or shepherds; and no one would compare them to dogs who have been silenced by wolves.

CLEINIAS: A thing not to be spoken of.

ATHENIAN: And are not all the Gods the chiefest of all guardians, and do they not guard our highest interests?

CLEINIAS: Yes; the chiepest.

ATHENIAN: And shall we say that those who guard our noblest interests, and are the best of guardians, are inferior in virtue to dogs, and to men even of moderate excellence, who would never betray justice for the sake of gifts which unjust men impiously offer them?

CLEINIAS: Certainly not; nor is such a notion to be endured, and he who holds this opinion may be fairly singled out and characterized as of all impious men the wickedest and most impious.

ATHENIAN: Then are the three assertions— that the Gods exist, and that they take care of men, and that they can never be persuaded to do injustice, now sufficiently demonstrated? May we say that they are?

CLEINIAS: You have our entire assent to your words.
ATHENIAN: I have spoken with vehemence because I am zealous against evil men; and I will tell you, dear Cleinias, why I am so. I would not have the wicked think that, having the superiority in argument, they may do as they please and act according to their various imaginations about the Gods; and this zeal has led me to speak too vehemently; but if we have at all succeeded in persuading the men to hate themselves and love their opposites, the prelude of our laws about impiety will not have been spoken in vain.

CLEINIAS: So let us hope; and even if we have failed, the style of our argument will not discredit the lawgiver.

ATHENIAN: After the prelude shall follow a discourse, which will be the interpreter of the law; this shall proclaim to all impious persons that they must depart from their ways and go over to the pious. And to those who disobey, let the law about impiety be as follows: If a man is guilty of any impiety in word or deed, any one who happens to be present shall give information to the magistrates, in aid of the law; and let the magistrates who first receive the information bring him before the appointed court according to the law; and if a magistrate, after receiving information, refuses to act, he shall be tried for impiety at the instance of any one who is willing to vindicate the laws; and if any one be cast, the court shall estimate the punishment of each act of impiety; and let all such criminals be imprisoned. There shall be three prisons in the state: the first of them is to be the common prison in the neighbourhood of the agora for the safe-keeping of the generality of offenders; another is to be in the neighbourhood of the nocturnal council, and is to be called the 'House of Reformation'; another, to be situated in some wild and desolate region in the centre of the country, shall be called by some name expressive of retribution. Now, men fall into impiety from three causes, which have been already mentioned, and from each of these causes arise two sorts of impiety, in all six, which are worth distinguishing, and should not all have the same punishment. For he who does not believe in the Gods, and yet has a righteous nature, hates the wicked and dislikes and refuses to do injustice, and avoids unrighteous men, and loves the righteous. But they who besides believing that the world is devoid of Gods are intemperate, and have at the same time good memories and quick wits, are worse; although both of them are unbelievers, much less injury is done by the one than by the other. The one may talk loosely about the Gods and about sacrifices and oaths, and perhaps by laughing at other men he may make them like himself, if he be not punished. But the other who holds the same opinions and is called a clever man, is full of stratagem and deceit --men of this class deal in prophecy and jugglery of all kinds, and out of their ranks sometimes come tyrants and demagogues and generals and hierophants of private mysteries and the Sophists, as they are termed, with their ingenious devices. There are many kinds of unbelievers, but two
only for whom legislation is required; one the hypocritical sort, whose crime is deserving of death many times over, while the other needs only bonds and admonition. In like manner also the notion that the Gods take no thought of men produces two other sorts of crimes, and the notion that they may be propitiated produces two more. Assuming these divisions, let those who have been made what they are only from want of understanding, and not from malice or an evil nature, be placed by the judge in the House of Reformation, and ordered to suffer imprisonment during a period of not less than five years. And in the meantime let them have no intercourse with the other citizens, except with members of the nocturnal council, and with them let them converse with a view to the improvement of their soul's health. And when the time of their imprisonment has expired, if any of them be of sound mind let him be restored to sane company, but if not, and if he be condemned a second time, let him be punished with death. As to that class of monstrous natures who not only believe that there are no Gods, or that they are negligent, or to be propitiated, but in contempt of mankind conjure the souls of the living and say that they can conjure the dead and promise to charm the Gods with sacrifices and prayers, and will utterly overthrow individuals and whole houses and states for the sake of money—let him who is guilty of any of these things be condemned by the court to be bound according to law in the prison which is in the centre of the land, and let no freeman ever approach him, but let him receive the rations of food appointed by the guardians of the law from the hands of the public slaves; and when he is dead let him be cast beyond the borders unburied, and if any freeman assist in burying him, let him pay the penalty of impiety to any one who is willing to bring a suit against him. But if he leaves behind him children who are fit to be citizens, let the guardians of orphans take care of them, just as they would of any other orphans, from the day on which their father is convicted.

In all these cases there should be one law, which will make men in general less liable to transgress in word or deed, and less foolish, because they will not be allowed to practise religious rites contrary to law. And let this be the simple form of the law: No man shall have sacred rites in a private house. When he would sacrifice, let him go to the temples and hand over his offerings to the priests and priestesses, who see to the sanctity of such things, and let him pray himself, and let any one who pleases join with him in prayer. The reason of this is as follows: Gods and temples are not easily instituted, and to establish them rightly is the work of a mighty intellect. And women especially, and men too, when they are sick or in danger, or in any sort of difficulty, or again on their receiving any good fortune, have a way of consecrating the occasion, vowing sacrifices, and promising shrines to Gods, demigods, and sons of Gods; and when they are awakened by terrible apparitions and dreams or remember visions, they find in altars and temples the remedies of them, and will fill every house and village with them, placing them in the open air, or wherever they may have had such visions; and with a view to all these cases we should obey
BOOK XI.

In the next place, dealings between man and man require to be suitably regulated. The principle of them is very simple: Thou shalt not, if thou canst help, touch that which is mine, or remove the least thing which belongs to me without my consent; and may I be of a sound mind, and do to others as I would that they should do to me. First, let us speak of treasure-trove: May I never pray the Gods to find the hidden treasure, which another has laid up for himself and his family, he not being one of my ancestors, nor lift, if I should find, such a treasure. And may I never have any dealings with those who are called diviners, and who in any way or manner counsel me to take up the deposit entrusted to the earth, for I should not gain so much in the increase of my possessions, if I take up the prize, as I should grow in justice and virtue of soul, if I abstain; and this will be a better possession to me than the other in a better part of myself; for the possession of justice in the soul is preferable to the possession of wealth. And of many things it is well said--'Move not the immovables,' and this may be regarded as one of them. And we shall do well to believe the common tradition which says, that such deeds prevent a man from having a family. Now as to him who is careless about having children and regardless of the legislator, taking up that which neither he deposited, nor any ancestor of his, without the consent of the depositor,
violating the simplest and noblest of laws which was the enactment of no
mean man: 'Take not up that which was not laid down by thee'--of him, I
say, who despises these two legislators, and takes up, not some small
matter which he has not deposited, but perhaps a great heap of treasure,
what he ought to suffer at the hands of the Gods, God only knows; but I
would have the first person who sees him go and tell the wardens of the
city, if the occurrence has taken place in the city, or if the occurrence
has taken place in the agora he shall tell the wardens of the agora, or if
in the country he shall tell the wardens of the country and their
commanders. When information has been received the city shall send to
Delphi, and, whatever the God answers about the money and the remover of
the money, that the city shall do in obedience to the oracle; the
informer, if he be a freeman, shall have the honour of doing rightly, and
he who informs not, the dishonour of doing wrongly; and if he be a slave
who gives information, let him be freed, as he ought to be, by the state,
which shall give his master the price of him; but if he do not inform he
shall be punished with death. Next in order shall follow a similar law,
which shall apply equally to matters great and small: If a man happens to
leave behind him some part of his property, whether intentionally or
unintentionally, let him who may come upon the left property suffer it to
remain, reflecting that such things are under the protection of the
Goddess of ways, and are dedicated to her by the law. But if any one
defies the law, and takes the property home with him, let him, if the
thing is of little worth, and the man who takes it a slave, be beaten with
many stripes by him who meets him, being a person of not less than thirty
years of age. Or if he be a freeman, in addition to being thought a mean
person and a despiser of the laws, let him pay ten times the value of the
treasure which he has moved to the leaver. And if some one accuses another
of having anything which belongs to him, whether little or much, and the
other admits that he has this thing, but denies that the property in
dispute belongs to the other, if the property be registered with the
magistrates according to law, the claimant shall summon the possessor, who
shall bring it before the magistrates; and when it is brought into court,
if it be registered in the public registers, to which of the litigants it
belonged, let him take it and go his way. Or if the property be registered
as belonging to some one who is not present, whoever will offer sufficient
surety on behalf of the absent person that he will give it up to him,
shall take it away as the representative of the other. But if the property
which is deposited be not registered with the magistrates, let it remain
until the time of trial with three of the eldest of the magistrates; and
if it be an animal which is deposited, then he who loses the suit shall
pay the magistrates for its keep, and they shall determine the cause
within three days.

Any one who is of sound mind may arrest his own slave, and do with him
whatever he will of such things as are lawful; and he may arrest the
runaway slave of any of his friends or kindred with a view to his safe-
keeping. And if any one takes away him who is being carried off as a slave, intending to liberate him, he who is carrying him off shall let him go; but he who takes him away shall give three sufficient sureties; and if he give them, and not without giving them, he may take him away, but if he take him away after any other manner he shall be deemed guilty of violence, and being convicted shall pay as a penalty double the amount of the damages claimed to him who has been deprived of the slave. Any man may also carry off a freedman, if he do not pay respect or sufficient respect to him who freed him. Now the respect shall be, that the freedman go three times in the month to the hearth of the person who freed him, and offer to do whatever he ought, so far as he can; and he shall agree to make such a marriage as his former master approves. He shall not be permitted to have more property than he who gave him liberty, and what more he has shall belong to his master. The freedman shall not remain in the state more than twenty years, but like other foreigners shall go away, taking his entire property with him, unless he has the consent of the magistrates and of his former master to remain. If a freedman or any other stranger has a property greater than the census of the third class, at the expiration of thirty days from the day on which this comes to pass, he shall take that which is his and go his way, and in this case he shall not be allowed to remain any longer by the magistrates. And if any one disobeys this regulation, and is brought into court and convicted, he shall be punished with death, and his property shall be confiscated. Suits about these matters shall take place before the tribes, unless the plaintiff and defendant have got rid of the accusation either before their neighbours or before judges chosen by them. If a man lay claim to any animal or anything else which he declares to be his, let the possessor refer to the seller or to some honest and trustworthy person, who has given, or in some legitimate way made over the property to him; if he be a citizen or a metic, sojourning in the city, within thirty days, or, if the property have been delivered to him by a stranger, within five months, of which the middle month shall include the summer solstice. When goods are exchanged by selling and buying, a man shall deliver them, and receive the price of them, at a fixed place in the agora, and have done with the matter; but he shall not buy or sell anywhere else, nor give credit. And if in any other manner or in any other place there be an exchange of one thing for another, and the seller give credit to the man who buys from him, he must do this on the understanding that the law gives no protection in cases of things sold not in accordance with these regulations. Again, as to contributions, any man who likes may go about collecting contributions as a friend among friends, but if any difference arises about the collection, he is to act on the understanding that the law gives no protection in such cases. He who sells anything above the value of fifty drachmas shall be required to remain in the city for ten days, and the purchaser shall be informed of the house of the seller, with a view to the sort of charges which are apt to arise in such cases, and the restitutions which the law allows. And let legal restitution be on this wise: If a man sells a slave
who is in a consumption, or who has the disease of the stone, or of strangury, or epilepsy, or some other tedious and incurable disorder of body or mind, which is not discernible to the ordinary man, if the purchaser be a physician or trainer, he shall have no right of restitution; nor shall there be any right of restitution if the seller has told the truth beforehand to the buyer. But if a skilled person sells to another who is not skilled, let the buyer appeal for restitution within six months, except in the case of epilepsy, and then the appeal may be made within a year. The cause shall be determined by such physicians as the parties may agree to choose; and the defendant, if he lose the suit, shall pay double the price at which he sold. If a private person sell to another private person, he shall have the right of restitution, and the decision shall be given as before, but the defendant, if he be cast, shall only pay back the price of the slave. If a person sells a homicide to another, and they both know of the fact, let there be no restitution in such a case, but if he do not know of the fact, there shall be a right of restitution, whenever the buyer makes the discovery; and the decision shall rest with the five youngest guardians of the law, and if the decision be that the seller was cognisant of the fact, he shall purify the house of the purchaser, according to the law of the interpreters, and shall pay back three times the purchase-money.

If a man exchanges either money for money, or anything whatever for anything else, either with or without life, let him give and receive them genuine and unadulterated, in accordance with the law. And let us have a prelude about all this sort of roguery, like the preludes of our other laws. Every man should regard adulteration as of one and the same class with falsehood and deceit, concerning which the many are too fond of saying that at proper times and places the practice may often be right. But they leave the occasion, and the when, and the where, undefined and unsettled, and from this want of definiteness in their language they do a great deal of harm to themselves and to others. Now a legislator ought not to leave the matter undetermined; he ought to prescribe some limit, either greater or less. Let this be the rule prescribed: No one shall call the Gods to witness, when he says or does anything false or deceitful or dishonest, unless he would be the most hateful of mankind to them. And he is most hateful to them who takes a false oath, and pays no heed to the Gods; and in the next degree, he who tells a falsehood in the presence of his superiors. Now better men are the superiors of worse men, and in general elders are the superiors of the young; wherefore also parents are the superiors of their offspring, and men of women and children, and rulers of their subjects; for all men ought to reverence any one who is in any position of authority, and especially those who are in state offices. And this is the reason why I have spoken of these matters. For every one who is guilty of adulteration in the agora tells a falsehood, and deceives, and when he invokes the Gods, according to the customs and cautions of the wardens of the agora, he does but swear without any
respect for God or man. Certainly, it is an excellent rule not lightly to
defile the names of the Gods, after the fashion of men in general, who
care little about piety and purity in their religious actions. But if a
man will not conform to this rule, let the law be as follows: He who sells
anything in the agora shall not ask two prices for that which he sells,
but he shall ask one price, and if he do not obtain this, he shall take
away his goods; and on that day he shall not value them either at more or
less; and there shall be no praising of any goods, or oath taken about
them. If a person disobeys this command, any citizen who is present, not
being less than thirty years of age, may with impunity chastise and beat
the swearer, but if instead of obeying the laws he takes no heed, he shall
be liable to the charge of having betrayed them. If a man sells any
adulterated goods and will not obey these regulations, he who knows and
can prove the fact, and does prove it in the presence of the magistrates,
if he be a slave or a metic, shall have the adulterated goods; but if he
be a citizen, and do not pursue the charge, he shall be called a rogue,
and deemed to have robbed the Gods of the agora; or if he proves the
charge, he shall dedicate the goods to the Gods of the agora. He who is
proved to have sold any adulterated goods, in addition to losing the goods
themselves, shall be beaten with stripes--a stripe for a drachma,
according to the price of the goods; and the herald shall proclaim in the
agora the offence for which he is going to be beaten. The wardens of the
agora and the guardians of the law shall obtain information from
experienced persons about the rogueries and adulterations of the sellers,
and shall write up what the seller ought and ought not to do in each case;
and let them inscribe their laws on a column in front of the court of the
wardens of the agora, that they may be clear instructors of those who have
business in the agora. Enough has been said in what has preceded about the
wardens of the city, and if anything seems to be wanting, let them
communicate with the guardians of the law, and write down the omission,
and place on a column in the court of the wardens of the city the primary
and secondary regulations which are laid down for them about their office.

After the practices of adulteration naturally follow the practices of
retail trade. Concerning these, we will first of all give a word of
counsel and reason, and the law shall come afterwards. Retail trade in a
city is not by nature intended to do any harm, but quite the contrary; for
is not he a benefactor who reduces the inequalities and
incommensurabilities of goods to equality and common measure? And this is
what the power of money accomplishes, and the merchant may be said to be
appointed for this purpose. The hireling and the tavern-keeper, and many
other occupations, some of them more and others less seemly--all alike
have this object--they seek to satisfy our needs and equalize our
possessions. Let us then endeavour to see what has brought retail trade
into ill-odour, and wherein lies the dishonour and unseemliness of it, in
order that if not entirely, we may yet partially, cure the evil by
legislation. To effect this is no easy matter, and requires a great deal
of virtue.

CLEINIAS: What do you mean?

ATHENIAN: Dear Cleinias, the class of men is small--they must have been rarely gifted by nature, and trained by education--who, when assailed by wants and desires, are able to hold out and observe moderation, and when they might make a great deal of money are sober in their wishes, and prefer a moderate to a large gain. But the mass of mankind are the very opposite: their desires are unbounded, and when they might gain in moderation they prefer gains without limit; wherefore all that relates to retail trade, and merchandise, and the keeping of taverns, is denounced and numbered among dishonourable things. For if what I trust may never be and will not be, we were to compel, if I may venture to say a ridiculous thing, the best men everywhere to keep taverns for a time, or carry on retail trade, or do anything of that sort; or if, in consequence of some fate or necessity, the best women were compelled to follow similar callings, then we should know how agreeable and pleasant all these things are; and if all such occupations were managed on incorrupt principles, they would be honoured as we honour a mother or a nurse. But now that a man goes to desert places and builds houses which can only be reached by long journeys, for the sake of retail trade, and receives strangers who are in need at the welcome resting-place, and gives them peace and calm when they are tossed by the storm, or cool shade in the heat; and then instead of behaving to them as friends, and showing the duties of hospitality to his guests, treats them as enemies and captives who are at his mercy, and will not release them until they have paid the most unjust, abominable, and extortionate ransom--these are the sort of practises, and foul evils they are, which cast a reproach upon the succour of adversity. And the legislator ought always to be devising a remedy for evils of this nature. There is an ancient saying, which is also a true one--'To fight against two opponents is a difficult thing,' as is seen in diseases and in many other cases. And in this case also the war is against two enemies--wealth and poverty; one of whom corrupts the soul of man with luxury, while the other drives him by pain into utter shamelessness. What remedy can a city of sense find against this disease? In the first place, they must have as few retail traders as possible; and in the second place, they must assign the occupation to that class of men whose corruption will be the least injury to the state; and in the third place, they must devise some way whereby the followers of these occupations themselves will not readily fall into habits of unbridled shamelessness and meanness.

After this preface let our law run as follows, and may fortune favour us: No landowner among the Magnetes, whose city the God is restoring and resettling--no one, that is, of the 5040 families, shall become a retail trader either voluntarily or involuntarily; neither shall he be a merchant, or do any service for private persons unless they equally serve
him, except for his father or his mother, and their fathers and mothers; and in general for his elders who are freemen, and whom he serves as a freeman. Now it is difficult to determine accurately the things which are worthy or unworthy of a freeman, but let those who have obtained the prize of virtue give judgment about them in accordance with their feelings of right and wrong. He who in any way shares in the illiberality of retail trades may be indicted for dishonouring his race by any one who likes, before those who have been judged to be the first in virtue; and if he appear to throw dirt upon his father's house by an unworthy occupation, let him be imprisoned for a year and abstain from that sort of thing; and if he repeat the offence, for two years; and every time that he is convicted let the length of his imprisonment be doubled. This shall be the second law: He who engages in retail trade must be either a metic or a stranger. And a third law shall be: In order that the retail trader who dwells in our city may be as good or as little bad as possible, the guardians of the law shall remember that they are not only guardians of those who may be easily watched and prevented from becoming lawless or bad, because they are well-born and bred; but still more should they have a watch over those who are of another sort, and follow pursuits which have a very strong tendency to make men bad. And, therefore, in respect of the multifarious occupations of retail trade, that is to say, in respect of such of them as are allowed to remain, because they seem to be quite necessary in a state—about these the guardians of the law should meet and take counsel with those who have experience of the several kinds of retail trade, as we before commanded concerning adulteration (which is a matter akin to this), and when they meet they shall consider what amount of receipts, after deducting expenses, will produce a moderate gain to the retail trades, and they shall fix in writing and strictly maintain what they find to be the right percentage of profit; this shall be seen to by the wardens of the agora, and by the wardens of the city, and by the wardens of the country. And so retail trade will benefit every one, and do the least possible injury to those in the state who practise it.

When a man makes an agreement which he does not fulfil, unless the agreement be of a nature which the law or a vote of the assembly does not allow, or which he has made under the influence of some unjust compulsion, or which he is prevented from fulfilling against his will by some unexpected chance, the other party may go to law with him in the courts of the tribes, for not having completed his agreement, if the parties are not able previously to come to terms before arbiters or before their neighbours. The class of craftsmen who have furnished human life with the arts is dedicated to Hephaestus and Athene; and there is a class of craftsmen who preserve the works of all craftsmen by arts of defence, the votaries of Ares and Athene, to which divinities they too are rightly dedicated. All these continue through life serving the country and the people; some of them are leaders in battle; others make for hire implements and works, and they ought not to deceive in such matters, out
of respect to the Gods who are their ancestors. If any craftsman through
indolence omit to execute his work in a given time, not reverencing the
God who gives him the means of life, but considering, foolish fellow, that
he is his own God and will let him off easily, in the first place, he
shall suffer at the hands of the God, and in the second place, the law
shall follow in a similar spirit. He shall owe to him who contracted with
him the price of the works which he has failed in performing, and he shall
begin again and execute them gratis in the given time. When a man
undertakes a work, the law gives him the same advice which was given to
the seller, that he should not attempt to raise the price, but simply ask
the value; this the law enjoins also on the contractor; for the craftsman
assuredly knows the value of his work. Wherefore, in free states the man
of art ought not to attempt to impose upon private individuals by the help
of his art, which is by nature a true thing; and he who is wronged in a
matter of this sort, shall have a right of action against the party who
has wronged him. And if any one lets out work to a craftsman, and does not
pay him duly according to the lawful agreement, disregarding Zeus the
guardian of the city and Athene, who are the partners of the state, and
overthrows the foundations of society for the sake of a little gain, in
his case let the law and the Gods maintain the common bonds of the state.
And let him who, having already received the work in exchange, does not
pay the price in the time agreed, pay double the price; and if a year has
e elapsed, although interest is not to be taken on loans, yet for every
drachma which he owes to the contractor let him pay a monthly interest of
an obol. Suits about these matters are to be decided by the courts of the
tribes; and by the way, since we have mentioned craftsmen at all, we must
not forget that other craft of war, in which generals and tacticians are
the craftsmen, who undertake voluntarily or involuntarily the work of our
safety, as other craftsmen undertake other public works--if they execute
their work well the law will never tire of praising him who gives them
those honours which are the just rewards of the soldier; but if any one,
having already received the benefit of any noble service in war, does not
make the due return of honour, the law will blame him. Let this then be
the law, having an ingredient of praise, not compelling but advising the
great body of the citizens to honour the brave men who are the saviours of
the whole state, whether by their courage or by their military skill--they
should honour them, I say, in the second place; for the first and highest
tribute of respect is to be given to those who are able above other men to
honour the words of good legislators.

The greater part of the dealings between man and man have been now
regulated by us with the exception of those that relate to orphans and the
supervision of orphans by their guardians. These follow next in order, and
must be regulated in some way. But to arrive at them we must begin with
the testamentary wishes of the dying and the case of those who may have
happened to die intestate. When I said, Cleinias, that we must regulate
them, I had in my mind the difficulty and perplexity in which all such
matters are involved. You cannot leave them unregulated, for individuals would make regulations at variance with one another, and repugnant to the laws and habits of the living and to their own previous habits, if a person were simply allowed to make any will which he pleased, and this were to take effect in whatever state he may have been at the end of his life; for most of us lose our senses in a manner, and feel crushed when we think that we are about to die.

CLEINIAS: What do you mean, Stranger?

ATHENIAN: O Cleinias, a man when he is about to die is an intractable creature, and is apt to use language which causes a great deal of anxiety and trouble to the legislator.

CLEINIAS: In what way?

ATHENIAN: He wants to have the entire control of all his property, and will use angry words.

CLEINIAS: Such as what?

ATHENIAN: O ye Gods, he will say, how monstrous that I am not allowed to give, or not to give, my own to whom I will--less to him who has been bad to me, and more to him who has been good to me, and whose badness and goodness have been tested by me in time of sickness or in old age and in every other sort of fortune!

CLEINIAS: Well, Stranger, and may he not very fairly say so?

ATHENIAN: In my opinion, Cleinias, the ancient legislators were too good-natured, and made laws without sufficient observation or consideration of human things.

CLEINIAS: What do you mean?

ATHENIAN: I mean, my friend, that they were afraid of the testator's reproaches, and so they passed a law to the effect that a man should be allowed to dispose of his property in all respects as he liked; but you and I, if I am not mistaken, will have something better to say to our departing citizens.

CLEINIAS: What?

ATHENIAN: O my friends, we will say to them, hard is it for you, who are creatures of a day, to know what is yours--hard too, as the Delphic oracle says, to know yourselves at this hour. Now I, as the legislator, regard you and your possessions, not as belonging to yourselves, but as belonging
to your whole family, both past and future, and yet more do I regard both family and possessions as belonging to the state; wherefore, if some one steals upon you with flattery, when you are tossed on the sea of disease or old age, and persuades you to dispose of your property in a way that is not for the best, I will not, if I can help, allow this; but I will legislate with a view to the whole, considering what is best both for the state and for the family, esteeming as I ought the feelings of an individual at a lower rate; and I hope that you will depart in peace and kindness towards us, as you are going the way of all mankind; and we will impartially take care of all your concerns, not neglecting any of them, if we can possibly help. Let this be our prelude and consolation to the living and dying, Cleinias, and let the law be as follows: He who makes a disposition in a testament, if he be the father of a family, shall first of all inscribe as his heir any one of his sons whom he may think fit; and if he gives any of his children to be adopted by another citizen, let the adoption be inscribed. And if he has a son remaining over and above who has not been adopted upon any lot, and who may be expected to be sent out to a colony according to law, to him his father may give as much as he pleases of the rest of his property, with the exception of the paternal lot and the fixtures on the lot. And if there are other sons, let him distribute among them what there is more than the lot in such portions as he pleases. And if one of the sons has already a house of his own, he shall not give him of the money, nor shall he give money to a daughter who has been betrothed, but if she is not betrothed he may give her money. And if any of the sons or daughters shall be found to have another lot of land in the country, which has accrued after the testament has been made, they shall leave the lot which they have inherited to the heir of the man who has made the will. If the testator has no sons, but only daughters, let him choose the husband of any one of his daughters whom he pleases, and leave and inscribe him as his son and heir. And if a man have lost his son, when he was a child, and before he could be reckoned among grown up men, whether his own or an adopted son, let the testator make mention of the circumstance and inscribe whom he will to be his second son in hope of better fortune. If the testator has no children at all, he may select and give to any one whom he pleases the tenth part of the property which he has acquired; but let him not be blamed if he gives all the rest to his adopted son, and makes a friend of him according to the law. If the sons of a man require guardians, and the father when he dies leaves a will appointing guardians, those who have been named by him, whoever they are and whatever their number be, if they are able and willing to take charge of the children, shall be recognised according to the provisions of the will. But if he dies and has made no will, or a will in which he has appointed no guardians, then the next of kin, two on the father's and two on the mother's side, and one of the friends of the deceased, shall have the authority of guardians, whom the guardians of the law shall appoint when the orphans require guardians. And the fifteen eldest guardians of the law shall have the whole care and charge of the orphans, divided into
threes according to seniority--a body of three for one year, and then another body of three for the next year, until the cycle of the five periods is complete; and this, as far as possible, is to continue always. If a man dies, having made no will at all, and leaves sons who require the care of guardians, they shall share in the protection which is afforded by these laws. And if a man dying by some unexpected fate leaves daughters behind him, let him pardon the legislator if when he gives them in marriage, he have a regard only to two out of three conditions--nearness of kin and the preservation of the lot, and omits the third condition, which a father would naturally consider, for he would choose out of all the citizens a son for himself, and a husband for his daughter, with a view to his character and disposition--the father, I say, shall forgive the legislator if he disregards this, which to him is an impossible consideration. Let the law about these matters where practicable be as follows: If a man dies without making a will, and leaves behind him daughters, let his brother, being the son of the same father or of the same mother, having no lot, marry the daughter and have the lot of the dead man. And if he have no brother, but only a brother's son, in like manner let them marry, if they be of a suitable age; and if there be not even a brother's son, but only the son of a sister, let them do likewise, and so in the fourth degree, if there be only the testator's father's brother, or in the fifth degree, his father's brother's son, or in the sixth degree, the child of his father's sister. Let kindred be always reckoned in this way: if a person leaves daughters the relationship shall proceed upwards through brothers and sisters, and brothers' and sisters' children, and first the males shall come, and after them the females in the same family. The judge shall consider and determine the suitableness or unsuitableness of age in marriage; he shall make an inspection of the males naked, and of the women naked down to the navel. And if there be a lack of kinsmen in a family extending to grandchildren of a brother, or to the grandchildren of a grandfather's children, the maiden may choose with the consent of her guardians any one of the citizens who is willing and whom she wills, and he shall be the heir of the dead man, and the husband of his daughter. Circumstances vary, and there may sometimes be a still greater lack of relations within the limits of the state; and if any maiden has no kindred living in the city, and there is some one who has been sent out to a colony, and she is disposed to make him the heir of her father's possessions, if he be indeed of her kindred, let him proceed to take the lot according to the regulation of the law; but if he be not of her kindred, she having no kinsmen within the city, and he be chosen by the daughter of the dead man, and empowered to marry by the guardians, let him return home and take the lot of him who died intestate. And if a man has no children, either male or female, and dies without making a will, let the previous law in general hold; and let a man and a woman go forth from the family and share the deserted house, and let the lot belong absolutely to them; and let the heiress in the first degree be a sister, and in a second degree a daughter of a brother, and in the third, a
daughter of a sister, in the fourth degree the sister of a father, and in the fifth degree the daughter of a father's brother, and in a sixth degree of a father's sister; and these shall dwell with their male kinsmen, according to the degree of relationship and right, as we enacted before. Now we must not conceal from ourselves that such laws are apt to be oppressive and that there may sometimes be a hardship in the lawgiver commanding the kinsman of the dead man to marry his relation; he may be thought not to have considered the innumerable hindrances which may arise among men in the execution of such ordinances; for there may be cases in which the parties refuse to obey, and are ready to do anything rather than marry, when there is some bodily or mental malady or defect among those who are bidden to marry or be married. Persons may fancy that the legislator never thought of this, but they are mistaken; wherefore let us make a common prelude on behalf of the lawgiver and of his subjects, the law begging the latter to forgive the legislator, in that he, having to take care of the common weal, cannot order at the same time the various circumstances of individuals, and begging him to pardon them if naturally they are sometimes unable to fulfil the act which he in his ignorance imposes upon them.

CLEINIAS: And how, Stranger, can we act most fairly under the circumstances?

ATHENIAN: There must be arbiters chosen to deal with such laws and the subjects of them.

CLEINIAS: What do you mean?

ATHENIAN: I mean to say, that a case may occur in which the nephew, having a rich father, will be unwilling to marry the daughter of his uncle; he will have a feeling of pride, and he will wish to look higher. And there are cases in which the legislator will be imposing upon him the greatest calamity, and he will be compelled to disobey the law, if he is required, for example, to take a wife who is mad, or has some other terrible malady of soul or body, such as makes life intolerable to the sufferer. Then let what we are saying concerning these cases be embodied in a law: If any one finds fault with the established laws respecting testaments, both as to other matters and especially in what relates to marriage, and asserts that the legislator, if he were alive and present, would not compel him to obey--that is to say, would not compel those who are by our law required to marry or be given in marriage, to do either--and some kinsman or guardian dispute this, the reply is that the legislator left fifteen of the guardians of the law to be arbiters and fathers of orphans, male or female, and to them let the disputants have recourse, and by their aid determine any matters of the kind, admitting their decision to be final. But if any one thinks that too great power is thus given to the guardians of the law, let him bring his adversaries into the court of the select
judges, and there have the points in dispute determined. And he who loses the cause shall have censure and blame from the legislator, which, by a man of sense, is felt to be a penalty far heavier than a great loss of money.

Thus will orphan children have a second birth. After their first birth we spoke of their nurture and education, and after their second birth, when they have lost their parents, we ought to take measures that the misfortune of orphanhood may be as little sad to them as possible. In the first place, we say that the guardians of the law are lawgivers and fathers to them, not inferior to their natural fathers. Moreover, they shall take charge of them year by year as of their own kindred; and we have given both to them and to the children's own guardians as suitable admonition concerning the nurture of orphans. And we seem to have spoken opportunely in our former discourse, when we said that the souls of the dead have the power after death of taking an interest in human affairs, about which there are many tales and traditions, long indeed, but true; and seeing that they are so many and so ancient, we must believe them, and we must also believe the lawgivers, who tell us that these things are true, if they are not to be regarded as utter fools. But if these things are really so, in the first place men should have a fear of the Gods above, who regard the loneliness of the orphans; and in the second place of the souls of the departed, who by nature incline to take an especial care of their own children, and are friendly to those who honour, and unfriendly to those who dishonour them. Men should also fear the souls of the living who are aged and high in honour; wherever a city is well ordered and prosperous, their descendants cherish them, and so live happily; old persons are quick to see and hear all that relates to them, and are propitious to those who are just in the fulfilment of such duties, and they punish those who wrong the orphan and the desolate, considering that they are the greatest and most sacred of trusts. To all which matters the guardian and magistrate ought to apply his mind, if he has any, and take heed of the nurture and education of the orphans, seeking in every possible way to do them good, for he is making a contribution to his own good and that of his children. He who obeys the tale which precedes the law, and does no wrong to an orphan, will never experience the wrath of the legislator. But he who is disobedient, and wrongs any one who is bereft of father or mother, shall pay twice the penalty which he would have paid if he had wronged one whose parents had been alive. As touching other legislation concerning guardians in their relation to orphans, or concerning magistrates and their superintendence of the guardians, if they did not possess examples of the manner in which children of freemen would be brought up in the bringing up of their own children, and of the care of their property in the care of their own, or if they had not just laws fairly stated about these very things--there would have been reason in making laws for them, under the idea that they were a peculiar class, and we might distinguish and make separate rules for the life of those who are
orphans and of those who are not orphans. But as the case stands, the condition of orphans with us is not different from the case of those who have a father, though in regard to honour and dishonour, and the attention given to them, the two are not usually placed upon a level. Wherefore, touching the legislation about orphans, the law speaks in serious accents, both of persuasion and threatening, and such a threat as the following will be by no means out of place: He who is the guardian of an orphan of either sex, and he among the guardians of the law to whom the superintendence of this guardian has been assigned, shall love the unfortunate orphan as though he were his own child, and he shall be as careful and diligent in the management of his possessions as he would be if they were his own, or even more careful and diligent. Let every one who has the care of an orphan observe this law. But any one who acts contrary to the law on these matters, if he be a guardian of the child, may be fined by a magistrate, or, if he be himself a magistrate, the guardian may bring him before the court of select judges, and punish him, if convicted, by exacting a fine of double the amount of that inflicted by the court. And if a guardian appears to the relations of the orphan, or to any other citizen, to act negligently or dishonestly, let them bring him before the same court, and whatever damages are given against him, let him pay fourfold, and let half belong to the orphan and half to him who procured the conviction. If any orphan arrives at years of discretion, and thinks that he has been ill-used by his guardians, let him within five years of the expiration of the guardianship be allowed to bring them to trial; and if any of them be convicted, the court shall determine what he shall pay or suffer. And if a magistrate shall appear to have wronged the orphan by neglect, and he be convicted, let the court determine what he shall suffer or pay to the orphan, and if there be dishonesty in addition to neglect, besides paying the fine, let him be deposed from his office of guardian of the law, and let the state appoint another guardian of the law for the city and for the country in his room.

Greater differences than there ought to be sometimes arise between fathers and sons, on the part either of fathers who will be of opinion that the legislator should enact that they may, if they wish, lawfully renounce their son by the proclamation of a herald in the face of the world, or of sons who think that they should be allowed to indict their fathers on the charge of imbecility when they are disabled by disease or old age. These things only happen, as a matter of fact, where the natures of men are utterly bad; for where only half is bad, as, for example, if the father be not bad, but the son be bad, or conversely, no great calamity is the result of such an amount of hatred as this. In another state, a son disinowned by his father would not of necessity cease to be a citizen, but in our state, of which these are to be the laws, the disinherited must necessarily emigrate into another country, for no addition can be made even of a single family to the 5040 households; and, therefore, he who deserves to suffer these things must be renounced not only by his father,
who is a single person, but by the whole family, and what is done in these cases must be regulated by some such law as the following: He who in the sad disorder of his soul has a mind, justly or unjustly, to expel from his family a son whom he has begotten and brought up, shall not lightly or at once execute his purpose; but first of all he shall collect together his own kinsmen, extending to cousins, and in like manner his son's kinsmen by the mother's side, and in their presence he shall accuse his son, setting forth that he deserves at the hands of them all to be dismissed from the family; and the son shall be allowed to address them in a similar manner, and show that he does not deserve to suffer any of these things. And if the father persuades them, and obtains the suffrages of more than half of his kindred, exclusive of the father and mother and the offender himself--I say, if he obtains more than half the suffrages of all the other grown-up members of the family, of both sexes, the father shall be permitted to put away his son, but not otherwise. And if any other citizen is willing to adopt the son who is put away, no law shall hinder him; for the characters of young men are subject to many changes in the course of their lives. And if he has been put away, and in a period of ten years no one is willing to adopt him, let those who have the care of the superabundant population which is sent out into colonies, see to him, in order that he may be suitably provided for in the colony. And if disease or age or harshness of temper, or all these together, makes a man to be more out of his mind than the rest of the world are--but this is not observable, except to those who live with him--and he, being master of his property, is the ruin of the house, and his son doubts and hesitates about indicting his father for insanity, let the law in that case ordain that he shall first of all go to the eldest guardians of the law and tell them of his father's misfortune, and they shall duly look into the matter, and take counsel as to whether he shall indict him or not. And if they advise him to proceed, they shall be both his witnesses and his advocates; and if the father is cast, he shall henceforth be incapable of ordering the least particular of his life; let him be as a child dwelling in the house for the remainder of his days. And if a man and his wife have an unfortunate incompatibility of temper, ten of the guardians of the law, who are impartial, and ten of the women who regulate marriages, shall look to the matter, and if they are able to reconcile them they shall be formally reconciled; but if their souls are too much tossed with passion, they shall endeavour to find other partners. Now they are not likely to have very gentle tempers; and, therefore, we must endeavour to associate with them deeper and softer natures. Those who have no children, or only a few, at the time of their separation, should choose their new partners with a view to the procreation of children; but those who have a sufficient number of children should separate and marry again in order that they may have some one to grow old with and that the pair may take care of one another in age. If a woman dies, leaving children, male or female, the law will advise rather than compel the husband to bring up the children without introducing into the house a stepmother. But if he have no
children, then he shall be compelled to marry until he has begotten a sufficient number of sons to his family and to the state. And if a man dies leaving a sufficient number of children, the mother of his children shall remain with them and bring them up. But if she appears to be too young to live virtuously without a husband, let her relations communicate with the women who superintend marriage, and let both together do what they think best in these matters; if there is a lack of children, let the choice be made with a view to having them; two children, one of either sex, shall be deemed sufficient in the eye of the law. When a child is admitted to be the offspring of certain parents and is acknowledged by them, but there is need of a decision as to which parent the child is to follow—in case a female slave have intercourse with a male slave, or with a freeman or freedman, the offspring shall always belong to the master of the female slave. Again, if a free woman have intercourse with a male slave, the offspring shall belong to the master of the slave; but if a child be born either of a slave by her master, or of his mistress by a slave—and this be proven—the offspring of the woman and its father shall be sent away by the women who superintend marriage into another country, and the guardians of the law shall send away the offspring of the man and its mother.

Neither God, nor a man who has understanding, will ever advise any one to neglect his parents. To a discourse concerning the honour and dishonour of parents, a prelude such as the following, about the service of the Gods, will be a suitable introduction: There are ancient customs about the Gods which are universal, and they are of two kinds: some of the Gods we see with our eyes and we honour them, of others we honour the images, raising statues of them which we adore; and though they are lifeless, yet we imagine that the living Gods have a good will and gratitude to us on this account. Now, if a man has a father or mother, or their fathers or mothers treasured up in his house stricken in years, let him consider that no statue can be more potent to grant his requests than they are, who are sitting at his hearth, if only he knows how to show true service to them.

CLEINIAS: And what do you call the true mode of service?

ATHENIAN: I will tell you, O my friend, for such things are worth listening to.

CLEINIAS: Proceed.

ATHENIAN: Oedipus, as tradition says, when dishonoured by his sons, invoked on them curses which every one declares to have been heard and ratified by the Gods, and Amyntor in his wrath invoked curses on his son Phoenix, and Theseus upon Hippolytus, and innumerable others have also called down wrath upon their children, whence it is clear that the Gods listen to the imprecations of parents; for the curses of parents are, as
they ought to be, mighty against their children as no others are. And shall we suppose that the prayers of a father or mother who is specially dishonoured by his or her children, are heard by the Gods in accordance with nature; and that if a parent is honoured by them, and in the gladness of his heart earnestly entreats the Gods in his prayers to do them good, he is not equally heard, and that they do not minister to his request? If not, they would be very unjust ministers of good, and that we affirm to be contrary to their nature.

CLEINIAS: Certainly.

ATHENIAN: May we not think, as I was saying just now, that we can possess no image which is more honoured by the Gods, than that of a father or grandfather, or of a mother stricken in years? whom when a man honours, the heart of the God rejoices, and he is ready to answer their prayers. And, truly, the figure of an ancestor is a wonderful thing, far higher than that of a lifeless image. For the living, when they are honoured by us, join in our prayers, and when they are dishonoured, they utter imprecations against us; but lifeless objects do neither. And therefore, if a man makes a right use of his father and grandfather and other aged relations, he will have images which above all others will win him the favour of the Gods.

CLEINIAS: Excellent.

ATHENIAN: Every man of any understanding fears and respects the prayers of parents, knowing well that many times and to many persons they have been accomplished. Now these things being thus ordered by nature, good men think it a blessing from heaven if their parents live to old age and reach the utmost limit of human life, or if taken away before their time they are deeply regretted by them; but to bad men parents are always a cause of terror. Wherefore let every man honour with every sort of lawful honour his own parents, agreeably to what has now been said. But if this prelude be an unmeaning sound in the ears of any one, let the law follow, which may be rightly imposed in these terms: If any one in this city be not sufficiently careful of his parents, and do not regard and gratify in every respect their wishes more than those of his sons and of his other offspring or of himself--let him who experiences this sort of treatment either come himself, or send some one to inform the three eldest guardians of the law, and three of the women who have the care of marriages; and let them look to the matter and punish youthful evil-doers with stripes and bonds if they are under thirty years of age, that is to say, if they be men, or if they be women, let them undergo the same punishment up to forty years of age. But if, when they are still more advanced in years, they continue the same neglect of their parents, and do any hurt to any of them, let them be brought before a court in which every single one of the eldest citizens shall be the judges, and if the offender be convicted, let
the court determine what he ought to pay or suffer, and any penalty may be imposed on him which a man can pay or suffer. If the person who has been wronged be unable to inform the magistrates, let any freeman who hears of his case inform, and if he do not, he shall be deemed base, and shall be liable to have a suit for damage brought against him by any one who likes. And if a slave inform, he shall receive freedom; and if he be the slave of the injurer or injured party, he shall be set free by the magistrates, or if he belong to any other citizen, the public shall pay a price on his behalf to the owner; and let the magistrates take heed that no one wrongs him out of revenge, because he has given information.

Cases in which one man injures another by poisons, and which prove fatal, have been already discussed; but about other cases in which a person intentionally and of malice harms another with meats, or drinks, or ointments, nothing has as yet been determined. For there are two kinds of poisons used among men, which cannot clearly be distinguished. There is the kind just now explicitly mentioned, which injures bodies by the use of other bodies according to a natural law; there is also another kind which persuades the more daring class that they can do injury by sorceries, and incantations, and magic knots, as they are termed, and makes others believe that they above all persons are injured by the powers of the magician. Now it is not easy to know the nature of all these things; nor if a man do know can he readily persuade others to believe him. And when men are disturbed in their minds at the sight of waxen images fixed either at their doors, or in a place where three ways meet, or on the sepulchres of parents, there is no use in trying to persuade them that they should despise all such things because they have no certain knowledge about them. But we must have a law in two parts, concerning poisoning, in whichever of the two ways the attempt is made, and we must entreat, and exhort, and advise men not to have recourse to such practises, by which they scare the multitude out of their wits, as if they were children, compelling the legislator and the judge to heal the fears which the sorcerer arouses, and to tell them in the first place, that he who attempts to poison or enchant others knows not what he is doing, either as regards the body (unless he has a knowledge of medicine), or as regards his enchantments (unless he happens to be a prophet or diviner). Let the law, then, run as follows about poisoning or witchcraft: He who employs poison to do any injury, not fatal, to a man himself, or to his servants, or any injury, whether fatal or not, to his cattle or his bees, if he be a physician, and be convicted of poisoning, shall be punished with death; or if he be a private person, the court shall determine what he is to pay or suffer. But he who seems to be the sort of man who injures others by magic knots, or enchantments, or incantations, or any of the like practises, if he be a prophet or diviner, let him die; and if, not being a prophet, he be convicted of witchcraft, as in the previous case, let the court fix what he ought to pay or suffer.

When a man does another any injury by theft or violence, for the greater
injury let him pay greater damages to the injured man, and less for the smaller injury: but in all cases, whatever the injury may have been, as much as will compensate the loss. And besides the compensation of the wrong, let a man pay a further penalty for the chastisement of his offence: he who has done the wrong instigated by the folly of another, through the lightheartedness of youth or the like, shall pay a lighter penalty; but he who has injured another through his own folly, when overcome by pleasure or pain, in cowardly fear, or lust, or envy, or implacable anger, shall endure a heavier punishment. Not that he is punished because he did wrong, for that which is done can never be undone, but in order that in future times, he, and those who see him corrected, may utterly hate injustice, or at any rate abate much of their evil-doing. Having an eye to all these things, the law, like a good archer, should aim at the right measure of punishment, and in all cases at the deserved punishment. In the attainment of this the judge shall be a fellow-worker with the legislator, whenever the law leaves to him to determine what the offender shall suffer or pay; and the legislator, like a painter, shall give a rough sketch of the cases in which the law is to be applied. This is what we must do, Megillus and Cleinias, in the best and fairest manner that we can, saying what the punishments are to be of all actions of theft and violence, and giving laws of such a kind as the Gods and sons of Gods would have us give.

If a man is mad he shall not be at large in the city, but his relations shall keep him at home in any way which they can; or if not, let them pay a penalty—he who is of the highest class shall pay a penalty of one hundred drachmas, whether he be a slave or a freeman whom he neglects; and he of the second class shall pay four-fifths of a mina; and he of the third class three-fifths; and he of the fourth class two-fifths. Now there are many sorts of madness, some arising out of disease, which we have already mentioned; and there are other kinds, which originate in an evil and passionate temperament, and are increased by bad education; out of a slight quarrel this class of madmen will often raise a storm of abuse against one another, and nothing of that sort ought to be allowed to occur in a well-ordered state. Let this, then, be the law about abuse, which shall relate to all cases: No one shall speak evil of another; and when a man disputes with another he shall teach and learn of the disputant and the company, but he shall abstain from evil-speaking; for out of the imprecations which men utter against one another, and the feminine habit of casting aspersions on one another, and using foul names, out of words light as air, in very deed the greatest enmities and hatreds spring up. For the speaker gratifies his anger, which is an ungracious element of his nature; and nursing up his wrath by the entertainment of evil thoughts, and exacerbating that part of his soul which was formerly civilised by education, he lives in a state of savageness and moroseness, and pays a bitter penalty for his anger. And in such cases almost all men take to saying something ridiculous about their opponent, and there is no man who
is in the habit of laughing at another who does not miss virtue and earnestness altogether, or lose the better half of greatness. Wherefore let no one utter any taunting word at a temple, or at the public sacrifices, or at the games, or in the agora, or in a court of justice, or in any public assembly. And let the magistrate who presides on these occasions chastise an offender, and he shall be blameless; but if he fails in doing so, he shall not claim the prize of virtue; for he is one who heeds not the laws, and does not do what the legislator commands. And if in any other place any one indulges in these sort of revilings, whether he has begun the quarrel or is only retaliating, let any elder who is present support the law, and control with blows those who indulge in passion, which is another great evil; and if he do not, let him be liable to pay the appointed penalty. And we say now, that he who deals in reproaches against others cannot reproach them without attempting to ridicule them; and this, when done in a moment of anger, is what we make matter of reproach against him. But then, do we admit into our state the comic writers who are so fond of making mankind ridiculous, if they attempt in a good-natured manner to turn the laugh against our citizens? or do we draw the distinction of jest and earnest, and allow a man to make use of ridicule in jest and without anger about any thing or person; though as we were saying, not if he be angry and have a set purpose? We forbid earnest --that is unalterably fixed; but we have still to say who are to be sanctioned or not to be sanctioned by the law in the employment of innocent humour. A comic poet, or maker of iambic or satirical lyric verse, shall not be permitted to ridicule any of the citizens, either by word or likeness, either in anger or without anger. And if any one is disobedient, the judges shall either at once expel him from the country, or he shall pay a fine of three minae, which shall be dedicated to the God who presides over the contests. Those only who have received permission shall be allowed to write verses at one another, but they shall be without anger and in jest; in anger and in serious earnest they shall not be allowed. The decision of this matter shall be left to the superintendent of the general education of the young, and whatever he may license, the writer shall be allowed to produce, and whatever he rejects let not the poet himself exhibit, or ever teach anybody else, slave or freeman, under the penalty of being dishonoured, and held disobedient to the laws.

Now he is not to be pitied who is hungry, or who suffers any bodily pain, but he who is temperate, or has some other virtue, or part of a virtue, and at the same time suffers from misfortune; it would be an extraordinary thing if such an one, whether slave or freeman, were utterly forsaken and fell into the extremes of poverty in any tolerably well-ordered city or government. Wherefore the legislator may safely make a law applicable to such cases in the following terms: Let there be no beggars in our state; and if anybody begs, seeking to pick up a livelihood by unavailing prayers, let the wardens of the agora turn him out of the agora, and the wardens of the city out of the city, and the wardens of the country send
him out of any other parts of the land across the border, in order that
the land may be cleared of this sort of animal.

If a slave of either sex injure anything, which is not his or her own,
through inexperience, or some improper practice, and the person who
suffers damage be not himself in part to blame, the master of the slave
who has done the harm shall either make full satisfaction, or give up the
slave who has done the injury. But if the master argue that the charge has
arisen by collusion between the injured party and the injurer, with the
view of obtaining the slave, let him sue the person, who says that he has
been injured, for malpractices. And if he gain a conviction, let him
receive double the value which the court fixes as the price of the slave;
and if he lose his suit, let him make amends for the injury, and give up
the slave. And if a beast of burden, or horse, or dog, or any other
animal, injure the property of a neighbour, the owner shall in like manner
pay for the injury.

If any man refuses to be a witness, he who wants him shall summon him, and
he who is summoned shall come to the trial; and if he knows and is willing
to bear witness, let him bear witness, but if he says he does not know let
him swear by the three divinities Zeus, and Apollo, and Themis, that he
does not, and have no more to do with the cause. And he who is summoned to
give witness and does not answer to his summoner, shall be liable for the
harm which ensues according to law. And if a person calls up as a witness
any one who is acting as a judge, let him give his witness, but he shall
not afterwards vote in the cause. A free woman may give her witness and
plead, if she be more than forty years of age, and may bring an action if
she have no husband; but if her husband be alive she shall only be allowed
to bear witness. A slave of either sex and a child shall be allowed to
give evidence and to plead, but only in cases of murder; and they must
produce sufficient sureties that they will certainly remain until the
trial, in case they should be charged with false witness. And either of
the parties in a cause may bring an accusation of perjury against
witnesses, touching their evidence in whole or in part, if he asserts that
such evidence has been given; but the accusation must be brought previous
to the final decision of the cause. The magistrates shall preserve the
accusations of false witness, and have them kept under the seal of both
parties, and produce them on the day when the trial for false witness
takes place. If a man be twice convicted of false witness, he shall not be
required, and if thrice, he shall not be allowed to bear witness; and if
he dare to witness after he has been convicted three times, let any one
who pleases inform against him to the magistrates, and let the magistrates
hand him over to the court, and if he be convicted he shall be punished
with death. And in any case in which the evidence is rightly found to be
false, and yet to have given the victory to him who wins the suit, and
more than half the witnesses are condemned, the decision which was gained
by these means shall be rescinded, and there shall be a discussion and a
decision as to whether the suit was determined by that false evidence or not; and in whichever way the decision may be given, the previous suit shall be determined accordingly.

There are many noble things in human life, but to most of them attach evils which are fated to corrupt and spoil them. Is not justice noble, which has been the civiliser of humanity? How then can the advocate of justice be other than noble? And yet upon this profession which is presented to us under the fair name of art has come an evil reputation. In the first place, we are told that by ingenious pleas and the help of an advocate the law enables a man to win a particular cause, whether just or unjust; and that both the art, and the power of speech which is thereby imparted, are at the service of him who is willing to pay for them. Now in our state this so-called art, whether really an art or only an experience and practice destitute of any art, ought if possible never to come into existence, or if existing among us should listen to the request of the legislator and go away into another land, and not speak contrary to justice. If the offenders obey we say no more; but for those who disobey, the voice of the law is as follows: If any one thinks that he will pervert the power of justice in the minds of the judges, and unseasonably litigate or advocate, let any one who likes indict him for malpractices of law and dishonest advocacy, and let him be judged in the court of select judges; and if he be convicted, let the court determine whether he may be supposed to act from a love of money or from contentiousness. And if he is supposed to act from contentiousness, the court shall fix a time during which he shall not be allowed to institute or plead a cause; and if he is supposed to act as he does from love of money, in case he be a stranger, he shall leave the country, and never return under penalty of death; but if he be a citizen, he shall die, because he is a lover of money, in whatever manner gained; and equally, if he be judged to have acted more than once from contentiousness, he shall die.

BOOK XII.

If a herald or an ambassador carry a false message from our city to any other, or bring back a false message from the city to which he is sent, or be proved to have brought back, whether from friends or enemies, in his capacity of herald or ambassador, what they have never said, let him be indicted for having violated, contrary to the law, the commands and duties imposed upon him by Hermes and Zeus, and let there be a penalty fixed, which he shall suffer or pay if he be convicted.

Theft is a mean, and robbery a shameless thing; and none of the sons of Zeus delight in fraud and violence, or ever practised either. Wherefore let no one be deluded by poets or mythologers into a mistaken belief of such things, nor let him suppose, when he thieves or is guilty of
violence, that he is doing nothing base, but only what the Gods themselves do. For such tales are untrue and improbable; and he who steals or robs contrary to the law, is never either a God or the son of a God; of this the legislator ought to be better informed than all the poets put together. Happy is he and may he be for ever happy, who is persuaded and listens to our words; but he who disobeys shall have to contend against the following law: If a man steal anything belonging to the public, whether that which he steals be much or little, he shall have the same punishment. For he who steals a little steals with the same wish as he who steals much, but with less power, and he who takes up a greater amount, not having deposited it, is wholly unjust. Wherefore the law is not disposed to inflict a less penalty on the one than on the other because his theft is less, but on the ground that the thief may possibly be in one case still curable, and may in another case be incurable. If any one convict in a court of law a stranger or a slave of a theft of public property, let the court determine what punishment he shall suffer, or what penalty he shall pay, bearing in mind that he is probably not incurable. But the citizen who has been brought up as our citizens will have been, if he be found guilty of robbing his country by fraud or violence, whether he be caught in the act or not, shall be punished with death; for he is incurable.

Now for expeditions of war much consideration and many laws are required; the great principle of all is that no one of either sex should be without a commander; nor should the mind of any one be accustomed to do anything, either in jest or earnest, of his own motion, but in war and in peace he should look to and follow his leader, even in the least things being under his guidance; for example, he should stand or move, or exercise, or wash, or take his meals, or get up in the night to keep guard and deliver messages when he is bidden; and in the hour of danger he should not pursue and not retreat except by order of his superior; and in a word, not teach the soul or accustom her to know or understand how to do anything apart from others. Of all soldiers the life should be always and in all things as far as possible in common and together; there neither is nor ever will be a higher, or better, or more scientific principle than this for the attainment of salvation and victory in war. And we ought in time of peace from youth upwards to practise this habit of commanding others, and of being commanded by others; anarchy should have no place in the life of man or of the beasts who are subject to man. I may add that all dances ought to be performed with a view to military excellence; and agility and ease should be cultivated for the same object, and also endurance of the want of meats and drinks, and of winter cold and summer heat, and of hard couches; and, above all, care should be taken not to destroy the peculiar qualities of the head and the feet by surrounding them with extraneous coverings, and so hindering their natural growth of hair and soles. For these are the extremities, and of all the parts of the body, whether they are preserved or not is of the greatest consequence; the one is the
servant of the whole body, and the other the master, in whom all the ruling senses are by nature set. Let the young men imagine that he hears in what has preceded the praises of the military life; the law shall be as follows: He shall serve in war who is on the roll or appointed to some special service, and if any one is absent from cowardice, and without the leave of the generals, he shall be indicted before the military commanders for failure of service when the army comes home; and the soldiers shall be his judges; the heavy-armed, and the cavalry, and the other arms of the service shall form separate courts; and they shall bring the heavy-armed before the heavy-armed, and the horsemen before the horsemen, and the others in like manner before their peers; and he who is found guilty shall never be allowed to compete for any prize of valour, or indict another for not serving on an expedition, or be an accuser at all in any military matters. Moreover, the court shall further determine what punishment he shall suffer, or what penalty he shall pay. When the suits for failure of service are completed, the leaders of the several kinds of troops shall again hold an assembly, and they shall adjudge the prizes of valour; and he who likes searching for judgment in his own branch of the service, saying nothing about any former expedition, nor producing any proof or witnesses to confirm his statement, but speaking only of the present occasion. The crown of victory shall be an olive wreath which the victor shall offer up at the temple of any war-god whom he likes, adding an inscription for a testimony to last during life, that such an one has received the first, the second, or the third prize. If any one goes on an expedition, and returns home before the appointed time, when the generals have not withdrawn the army, he shall be indicted for desertion before the same persons who took cognizance of failure of service, and if he be found guilty, the same punishment shall be inflicted on him. Now every man who is engaged in any suit ought to be very careful of bringing false witness against any one, either intentionally or unintentionally, if he can help; for justice is truly said to be an honourable maiden, and falsehood is naturally repugnant to honour and justice. A witness ought to be very careful not to sin against justice, as for example in what relates to the throwing away of arms--he must distinguish the throwing them away when necessary, and not make that a reproach, or bring an action against some innocent person on that account. To make the distinction may be difficult; but still the law must attempt to define the different kinds in some way. Let me endeavour to explain my meaning by an ancient tale: If Patroclus had been brought to the tent still alive but without his arms (and this has happened to innumerable persons), the original arms, which the poet says were presented to Peleus by the Gods as a nuptial gift when he married Thetis, remaining in the hands of Hector, then the base spirits of that day might have reproached the son of Menoetius with having cast away his arms. Again, there is the case of those who have been thrown down precipices and lost their arms; and of those who at sea, and in stormy places, have been suddenly overwhelmed by floods of water; and there are numberless things of this kind which one might adduce by way of
extenuation, and with the view of justifying a misfortune which is easily misrepresented. We must, therefore, endeavour to divide to the best of our power the greater and more serious evil from the lesser. And a distinction may be drawn in the use of terms of reproach. A man does not always deserve to be called the thrower away of his shield; he may be only the loser of his arms. For there is a great or rather absolute difference between him who is deprived of his arms by a sufficient force, and him who voluntarily lets his shield go. Let the law then be as follows: If a person having arms is overtaken by the enemy and does not turn round and defend himself, but lets them go voluntarily or throws them away, choosing a base life and a swift escape rather than a courageous and noble and blessed death—in such a case of the throwing away of arms let justice be done, but the judge need take no note of the case just now mentioned; for the bad men ought always to be punished, in the hope that he may be improved, but not the unfortunate, for there is no advantage in that. And what shall be the punishment suited to him who has thrown away his weapons of defence? Tradition says that Caeneus, the Thessalian, was changed by a God from a woman into a man; but the converse miracle cannot now be wrought, or no punishment would be more proper than that the man who throws away his shield should be changed into a woman. This however is impossible, and therefore let us make a law as nearly like this as we can—that he who loves his life too well shall be in no danger for the remainder of his days, but shall live for ever under the stigma of cowardice. And let the law be in the following terms: When a man is found guilty of disgracefully throwing away his arms in war, no general or military officer shall allow him to serve as a soldier, or give him any place at all in the ranks of soldiers; and the officer who gives the coward any place, shall suffer a penalty which the public examiner shall exact of him; and if he be of the highest class, he shall pay a thousand drachmae; or if he be of the second class, five minae; or if he be of the third, three minae; or if he be of the fourth class, one mina. And he who is found guilty of cowardice, shall not only be dismissed from manly dangers, which is a disgrace appropriate to his nature, but he shall pay a thousand drachmae, if he be of the highest class, and five minae if he be of the second class, and three if he be of the third class, and a mina, like the preceding, if he be of the fourth class.

What regulations will be proper about examiners, seeing that some of our magistrates are elected by lot, and for a year, and some for a longer time and from selected persons? Of such magistrates, who will be a sufficient censor or examiner, if any of them, weighed down by the pressure of office or his own inability to support the dignity of his office, be guilty of any crooked practice? It is by no means easy to find a magistrate who excels other magistrates in virtue, but still we must endeavour to discover some censor or examiner who is more than man. For the truth is, that there are many elements of dissolution in a state, as there are also in a ship, or in an animal; they all have their cords, and girders, and
sinews—one nature diffused in many places, and called by many names; and the office of examiner is a most important element in the preservation and dissolution of states. For if the examiners are better than the magistrates, and their duty is fulfilled justly and without blame, then the whole state and country flourishes and is happy; but if the examination of the magistrates is carried on in a wrong way, then, by the relaxation of that justice which is the uniting principle of all constitutions, every power in the state is rent asunder from every other; they no longer incline in the same direction, but fill the city with faction, and make many cities out of one, and soon bring all to destruction. Wherefore the examiners ought to be admirable in every sort of virtue. Let us invent a mode of creating them, which shall be as follows: Every year, after the summer solstice, the whole city shall meet in the common precincts of Helios and Apollo, and shall present to the God three men out of their own number in the manner following: Each citizen shall select, not himself, but some other citizen whom he deems in every way the best, and who is not less than fifty years of age. And out of the selected persons who have the greatest number of votes, they shall make a further selection until they reduce them to one-half, if they are an even number; but if they are not an even number, they shall subtract the one who has the smallest number of votes, and make them an even number, and then leave the half which have the greater number of votes. And if two persons have an equal number of votes, and thus increase the number beyond one-half, they shall withdraw the younger of the two and do away the excess; and then including all the rest they shall again vote, until there are left three having an unequal number of votes. But if all the three, or two out of the three, have equal votes, let them commit the election to good fate and fortune, and separate off by lot the first, and the second, and the third; these they shall crown with an olive wreath and give them the prize of excellence, at the same time proclaiming to all the world that the city of the Magnetès, by the providence of the Gods, is again preserved, and presents to the Sun and to Apollo her three best men as first-fruits, to be a common offering to them, according to the ancient law, as long as their lives answer to the judgment formed of them. And these shall appoint in their first year twelve examiners, to continue until each has completed seventy-five years, to whom three shall afterwards be added yearly; and let these divide all the magistracies into twelve parts, and prove the holders of them by every sort of test to which a freeman may be subjected; and let them live while they hold office in the precinct of Helios and Apollo, in which they were chosen, and let each one form a judgment of some things individually, and of others in company with his colleagues; and let him place a writing in the agora about each magistracy, and what the magistrate ought to suffer or pay, according to the decision of the examiners. And if a magistrate does not admit that he has been justly judged, let him bring the examiners before the select judges, and if he be acquitted by their decision, let him, if he will, accuse the examiners themselves; if, however, he be convicted, and have
been condemned to death by the examiners, let him die (and of course he can only die once): but any other penalties which admit of being doubled let him suffer twice over.

And now let us pass under review the examiners themselves; what will their examination be, and how conducted? During the life of these men, whom the whole state counts worthy of the rewards of virtue, they shall have the first seat at all public assemblies, and at all Hellenic sacrifices and sacred missions, and other public and holy ceremonies in which they share. The chiefs of each sacred mission shall be selected from them, and they only of all the citizens shall be adorned with a crown of laurel; they shall all be priests of Apollo and Helios; and one of them, who is judged first of the priests created in that year, shall be high priest; and they shall write up his name in each year to be a measure of time as long as the city lasts; and after their death they shall be laid out and carried to the grave and entombed in a manner different from the other citizens. They shall be decked in a robe all of white, and there shall be no crying or lamentation over them; but a chorus of fifteen maidens, and another of boys, shall stand around the bier on either side, hymning the praises of the departed priests in alternate responses, declaring their blessedness in song all day long; and at dawn a hundred of the youths who practise gymnastic exercises, and whom the relations of the departed shall choose, shall carry the bier to the sepulchre, the young men marching first, dressed in the garb of warriors--the cavalry with their horses, the heavy-armed with their arms, and the others in like manner. And boys near the bier and in front of it shall sing their national hymn, and maidens shall follow behind, and with them the women who have passed the age of child-bearing; next, although they are interdicted from other burials, let priests and priestesses follow, unless the Pythian oracle forbid them; for this burial is free from pollution. The place of burial shall be an oblong vaulted chamber underground, constructed of tufa, which will last for ever, having stone couches placed side by side. And here they will lay the blessed person, and cover the sepulchre with a circular mound of earth and plant a grove of trees around on every side but one; and on that side the sepulchre shall be allowed to extend for ever, and a new mound will not be required. Every year they shall have contests in music and gymnastics, and in horsemanship, in honour of the dead. These are the honours which shall be given to those who at the examination are found blameless; but if any of them, trusting to the scrutiny being over, should, after the judgment has been given, manifest the wickedness of human nature, let the law ordain that he who pleases shall indict him, and let the cause be tried in the following manner. In the first place, the court shall be composed of the guardians of the law, and to them the surviving examiners shall be added, as well as the court of select judges; and let the pursuer lay his indictment in this form--he shall say that so-and-so is unworthy of the prize of virtue and of his office; and if the defendant be convicted let him be deprived of his office, and of the burial, and of the other honours
given him. But if the prosecutor do not obtain the fifth part of the votes, let him, if he be of the first-class, pay twelve minae, and eight if he be of the second class, and six if he be of the third class, and two minae if he be of the fourth class.

The so-called decision of Rhadamanthus is worthy of all admiration. He knew that the men of his own time believed and had no doubt that there were Gods, which was a reasonable belief in those days, because most men were the sons of Gods, and according to tradition he was one himself. He appears to have thought that he ought to commit judgment to no man, but to the Gods only, and in this way suits were simply and speedily decided by him. For he made the two parties take an oath respecting the points in dispute, and so got rid of the matter speedily and safely. But now that a certain portion of mankind do not believe at all in the existence of the Gods, and others imagine that they have no care of us, and the opinion of most men, and of the worst men, is that in return for a small sacrifice and a few flattering words they will be their accomplices in purloining large sums and save them from many terrible punishments, the way of Rhadamanthus is no longer suited to the needs of justice; for as the opinions of men about the Gods are changed, the laws should also be changed—in the granting of suits a rational legislation ought to do away with the oaths of the parties on either side—he who obtains leave to bring an action should write down the charges, but should not add an oath; and the defendant in like manner should give his denial to the magistrates in writing, and not swear; for it is a dreadful thing to know, when many lawsuits are going on in a state, that almost half the people who meet one another quite unconcernedly at the public meals and in other companies and relations of private life are perjured. Let the law, then, be as follows: A judge who is about to give judgment shall take an oath, and he who is choosing magistrates for the state shall either vote on oath or with a voting tablet which he brings from a temple; so too the judge of dances and of all music, and the superintendents and umpires of gymnastic and equestrian contests, and any matters in which, as far as men can judge, there is nothing to be gained by a false oath; but all cases in which a denial confirmed by an oath clearly results in a great advantage to the taker of the oath, shall be decided without the oath of the parties to the suit, and the presiding judges shall not permit either of them to use an oath for the sake of persuading, nor to call down curses on himself and his race, nor to use unseemly supplications or womanish laments. But they shall ever be teaching and learning what is just in auspicious words; and he who does otherwise shall be supposed to speak beside the point, and the judges shall again bring him back to the question at issue. On the other hand, strangers in their dealings with strangers shall as at present have power to give and receive oaths, for they will not often grow old in the city or leave a fry of young ones like themselves to be the sons and heirs of the land.
As to the initiation of private suits, let the manner of deciding causes between all citizens be the same as in cases in which any freeman is disobedient to the state in minor matters, of which the penalty is not stripes, imprisonment, or death. But as regards attendance at choruses or processions or other shows, and as regards public services, whether the celebration of sacrifice in peace, or the payment of contributions in war --in all these cases, first comes the necessity of providing a remedy for the loss; and by those who will not obey, there shall be security given to the officers whom the city and the law empower to exact the sum due; and if they forfeit their security, let the goods which they have pledged be sold and the money given to the city; but if they ought to pay a larger sum, the several magistrates shall impose upon the disobedient a suitable penalty, and bring them before the court, until they are willing to do what they are ordered.

Now a state which makes money from the cultivation of the soil only, and has no foreign trade, must consider what it will do about the emigration of its own people to other countries, and the reception of strangers from elsewhere. About these matters the legislator has to consider, and he will begin by trying to persuade men as far as he can. The intercourse of cities with one another is apt to create a confusion of manners; strangers are always suggesting novelties to strangers. When states are well governed by good laws the mixture causes the greatest possible injury; but seeing that most cities are the reverse of well-ordered, the confusion which arises in them from the reception of strangers, and from the citizens themselves rushing off into other cities, when any one either young or old desires to travel anywhere abroad at whatever time, is of no consequence. On the other hand, the refusal of states to receive others, and for their own citizens never to go to other places, is an utter impossibility, and to the rest of the world is likely to appear ruthless and uncivilised; it is a practice adopted by people who use harsh words, such as xenelasia or banishment of strangers, and who have harsh and morose ways, as men think. And to be thought or not to be thought well of by the rest of the world is no light matter; for the many are not so far wrong in their judgment of who are bad and who are good, as they are removed from the nature of virtue in themselves. Even bad men have a divine instinct which guesses rightly, and very many who are utterly depraved form correct notions and judgments of the differences between the good and bad. And the generality of cities are quite right in exhorting us to value a good reputation in the world, for there is no truth greater and more important than this--that he who is really good (I am speaking of the men who would be perfect) seeks for reputation with, but not without, the reality of goodness. And our Cretan colony ought also to acquire the fairest and noblest reputation for virtue from other men; and there is every reason to expect that, if the reality answers to the idea, she will be one of the few well-ordered cities which the sun and the other Gods behold. Wherefore, in the matter of journeys to other countries and the
reception of strangers, we enact as follows: In the first place, let no one be allowed to go anywhere at all into a foreign country who is less than forty years of age; and no one shall go in a private capacity, but only in some public one, as a herald, or on an embassy, or on a sacred mission. Going abroad on an expedition or in war is not to be included among travels of the class authorised by the state. To Apollo at Delphi and to Zeus at Olympia and to Nemea and to the Isthmus, citizens should be sent to take part in the sacrifices and games there dedicated to the Gods; and they should send as many as possible, and the best and fairest that can be found, and they will make the city renowned at holy meetings in time of peace, procuring a glory which shall be the converse of that which is gained in war; and when they come home they shall teach the young that the institutions of other states are inferior to their own. And they shall send spectators of another sort, if they have the consent of the guardians, being such citizens as desire to look a little more at leisure at the doings of other men; and these no law shall hinder. For a city which has no experience of good and bad men or intercourse with them, can never be thoroughly and perfectly civilised, nor, again, can the citizens of a city properly observe the laws by habit only, and without an intelligent understanding of them. And there always are in the world a few inspired men whose acquaintance is beyond price, and who spring up quite as much in ill-ordered as in well-ordered cities. These are they whom the citizens of a well-ordered city should be ever seeking out, going forth over sea and over land to find him who is incorruptible— that he may establish more firmly institutions in his own state which are good already, and amend what is deficient; for without this examination and enquiry a city will never continue perfect any more than if the examination is ill-conducted.

CLEINIAS: How can we have an examination and also a good one?

ATHENIAN: In this way: In the first place, our spectator shall be of not less than fifty years of age; he must be a man of reputation, especially in war, if he is to exhibit to other cities a model of the guardians of the law, but when he is more than sixty years of age he shall no longer continue in his office of spectator. And when he has carried on his inspection during as many out of the ten years of his office as he pleases, on his return home let him go to the assembly of those who review the laws. This shall be a mixed body of young and old men, who shall be required to meet daily between the hour of dawn and the rising of the sun. They shall consist, in the first place, of the priests who have obtained the rewards of virtue; and, in the second place, of guardians of the law, the ten eldest being chosen; the general superintendent of education shall also be a member, as well as the last appointed as those who have been released from the office; and each of them shall take with him as his companion a young man, whomsoever he chooses, between the ages of thirty and forty. These shall be always holding conversation and discourse about
the laws of their own city or about any specially good ones which they may hear to be existing elsewhere; also about kinds of knowledge which may appear to be of use and will throw light upon the examination, or of which the want will make the subject of laws dark and uncertain to them. Any knowledge of this sort which the elders approve, the younger men shall learn with all diligence; and if any one of those who have been invited appear to be unworthy, the whole assembly shall blame him who invited him. The rest of the city shall watch over those among the young men who distinguish themselves, having an eye upon them, and especially honouring them if they succeed, but dishonouring them above the rest if they turn out to be inferior. This is the assembly to which he who has visited the institutions of other men, on his return home shall straightway go, and if he have discovered any one who has anything to say about the enactment of laws or education or nurture, or if he have himself made any observations, let him communicate his discoveries to the whole assembly. And if he be seen to have come home neither better nor worse, let him be praised at any rate for his enthusiasm; and if he be much better, let him be praised so much the more; and not only while he lives but after his death let the assembly honour him with fitting honours. But if on his return home he appear to have been corrupted, pretending to be wise when he is not, let him hold no communication with any one, whether young or old; and if he will hearken to the rulers, then he shall be permitted to live as a private individual; but if he will not, let him die, if he be convicted in a court of law of interfering about education and the laws. And if he deserve to be indicted, and none of the magistrates indict him, let that be counted as a disgrace to them when the rewards of virtue are decided.

Let such be the character of the person who goes abroad, and let him go abroad under these conditions. In the next place, the stranger who comes from abroad should be received in a friendly spirit. Now there are four kinds of strangers, of whom we must make some mention--the first is he who comes and stays throughout the summer; this class are like birds of passage, taking wing in pursuit of commerce, and flying over the sea to other cities, while the season lasts; he shall be received in market-places and harbours and public buildings, near the city but outside, by those magistrates who are appointed to superintend these matters; and they shall take care that a stranger, whoever he be, duly receives justice; but he shall not be allowed to make any innovation. They shall hold the intercourse with him which is necessary, and this shall be as little as possible. The second kind is just a spectator who comes to see with his eyes and hear with his ears the festivals of the Muses; such ought to have entertainment provided them at the temples by hospitable persons, and the priests and ministers of the temples should see and attend to them. But they should not remain more than a reasonable time; let them see and hear that for the sake of which they came, and then go away, neither having suffered nor done any harm. The priests shall be their judges, if any of them receive or do any wrong up to the sum of fifty drachmae, but if any
greater charge be brought, in such cases the suit shall come before the
wardens of the agora. The third kind of stranger is he who comes on some
public business from another land, and is to be received with public
honours. He is to be received only by the generals and commanders of horse
and foot, and the host by whom he is entertained, in conjunction with the
Prytanes, shall have the sole charge of what concerns him. There is a
fourth class of persons answering to our spectators, who come from another
land to look at ours. In the first place, such visits will be rare, and
the visitor should be at least fifty years of age; he may possibly be
wanting to see something that is rich and rare in other states, or himself
to show something in like manner to another city. Let such an one, then,
go unbidden to the doors of the wise and rich, being one of them himself:
let him go, for example, to the house of the superintendent of education,
confident that he is a fitting guest of such a host, or let him go to the
house of some of those who have gained the prize of virtue and hold
discourse with them, both learning from them, and also teaching them; and
when he has seen and heard all, he shall depart, as a friend taking leave
of friends, and be honoured by them with gifts and suitable tributes of
respect. These are the customs, according to which our city should receive
all strangers of either sex who come from other countries, and should send
forth her own citizens, showing respect to Zeus, the God of hospitality,
not forbidding strangers at meals and sacrifices, as is the manner which
prevails among the children of the Nile, nor driving them away by savage
proclamations.

When a man becomes surety, let him give the security in a distinct form,
acknowledging the whole transaction in a written document, and in the
presence of not less than three witnesses if the sum be under a thousand
drachmae, and of not less than five witnesses if the sum be above a
thousand drachmae. The agent of a dishonest or untrustworthy seller shall
himself be responsible; both the agent and the principal shall be equally
liable. If a person wishes to find anything in the house of another, he
shall enter naked, or wearing only a short tunic and without a girdle,
having first taken an oath by the customary Gods that he expects to find
it there; he shall then make his search, and the other shall throw open
his house and allow him to search things both sealed and unsealed. And if
a person will not allow the searcher to make his search, he who is
prevented shall go to law with him, estimating the value of the goods
after which he is searching, and if the other be convicted he shall pay
twice the value of the article. If the master be absent from home, the
dwellers in the house shall let him search the unsealed property, and on
the sealed property the searcher shall set another seal, and shall appoint
any one whom he likes to guard them during five days; and if the master of
the house be absent during a longer time, he shall take with him the
wardens of the city, and so make his search, opening the sealed property
as well as the unsealed, and then, together with the members of the family
and the wardens of the city, he shall seal them up again as they were
before. There shall be a limit of time in the case of disputed things, and he who has had possession of them during a certain time shall no longer be liable to be disturbed. As to houses and lands there can be no dispute in this state of ours; but if a man has any other possessions which he has used and openly shown in the city and in the agora and in the temples, and no one has put in a claim to them, and some one says that he was looking for them during this time, and the possessor is proved to have made no concealment, if they have continued for a year, the one having the goods and the other looking for them, the claim of the seeker shall not be allowed after the expiration of the year; or if he does not use or show the lost property in the market or in the city, but only in the country, and no one offers himself as the owner during five years, at the expiration of the five years the claim shall be barred for ever after; or if he uses them in the city but within the house, then the appointed time of claiming the goods shall be three years, or ten years if he has them in the country in private. And if he has them in another land, there shall be no limit of time or prescription, but whenever the owner finds them he may claim them.

If any one prevents another by force from being present at a trial, whether a principal party or his witnesses; if the person prevented be a slave, whether his own or belonging to another, the suit shall be incomplete and invalid; but if he who is prevented be a freeman, besides the suit being incomplete, the other who has prevented him shall be imprisoned for a year, and shall be prosecuted for kidnapping by any one who pleases. And if any one hinders by force a rival competitor in gymnastic or music, or any other sort of contest, from being present at the contest, let him who has a mind inform the presiding judges, and they shall liberate him who is desirous of competing; and if they are not able, and he who hinders the other from competing wins the prize, then they shall give the prize of victory to him who is prevented, and inscribe him as the conqueror in any temples which he pleases; and he who hinders the other shall not be permitted to make any offering or inscription having reference to that contest, and in any case he shall be liable for damages, whether he be defeated or whether he conquer.

If any one knowingly receives anything which has been stolen, he shall undergo the same punishment as the thief, and if a man receives an exile he shall be punished with death. Every man should regard the friend and enemy of the state as his own friend and enemy; and if any one makes peace or war with another on his own account, and without the authority of the state, he, like the receiver of the exile, shall undergo the penalty of death. And if any fraction of the city declare war or peace against any, the generals shall indict the authors of this proceeding, and if they are convicted death shall be the penalty. Those who serve their country ought to serve without receiving gifts, and there ought to be no excusing or approving the saying, 'Men should receive gifts as the reward of good, but
not of evil deeds'; for to know which we are doing, and to stand fast by our knowledge, is no easy matter. The safest course is to obey the law which says, 'Do no service for a bribe,' and let him who disobeys, if he be convicted, simply die. With a view to taxation, for various reasons, every man ought to have had his property valued: and the tribesmen should likewise bring a register of the yearly produce to the wardens of the country, that in this way there may be two valuations; and the public officers may use annually whichever on consideration they deem the best, whether they prefer to take a certain portion of the whole value, or of the annual revenue, after subtracting what is paid to the common tables.

Touching offerings to the Gods, a moderate man should observe moderation in what he offers. Now the land and the hearth of the house of all men is sacred to all Gods; wherefore let no man dedicate them a second time to the Gods. Gold and silver, whether possessed by private persons or in temples, are in other cities provocative of envy, and ivory, the product of a dead body, is not a proper offering; brass and iron, again, are instruments of war; but of wood let a man bring what offering he likes, provided it be a single block, and in like manner of stone, to the public temples; of woven work let him not offer more than one woman can execute in a month. White is a colour suitable to the Gods, especially in woven works, but dyes should only be used for the adornments of war. The most divine of gifts are birds and images, and they should be such as one painter can execute in a single day. And let all other offerings follow a similar rule.

Now that the whole city has been divided into parts of which the nature and number have been described, and laws have been given about all the most important contracts as far as this was possible, the next thing will be to have justice done. The first of the courts shall consist of elected judges, who shall be chosen by the plaintiff and the defendant in common: these shall be called arbiters rather than judges. And in the second court there shall be judges of the villages and tribes corresponding to the twelvefold division of the land, and before these the litigants shall go to contend for greater damages, if the suit be not decided before the first judges; the defendant, if he be defeated the second time, shall pay a fifth more than the damages mentioned in the indictment; and if he find fault with his judges and would try a third time, let him carry the suit before the select judges, and if he be again defeated, let him pay the whole of the damages and half as much again. And the plaintiff, if when defeated before the first judges he persist in going on to the second, shall if he wins receive in addition to the damages a fifth part more, and if defeated he shall pay a like sum; but if he is not satisfied with the previous decision, and will insist on proceeding to a third court, then if he win he shall receive from the defendant the amount of the damages and, as I said before, half as much again, and the plaintiff, if he lose, shall pay half of the damages claimed. Now the assignment by lot of judges to
courts and the completion of the number of them, and the appointment of servants to the different magistrates, and the times at which the several causes should be heard, and the votings and delays, and all the things that necessarily concern suits, and the order of causes, and the time in which answers have to be put in and parties are to appear--of these and other things akin to these we have indeed already spoken, but there is no harm in repeating what is right twice or thrice: All lesser and easier matters which the elder legislator has omitted may be supplied by the younger one. Private courts will be sufficiently regulated in this way, and the public and state courts, and those which the magistrates must use in the administration of their several offices, exist in many other states. Many very respectable institutions of this sort have been framed by good men, and from them the guardians of the law may by reflection derive what is necessary for the order of our new state, considering and correcting them, and bringing them to the test of experience, until every detail appears to be satisfactorily determined; and then putting the final seal upon them, and making them irreversible, they shall use them for ever afterwards. As to what relates to the silence of judges and the abstinence from words of evil omen and the reverse, and the different notions of the just and good and honourable which exist in our own as compared with other states, they have been partly mentioned already, and another part of them will be mentioned hereafter as we draw near the end. To all these matters he who would be an equal judge shall justly look, and he shall possess writings about them that he may learn them. For of all kinds of knowledge the knowledge of good laws has the greatest power of improving the learner; otherwise there would be no meaning in the divine and admirable law possessing a name akin to mind (nous, nomos). And of all other words, such as the praises and censures of individuals which occur in poetry and also in prose, whether written down or uttered in daily conversation, whether men dispute about them in the spirit of contention or weakly assent to them, as is often the case--of all these the one sure test is the writings of the legislator, which the righteous judge ought to have in his mind as the antidote of all other words, and thus make himself and the city stand upright, procuring for the good the continuance and increase of justice, and for the bad, on the other hand, a conversion from ignorance and intemperance, and in general from all unrighteousness, as far as their evil minds can be healed, but to those whose web of life is in reality finished, giving death, which is the only remedy for souls in their condition, as I may say truly again and again. And such judges and chiefs of judges will be worthy of receiving praise from the whole city.

When the suits of the year are completed the following laws shall regulate their execution: In the first place, the judge shall assign to the party who wins the suit the whole property of him who loses, with the exception of mere necessaries, and the assignment shall be made through the herald immediately after each decision in the hearing of the judges; and when the month arrives following the month in which the courts are sitting, (unless
the gainer of the suit has been previously satisfied) the court shall follow up the case, and hand over to the winner the goods of the loser; but if they find that he has not the means of paying, and the sum deficient is not less than a drachma, the insolvent person shall not have any right of going to law with any other man until he have satisfied the debt of the winning party; but other persons shall still have the right of bringing suits against him. And if any one after he is condemned refuses to acknowledge the authority which condemned him, let the magistrates who are thus deprived of their authority bring him before the court of the guardians of the law, and if he be cast, let him be punished with death, as a subverter of the whole state and of the laws.

Thus a man is born and brought up, and after this manner he begets and brings up his own children, and has his share of dealings with other men, and suffers if he has done wrong to any one, and receives satisfaction if he has been wronged, and so at length in due time he grows old under the protection of the laws, and his end comes in the order of nature. Concerning the dead of either sex, the religious ceremonies which may fittingly be performed, whether appertaining to the Gods of the underworld or of this, shall be decided by the interpreters with absolute authority. Their sepulchres are not to be in places which are fit for cultivation, and there shall be no monuments in such spots, either large or small, but they shall occupy that part of the country which is naturally adapted for receiving and concealing the bodies of the dead with as little hurt as possible to the living. No man, living or dead, shall deprive the living of the sustenance which the earth, their foster-parent, is naturally inclined to provide for them. And let not the mound be piled higher than would be the work of five men completed in five days; nor shall the stone which is placed over the spot be larger than would be sufficient to receive the praises of the dead included in four heroic lines. Nor shall the laying out of the dead in the house continue for a longer time than is sufficient to distinguish between him who is in a trance only and him who is really dead, and speaking generally, the third day after death will be a fair time for carrying out the body to the sepulchre. Now we must believe the legislator when he tells us that the soul is in all respects superior to the body, and that even in life what makes each one of us to be what we are is only the soul; and that the body follows us about in the likeness of each of us, and therefore, when we are dead, the bodies of the dead are quite rightly said to be our shades or images; for the true and immortal being of each one of us which is called the soul goes on her way to other Gods, before them to give an account—which is an inspiring hope to the good, but very terrible to the bad, as the laws of our fathers tell us; and they also say that not much can be done in the way of helping a man after he is dead. But the living—he should be helped by all his kindred, that while in life he may be the holiest and justest of men, and after death may have no great sins to be punished in the world below. If this be true, a man ought not to waste his
substance under the idea that all this lifeless mass of flesh which is in process of burial is connected with him; he should consider that the son, or brother, or the beloved one, whoever he may be, whom he thinks he is laying in the earth, has gone away to complete and fulfil his own destiny, and that his duty is rightly to order the present, and to spend moderately on the lifeless altar of the Gods below. But the legislator does not intend moderation to be taken in the sense of meanness. Let the law, then, be as follows: The expenditure on the entire funeral of him who is of the highest class, shall not exceed five minae; and for him who is of the second class, three minae, and for him who is of the third class, two minae, and for him who is of the fourth class, one mina, will be a fair limit of expense. The guardians of the law ought to take especial care of the different ages of life, whether childhood, or manhood, or any other age. And at the end of all, let there be some one guardian of the law presiding, who shall be chosen by the friends of the deceased to superintend, and let it be glory to him to manage with fairness and moderation what relates to the dead, and a discredit to him if they are not well managed. Let the laying out and other ceremonies be in accordance with custom, but to the statesman who adopts custom as his law we must give way in certain particulars. It would be monstrous for example that he should command any man to weep or abstain from weeping over the dead; but he may forbid cries of lamentation, and not allow the voice of the mourner to be heard outside the house; also, he may forbid the bringing of the dead body into the open streets, or the processions of mourners in the streets, and may require that before daybreak they should be outside the city. Let these, then, be our laws relating to such matters, and let him who obeys be free from penalty; but he who disobeys even a single guardian of the law shall be punished by them all with a fitting penalty. Other modes of burial, or again the denial of burial, which is to be refused in the case of robbers of temples and parricides and the like, have been devised and are embodied in the preceding laws, so that now our work of legislation is pretty nearly at an end; but in all cases the end does not consist in doing something or acquiring something or establishing something—the end will be attained and finally accomplished, when we have provided for the perfect and lasting continuance of our institutions; until then our creation is incomplete.

CLEINIAS: That is very good, Stranger; but I wish you would tell me more clearly what you mean.

ATHENIAN: O Cleinias, many things of old time were well said and sung; and the saying about the Fates was one of them.

CLEINIAS: What is it?

ATHENIAN: The saying that Lachesis or the giver of the lots is the first of them, and that Clotho or the spinner is the second of them, and that
Atropos or the unchanging one is the third of them; and that she is the preserver of the things which we have spoken, and which have been compared in a figure to things woven by fire, they both (i.e. Atropos and the fire) producing the quality of unchangeableness. I am speaking of the things which in a state and government give not only health and salvation to the body, but law, or rather preservation of the law, in the soul; and, if I am not mistaken, this seems to be still wanting in our laws: we have still to see how we can implant in them this irreversible nature.

CLEINIAS: It will be no small matter if we can only discover how such a nature can be implanted in anything.

ATHENIAN: But it certainly can be; so much I clearly see.

CLEINIAS: Then let us not think of desisting until we have imparted this quality to our laws; for it is ridiculous, after a great deal of labour has been spent, to place a thing at last on an insecure foundation.

ATHENIAN: I approve of your suggestion, and am quite of the same mind with you.

CLEINIAS: Very good: And now what, according to you, is to be the salvation of our government and of our laws, and how is it to be effected?

ATHENIAN: Were we not saying that there must be in our city a council which was to be of this sort: The ten oldest guardians of the law, and all those who have obtained prizes of virtue, were to meet in the same assembly, and the council was also to include those who had visited foreign countries in the hope of hearing something that might be of use in the preservation of the laws, and who, having come safely home, and having been tested in these same matters, had proved themselves to be worthy to take part in the assembly--each of the members was to select some young man of not less than thirty years of age, he himself judging in the first instance whether the young man was worthy by nature and education, and then suggesting him to the others, and if he seemed to them also to be worthy they were to adopt him; but if not, the decision at which they arrived was to be kept a secret from the citizens at large, and, more especially, from the rejected candidate. The meeting of the council was to be held early in the morning, when everybody was most at leisure from all other business, whether public or private--was not something of this sort said by us before?

CLEINIAS: True.

ATHENIAN: Then, returning to the council, I would say further, that if we let it down to be the anchor of the state, our city, having everything which is suitable to her, will preserve all that we wish to preserve.
CLEINIAS: What do you mean?

ATHENIAN: Now is the time for me to speak the truth in all earnestness.

CLEINIAS: Well said, and I hope that you will fulfil your intention.

ATHENIAN: Know, Cleinias, that everything, in all that it does, has a natural saviour, as of an animal the soul and the head are the chief saviours.

CLEINIAS: Once more, what do you mean?

ATHENIAN: The well-being of those two is obviously the preservation of every living thing.

CLEINIAS: How is that?

ATHENIAN: The soul, besides other things, contains mind, and the head, besides other things, contains sight and hearing; and the mind, mingling with the noblest of the senses, and becoming one with them, may be truly called the salvation of all.

CLEINIAS: Yes, quite so.

ATHENIAN: Yes, indeed; but with what is that intellect concerned which, mingling with the senses, is the salvation of ships in storms as well as in fair weather? In a ship, when the pilot and the sailors unite their perceptions with the piloting mind, do they not save both themselves and their craft?

CLEINIAS: Very true.

ATHENIAN: We do not want many illustrations about such matters: What aim would the general of an army, or what aim would a physician propose to himself, if he were seeking to attain salvation?

CLEINIAS: Very good.

ATHENIAN: Does not the general aim at victory and superiority in war, and do not the physician and his assistants aim at producing health in the body?

CLEINIAS: Certainly.

ATHENIAN: And a physician who is ignorant about the body, that is to say, who knows not that which we just now called health, or a general who knows
not victory, or any others who are ignorant of the particulars of the arts which we mentioned, cannot be said to have understanding about any of these matters.

CLEINIAS: They cannot.

ATHENIAN: And what would you say of the state? If a person proves to be ignorant of the aim to which the statesman should look, ought he, in the first place, to be called a ruler at all; and further, will he ever be able to preserve that of which he does not even know the aim?

CLEINIAS: Impossible.

ATHENIAN: And therefore, if our settlement of the country is to be perfect, we ought to have some institution, which, as I was saying, will tell what is the aim of the state, and will inform us how we are to attain this, and what law or what man will advise us to that end. Any state which has no such institution is likely to be devoid of mind and sense, and in all her actions will proceed by mere chance.

CLEINIAS: Very true.

ATHENIAN: In which, then, of the parts or institutions of the state is any such guardian power to be found? Can we say?

CLEINIAS: I am not quite certain, Stranger; but I have a suspicion that you are referring to the assembly which you just now said was to meet at night.

ATHENIAN: You understand me perfectly, Cleinias; and we must assume, as the argument implies, that this council possesses all virtue; and the beginning of virtue is not to make mistakes by guessing many things, but to look steadily at one thing, and on this to fix all our aims.

CLEINIAS: Quite true.

ATHENIAN: Then now we shall see why there is nothing wonderful in states going astray--the reason is that their legislators have such different aims; nor is there anything wonderful in some laying down as their rule of justice, that certain individuals should bear rule in the state, whether they be good or bad, and others that the citizens should be rich, not caring whether they are the slaves of other men or not. The tendency of others, again, is towards freedom; and some legislate with a view to two things at once--they want to be at the same time free and the lords of other states; but the wisest men, as they deem themselves to be, look to all these and similar aims, and there is no one of them which they exclusively honour, and to which they would have all things look.
CLEINIAS: Then, Stranger, our former assertion will hold; for we were saying that laws generally should look to one thing only; and this, as we admitted, was rightly said to be virtue.

ATHENIAN: Yes.

CLEINIAS: And we said that virtue was of four kinds?

ATHENIAN: Quite true.

CLEINIAS: And that mind was the leader of the four, and that to her the three other virtues and all other things ought to have regard?

ATHENIAN: You follow me capitally, Cleinias, and I would ask you to follow me to the end, for we have already said that the mind of the pilot, the mind of the physician and of the general look to that one thing to which they ought to look; and now we may turn to mind political, of which, as of a human creature, we will ask a question: O wonderful being, and to what are you looking? The physician is able to tell his single aim in life, but you, the superior, as you declare yourself to be, of all intelligent beings, when you are asked are not able to tell. Can you, Megillus, and you, Cleinias, say distinctly what is the aim of mind political, in return for the many explanations of things which I have given you?

CLEINIAS: We cannot, Stranger.

ATHENIAN: Well, but ought we not to desire to see it, and to see where it is to be found?

CLEINIAS: For example, where?

ATHENIAN: For example, we were saying that there are four kinds of virtue, and as there are four of them, each of them must be one.

CLEINIAS: Certainly.

ATHENIAN: And further, all four of them we call one; for we say that courage is virtue, and that prudence is virtue, and the same of the two others, as if they were in reality not many but one, that is, virtue.

CLEINIAS: Quite so.

ATHENIAN: There is no difficulty in seeing in what way the two differ from one another, and have received two names, and so of the rest. But there is more difficulty in explaining why we call these two and the rest of them by the single name of virtue.
CLEINIAS: How do you mean?

ATHENIAN: I have no difficulty in explaining what I mean. Let us distribute the subject into questions and answers.

CLEINIAS: Once more, what do you mean?

ATHENIAN: Ask me what is that one thing which I call virtue, and then again speak of as two, one part being courage and the other wisdom. I will tell you how that occurs: One of them has to do with fear; in this the beasts also participate, and quite young children--I mean courage; for a courageous temper is a gift of nature and not of reason. But without reason there never has been, or is, or will be a wise and understanding soul; it is of a different nature.

CLEINIAS: That is true.

ATHENIAN: I have now told you in what way the two are different, and do you in return tell me in what way they are one and the same. Suppose that I ask you in what way the four are one, and when you have answered me, you will have a right to ask of me in return in what way they are four; and then let us proceed to enquire whether in the case of things which have a name and also a definition to them, true knowledge consists in knowing the name only and not the definition. Can he who is good for anything be ignorant of all this without discredit where great and glorious truths are concerned?

CLEINIAS: I suppose not.

ATHENIAN: And is there anything greater to the legislator and the guardian of the law, and to him who thinks that he excels all other men in virtue, and has won the palm of excellence, than these very qualities of which we are now speaking--courage, temperance, wisdom, justice?

CLEINIAS: How can there be anything greater?

ATHENIAN: And ought not the interpreters, the teachers, the lawgivers, the guardians of the other citizens, to excel the rest of mankind, and perfectly to show him who desires to learn and know or whose evil actions require to be punished and reproved, what is the nature of virtue and vice? Or shall some poet who has found his way into the city, or some chance person who pretends to be an instructor of youth, show himself to be better than him who has won the prize for every virtue? And can we wonder that when the guardians are not adequate in speech or action, and have no adequate knowledge of virtue, the city being unguarded should experience the common fate of cities in our day?
CLEINIAS: Wonder! no.

ATHENIAN: Well, then, must we do as we said? Or can we give our guardians a more precise knowledge of virtue in speech and action than the many have? or is there any way in which our city can be made to resemble the head and senses of rational beings because possessing such a guardian power?

CLEINIAS: What, Stranger, is the drift of your comparison?

ATHENIAN: Do we not see that the city is the trunk, and are not the younger guardians, who are chosen for their natural gifts, placed in the head of the state, having their souls all full of eyes, with which they look about the whole city? They keep watch and hand over their perceptions to the memory, and inform the elders of all that happens in the city; and those whom we compared to the mind, because they have many wise thoughts—that is to say, the old men—take counsel, and making use of the younger men as their ministers, and advising with them—in this way both together truly preserve the whole state: Shall this or some other be the order of our state? Are all our citizens to be equal in acquirements, or shall there be special persons among them who have received a more careful training and education?

CLEINIAS: That they should be equal, my good sir, is impossible.

ATHENIAN: Then we ought to proceed to some more exact training than any which has preceded.

CLEINIAS: Certainly.

ATHENIAN: And must not that of which we are in need be the one to which we were just now alluding?

CLEINIAS: Very true.

ATHENIAN: Did we not say that the workman or guardian, if he be perfect in every respect, ought not only to be able to see the many aims, but he should press onward to the one? This he should know, and knowing, order all things with a view to it.

CLEINIAS: True.

ATHENIAN: And can any one have a more exact way of considering or contemplating anything, than the being able to look at one idea gathered from many different things?
CLEINIAS: Perhaps not.

ATHENIAN: Not 'Perhaps not,' but 'Certainly not,' my good sir, is the right answer. There never has been a truer method than this discovered by any man.

CLEINIAS: I bow to your authority, Stranger; let us proceed in the way which you propose.

ATHENIAN: Then, as would appear, we must compel the guardians of our divine state to perceive, in the first place, what that principle is which is the same in all the four--the same, as we affirm, in courage and in temperance, and in justice and in prudence, and which, being one, we call as we ought, by the single name of virtue. To this, my friends, we will, if you please, hold fast, and not let go until we have sufficiently explained what that is to which we are to look, whether to be regarded as one, or as a whole, or as both, or in whatever way. Are we likely ever to be in a virtuous condition, if we cannot tell whether virtue is many, or four, or one? Certainly, if we take counsel among ourselves, we shall in some way contrive that this principle has a place amongst us; but if you have made up your mind that we should let the matter alone, we will.

CLEINIAS: We must not, Stranger, by the God of strangers I swear that we must not, for in our opinion you speak most truly; but we should like to know how you will accomplish your purpose.

ATHENIAN: Wait a little before you ask; and let us, first of all, be quite agreed with one another that the purpose has to be accomplished.

CLEINIAS: Certainly, it ought to be, if it can be.

ATHENIAN: Well, and about the good and the honourable, are we to take the same view? Are our guardians only to know that each of them is many, or also how and in what way they are one?

CLEINIAS: They must consider also in what sense they are one.

ATHENIAN: And are they to consider only, and to be unable to set forth what they think?

CLEINIAS: Certainly not; that would be the state of a slave.

ATHENIAN: And may not the same be said of all good things--that the true guardians of the laws ought to know the truth about them, and to be able to interpret them in words, and carry them out in action, judging of what is and of what is not well, according to nature?
CLEINIAS: Certainly.

ATHENIAN: Is not the knowledge of the Gods which we have set forth with so much zeal one of the noblest sorts of knowledge—to know that they are, and know how great is their power, as far as in man lies? We do indeed excuse the mass of the citizens, who only follow the voice of the laws, but we refuse to admit as guardians any who do not labour to obtain every possible evidence that there is respecting the Gods; our city is forbidden and not allowed to choose as a guardian of the law, or to place in the select order of virtue, him who is not an inspired man, and has not laboured at these things.

CLEINIAS: It is certainly just, as you say, that he who is indolent about such matters or incapable should be rejected, and that things honourable should be put away from him.

ATHENIAN: Are we assured that there are two things which lead men to believe in the Gods, as we have already stated?

CLEINIAS: What are they?

ATHENIAN: One is the argument about the soul, which has been already mentioned—that it is the eldest and most divine of all things, to which motion attaining generation gives perpetual existence; the other was an argument from the order of the motion of the stars, and of all things under the dominion of the mind which ordered the universe. If a man look upon the world not lightly or ignorantly, there was never any one so godless who did not experience an effect opposite to that which the many imagine. For they think that those who handle these matters by the help of astronomy, and the accompanying arts of demonstration, may become godless, because they see, as far as they can see, things happening by necessity, and not by an intelligent will accomplishing good.

CLEINIAS: But what is the fact?

ATHENIAN: Just the opposite, as I said, of the opinion which once prevailed among men, that the sun and stars are without soul. Even in those days men wondered about them, and that which is now ascertained was then conjectured by some who had a more exact knowledge of them—that if they had been things without soul, and had no mind, they could never have moved with numerical exactness so wonderful; and even at that time some ventured to hazard the conjecture that mind was the orderer of the universe. But these same persons again mistaking the nature of the soul, which they conceived to be younger and not older than the body, once more overturned the world, or rather, I should say, themselves; for the bodies which they saw moving in heaven all appeared to be full of stones, and earth, and many other lifeless substances, and to these they assigned the
causes of all things. Such studies gave rise to much atheism and perplexity, and the poets took occasion to be abusive—comparing the philosophers to she-dogs uttering vain howlings, and talking other nonsense of the same sort. But now, as I said, the case is reversed.

CLEINIAS: How so?

ATHENIAN: No man can be a true worshipper of the Gods who does not know these two principles—that the soul is the eldest of all things which are born, and is immortal and rules over all bodies; moreover, as I have now said several times, he who has not contemplated the mind of nature which is said to exist in the stars, and gone through the previous training, and seen the connexion of music with these things, and harmonized them all with laws and institutions, is not able to give a reason of such things as have a reason. And he who is unable to acquire this in addition to the ordinary virtues of a citizen, can hardly be a good ruler of a whole state; but he should be the subordinate of other rulers. Wherefore, Cleinias and Megillus, let us consider whether we may not add to all the other laws which we have discussed this further one—that the nocturnal assembly of the magistrates, which has also shared in the whole scheme of education proposed by us, shall be a guard set according to law for the salvation of the state. Shall we propose this?

CLEINIAS: Certainly, my good friend, we will if the thing is in any degree possible.

ATHENIAN: Let us make a common effort to gain such an object; for I too will gladly share in the attempt. Of these matters I have had much experience, and have often considered them, and I dare say that I shall be able to find others who will also help.

CLEINIAS: I agree, Stranger, that we should proceed along the road in which God is guiding us; and how we can proceed rightly has now to be investigated and explained.

ATHENIAN: O Megillus and Cleinias, about these matters we cannot legislate further until the council is constituted; when that is done, then we will determine what authority they shall have of their own; but the explanation of how this is all to be ordered would only be given rightly in a long discourse.

CLEINIAS: What do you mean, and what new thing is this?

ATHENIAN: In the first place, a list would have to be made out of those who by their ages and studies and dispositions and habits are well fitted for the duty of a guardian. In the next place, it will not be easy for them to discover themselves what they ought to learn, or become the
disciple of one who has already made the discovery. Furthermore, to write down the times at which, and during which, they ought to receive the several kinds of instruction, would be a vain thing; for the learners themselves do not know what is learned to advantage until the knowledge which is the result of learning has found a place in the soul of each. And so these details, although they could not be truly said to be secret, might be said to be incapable of being stated beforehand, because when stated they would have no meaning.

CLEINIAS: What then are we to do, Stranger, under these circumstances?

ATHENIAN: As the proverb says, the answer is no secret, but open to all of us: We must risk the whole on the chance of throwing, as they say, thrice six or thrice ace, and I am willing to share with you the danger by stating and explaining to you my views about education and nurture, which is the question coming to the surface again. The danger is not a slight or ordinary one, and I would advise you, Cleinias, in particular, to see to the matter; for if you order rightly the city of the Magnetes, or whatever name God may give it, you will obtain the greatest glory; or at any rate you will be thought the most courageous of men in the estimation of posterity. Dear companions, if this our divine assembly can only be established, to them we will hand over the city; none of the present company of legislators, as I may call them, would hesitate about that. And the state will be perfected and become a waking reality, which a little while ago we attempted to create as a dream and in idea only, mingling together reason and mind in one image, in the hope that our citizens might be duly mingled and rightly educated; and being educated, and dwelling in the citadel of the land, might become perfect guardians, such as we have never seen in all our previous life, by reason of the saving virtue which is in them.

MEGILLUS: Dear Cleinias, after all that has been said, either we must detain the Stranger, and by supplications and in all manner of ways make him share in the foundation of the city, or we must give up the undertaking.

CLEINIAS: Very true, Megillus; and you must join with me in detaining him.

MEGILLUS: I will.
THE REPUBLIC

by Plato

translated by Benjamin Jowett

THE INTRODUCTION

THE Republic of Plato is the longest of his works with the exception of the Laws, and is certainly the greatest of them. There are nearer approaches to modern metaphysics in the Philebus and in the Sophist; the Politicus or Statesman is more ideal; the form and institutions of the State are more clearly drawn out in the Laws; as works of art, the Symposium and the Protagoras are of higher excellence. But no other Dialogue of Plato has the same largeness of view and the same perfection of style; no other shows an equal knowledge of the world, or contains more of those thoughts which are new as well as old, and not of one age only but of all. Nowhere in Plato is there a deeper irony or a greater wealth of humor or imagery, or more dramatic power. Nor in any other of his writings is the attempt made to interweave life and speculation, or to connect politics with philosophy. The Republic is the centre around which the other Dialogues may be grouped; here philosophy reaches the highest point to which ancient thinkers ever attained. Plato among the Greeks, like Bacon among the moderns, was the first who conceived a method of knowledge, although neither of them always distinguished the bare outline or form from the substance of truth; and both of them had to be content with an abstraction of science which was not yet realized. He was the greatest metaphysical genius whom the world has seen; and in him, more than in any other ancient thinker, the germs of future knowledge are contained. The sciences of logic and psychology, which have supplied so many instruments of thought to after-ages, are based upon the analyses of Socrates and Plato. The principles of definition, the law of contradiction, the fallacy of arguing in a circle, the distinction between the essence and accidents of a thing or notion, between means and ends, between causes and conditions; also the division of the mind into the rational, concupiscent, and irascible elements, or of pleasures and desires into necessary and unnecessary--these and other great forms of thought are all of them to be found in the Republic, and were probably first invented by Plato. The greatest of all logical truths, and the one of which writers on philosophy are most apt to lose sight, the difference between words and things, has been most
strenuously insisted on by him, although he has not always avoided the confusion of them in his own writings. But he does not bind up truth in logical formulae,—logic is still veiled in metaphysics; and the science which he imagines to "contemplate all truth and all existence" is very unlike the doctrine of the syllogism which Aristotle claims to have discovered.

Neither must we forget that the Republic is but the third part of a still larger design which was to have included an ideal history of Athens, as well as a political and physical philosophy. The fragment of the Critias has given birth to a world-famous fiction, second only in importance to the tale of Troy and the legend of Arthur; and is said as a fact to have inspired some of the early navigators of the sixteenth century. This mythical tale, of which the subject was a history of the wars of the Athenians against the Island of Atlantis, is supposed to be founded upon an unfinished poem of Solon, to which it would have stood in the same relation as the writings of the logographers to the poems of Homer. It would have told of a struggle for Liberty, intended to represent the conflict of Persia and Hellas.

We may judge from the noble commencement of the Timaeus, from the fragment of the Critias itself, and from the third book of the Laws, in what manner Plato would have treated this high argument. We can only guess why the great design was abandoned; perhaps because Plato became sensible of some incongruity in a fictitious history, or because he had lost his interest in it, or because advancing years forbade the completion of it; and we may please ourselves with the fancy that had this imaginary narrative ever been finished, we should have found Plato himself sympathizing with the struggle for Hellenic independence, singing a hymn of triumph over Marathon and Salamis, perhaps making the reflection of Herodotus where he contemplates the growth of the Athenian empire—"How brave a thing is freedom of speech, which has made the Athenians so far exceed every other state of Hellas in greatness!" or, more probably, attributing the victory to the ancient good order of Athens and to the favor of Apollo and Athene.

Again, Plato may be regarded as the "captain" ('arhchegoz') or leader of a goodly band of followers; for in the Republic is to be found the original of Cicero's De Republica, of St. Augustine's City of God, of the Utopia of Sir Thomas More, and of the numerous other imaginary States which are framed upon the same model. The extent to which Aristotle or the Aristotelian school were indebted to him in the Politics has been little recognized, and the recognition is the more necessary because it is not made by Aristotle himself. The two philosophers had more in common than they were conscious of; and probably some elements of Plato remain still undetected in Aristotle. In English philosophy too, many affinities may be traced, not only in the works of the Cambridge Platonists, but in great original writers
like Berkeley or Coleridge, to Plato and his ideas. That there is a
truth higher than experience, of which the mind bears witness to
herself, is a conviction which in our own generation has been
enthusiastically asserted, and is perhaps gaining ground. Of the Greek
authors who at the Renaissance brought a new life into the world Plato
has had the greatest influence. The Republic of Plato is also the
first treatise upon education, of which the writings of Milton and
Locke, Rousseau, Jean Paul, and Goethe are the legitimate descendants.
Like Dante or Bunyan, he has a revelation of another life; like Bacon,
he is profoundly impressed with the unity of knowledge; in the early
Church he exercised a real influence on theology, and at the Revival of
Literature on politics. Even the fragments of his words when "repeated
at second-hand" have in all ages ravished the hearts of men, who have
seen reflected in them their own higher nature. He is the father of
idealism in philosophy, in politics, in literature. And many of the
latest conceptions of modern thinkers and statesmen, such as the unity
of knowledge, the reign of law, and the equality of the sexes, have
been anticipated in a dream by him.

ARGUMENT

The argument of the Republic is the search after Justice, the nature of
which is first hinted at by Cephalus, the just and blameless old
man--then discussed on the basis of proverbial morality by Socrates and
Polemarchus--then caricatured by Thrasymachus and partially explained
by Socrates--reduced to an abstraction by Glaucon and Adeimantus, and
having become invisible in the individual reappears at length in the
ideal State which is constructed by Socrates. The first care of the
rulers is to be education, of which an outline is drawn after the old
Hellenic model, providing only for an improved religion and morality,
and more simplicity in music and gymnastic, a manlier strain of poetry,
and greater harmony of the individual and the State. We are thus led
on to the conception of a higher State, in which "no man calls anything
his own," and in which there is neither "marrying nor giving in
marriage," and "kings are philosophers" and "philosophers are kings;"
and there is another and higher education, intellectual as well as
moral and religious, of science as well as of art, and not of youth
only but of the whole of life. Such a State is hardly to be realized
in this world and would quickly degenerate. To the perfect ideal
succeeds the government of the soldier and the lover of honor, this
again declining into democracy, and democracy into tyranny, in an
imaginary but regular order having not much resemblance to the actual
facts. When "the wheel has come full circle" we do not begin again
with a new period of human life; but we have passed from the best to
the worst, and there we end. The subject is then changed and the old
quarrel of poetry and philosophy which had been more lightly treated in the earlier books of the Republic is now resumed and fought out to a conclusion. Poetry is discovered to be an imitation thrice removed from the truth, and Homer, as well as the dramatic poets, having been condemned as an imitator, is sent into banishment along with them. And the idea of the State is supplemented by the revelation of a future life.

The division into books, like all similar divisions, is probably later than the age of Plato. The natural divisions are five in number;--(1) Book I and the first half of Book II down to the paragraph beginning, "I had always admired the genius of Glaucon and Adeimantus," which is introductory; the first book containing a refutation of the popular and sophistical notions of justice, and concluding, like some of the earlier Dialogues, without arriving at any definite result. To this is appended a restatement of the nature of justice according to common opinion, and an answer is demanded to the question--What is justice, stripped of appearances? The second division (2) includes the remainder of the second and the whole of the third and fourth books, which are mainly occupied with the construction of the first State and the first education. The third division (3) consists of the fifth, sixth, and seventh books, in which philosophy rather than justice is the subject of inquiry, and the second State is constructed on principles of communism and ruled by philosophers, and the contemplation of the idea of good takes the place of the social and political virtues. In the eighth and ninth books (4) the perversions of States and of the individuals who correspond to them are reviewed in succession; and the nature of pleasure and the principle of tyranny are further analyzed in the individual man. The tenth book (5) is the conclusion of the whole, in which the relations of philosophy to poetry are finally determined, and the happiness of the citizens in this life, which has now been assured, is crowned by the vision of another.

Or a more general division into two parts may be adopted; the first (Books I-IV) containing the description of a State framed generally in accordance with Hellenic notions of religion and morality, while in the second (Books V-X) the Hellenic State is transformed into an ideal kingdom of philosophy, of which all other governments are the perversions. These two points of view are really opposed, and the opposition is only veiled by the genius of Plato. The Republic, like the Phaedrus, is an imperfect whole; the higher light of philosophy breaks through the regularity of the Hellenic temple, which at last fades away into the heavens. Whether this imperfection of structure arises from an enlargement of the plan; or from the imperfect reconciliation in the writer's own mind of the struggling elements of thought which are now first brought together by him; or, perhaps, from the composition of the work at different times--are questions, like the
similar question about the Iliad and the Odyssey, which are worth asking, but which cannot have a distinct answer. In the age of Plato there was no regular mode of publication, and an author would have the less scruple in altering or adding to a work which was known only to a few of his friends. There is no absurdity in supposing that he may have laid his labors aside for a time, or turned from one work to another; and such interruptions would be more likely to occur in the case of a long than of a short writing. In all attempts to determine the chronological order of the Platonic writings on internal evidence, this uncertainty about any single Dialogue being composed at one time is a disturbing element, which must be admitted to affect longer works, such as the Republic and the Laws, more than shorter ones. But, on the other hand, the seeming discrepancies of the Republic may only arise out of the discordant elements which the philosopher has attempted to unite in a single whole, perhaps without being himself able to recognize the inconsistency which is obvious to us. For there is a judgment of after ages which few great writers have ever been able to anticipate for themselves. They do not perceive the want of connection in their own writings, or the gaps in their systems which are visible enough to those who come after them. In the beginnings of literature and philosophy, amid the first efforts of thought and language, more inconsistencies occur than now, when the paths of speculation are well worn and the meaning of words precisely defined. For consistency, too, is the growth of time; and some of the greatest creations of the human mind have been wanting in unity. Tried by this test, several of the Platonic Dialogues, according to our modern ideas, appear to be defective, but the deficiency is no proof that they were composed at different times or by different hands. And the supposition that the Republic was written uninterruptedly and by a continuous effort is in some degree confirmed by the numerous references from one part of the work to another.

The second title, "Concerning Justice," is not the one by which the Republic is quoted, either by Aristotle or generally in antiquity, and, like the other second titles of the Platonic Dialogues, may therefore be assumed to be of later date. Morgenstern and others have asked whether the definition of justice, which is the professed aim, or the construction of the State is the principal argument of the work. The answer is, that the two blend in one, and are two faces of the same truth: for justice is the order of the State, and the State is the visible embodiment of justice under the conditions of human society. The one is the soul and the other is the body, and the Greek ideal of the State, as of the individual, is a fair mind in a fair body. In Hegelian phraseology the State is the reality of which justice is the ideal. Or, described in Christian language, the kingdom of God is within, and yet develops into a Church or external kingdom; "the house not made with hands, eternal in the heavens," is reduced to the
proportions of an earthly building. Or, to use a Platonic image, justice and the State are the warp and the woof which run through the whole texture. And when the constitution of the State is completed, the conception of justice is not dismissed, but reappears under the same or different names throughout the work, both as the inner law of the individual soul, and finally as the principle of rewards and punishments in another life. The virtues are based on justice, of which common honesty in buying and selling is the shadow, and justice is based on the idea of good, which is the harmony of the world, and is reflected both in the institutions of States and in motions of the heavenly bodies. The Timaeus, which takes up the political rather than the ethical side of the Republic, and is chiefly occupied with hypotheses concerning the outward world, yet contains many indications that the same law is supposed to reign over the State, over nature, and over man.

Too much, however, has been made of this question both in ancient and in modern times. There is a stage of criticism in which all works, whether of nature or of art, are referred to design. Now in ancient writings, and indeed in literature generally, there remains often a large element which was not comprehended in the original design. For the plan grows under the author's hand; new thoughts occur to him in the act of writing; he has not worked out the argument to the end before he begins. The reader who seeks to find some one idea under which the whole may be conceived, must necessarily seize on the vaguest and most general. Thus Stallbaum, who is dissatisfied with the ordinary explanations of the argument of the Republic, imagines himself to have found the true argument "in the representation of human life in a State perfected by justice and governed according to the idea of good." There may be some use in such general descriptions, but they can hardly be said to express the design of the writer. The truth is, that we may as well speak of many designs as of one; nor need anything be excluded from the plan of a great work to which the mind is naturally led by the association of ideas, and which does not interfere with the general purpose. What kind or degree of unity is to be sought after in a building, in the plastic arts, in poetry, in prose, is a problem which has to be determined relatively to the subject-matter. To Plato himself, the inquiry "what was the intention of the writer," or "what was the principal argument of the Republic" would have been hardly intelligible, and therefore had better be at once dismissed.

Is not the Republic the vehicle of three or four great truths which, to Plato's own mind, are most naturally represented in the form of the State? Just as in the Jewish prophets the reign of Messiah, or "the day of the Lord," or the suffering Servant or people of God, or the "Sun of righteousness with healing in his wings" only convey, to us at least, their great spiritual ideals, so through the Greek State Plato
reveals to us his own thoughts about divine perfection, which is the idea of good--like the sun in the visible world;--about human perfection, which is justice--about education beginning in youth and continuing in later years--about poets and sophists and tyrants who are the false teachers and evil rulers of mankind--about "the world" which is the embodiment of them--about a kingdom which exists nowhere upon earth but is laid up in heaven to be the pattern and rule of human life. No such inspired creation is at unity with itself, any more than the clouds of heaven when the sun pierces through them. Every shade of light and dark, of truth, and of fiction which is the veil of truth, is allowable in a work of philosophical imagination. It is not all on the same plane; it easily passes from ideas to myths and fancies, from facts to figures of speech. It is not prose but poetry, at least a great part of it, and ought not to be judged by the rules of logic or the probabilities of history. The writer is not fashioning his ideas into an artistic whole; they take possession of him and are too much for him. We have no need therefore to discuss whether a State such as Plato has conceived is practicable or not, or whether the outward form or the inward life came first into the mind of the writer. For the practicability of his ideas has nothing to do with their truth; and the highest thoughts to which he attains may be truly said to bear the greatest "marks of design"--justice more than the external frame-work of the State, the idea of good more than justice. The great science of dialectic or the organization of ideas has no real content; but is only a type of the method or spirit in which the higher knowledge is to be pursued by the spectator of all time and all existence. It is in the fifth, sixth, and seventh books that Plato reaches the "summit of speculation," and these, although they fail to satisfy the requirements of a modern thinker, may therefore be regarded as the most important, as they are also the most original, portions of the work.

It is not necessary to discuss at length a minor question which has been raised by Boeckh, respecting the imaginary date at which the conversation was held (the year 411 B. C. which is proposed by him will do as well as any other); for a writer of fiction, and especially a writer who, like Plato, is notoriously careless of chronology, only aims at general probability. Whether all the persons mentioned in the Republic could ever have met at any one time is not a difficulty which would have occurred to an Athenian reading the work forty years later, or to Plato himself at the time of writing (any more than to Shakespeare respecting one of his own dramas); and need not greatly trouble us now. Yet this may be a question having no answer "which is still worth asking," because the investigation shows that we can not argue historically from the dates in Plato; it would be useless therefore to waste time in inventing far-fetched reconciliations of them in order avoid chronological difficulties, such, for example, as the conjecture of C. F. Hermann, that Glaucon and Adeimantus are not the
brothers but the uncles of Plato, or the fancy of Stallbaum that Plato intentionally left anachronisms indicating the dates at which some of his Dialogues were written.

CHARACTERS

The principal characters in the Republic are Cephalus, Polemarchus, Thrasymachus, Socrates, Glaucon, and Adeimantus. Cephalus appears in the introduction only, Polemarchus drops at the end of the first argument, and Thrasymachus is reduced to silence at the close of the first book. The main discussion is carried on by Socrates, Glaucon, and Adeimantus. Among the company are Lysias (the orator) and Euthydemus, the sons of Cephalus and brothers of Polemarchus, an unknown Charmantides--these are mute auditors; also there is Cleitophon, who once interrupts, where, as in the Dialogue which bears his name, he appears as the friend and ally of Thrasymachus.

Cephalus, the patriarch of house, has been appropriately engaged in offering a sacrifice. He is the pattern of an old man who has almost done with life, and is at peace with himself and with all mankind. He feels that he is drawing nearer to the world below, and seems to linger around the memory of the past. He is eager that Socrates should come to visit him, fond of the poetry of the last generation, happy in the consciousness of a well-spent life, glad at having escaped from the tyranny of youthful lusts. His love of conversation, his affection, his indifference to riches, even his garrulity, are interesting traits of character. He is not one of those who have nothing to say, because their whole mind has been absorbed in making money. Yet he acknowledges that riches have the advantage of placing men above the temptation to dishonesty or falsehood. The respectful attention shown to him by Socrates, whose love of conversation, no less than the mission imposed upon him by the Oracle, leads him to ask questions of all men, young and old alike, should also be noted. Who better suited to raise the question of justice than Cephalus, whose life might seem to be the expression of it? The moderation with which old age is pictured by Cephalus as a very tolerable portion of existence is characteristic, not only of him, but of Greek feeling generally, and contrasts with the exaggeration of Cicero in the De Senectute. The evening of life is described by Plato in the most expressive manner, yet with the fewest possible touches. As Cicero remarks (Ep. ad Attic. iv. 16), the aged Cephalus would have been out of place in the discussion which follows, and which he could neither have understood nor taken part in without a violation of dramatic propriety.

His "son and heir" Polemarchus has the frankness and impetuousness of
youth; he is for detaining Socrates by force in the opening scene, and will not "let him off" on the subject of women and children. Like Cephalus, he is limited in his point of view, and represents the proverbial stage of morality which has rules of life rather than principles; and he quotes Simonides as his father had quoted Pindar. But after this he has no more to say; the answers which he makes are only elicited from him by the dialectic of Socrates. He has not yet experienced the influence of the Sophists like Glaucon and Adeimantus, nor is he sensible of the necessity of refuting them; he belongs to the pre-Socratic or pre-dialectical age. He is incapable of arguing, and is bewildered by Socrates to such a degree that he does not know what he is saying. He is made to admit that justice is a thief, and that the virtues follow the analogy of the arts. From his brother Lysias we learn that he fell a victim to the Thirty Tyrants, but no allusion is here made to his fate, nor to the circumstance that Cephalus and his family were of Syracusan origin, and had migrated from Thurii to Athens.

The "Chalcedonian giant," Thrasyvulchus, of whom we have already heard in the Phaedrus, is the personification of the Sophists, according to Plato's conception of them, in some of their worst characteristics. He is vain and blustering, refusing to discourse unless he is paid, fond of making an oration, and hoping thereby to escape the inevitable Socrates; but a mere child in argument, and unable to foresee that the next "move" (to use a Platonic expression) will "shut him up." He has reached the stage of framing general notions, and in this respect is in advance of Cephalus and Polemarchus. But he is incapable of defending them in a discussion, and vainly tries to cover his confusion in banter and insolence. Whether such doctrines as are attributed to him by Plato were really held either by him or by any other Sophist is uncertain; in the infancy of philosophy serious errors about morality might easily grow up--they are certainly put into the mouths of speakers in Thucydides; but we are concerned at present with Plato's description of him, and not with the historical reality. The inequality of the contest adds greatly to the humor of the scene. The pompous and empty Sophist is utterly helpless in the hands of the great master of dialectic, who knows how to touch all the springs of vanity and weakness in him. He is greatly irritated by the irony of Socrates, but his noisy and imbecile rage only lays him more and more open to the thrusts of his assailant. His determination to cram down their throats, or put "bodily into their souls" his own words, elicits a cry of horror from Socrates. The state of his temper is quite as worthy of remark as the process of the argument. Nothing is more amusing than his complete submission when he has been once thoroughly beaten. At first he seems to continue the discussion with reluctance, but soon with apparent good-will, and he even testifies his interest at a later stage by one or two occasional remarks. When attacked by Glaucon he is humorously protected by Socrates "as one who has never been his enemy
and is now his friend." From Cicero and Quintilian and from Aristotle's Rhetoric we learn that the Sophist whom Plato has made so ridiculous was a man of note whose writings were preserved in later ages. The play on his name which was made by his contemporary Herodicus, "thou wast ever bold in battle," seems to show that the description of him is not devoid of verisimilitude.

When Thrasymachus has been silenced, the two principal respondents, Glaucon and Adeimantus, appear on the scene: here, as in Greek tragedy, three actors are introduced. At first sight the two sons of Ariston may seem to wear a family likeness, like the two friends Simmias and Cebes in the Phaedo. But on a nearer examination of them the similarity vanishes, and they are seen to be distinct characters. Glaucon is the impetuous youth who can "just never have enough of fechting" (cf. the character of him in Xen. Mem. iii. 6); the man of pleasure who is acquainted with the mysteries of love; the "juvenis qui gaudet canibus," and who improves the breed of animals; the lover of art and music who has all the experiences of youthful life. He is full of quickness and penetration, piercing easily below the clumsy platitudes of Thrasymachus to the real difficulty; he turns out to the light the seamy side of human life, and yet does not lose faith in the just and true. It is Glaucon who seizes what may be termed the ludicrous relation of the philosopher to the world, to whom a state of simplicity is "a city of pigs," who is always prepared with a jest when the argument offers him an opportunity, and who is ever ready to second the humor of Socrates and to appreciate the ridiculous, whether in the connoisseurs of music, or in the lovers of theatricals, or in the fantastic behavior of the citizens of democracy. His weaknesses are several times alluded to by Socrates, who, however, will not allow him to be attacked by his brother Adeimantus. He is a soldier, and, like Adeimantus, has been distinguished at the battle of Megara.

The character of Adeimantus is deeper and graver, and the profounder objections are commonly put into his mouth. Glaucon is more demonstrative, and generally opens the game. Adeimantus pursues the argument further. Glaucon has more of the liveliness and quick sympathy of youth; Adeimantus has the maturer judgment of a grown-up man of the world. In the second book, when Glaucon insists that justice and injustice shall be considered without regard to their consequences, Adeimantus remarks that they are regarded by mankind in general only for the sake of their consequences; and in a similar vein of reflection he urges at the beginning of the fourth book that Socrates falls in making his citizens happy, and is answered that happiness is not the first but the second thing, not the direct aim but the indirect consequence of the good government of a State. In the discussion about religion and mythology, Adeimantus is the respondent, but Glaucon breaks in with a slight jest, and carries on the
conversation in a lighter tone about music and gymnastic to the end of the book. It is Adeimantus again who volunteers the criticism of common sense on the Socratic method of argument, and who refuses to let Socrates pass lightly over the question of women and children. It is Adeimantus who is the respondent in the more argumentative, as Glaucon in the lighter and more imaginative portions of the Dialogue. For example, throughout the greater part of the sixth book, the causes of the corruption of philosophy and the conception of the idea of good are discussed with Adeimantus. Then Glaucon resumes his place of principal respondent; but he has a difficulty in apprehending the higher education of Socrates, and makes some false hits in the course of the discussion. Once more Adeimantus returns with the allusion to his brother Glaucon whom he compares to the contentious State; in the next book he is again superseded, and Glaucon continues to the end.

Thus in a succession of characters Plato represents the successive stages of morality, beginning with the Athenian gentleman of the olden time, who is followed by the practical man of that day regulating his life by proverbs and saws; to him succeeds the wild generalization of the Sophists, and lastly come the young disciples of the great teacher, who know the sophistical arguments but will not be convinced by them, and desire to go deeper into the nature of things. These too, like Cephalus, Polemarchus, Thrasymachus, are clearly distinguished from one another. Neither in the Republic, nor in any other Dialogue of Plato, is a single character repeated.

The delineation of Socrates in the Republic is not wholly consistent. In the first book we have more of the real Socrates, such as he is depicted in the Memorabilia of Xenophon, in the earliest Dialogues of Plato, and in the Apology. He is ironical, provoking, questioning, the old enemy of the Sophists, ready to put on the mask of Silenus as well as to argue seriously. But in the sixth book his enmity towards the Sophists abates; he acknowledges that they are the representatives rather than the corrupters of the world. He also becomes more dogmatic and constructive, passing beyond the range either of the political or the speculative ideas of the real Socrates. In one passage Plato himself seems to intimate that the time had now come for Socrates, who had passed his whole life in philosophy, to give his own opinion and not to be always repeating the notions of other men. There is no evidence that either the idea of good or the conception of a perfect State were comprehended in the Socratic teaching, though he certainly dwelt on the nature of the universal and of final causes (cp. Xen. Mem. i. 4; Phaedo 97); and a deep thinker like him in his thirty or forty years of public teaching, could hardly have falled to touch on the nature of family relations, for which there is also some positive evidence in the Memorabilia (Mem. i. 2, 51 foll.) The Socratic method is nominally retained; and every inference is either put into the mouth
of the respondent or represented as the common discovery of him and
Socrates. But any one can see that this is a mere form, of which the
affectation grows wearisome as the work advances. The method of
inquiry has passed into a method of teaching in which by the help of
interlocutors the same thesis is looked at from various points of view.

The nature of the process is truly characterized by Glaucon, when he
describes himself as a companion who is not good for much in an
investigation, but can see what he is shown, and may, perhaps, give the
answer to a question more fluently than another.

Neither can we be absolutely certain that, Socrates himself taught the
immortality of the soul, which is unknown to his disciple Glaucon in
the Republic; nor is there any reason to suppose that he used myths or
revelations of another world as a vehicle of instruction, or that he
would have banished poetry or have denounced the Greek mythology. His
favorite oath is retained, and a slight mention is made of the
daemonium, or internal sign, which is alluded to by Socrates as a
phenomenon peculiar to himself. A real element of Socratic teaching,
which is more prominent in the Republic than in any of the other
Dialogues of Plato, is the use of example and illustration
('taphorhtika auto phrospherhontez'): "Let us apply the test of common
instances." "You," says Adeimantus, ironically, in the sixth book, "are
so unaccustomed to speak in images." And this use of examples or
images, though truly Socratic in origin, is enlarged by the genius of
Plato into the form of an allegory or parable, which embodies in the
concrete what has been already described, or is about to be described,
in the abstract. Thus the figure of the cave in Book VII is a
recapitulation of the divisions of knowledge in Book VI. The composite
animal in Book IX is an allegory of the parts of the soul. The noble
captain and the ship and the true pilot in Book VI are a figure of the
relation of the people to the philosophers in the State which has been
described. Other figures, such as the dog in the second, third, and
fourth books, or the marriage of the portionless maiden in the sixth
book, or the drones and wasps in the eighth and ninth books, also form
links of connection in long passages, or are used to recall previous
discussions.

Plato is most true to the character of his master when he describes him
as "not of this world." And with this representation of him the ideal
State and the other paradoxes of the Republic are quite in accordance,
though they can not be shown to have been speculations of Socrates. To
him, as to other great teachers both philosophical and religious, when
they looked upward, the world seemed to be the embodiment of error and
evil. The common sense of mankind has revolted against this view, or
has only partially admitted it. And even in Socrates himself the
sterner judgment of the multitude at times passes into a sort of
ironical pity or love. Men in general are incapable of philosophy, and are therefore at enmity with the philosopher; but their misunderstanding of him is unavoidable: for they have never seen him as he truly is in his own image; they are only acquainted with artificial systems possessing no native force of truth—words which admit of many applications. Their leaders have nothing to measure with, and are therefore ignorant of their own stature. But they are to be pitied or laughed at, not to be quarrelled with; they mean well with their nostrums, if they could only learn that they are cutting off a Hydra's head. This moderation towards those who are in error is one of the most characteristic features of Socrates in the Republic. In all the different representations of Socrates, whether of Xenophon or Plato, and the differences of the earlier or later Dialogues, he always retains the character of the unwearied and disinterested seeker after truth, without which he would have ceased to be Socrates.

Leaving the characters we may now analyze the contents of the Republic, and then proceed to consider (1) The general aspects of this Hellenic ideal of the State, (2) The modern lights in which the thoughts of Plato may be read.

BOOK I

SOCRATES - GLAUCON

I WENT down yesterday to the Piraeus with Glaucon the son of Ariston, that I might offer up my prayers to the goddess; and also because I wanted to see in what manner they would celebrate the festival, which was a new thing. I was delighted with the procession of the inhabitants; but that of the Thracians was equally, if not more, beautiful. When we had finished our prayers and viewed the spectacle, we turned in the direction of the city; and at that instant Polemarchus the son of Cephalus chanced to catch sight of us from a distance as we were starting on our way home, and told his servant to run and bid us wait for him. The servant took hold of me by the cloak behind, and said: Polemarchus desires you to wait.

I turned round, and asked him where his master was.

There he is, said the youth, coming after you, if you will only wait.

Certainly we will, said Glaucon; and in a few minutes Polemarchus
appeared, and with him Adeimantus, Glaucon's brother, Niceratus the son of Nicias, and several others who had been at the procession.

**SOCRATES - POLEMARCHUS - GLAUCON - ADEIMANTUS**

Polemarchus said to me: I perceive, Socrates, that you and our companion are already on your way to the city.

You are not far wrong, I said.

But do you see, he rejoined, how many we are?

Of course.

And are you stronger than all these? for if not, you will have to remain where you are.

May there not be the alternative, I said, that we may persuade you to let us go?

But can you persuade us, if we refuse to listen to you? he said.

Certainly not, replied Glaucon.

Then we are not going to listen; of that you may be assured.

Adeimantus added: Has no one told you of the torch-race on horseback in honour of the goddess which will take place in the evening?

With horses! I replied: That is a novelty. Will horsemen carry torches and pass them one to another during the race?

Yes, said Polemarchus, and not only so, but a festival will be celebrated at night, which you certainly ought to see. Let us rise soon after supper and see this festival; there will be a gathering of young men, and we will have a good talk. Stay then, and do not be perverse.

Glaucon said: I suppose, since you insist, that we must.

Very good, I replied.

**GLAUCON - CEPHALUS - SOCRATES**

Accordingly we went with Polemarchus to his house; and there we found his brothers Lysias and Euthydemus, and with them Thrasy-machus the Chalcedonian, Charmantides the Paeanian, and Cleitophon the son of
Aristonymus. There too was Cephalus the father of Polemarchus, whom I had not seen for a long time, and I thought him very much aged. He was seated on a cushioned chair, and had a garland on his head, for he had been sacrificing in the court; and there were some other chairs in the room arranged in a semicircle, upon which we sat down by him. He saluted me eagerly, and then he said:--

You don't come to see me, Socrates, as often as you ought: If I were still able to go and see you I would not ask you to come to me. But at my age I can hardly get to the city, and therefore you should come oftener to the Piraeus. For let me tell you, that the more the pleasures of the body fade away, the greater to me is the pleasure and charm of conversation. Do not then deny my request, but make our house your resort and keep company with these young men; we are old friends, and you will be quite at home with us.

I replied: There is nothing which for my part I like better, Cephalus, than conversing with aged men; for I regard them as travellers who have gone a journey which I too may have to go, and of whom I ought to enquire, whether the way is smooth and easy, or rugged and difficult. And this is a question which I should like to ask of you who have arrived at that time which the poets call the 'threshold of old age'--Is life harder towards the end, or what report do you give of it?

I will tell you, Socrates, he said, what my own feeling is. Men of my age flock together; we are birds of a feather, as the old proverb says; and at our meetings the tale of my acquaintance commonly is--I cannot eat, I cannot drink; the pleasures of youth and love are fled away: there was a good time once, but now that is gone, and life is no longer life. Some complain of the slights which are put upon them by relations, and they will tell you sadly of how many evils their old age is the cause. But to me, Socrates, these complainers seem to blame that which is not really in fault. For if old age were the cause, I too being old, and every other old man, would have felt as they do. But this is not my own experience, nor that of others whom I have known. How well I remember the aged poet Sophocles, when in answer to the question, How does love suit with age, Sophocles,--are you still the man you were? Peace, he replied; most gladly have I escaped the thing of which you speak; I feel as if I had escaped from a mad and furious master. His words have often occurred to my mind since, and they seem as good to me now as at the time when he uttered them. For certainly old age has a great sense of calm and freedom; when the passions relax their hold, then, as Sophocles says, we are freed from the grasp not of one mad master only, but of many. The truth is, Socrates, that these regrets, and also the complaints about relations, are to be attributed to the same cause, which is not old age, but men's characters and tempers; for he who is of a calm and happy nature will
hardly feel the pressure of age, but to him who is of an opposite disposition youth and age are equally a burden.

I listened in admiration, and wanting to draw him out, that he might go on--Yes, Cephalus, I said: but I rather suspect that people in general are not convinced by you when you speak thus; they think that old age sits lightly upon you, not because of your happy disposition, but because you are rich, and wealth is well known to be a great comforter.

You are right, he replied; they are not convinced: and there is something in what they say; not, however, so much as they imagine. I might answer them as Themistocles answered the Seriphian who was abusing him and saying that he was famous, not for his own merits but because he was an Athenian: 'If you had been a native of my country or I of yours, neither of us would have been famous.' And to those who are not rich and are impatient of old age, the same reply may be made; for to the good poor man old age cannot be a light burden, nor can a bad rich man ever have peace with himself.

May I ask, Cephalus, whether your fortune was for the most part inherited or acquired by you?

Acquired! Socrates; do you want to know how much I acquired? In the art of making money I have been midway between my father and grandfather: for my grandfather, whose name I bear, doubled and trebled the value of his patrimony, that which he inherited being much what I possess now; but my father Lysanias reduced the property below what it is at present: and I shall be satisfied if I leave to these my sons not less but a little more than I received.

That was why I asked you the question, I replied, because I see that you are indifferent about money, which is a characteristic rather of those who have inherited their fortunes than of those who have acquired them; the makers of fortunes have a second love of money as a creation of their own, resembling the affection of authors for their own poems, or of parents for their children, besides that natural love of it for the sake of use and profit which is common to them and all men. And hence they are very bad company, for they can talk about nothing but the praises of wealth. That is true, he said.

Yes, that is very true, but may I ask another question? What do you consider to be the greatest blessing which you have reaped from your wealth?

One, he said, of which I could not expect easily to convince others. For let me tell you, Socrates, that when a man thinks himself to be near death, fears and cares enter into his mind which he never had
before; the tales of a world below and the punishment which is exacted there of deeds done here were once a laughing matter to him, but now he is tormented with the thought that they may be true: either from the weakness of age, or because he is now drawing nearer to that other place, he has a clearer view of these things; suspicions and alarms crowd thickly upon him, and he begins to reflect and consider what wrongs he has done to others. And when he finds that the sum of his transgressions is great he will many a time like a child start up in his sleep for fear, and he is filled with dark forebodings. But to him who is conscious of no sin, sweet hope, as Pindar charmingly says, is the kind nurse of his age:

Hope, he says, cherishes the soul of him who lives in justice and holiness and is the nurse of his age and the companion of his journey;--hope which is mightiest to sway the restless soul of man.

How admirable are his words! And the great blessing of riches, I do not say to every man, but to a good man, is, that he has had no occasion to deceive or to defraud others, either intentionally or unintentionally; and when he departs to the world below he is not in any apprehension about offerings due to the gods or debts which he owes to men. Now to this peace of mind the possession of wealth greatly contributes; and therefore I say, that, setting one thing against another, of the many advantages which wealth has to give, to a man of sense this is in my opinion the greatest.

Well said, Cephalus, I replied; but as concerning justice, what is it?--to speak the truth and to pay your debts--no more than this? And even to this are there not exceptions? Suppose that a friend when in his right mind has deposited arms with me and he asks for them when he is not in his right mind, ought I to give them back to him? No one would say that I ought or that I should be right in doing so, any more than they would say that I ought always to speak the truth to one who is in his condition.

You are quite right, he replied.

But then, I said, speaking the truth and paying your debts is not a correct definition of justice.

CEPHALUS - Socrates - POLEMARCHUS

Quite correct, Socrates, if Simonides is to be believed, said Polemarchus interposing.

I fear, said Cephalus, that I must go now, for I have to look after the
sacrifices, and I hand over the argument to Polemarchus and the company.

Is not Polemarchus your heir? I said.

To be sure, he answered, and went away laughing to the sacrifices.

SOCRATES - POLEMARCHUS

Tell me then, O thou heir of the argument, what did Simonides say, and according to you truly say, about justice?

He said that the repayment of a debt is just, and in saying so he appears to me to be right.

I should be sorry to doubt the word of such a wise and inspired man, but his meaning, though probably clear to you, is the reverse of clear to me. For he certainly does not mean, as we were now saying that I ought to return a return a deposit of arms or of anything else to one who asks for it when he is not in his right senses; and yet a deposit cannot be denied to be a debt.

True.

Then when the person who asks me is not in his right mind I am by no means to make the return?

Certainly not.

When Simonides said that the repayment of a debt was justice, he did not mean to include that case?

Certainly not; for he thinks that a friend ought always to do good to a friend and never evil.

You mean that the return of a deposit of gold which is to the injury of the receiver, if the two parties are friends, is not the repayment of a debt,—that is what you would imagine him to say?

Yes.

And are enemies also to receive what we owe to them?

To be sure, he said, they are to receive what we owe them, and an enemy, as I take it, owes to an enemy that which is due or proper to him— that is to say, evil.

Simonides, then, after the manner of poets, would seem to have spoken
darkly of the nature of justice; for he really meant to say that justice is the giving to each man what is proper to him, and this he termed a debt.

That must have been his meaning, he said.

By heaven! I replied; and if we asked him what due or proper thing is given by medicine, and to whom, what answer do you think that he would make to us?

He would surely reply that medicine gives drugs and meat and drink to human bodies.

And what due or proper thing is given by cookery, and to what?

Seasoning to food.

And what is that which justice gives, and to whom?

If, Socrates, we are to be guided at all by the analogy of the preceding instances, then justice is the art which gives good to friends and evil to enemies.

That is his meaning then?

I think so.

And who is best able to do good to his friends and evil to his enemies in time of sickness?

The physician.

Or when they are on a voyage, amid the perils of the sea?

The pilot.

And in what sort of actions or with a view to what result is the just man most able to do harm to his enemy and good to his friends?

In going to war against the one and in making alliances with the other.

But when a man is well, my dear Polemarchus, there is no need of a physician?

No.

And he who is not on a voyage has no need of a pilot?
No.

Then in time of peace justice will be of no use?

I am very far from thinking so.

You think that justice may be of use in peace as well as in war?

Yes.

Like husbandry for the acquisition of corn?

Yes.

Or like shoemaking for the acquisition of shoes,—that is what you mean?

Yes.

And what similar use or power of acquisition has justice in time of peace?

In contracts, Socrates, justice is of use.

And by contracts you mean partnerships?

Exactly.

But is the just man or the skilful player a more useful and better partner at a game of draughts?

The skilful player.

And in the laying of bricks and stones is the just man a more useful or better partner than the builder?

Quite the reverse.

Then in what sort of partnership is the just man a better partner than the harp-player, as in playing the harp the harp-player is certainly a better partner than the just man?

In a money partnership.

Yes, Polemarchus, but surely not in the use of money; for you do not want a just man to be your counsellor the purchase or sale of a horse; a man who is knowing about horses would be better for that, would he
not?

Certainly.

And when you want to buy a ship, the shipwright or the pilot would be better?

True.

Then what is that joint use of silver or gold in which the just man is to be preferred?

When you want a deposit to be kept safely.

You mean when money is not wanted, but allowed to lie?

Precisely.

That is to say, justice is useful when money is useless?

That is the inference.

And when you want to keep a pruning-hook safe, then justice is useful to the individual and to the state; but when you want to use it, then the art of the vine-dresser?

Clearly.

And when you want to keep a shield or a lyre, and not to use them, you would say that justice is useful; but when you want to use them, then the art of the soldier or of the musician?

Certainly.

And so of all the other things;--justice is useful when they are useless, and useless when they are useful?

That is the inference.

Then justice is not good for much. But let us consider this further point: Is not he who can best strike a blow in a boxing match or in any kind of fighting best able to ward off a blow?

Certainly.

And he who is most skilful in preventing or escaping from a disease is best able to create one?
True.

And he is the best guard of a camp who is best able to steal a march upon the enemy?

Certainly.

Then he who is a good keeper of anything is also a good thief?

That, I suppose, is to be inferred.

Then if the just man is good at keeping money, he is good at stealing it.

That is implied in the argument.

Then after all the just man has turned out to be a thief. And this is a lesson which I suspect you must have learnt out of Homer; for he, speaking of Autolycus, the maternal grandfather of Odysseus, who is a favourite of his, affirms that

He was excellent above all men in theft and perjury.

And so, you and Homer and Simonides are agreed that justice is an art of theft; to be practised however 'for the good of friends and for the harm of enemies,'--that was what you were saying?

No, certainly not that, though I do not now know what I did say; but I still stand by the latter words.

Well, there is another question: By friends and enemies do we mean those who are so really, or only in seeming?

Surely, he said, a man may be expected to love those whom he thinks good, and to hate those whom he thinks evil.

Yes, but do not persons often err about good and evil: many who are not good seem to be so, and conversely?

That is true.

Then to them the good will be enemies and the evil will be their friends? True.

And in that case they will be right in doing good to the evil and evil to the good?
Clearly.

But the good are just and would not do an injustice?

True.

Then according to your argument it is just to injure those who do no wrong?

Nay, Socrates; the doctrine is immoral.

Then I suppose that we ought to do good to the just and harm to the unjust?

I like that better.

But see the consequence:--Many a man who is ignorant of human nature has friends who are bad friends, and in that case he ought to do harm to them; and he has good enemies whom he ought to benefit; but, if so, we shall be saying the very opposite of that which we affirmed to be the meaning of Simonides.

Very true, he said: and I think that we had better correct an error into which we seem to have fallen in the use of the words 'friend' and 'enemy.'

What was the error, Polemarchus? I asked.

We assumed that he is a friend who seems to be or who is thought good.

And how is the error to be corrected?

We should rather say that he is a friend who is, as well as seems, good; and that he who seems only, and is not good, only seems to be and is not a friend; and of an enemy the same may be said.

You would argue that the good are our friends and the bad our enemies?

Yes.

And instead of saying simply as we did at first, that it is just to do good to our friends and harm to our enemies, we should further say: It is just to do good to our friends when they are good and harm to our enemies when they are evil?

Yes, that appears to me to be the truth.
But ought the just to injure any one at all?

Undoubtedly he ought to injure those who are both wicked and his enemies.

When horses are injured, are they improved or deteriorated?

The latter.

Deteriorated, that is to say, in the good qualities of horses, not of dogs?

Yes, of horses.

And dogs are deteriorated in the good qualities of dogs, and not of horses?

Of course.

And will not men who are injured be deteriorated in that which is the proper virtue of man?

Certainly.

And that human virtue is justice?

To be sure.

Then men who are injured are of necessity made unjust?

That is the result.

But can the musician by his art make men unmusical?

Certainly not.

Or the horseman by his art make them bad horsemen?

Impossible.

And can the just by justice make men unjust, or speaking general can the good by virtue make them bad?

Assuredly not.

Any more than heat can produce cold?
It cannot.

Or drought moisture?

Clearly not.

Nor can the good harm any one?

Impossible.

And the just is the good?

Certainly.

Then to injure a friend or any one else is not the act of a just man, but of the opposite, who is the unjust?

I think that what you say is quite true, Socrates.

Then if a man says that justice consists in the repayment of debts, and that good is the debt which a man owes to his friends, and evil the debt which he owes to his enemies,—to say this is not wise; for it is not true, if, as has been clearly shown, the injuring of another can be in no case just.

I agree with you, said Polemarchus.

Then you and I are prepared to take up arms against any one who attributes such a saying to Simonides or Bias or Pittacus, or any other wise man or seer?

I am quite ready to do battle at your side, he said.

Shall I tell you whose I believe the saying to be?

Whose?

I believe that Periander or Perdiccas or Xerxes or Ismenias the Theban, or some other rich and mighty man, who had a great opinion of his own power, was the first to say that justice is 'doing good to your friends and harm to your enemies.'

Most true, he said.

Yes, I said; but if this definition of justice also breaks down, what other can be offered?
Several times in the course of the discussion Thrasymachus had made an attempt to get the argument into his own hands, and had been put down by the rest of the company, who wanted to hear the end. But when Polemarchus and I had done speaking and there was a pause, he could no longer hold his peace; and, gathering himself up, he came at us like a wild beast, seeking to devour us. We were quite panic-stricken at the sight of him.

SOCRATES - POLEMARCHUS - THRASYMACHUS

He roared out to the whole company: What folly. Socrates, has taken possession of you all? And why, sillybillies, do you knock under to one another? I say that if you want really to know what justice is, you should not only ask but answer, and you should not seek honour to yourself from the refutation of an opponent, but have your own answer; for there is many a one who can ask and cannot answer. And now I will not have you say that justice is duty or advantage or profit or gain or interest, for this sort of nonsense will not do for me; I must have clearness and accuracy.

I was panic-stricken at his words, and could not look at him without trembling. Indeed I believe that if I had not fixed my eye upon him, I should have been struck dumb: but when I saw his fury rising, I looked at him first, and was therefore able to reply to him.

Thrasymachus, I said, with a quiver, don't be hard upon us. Polemarchus and I may have been guilty of a little mistake in the argument, but I can assure you that the error was not intentional. If we were seeking for a piece of gold, you would not imagine that we were 'knocking under to one another,' and so losing our chance of finding it. And why, when we are seeking for justice, a thing more precious than many pieces of gold, do you say that we are weakly yielding to one another and not doing our utmost to get at the truth? Nay, my good friend, we are most willing and anxious to do so, but the fact is that we cannot. And if so, you people who know all things should pity us and not be angry with us.

How characteristic of Socrates! he replied, with a bitter laugh;--that's your ironical style! Did I not foresee--have I not already told you, that whatever he was asked he would refuse to answer, and try irony or any other shuffle, in order that he might avoid answering?

You are a philosopher, Thrasymachus, I replied, and well know that if you ask a person what numbers make up twelve, taking care to prohibit him whom you ask from answering twice six, or three times four, or six
times two, or four times three, 'for this sort of nonsense will not do for me,'--then obviously, that is your way of putting the question, no one can answer you. But suppose that he were to retort, 'Thrasymachus, what do you mean? If one of these numbers which you interdict be the true answer to the question, am I falsely to say some other number which is not the right one?--is that your meaning?'--How would you answer him?

Just as if the two cases were at all alike! he said.

Why should they not be? I replied; and even if they are not, but only appear to be so to the person who is asked, ought he not to say what he thinks, whether you and I forbid him or not?

I presume then that you are going to make one of the interdicted answers?

I dare say that I may, notwithstanding the danger, if upon reflection I approve of any of them.

But what if I give you an answer about justice other and better, he said, than any of these? What do you deserve to have done to you?

Done to me!--as becomes the ignorant, I must learn from the wise--that is what I deserve to have done to me.

What, and no payment! a pleasant notion!

I will pay when I have the money, I replied.

SOCRATES - THRASYMACHUS - GLAUCON

But you have, Socrates, said Glaucon: and you, Thrasymachus, need be under no anxiety about money, for we will all make a contribution for Socrates.

Yes, he replied, and then Socrates will do as he always does--refuse to answer himself, but take and pull to pieces the answer of some one else.

Why, my good friend, I said, how can any one answer who knows, and says that he knows, just nothing; and who, even if he has some faint notions of his own, is told by a man of authority not to utter them? The natural thing is, that the speaker should be some one like yourself who professes to know and can tell what he knows. Will you then kindly answer, for the edification of the company and of myself?

Glaucon and the rest of the company joined in my request and
Thrasymachus, as any one might see, was in reality eager to speak; for he thought that he had an excellent answer, and would distinguish himself. But at first he to insist on my answering; at length he consented to begin. Behold, he said, the wisdom of Socrates; he refuses to teach himself, and goes about learning of others, to whom he never even says thank you.

That I learn of others, I replied, is quite true; but that I am ungrateful I wholly deny. Money I have none, and therefore I pay in praise, which is all I have: and how ready I am to praise any one who appears to me to speak well you will very soon find out when you answer; for I expect that you will answer well.

Listen, then, he said; I proclaim that justice is nothing else than the interest of the stronger. And now why do you not me? But of course you won't.

Let me first understand you, I replied. Justice, as you say, is the interest of the stronger. What, Thrasymachus, is the meaning of this? You cannot mean to say that because Polydamas, the pancratist, is stronger than we are, and finds the eating of beef conducive to his bodily strength, that to eat beef is therefore equally for our good who are weaker than he is, and right and just for us?

That's abominable of you, Socrates; you take the words in the sense which is most damaging to the argument.

Not at all, my good sir, I said; I am trying to understand them; and I wish that you would be a little clearer.

Well, he said, have you never heard that forms of government differ; there are tyrannies, and there are democracies, and there are aristocracies?

Yes, I know.

And the government is the ruling power in each state?

Certainly.

And the different forms of government make laws democratical, aristocratical, tyrannical, with a view to their several interests; and these laws, which are made by them for their own interests, are the justice which they deliver to their subjects, and him who transgresses them they punish as a breaker of the law, and unjust. And that is what I mean when I say that in all states there is the same principle of justice, which is the interest of the government; and as the government
must be supposed to have power, the only reasonable conclusion is, that everywhere there is one principle of justice, which is the interest of the stronger.

Now I understand you, I said; and whether you are right or not I will try to discover. But let me remark, that in defining justice you have yourself used the word 'interest' which you forbade me to use. It is true, however, that in your definition the words 'of the stronger' are added.

A small addition, you must allow, he said.

Great or small, never mind about that: we must first enquire whether what you are saying is the truth. Now we are both agreed that justice is interest of some sort, but you go on to say 'of the stronger'; about this addition I am not so sure, and must therefore consider further.

Proceed.

I will; and first tell me, Do you admit that it is just or subjects to obey their rulers?

I do.

But are the rulers of states absolutely infallible, or are they sometimes liable to err?

To be sure, he replied, they are liable to err.

Then in making their laws they may sometimes make them rightly, and sometimes not?

True.

When they make them rightly, they make them agreeably to their interest; when they are mistaken, contrary to their interest; you admit that?

Yes.

And the laws which they make must be obeyed by their subjects,--and that is what you call justice?

Doubtless.

Then justice, according to your argument, is not only obedience to the interest of the stronger but the reverse?
What is that you are saying? he asked.

I am only repeating what you are saying, I believe. But let us consider: Have we not admitted that the rulers may be mistaken about their own interest in what they command, and also that to obey them is justice? Has not that been admitted?

Yes.

Then you must also have acknowledged justice not to be for the interest of the stronger, when the rulers unintentionally command things to be done which are to their own injury. For if, as you say, justice is the obedience which the subject renders to their commands, in that case, O wisest of men, is there any escape from the conclusion that the weaker are commanded to do, not what is for the interest, but what is for the injury of the stronger?

Nothing can be clearer, Socrates, said Polemarchus.

SOCRATES - CLEITOPHON - POLEMARCHUS - THRASYMACHUS

Yes, said Cleitophon, interposing, if you are allowed to be his witness.

But there is no need of any witness, said Polemarchus, for Thrasymachus himself acknowledges that rulers may sometimes command what is not for their own interest, and that for subjects to obey them is justice.

Yes, Polemarchus,—Thrasymachus said that for subjects to do what was commanded by their rulers is just.

Yes, Cleitophon, but he also said that justice is the interest of the stronger, and, while admitting both these propositions, he further acknowledged that the stronger may command the weaker who are his subjects to do what is not for his own interest; whence follows that justice is the injury quite as much as the interest of the stronger.

But, said Cleitophon, he meant by the interest of the stronger what the stronger thought to be his interest,—this was what the weaker had to do; and this was affirmed by him to be justice.

Those were not his words, rejoined Polemarchus.

SOCRATES - THRASYMACHUS

Never mind, I replied, if he now says that they are, let us accept his statement. Tell me, Thrasymachus, I said, did you mean by justice what
the stronger thought to be his interest, whether really so or not?

Certainly not, he said. Do you suppose that I call him who is mistaken the stronger at the time when he is mistaken?

Yes, I said, my impression was that you did so, when you admitted that the ruler was not infallible but might be sometimes mistaken.

You argue like an informer, Socrates. Do you mean, for example, that he who is mistaken about the sick is a physician in that he is mistaken? or that he who errs in arithmetic or grammar is an arithmetician or grammarian at the me when he is making the mistake, in respect of the mistake? True, we say that the physician or arithmetician or grammarian has made a mistake, but this is only a way of speaking; for the fact is that neither the grammarian nor any other person of skill ever makes a mistake in so far as he is what his name implies; they none of them err unless their skill fails them, and then they cease to be skilled artists. No artist or sage or ruler errs at the time when he is what his name implies; though he is commonly said to err, and I adopted the common mode of speaking. But to be perfectly accurate, since you are such a lover of accuracy, we should say that the ruler, in so far as he is the ruler, is unerring, and, being unerring, always commands that which is for his own interest; and the subject is required to execute his commands; and therefore, as I said at first and now repeat, justice is the interest of the stronger.

Indeed, Thrasymachus, and do I really appear to you to argue like an informer?

Certainly, he replied.

And you suppose that I ask these questions with any design of injuring you in the argument?

Nay, he replied, 'suppose' is not the word--I know it; but you will be found out, and by sheer force of argument you will never prevail.

I shall not make the attempt, my dear man; but to avoid any misunderstanding occurring between us in future, let me ask, in what sense do you speak of a ruler or stronger whose interest, as you were saying, he being the superior, it is just that the inferior should execute--is he a ruler in the popular or in the strict sense of the term?

In the strictest of all senses, he said. And now cheat and play the informer if you can; I ask no quarter at your hands. But you never will be able, never.
And do you imagine, I said, that I am such a madman as to try and cheat, Thrasymachus? I might as well shave a lion.

Why, he said, you made the attempt a minute ago, and you failed.

Enough, I said, of these civilities. It will be better that I should ask you a question: Is the physician, taken in that strict sense of which you are speaking, a healer of the sick or a maker of money? And remember that I am now speaking of the true physician.

A healer of the sick, he replied.

And the pilot--that is to say, the true pilot--is he a captain of sailors or a mere sailor?

A captain of sailors.

The circumstance that he sails in the ship is not to be taken into account; neither is he to be called a sailor; the name pilot by which he is distinguished has nothing to do with sailing, but is significant of his skill and of his authority over the sailors.

Very true, he said.

Now, I said, every art has an interest?

Certainly.

For which the art has to consider and provide?

Yes, that is the aim of art.

And the interest of any art is the perfection of it--this and nothing else?

What do you mean?

I mean what I may illustrate negatively by the example of the body. Suppose you were to ask me whether the body is self-sufficing or has wants, I should reply: Certainly the body has wants; for the body may be ill and require to be cured, and has therefore interests to which the art of medicine ministers; and this is the origin and intention of medicine, as you will acknowledge. Am I not right?

Quite right, he replied.
But is the art of medicine or any other art faulty or deficient in any quality in the same way that the eye may be deficient in sight or the ear fail of hearing, and therefore requires another art to provide for the interests of seeing and hearing--has art in itself, I say, any similar liability to fault or defect, and does every art require another supplementary art to provide for its interests, and that another and another without end? Or have the arts to look only after their own interests? Or have they no need either of themselves or of another?--having no faults or defects, they have no need to correct them, either by the exercise of their own art or of any other; they have only to consider the interest of their subject-matter. For every art remains pure and faultless while remaining true--that is to say, while perfect and unimpaired. Take the words in your precise sense, and tell me whether I am not right."

Yes, clearly.

Then medicine does not consider the interest of medicine, but the interest of the body?

True, he said.

Nor does the art of horsemanship consider the interests of the art of horsemanship, but the interests of the horse; neither do any other arts care for themselves, for they have no needs; they care only for that which is the subject of their art?

True, he said.

But surely, Thrasymachus, the arts are the superiors and rulers of their own subjects?

To this he assented with a good deal of reluctance.

Then, I said, no science or art considers or enjoins the interest of the stronger or superior, but only the interest of the subject and weaker?

He made an attempt to contest this proposition also, but finally acquiesced.

Then, I continued, no physician, in so far as he is a physician, considers his own good in what he prescribes, but the good of his patient; for the true physician is also a ruler having the human body as a subject, and is not a mere money-maker; that has been admitted?

Yes.
And the pilot likewise, in the strict sense of the term, is a ruler of sailors and not a mere sailor?

That has been admitted.

And such a pilot and ruler will provide and prescribe for the interest of the sailor who is under him, and not for his own or the ruler's interest?

He gave a reluctant 'Yes.'

Then, I said, Thrasymachus, there is no one in any rule who, in so far as he is a ruler, considers or enjoins what is for his own interest, but always what is for the interest of his subject or suitable to his art; to that he looks, and that alone he considers in everything which he says and does.

When we had got to this point in the argument, and every one saw that the definition of justice had been completely upset, Thrasymachus, instead of replying to me, said: Tell me, Socrates, have you got a nurse?

Why do you ask such a question, I said, when you ought rather to be answering?

Because she leaves you to snivel, and never wipes your nose: she has not even taught you to know the shepherd from the sheep.

What makes you say that? I replied.

Because you fancy that the shepherd or neatherd fattens of tends the sheep or oxen with a view to their own good and not to the good of himself or his master; and you further imagine that the rulers of states, if they are true rulers, never think of their subjects as sheep, and that they are not studying their own advantage day and night. Oh, no; and so entirely astray are you in your ideas about the just and unjust as not even to know that justice and the just are in reality another's good; that is to say, the interest of the ruler and stronger, and the loss of the subject and servant; and injustice the opposite; for the unjust is lord over the truly simple and just: he is the stronger, and his subjects do what is for his interest, and minister to his happiness, which is very far from being their own. Consider further, most foolish Socrates, that the just is always a loser in comparison with the unjust. First of all, in private contracts: wherever the unjust is the partner of the just you will find that, when the partnership is dissolved, the unjust man has always more
and the just less. Secondly, in their dealings with the State: when there is an income tax, the just man will pay more and the unjust less on the same amount of income; and when there is anything to be received the one gains nothing and the other much. Observe also what happens when they take an office; there is the just man neglecting his affairs and perhaps suffering other losses, and getting nothing out of the public, because he is just; moreover he is hated by his friends and acquaintance for refusing to serve them in unlawful ways. But all this is reversed in the case of the unjust man. I am speaking, as before, of injustice on a large scale in which the advantage of the unjust is more apparent; and my meaning will be most clearly seen if we turn to that highest form of injustice in which the criminal is the happiest of men, and the sufferers or those who refuse to do injustice are the most miserable—that is to say tyranny, which by fraud and force takes away the property of others, not little by little but wholesale; comprehending in one, things sacred as well as profane, private and public; for which acts of wrong, if he were detected perpetrating any one of them singly, he would be punished and incur great disgrace—they who do such wrong in particular cases are called robbers of temples, and man-stealers and burglars and swindlers and thieves. But when a man besides taking away the money of the citizens has made slaves of them, then, instead of these names of reproach, he is termed happy and blessed, not only by the citizens but by all who hear of his having achieved the consummation of injustice. For mankind censure injustice, fearing that they may be the victims of it and not because they shrink from committing it. And thus, as I have shown, Socrates, injustice, when on a sufficient scale, has more strength and freedom and mastery than justice; and, as I said at first, justice is the interest of the stronger, whereas injustice is a man's own profit and interest.

Thrasymachus, when he had thus spoken, having, like a bathman, deluged our ears with his words, had a mind to go away. But the company would not let him; they insisted that he should remain and defend his position; and I myself added my own humble request that he would not leave us. Thrasymachus, I said to him, excellent man, how suggestive are your remarks! And are you going to run away before you have fairly taught or learned whether they are true or not? Is the attempt to determine the way of man's life so small a matter in your eyes—to determine how life may be passed by each one of us to the greatest advantage?

And do I differ from you, he said, as to the importance of the enquiry?

You appear rather, I replied, to have no care or thought about us, Thrasymachus—whether we live better or worse from not knowing what you say you know, is to you a matter of indifference. Prithee, friend, do not keep your knowledge to yourself; we are a large party; and any
benefit which you confer upon us will be amply rewarded. For my own part I openly declare that I am not convinced, and that I do not believe injustice to be more gainful than justice, even if uncontrolled and allowed to have free play. For, granting that there may be an unjust man who is able to commit injustice either by fraud or force, still this does not convince me of the superior advantage of injustice, and there may be others who are in the same predicament with myself. Perhaps we may be wrong; if so, you in your wisdom should convince us that we are mistaken in preferring justice to injustice.

And how am I to convince you, he said, if you are not already convinced by what I have just said; what more can I do for you? Would you have me put the proof bodily into your souls?

Heaven forbid! I said; I would only ask you to be consistent; or, if you change, change openly and let there be no deception. For I must remark, Thrasymachus, if you will recall what was previously said, that although you began by defining the true physician in an exact sense, you did not observe a like exactness when speaking of the shepherd; you thought that the shepherd as a shepherd tends the sheep not with a view to their own good, but like a mere diner or banqueter with a view to the pleasures of the table; or, again, as a trader for sale in the market, and not as a shepherd. Yet surely the art of the shepherd is concerned only with the good of his subjects; he has only to provide the best for them, since the perfection of the art is already ensured whenever all the requirements of it are satisfied. And that was what I was saying just now about the ruler. I conceived that the art of the ruler, considered as ruler, whether in a state or in private life, could only regard the good of his flock or subjects; whereas you seem to think that the rulers in states, that is to say, the true rulers, like being in authority.

Think! Nay, I am sure of it.

Then why in the case of lesser offices do men never take them willingly without payment, unless under the idea that they govern for the advantage not of themselves but of others? Let me ask you a question: Are not the several arts different, by reason of their each having a separate function? And, my dear illustrious friend, do say what you think, that we may make a little progress.

Yes, that is the difference, he replied.

And each art gives us a particular good and not merely a general one--medicine, for example, gives us health; navigation, safety at sea, and so on?
Yes, he said.

And the art of payment has the special function of giving pay: but we do not confuse this with other arts, any more than the art of the pilot is to be confused with the art of medicine, because the health of the pilot may be improved by a sea voyage. You would not be inclined to say, would you, that navigation is the art of medicine, at least if we are to adopt your exact use of language?

Certainly not.

Or because a man is in good health when he receives pay you would not say that the art of payment is medicine?

I should say not.

Nor would you say that medicine is the art of receiving pay because a man takes fees when he is engaged in healing?

Certainly not.

And we have admitted, I said, that the good of each art is specially confined to the art?

Yes.

Then, if there be any good which all artists have in common, that is to be attributed to something of which they all have the common use?

True, he replied.

And when the artist is benefited by receiving pay the advantage is gained by an additional use of the art of pay, which is not the art professed by him?

He gave a reluctant assent to this.

Then the pay is not derived by the several artists from their respective arts. But the truth is, that while the art of medicine gives health, and the art of the builder builds a house, another art attends them which is the art of pay. The various arts may be doing their own business and benefiting that over which they preside, but would the artist receive any benefit from his art unless he were paid as well?

I suppose not.
But does he therefore confer no benefit when he works for nothing?

Certainly, he confers a benefit.

Then now, Thrasymachus, there is no longer any doubt that neither arts
nor governments provide for their own interests; but, as we were before
saying, they rule and provide for the interests of their subjects who
are the weaker and not the stronger--to their good they attend and not
to the good of the superior.

And this is the reason, my dear Thrasymachus, why, as I was just now
saying, no one is willing to govern; because no one likes to take in
hand the reformation of evils which are not his concern without
remuneration. For, in the execution of his work, and in giving his
orders to another, the true artist does not regard his own interest,
but always that of his subjects; and therefore in order that rulers may
be willing to rule, they must be paid in one of three modes of payment:
money, or honour, or a penalty for refusing.

SOCRATES - GLAUCON

What do you mean, Socrates? said Glaucon. The first two modes of
payment are intelligible enough, but what the penalty is I do not
understand, or how a penalty can be a payment.

You mean that you do not understand the nature of this payment which to
the best men is the great inducement to rule? Of course you know that
ambition and avarice are held to be, as indeed they are, a disgrace?

Very true.

And for this reason, I said, money and honour have no attraction for
them; good men do not wish to be openly demanding payment for governing
and so to get the name of hirelings, nor by secretly helping themselves
out of the public revenues to get the name of thieves. And not being
ambitious they do not care about honour. Wherefore necessity must be
laid upon them, and they must be induced to serve from the fear of
punishment. And this, as I imagine, is the reason why the forwardness
to take office, instead of waiting to be compelled, has been deemed
dishonourable. Now the worst part of the punishment is that he who
refuses to rule is liable to be ruled by one who is worse than himself.
And the fear of this, as I conceive, induces the good to take office,
not because they would, but because they cannot help--not under the
idea that they are going to have any benefit or enjoyment themselves,
but as a necessity, and because they are not able to commit the task of
ruling to any one who is better than themselves, or indeed as good.
For there is reason to think that if a city were composed entirely of
good men, then to avoid office would be as much an object of contention as to obtain office is at present; then we should have plain proof that the true ruler is not meant by nature to regard his own interest, but that of his subjects; and every one who knew this would choose rather to receive a benefit from another than to have the trouble of conferring one. So far am I from agreeing with Thrasymachus that justice is the interest of the stronger. This latter question need not be further discussed at present; but when Thrasymachus says that the life of the unjust is more advantageous than that of the just, his new statement appears to me to be of a far more serious character. Which of us has spoken truly? And which sort of life, Glaucon, do you prefer?

I for my part deem the life of the just to be the more advantageous, he answered.

Did you hear all the advantages of the unjust which Thrasymachus was rehearsing?

Yes, I heard him, he replied, but he has not convinced me.

Then shall we try to find some way of convincing him, if we can, that he is saying what is not true?

Most certainly, he replied.

If, I said, he makes a set speech and we make another recounting all the advantages of being just, and he answers and we rejoin, there must be a numbering and measuring of the goods which are claimed on either side, and in the end we shall want judges to decide; but if we proceed in our enquiry as we lately did, by making admissions to one another, we shall unite the offices of judge and advocate in our own persons.

Very good, he said.

And which method do I understand you to prefer? I said.

That which you propose.

Well, then, Thrasymachus, I said, suppose you begin at the beginning and answer me. You say that perfect injustice is more gainful than perfect justice?

SOCRATES - GLAUCON - THRASYMACHUS

Yes, that is what I say, and I have given you my reasons.

And what is your view about them? Would you call one of them virtue
and the other vice?

Certainly.

I suppose that you would call justice virtue and injustice vice?

What a charming notion! So likely too, seeing that I affirm injustice to be profitable and justice not.

What else then would you say?

The opposite, he replied.

And would you call justice vice?

No, I would rather say sublime simplicity.

Then would you call injustice malignity?

No; I would rather say discretion.

And do the unjust appear to you to be wise and good?

Yes, he said; at any rate those of them who are able to be perfectly unjust, and who have the power of subduing states and nations; but perhaps you imagine me to be talking of cutpurses.

Even this profession if undetected has advantages, though they are not to be compared with those of which I was just now speaking.

I do not think that I misapprehend your meaning, Thrasymachus, I replied; but still I cannot hear without amazement that you class injustice with wisdom and virtue, and justice with the opposite.

Certainly I do so class them.

Now, I said, you are on more substantial and almost unanswerable ground; for if the injustice which you were maintaining to be profitable had been admitted by you as by others to be vice and deformity, an answer might have been given to you on received principles; but now I perceive that you will call injustice honourable and strong, and to the unjust you will attribute all the qualities which were attributed by us before to the just, seeing that you do not hesitate to rank injustice with wisdom and virtue.

You have guessed most infallibly, he replied.
Then I certainly ought not to shrink from going through with the argument so long as I have reason to think that you, Thrasymachus, are speaking your real mind; for I do believe that you are now in earnest and are not amusing yourself at our expense.

I may be in earnest or not, but what is that to you?--to refute the argument is your business.

Very true, I said; that is what I have to do: But will you be so good as answer yet one more question? Does the just man try to gain any advantage over the just?

Far otherwise; if he did would not be the simple, amusing creature which he is.

And would he try to go beyond just action?

He would not.

And how would he regard the attempt to gain an advantage over the unjust; would that be considered by him as just or unjust?

He would think it just, and would try to gain the advantage; but he would not be able.

Whether he would or would not be able, I said, is not to the point. My question is only whether the just man, while refusing to have more than another just man, would wish and claim to have more than the unjust?

Yes, he would.

And what of the unjust--does he claim to have more than the just man and to do more than is just.

Of course, he said, for he claims to have more than all men.

And the unjust man will strive and struggle to obtain more than the unjust man or action, in order that he may have more than all?

True.

We may put the matter thus, I said--the just does not desire more than his like but more than his unlike, whereas the unjust desires more than both his like and his unlike?

Nothing, he said, can be better than that statement.
And the unjust is good and wise, and the just is neither?

Good again, he said.

And is not the unjust like the wise and good and the just unlike them?

Of course, he said, he who is of a certain nature, is like those who are of a certain nature; he who is not, not.

Each of them, I said, is such as his like is?

Certainly, he replied.

Very good, Thrasymachus, I said; and now to take the case of the arts: you would admit that one man is a musician and another not a musician?

Yes.

And which is wise and which is foolish?

Clearly the musician is wise, and he who is not a musician is foolish.

And he is good in as far as he is wise, and bad in as far as he is foolish?

Yes.

And you would say the same sort of thing of the physician?

Yes.

And do you think, my excellent friend, that a musician when he adjusts the lyre would desire or claim to exceed or go beyond a musician in the tightening and loosening the strings?

I do not think that he would.

But he would claim to exceed the non-musician?

Of course.

And what would you say of the physician? In prescribing meats and drinks would he wish to go beyond another physician or beyond the practice of medicine?

He would not.
But he would wish to go beyond the non-physician?

Yes.

And about knowledge and ignorance in general; see whether you think that any man who has knowledge ever would wish to have the choice of saying or doing more than another man who has knowledge. Would he not rather say or do the same as his like in the same case?

That, I suppose, can hardly be denied.

And what of the ignorant? would he not desire to have more than either the knowing or the ignorant?

I dare say.

And the knowing is wise?

Yes.

And the wise is good?

True.

Then the wise and good will not desire to gain more than his like, but more than his unlike and opposite?

I suppose so.

Whereas the bad and ignorant will desire to gain more than both?

Yes.

But did we not say, Thrasymachus, that the unjust goes beyond both his like and unlike? Were not these your words? They were.

They were.

And you also said that the lust will not go beyond his like but his unlike?

Yes.

Then the just is like the wise and good, and the unjust like the evil and ignorant?

That is the inference.
And each of them is such as his like is?

That was admitted.

Then the just has turned out to be wise and good and the unjust evil and ignorant.

Thrasymachus made all these admissions, not fluently, as I repeat them, but with extreme reluctance; it was a hot summer's day, and the perspiration poured from him in torrents; and then I saw what I had never seen before, Thrasymachus blushing. As we were now agreed that justice was virtue and wisdom, and injustice vice and ignorance, I proceeded to another point:

Well, I said, Thrasymachus, that matter is now settled; but were we not also saying that injustice had strength; do you remember?

Yes, I remember, he said, but do not suppose that I approve of what you are saying or have no answer; if however I were to answer, you would be quite certain to accuse me of haranguing; therefore either permit me to have my say out, or if you would rather ask, do so, and I will answer 'Very good,' as they say to story-telling old women, and will nod 'Yes' and 'No.'

Certainly not, I said, if contrary to your real opinion.

Yes, he said, I will, to please you, since you will not let me speak. What else would you have?

Nothing in the world, I said; and if you are so disposed I will ask and you shall answer.

Proceed.

Then I will repeat the question which I asked before, in order that our examination of the relative nature of justice and injustice may be carried on regularly. A statement was made that injustice is stronger and more powerful than justice, but now justice, having been identified with wisdom and virtue, is easily shown to be stronger than injustice, if injustice is ignorance; this can no longer be questioned by any one. But I want to view the matter, Thrasymachus, in a different way: You would not deny that a state may be unjust and may be unjustly attempting to enslave other states, or may have already enslaved them, and may be holding many of them in subjection?

True, he replied; and I will add the best and perfectly unjust state
will be most likely to do so.

I know, I said, that such was your position; but what I would further consider is, whether this power which is possessed by the superior state can exist or be exercised without justice.

If you are right in you view, and justice is wisdom, then only with justice; but if I am right, then without justice.

I am delighted, Thrasymachus, to see you not only nodding assent and dissent, but making answers which are quite excellent.

That is out of civility to you, he replied.

You are very kind, I said; and would you have the goodness also to inform me, whether you think that a state, or an army, or a band of robbers and thieves, or any other gang of evil-doers could act at all if they injured one another?

No indeed, he said, they could not.

But if they abstained from injuring one another, then they might act together better?

Yes.

And this is because injustice creates divisions and hatreds and fighting, and justice imparts harmony and friendship; is not that true, Thrasymachus?

I agree, he said, because I do not wish to quarrel with you.

How good of you, I said; but I should like to know also whether injustice, having this tendency to arouse hatred, wherever existing, among slaves or among freemen, will not make them hate one another and set them at variance and render them incapable of common action?

Certainly.

And even if injustice be found in two only, will they not quarrel and fight, and become enemies to one another and to the just.

They will.

And suppose injustice abiding in a single person, would your wisdom say that she loses or that she retains her natural power?
Let us assume that she retains her power.

Yet is not the power which injustice exercises of such a nature that wherever she takes up her abode, whether in a city, in an army, in a family, or in any other body, that body is, to begin with, rendered incapable of united action by reason of sedition and distraction; and does it not become its own enemy and at variance with all that opposes it, and with the just? Is not this the case?

Yes, certainly.

And is not injustice equally fatal when existing in a single person; in the first place rendering him incapable of action because he is not at unity with himself, and in the second place making him an enemy to himself and the just? Is not that true, Thrasymachus?

Yes.

And O my friend, I said, surely the gods are just?

Granted that they are.

But if so, the unjust will be the enemy of the gods, and the just will be their friend?

Feast away in triumph, and take your fill of the argument; I will not oppose you, lest I should displease the company.

Well then, proceed with your answers, and let me have the remainder of my repast. For we have already shown that the just are clearly wiser and better and abler than the unjust, and that the unjust are incapable of common action; nay ing at more, that to speak as we did of men who are evil acting at any time vigorously together, is not strictly true, for if they had been perfectly evil, they would have laid hands upon one another; but it is evident that there must have been some remnant of justice in them, which enabled them to combine; if there had not been they would have injured one another as well as their victims; they were but half--villains in their enterprises; for had they been whole villains, and utterly unjust, they would have been utterly incapable of action. That, as I believe, is the truth of the matter, and not what you said at first. But whether the just have a better and happier life than the unjust is a further question which we also proposed to consider. I think that they have, and for the reasons which to have given; but still I should like to examine further, for no light matter is at stake, nothing less than the rule of human life.

Proceed.
I will proceed by asking a question: Would you not say that a horse has some end?

I should.

And the end or use of a horse or of anything would be that which could not be accomplished, or not so well accomplished, by any other thing?

I do not understand, he said.

Let me explain: Can you see, except with the eye?

Certainly not.

Or hear, except with the ear?

No.

These then may be truly said to be the ends of these organs?

They may.

But you can cut off a vine-branch with a dagger or with a chisel, and in many other ways?

Of course.

And yet not so well as with a pruning-hook made for the purpose?

True.

May we not say that this is the end of a pruning-hook?

We may.

Then now I think you will have no difficulty in understanding my meaning when I asked the question whether the end of anything would be that which could not be accomplished, or not so well accomplished, by any other thing?

I understand your meaning, he said, and assent.

And that to which an end is appointed has also an excellence? Need I ask again whether the eye has an end?

It has.
And has not the eye an excellence?

Yes.

And the ear has an end and an excellence also?

True.

And the same is true of all other things; they have each of them an end and a special excellence?

That is so.

Well, and can the eyes fulfil their end if they are wanting in their own proper excellence and have a defect instead?

How can they, he said, if they are blind and cannot see?

You mean to say, if they have lost their proper excellence, which is sight; but I have not arrived at that point yet. I would rather ask the question more generally, and only enquire whether the things which fulfil their ends fulfil them by their own proper excellence, and fall of fulfilling them by their own defect?

Certainly, he replied.

I might say the same of the ears; when deprived of their own proper excellence they cannot fulfil their end?

True.

And the same observation will apply to all other things?

I agree.

Well; and has not the soul an end which nothing else can fulfil? for example, to superintend and command and deliberate and the like. Are not these functions proper to the soul, and can they rightly be assigned to any other?

To no other.

And is not life to be reckoned among the ends of the soul?

Assuredly, he said.
And has not the soul an excellence also?

Yes.

And can she or can she not fulfil her own ends when deprived of that excellence?

She cannot.

Then an evil soul must necessarily be an evil ruler and superintendent, and the good soul a good ruler?

Yes, necessarily.

And we have admitted that justice is the excellence of the soul, and injustice the defect of the soul?

That has been admitted.

Then the just soul and the just man will live well, and the unjust man will live ill?

That is what your argument proves.

And he who lives well is blessed and happy, and he who lives ill the reverse of happy?

Certainly.

Then the just is happy, and the unjust miserable?

So be it.

But happiness and not misery is profitable.

Of course.

Then, my blessed Thrasymachus, injustice can never be more profitable than justice.

Let this, Socrates, he said, be your entertainment at the Bendidea.

For which I am indebted to you, I said, now that you have grown gentle towards me and have left off scolding. Nevertheless, I have not been well entertained; but that was my own fault and not yours. As an epicure snatches a taste of every dish which is successively brought to table, he not having allowed himself time to enjoy the one before, so
have I gone from one subject to another without having discovered what I sought at first, the nature of justice. I left that enquiry and turned away to consider whether justice is virtue and wisdom or evil and folly; and when there arose a further question about the comparative advantages of justice and injustice, I could not refrain from passing on to that. And the result of the whole discussion has been that I know nothing at all. For I know not what justice is, and therefore I am not likely to know whether it is or is not a virtue, nor can I say whether the just man is happy or unhappy.

BOOK II

SOCRATES - GLAUCON

WITH these words I was thinking that I had made an end of the discussion; but the end, in truth, proved to be only a beginning. For Glaucon, who is always the most pugnacious of men, was dissatisfied at Thrasy machus' retirement; he wanted to have the battle out. So he said to me: Socrates, do you wish really to persuade us, or only to seem to have persuaded us, that to be just is always better than to be unjust?

I should wish really to persuade you, I replied, if I could.

Then you certainly have not succeeded. Let me ask you now:--How would you arrange goods--are there not some which we welcome for their own sakes, and independently of their consequences, as, for example, harmless pleasures and enjoyments, which delight us at the time, although nothing follows from them?

I agree in thinking that there is such a class, I replied.

Is there not also a second class of goods, such as knowledge, sight, health, which are desirable not only in themselves, but also for their results?

Certainly, I said.

And would you not recognize a third class, such as gymnastic, and the care of the sick, and the physician's art; also the various ways of money-making--these do us good but we regard them as disagreeable; and no one would choose them for their own sakes, but only for the sake of some reward or result which flows from them?
There is, I said, this third class also. But why do you ask?

Because I want to know in which of the three classes you would place justice?

In the highest class, I replied,—among those goods which he who would be happy desires both for their own sake and for the sake of their results.

Then the many are of another mind; they think that justice is to be reckoned in the troublesome class, among goods which are to be pursued for the sake of rewards and of reputation, but in themselves are disagreeable and rather to be avoided.

I know, I said, that this is their manner of thinking, and that this was the thesis which Thrasymachus was maintaining just now, when he censured justice and praised injustice. But I am too stupid to be convinced by him.

I wish, he said, that you would hear me as well as him, and then I shall see whether you and I agree. For Thrasymachus seems to me, like a snake, to have been charmed by your voice sooner than he ought to have been; but to my mind the nature of justice and injustice have not yet been made clear. Setting aside their rewards and results, I want to know what they are in themselves, and how they inwardly work in the soul. If you, please, then, I will revive the argument of Thrasymachus. And first I will speak of the nature and origin of justice according to the common view of them. Secondly, I will show that all men who practise justice do so against their will, of necessity, but not as a good. And thirdly, I will argue that there is reason in this view, for the life of the unjust is after all better far than the life of the just—if what they say is true, Socrates, since I myself am not of their opinion. But still I acknowledge that I am perplexed when I hear the voices of Thrasymachus and myriads of others dinning in my ears; and, on the other hand, I have never yet heard the superiority of justice to injustice maintained by any one in a satisfactory way. I want to hear justice praised in respect of itself; then I shall be satisfied, and you are the person from whom I think that I am most likely to hear this; and therefore I will praise the unjust life to the utmost of my power, and my manner of speaking will indicate the manner in which I desire to hear you too praising justice and censuring injustice. Will you say whether you approve of my proposal?

Indeed I do; nor can I imagine any theme about which a man of sense would oftener wish to converse.
I am delighted, he replied, to hear you say so, and shall begin by speaking, as I proposed, of the nature and origin of justice.

GLAUCON

They say that to do injustice is, by nature, good; to suffer injustice, evil; but that the evil is greater than the good. And so when men have both done and suffered injustice and have had experience of both, not being able to avoid the one and obtain the other, they think that they had better agree among themselves to have neither; hence there arise laws and mutual covenants; and that which is ordained by law is termed by them lawful and just. This they affirm to be the origin and nature of justice;--it is a mean or compromise, between the best of all, which is to do injustice and not be punished, and the worst of all, which is to suffer injustice without the power of retaliation; and justice, being at a middle point between the two, is tolerated not as a good, but as the lesser evil, and honoured by reason of the inability of men to do injustice. For no man who is worthy to be called a man would ever submit to such an agreement if he were able to resist; he would be mad if he did. Such is the received account, Socrates, of the nature and origin of justice.

Now that those who practise justice do so involuntarily and because they have not the power to be unjust will best appear if we imagine something of this kind: having given both to the just and the unjust power to do what they will, let us watch and see whither desire will lead them; then we shall discover in the very act the just and unjust man to be proceeding along the same road, following their interest, which all natures deem to be their good, and are only diverted into the path of justice by the force of law. The liberty which we are supposing may be most completely given to them in the form of such a power as is said to have been possessed by Gyges the ancestor of Croesus the Lydian. According to the tradition, Gyges was a shepherd in the service of the king of Lydia; there was a great storm, and an earthquake made an opening in the earth at the place where he was feeding his flock. Amazed at the sight, he descended into the opening, where, among other marvels, he beheld a hollow brazen horse, having doors, at which he stooping and looking in saw a dead body of stature, as appeared to him, more than human, and having nothing on but a gold ring; this he took from the finger of the dead and reascended. Now the shepherds met together, according to custom, that they might send their monthly report about the flocks to the king; into their assembly he came having the ring on his finger, and as he was sitting among them he chanced to turn the collet of the ring inside his hand, when instantly he became invisible to the rest of the company and they began to speak of him as if he were no longer present. He was astonished at this, and again touching the ring he turned the collet outwards and reappeared;
he made several trials of the ring, and always with the same
result—when he turned the collet inwards he became invisible, when
outwards he reappeared. Whereupon he contrived to be chosen one of the
messengers who were sent to the court; where as soon as he arrived he
seduced the queen, and with her help conspired against the king and
slew him, and took the kingdom. Suppose now that there were two such
magic rings, and the just put on one of them and the unjust the other;
no man can be imagined to be of such an iron nature that he would stand
fast in justice. No man would keep his hands off what was not his own
when he could safely take what he liked out of the market, or go into
houses and lie with any one at his pleasure, or kill or release from
prison whom he would, and in all respects be like a God among men.
Then the actions of the just would be as the actions of the unjust;
they would both come at last to the same point. And this we may truly
affirm to be a great proof that a man is just, not willingly or because
he thinks that justice is any good to him individually, but of
necessity, for wherever any one thinks that he can safely be unjust,
there he is unjust. For all men believe in their hearts that injustice
is far more profitable to the individual than justice, and he who
argues as I have been supposing, will say that they are right. If you
could imagine any one obtaining this power of becoming invisible, and
never doing any wrong or touching what was another's, he would be
thought by the lookers-on to be a most wretched idiot, although they
would praise him to one another's faces, and keep up appearances with
one another from a fear that they too might suffer injustice. Enough
of this.

Now, if we are to form a real judgment of the life of the just and
unjust, we must isolate them; there is no other way; and how is the
isolation to be effected? I answer: Let the unjust man be entirely
unjust, and the just man entirely just; nothing is to be taken away
from either of them, and both are to be perfectly furnished for the
work of their respective lives. First, let the unjust be like other
distinguished masters of craft; like the skilful pilot or physician,
who knows intuitively his own powers and keeps within their limits, and
who, if he fails at any point, is able to recover himself. So let the
unjust make his unjust attempts in the right way, and lie hidden if he
means to be great in his injustice (he who is found out is nobody): for
the highest reach of injustice is: to be deemed just when you are not.
Therefore I say that in the perfectly unjust man we must assume the
most perfect injustice; there is to be no deduction, but we must allow
him, while doing the most unjust acts, to have acquired the greatest
reputation for justice. If he have taken a false step he must be able
to recover himself; he must be one who can speak with effect, if any of
his deeds come to light, and who can force his way where force is
required his courage and strength, and command of money and friends.
And at his side let us place the just man in his nobleness and
simplicity, wishing, as Aeschylus says, to be and not to seem good. There must be no seeming, for if he seem to be just he will be honoured and rewarded, and then we shall not know whether he is just for the sake of justice or for the sake of honours and rewards; therefore, let him be clothed in justice only, and have no other covering; and he must be imagined in a state of life the opposite of the former. Let him be the best of men, and let him be thought the worst; then he will have been put to the proof; and we shall see whether he will be affected by the fear of infamy and its consequences. And let him continue thus to the hour of death; being just and seeming to be unjust. When both have reached the uttermost extreme, the one of justice and the other of injustice, let judgment be given which of them is the happier of the two.

SOCRATES - GLAUCON

Heavens! my dear Glaucon, I said, how energetically you polish them up for the decision, first one and then the other, as if they were two statues.

I do my best, he said. And now that we know what they are like there is no difficulty in tracing out the sort of life which awaits either of them. This I will proceed to describe; but as you may think the description a little too coarse, I ask you to suppose, Socrates, that the words which follow are not mine.-- Let me put them into the mouths of the eulogists of injustice: They will tell you that the just man who is thought unjust will be scourged, racked, bound--will have his eyes burnt out; and, at last, after suffering every kind of evil, he will be impaled: Then he will understand that he ought to seem only, and not to be, just; the words of Aeschylus may be more truly spoken of the unjust than of the just. For the unjust is pursuing a reality; he does not live with a view to appearances--he wants to be really unjust and not to seem only:--

His mind has a soil deep and fertile,
Out of which spring his prudent counsels.

In the first place, he is thought just, and therefore bears rule in the city; he can marry whom he will, and give in marriage to whom he will; also he can trade and deal where he likes, and always to his own advantage, because he has no misgivings about injustice and at every contest, whether in public or private, he gets the better of his antagonists, and gains at their expense, and is rich, and out of his gains he can benefit his friends, and harm his enemies; moreover, he can offer sacrifices, and dedicate gifts to the gods abundantly and magnificently, and can honour the gods or any man whom he wants to honour in a far better style than the just, and therefore he is likely
to be dearer than they are to the gods. And thus, Socrates, gods and men are said to unite in making the life of the unjust better than the life of the just.

ADEIMANTUS - Socrates

I was going to say something in answer to Glaucon, when Adeimantus, his brother, interposed: Socrates, he said, you do not suppose that there is nothing more to be urged?

Why, what else is there? I answered.

The strongest point of all has not been even mentioned, he replied.

Well, then, according to the proverb, 'Let brother help brother'--if he fails in any part do you assist him; although I must confess that Glaucon has already said quite enough to lay me in the dust, and take from me the power of helping justice.

ADEIMANTUS

Nonsense, he replied. But let me add something more: There is another side to Glaucon's argument about the praise and censure of justice and injustice, which is equally required in order to bring out what I believe to be his meaning. Parents and tutors are always telling their sons and their wards that they are to be just; but why? not for the sake of justice, but for the sake of character and reputation; in the hope of obtaining for him who is reputed just some of those offices, marriages, and the like which Glaucon has enumerated among the advantages accruing to the unjust from the reputation of justice. More, however, is made of appearances by this class of persons than by the others; for they throw in the good opinion of the gods, and will tell you of a shower of benefits which the heavens, as they say, rain upon the pious; and this accords with the testimony of the noble Hesiod and Homer, the first of whom says, that the gods make the oaks of the just--

To hear acorns at their summit, and bees I the middle;  
And the sheep the bowed down bowed the with the their fleeces.

and many other blessings of a like kind are provided for them. And Homer has a very similar strain; for he speaks of one whose fame is--

As the fame of some blameless king who, like a god,  
Maintains justice to whom the black earth brings forth  
Wheat and barley, whose trees are bowed with fruit,  
And his sheep never fail to bear, and the sea gives him fish.
Still grander are the gifts of heaven which Musaeus and his son vouchsafe to the just; they take them down into the world below, where they have the saints lying on couches at a feast, everlastingly drunk, crowned with garlands; their idea seems to be that an immortality of drunkenness is the highest meed of virtue. Some extend their rewards yet further; the posterity, as they say, of the faithful and just shall survive to the third and fourth generation. This is the style in which they praise justice. But about the wicked there is another strain; they bury them in a slough in Hades, and make them carry water in a sieve; also while they are yet living they bring them to infamy, and inflict upon them the punishments which Glaucon described as the portion of the just who are reputed to be unjust; nothing else does their invention supply. Such is their manner of praising the one and censuring the other.

Once more, Socrates, I will ask you to consider another way of speaking about justice and injustice, which is not confined to the poets, but is found in prose writers. The universal voice of mankind is always declaring that justice and virtue are honourable, but grievous and toilsome; and that the pleasures of vice and injustice are easy of attainment, and are only censured by law and opinion. They say also that honesty is for the most part less profitable than dishonesty; and they are quite ready to call wicked men happy, and to honour them both in public and private when they are rich or in any other way influential, while they despise and overlook those who may be weak and poor, even though acknowledging them to be better than the others. But most extraordinary of all is their mode of speaking about virtue and the gods: they say that the gods apportion calamity and misery to many good men, and good and happiness to the wicked. And mendicant prophets go to rich men's doors and persuade them that they have a power committed to them by the gods of making an atonement for a man's own or his ancestor's sins by sacrifices or charms, with rejoicings and feasts; and they promise to harm an enemy, whether just or unjust, at a small cost; with magic arts and incantations binding heaven, as they say, to execute their will. And the poets are the authorities to whom they appeal, now smoothing the path of vice with the words of Hesiod;--

Vice may be had in abundance without trouble; the way is smooth and her dwelling-place is near. But before virtue the gods have set toil,

and a tedious and uphill road: then citing Homer as a witness that the gods may be influenced by men; for he also says:

The gods, too, may he turned from their purpose; and men pray to them and avert their wrath by sacrifices and soothing entreaties,
and by libations and the odour of fat, when they have sinned and transgressed.

And they produce a host of books written by Musaeus and Orpheus, who were children of the Moon and the Muses--that is what they say--according to which they perform their ritual, and persuade not only individuals, but whole cities, that expiations and atonements for sin may be made by sacrifices and amusements which fill a vacant hour, and are equally at the service of the living and the dead; the latter sort they call mysteries, and they redeem us from the pains of hell, but if we neglect them no one knows what awaits us.

He proceeded: And now when the young hear all this said about virtue and vice, and the way in which gods and men regard them, how are their minds likely to be affected, my dear Socrates,--those of them, I mean, who are quickwitted, and, like bees on the wing, light on every flower, and from all that they hear are prone to draw conclusions as to what manner of persons they should be and in what way they should walk if they would make the best of life? Probably the youth will say to himself in the words of Pindar--

Can I by justice or by crooked ways of deceit ascend a loftier tower which may he a fortress to me all my days?

For what men say is that, if I am really just and am not also thought just profit there is none, but the pain and loss on the other hand are unmistakable. But if, though unjust, I acquire the reputation of justice, a heavenly life is promised to me. Since then, as philosophers prove, appearance tyrannizes over truth and is lord of happiness, to appearance I must devote myself. I will describe around me a picture and shadow of virtue to be the vestibule and exterior of my house; behind I will trail the subtle and crafty fox, as Archilochus, greatest of sages, recommends. But I hear some one exclaiming that the concealment of wickedness is often difficult; to which I answer, Nothing great is easy. Nevertheless, the argument indicates this, if we would be happy, to be the path along which we should proceed. With a view to concealment we will establish secret brotherhoods and political clubs. And there are professors of rhetoric who teach the art of persuading courts and assemblies; and so, partly by persuasion and partly by force, I shall make unlawful gains and not be punished. Still I hear a voice saying that the gods cannot be deceived, neither can they be compelled. But what if there are no gods? or, suppose them to have no care of human things--why in either case should we mind about concealment? And even if there are gods, and they do care about us, yet we know of them only from tradition and the genealogies of the poets; and these are the very persons who say that they may be influenced and turned by 'sacrifices and soothing
entreaties and by offerings.' Let us be consistent then, and believe both or neither. If the poets speak truly, why then we had better be unjust, and offer of the fruits of injustice; for if we are just, although we may escape the vengeance of heaven, we shall lose the gains of injustice; but, if we are unjust, we shall keep the gains, and by our sinning and praying, and praying and sinning, the gods will be propitiated, and we shall not be punished. 'But there is a world below in which either we or our posterity will suffer for our unjust deeds.' Yes, my friend, will be the reflection, but there are mysteries and atoning deities, and these have great power. That is what mighty cities declare; and the children of the gods, who were their poets and prophets, bear a like testimony.

On what principle, then, shall we any longer choose justice rather than the worst injustice? when, if we only unite the latter with a deceitful regard to appearances, we shall fare to our mind both with gods and men, in life and after death, as the most numerous and the highest authorities tell us. Knowing all this, Socrates, how can a man who has any superiority of mind or person or rank or wealth, be willing to honour justice; or indeed to refrain from laughing when he hears justice praised? And even if there should be some one who is able to disprove the truth of my words, and who is satisfied that justice is best, still he is not angry with the unjust, but is very ready to forgive them, because he also knows that men are not just of their own free will; unless, peradventure, there be some one whom the divinity within him may have inspired with a hatred of injustice, or who has attained knowledge of the truth--but no other man. He only blames injustice who, owing to cowardice or age or some weakness, has not the power of being unjust. And this is proved by the fact that when he obtains the power, he immediately becomes unjust as far as he can be.

The cause of all this, Socrates, was indicated by us at the beginning of the argument, when my brother and I told you how astonished we were to find that of all the professing panegyrists of justice--beginning with the ancient heroes of whom any memorial has been preserved to us, and ending with the men of our own time--no one has ever blamed injustice or praised justice except with a view to the glories, honours, and benefits which flow from them. No one has ever adequately described either in verse or prose the true essential nature of either of them abiding in the soul, and invisible to any human or divine eye; or shown that of all the things of a man's soul which he has within him, justice is the greatest good, and injustice the greatest evil. Had this been the universal strain, had you sought to persuade us of this from our youth upwards, we should not have been on the watch to keep one another from doing wrong, but every one would have been his own watchman, because afraid, if he did wrong, of harbouring in himself the greatest of evils. I dare say that Thrasymanus and others would
seriously hold the language which I have been merely repeating, and words even stronger than these about justice and injustice, grossly, as I conceive, perverting their true nature. But I speak in this vehement manner, as I must frankly confess to you, because I want to hear from you the opposite side; and I would ask you to show not only the superiority which justice has over injustice, but what effect they have on the possessor of them which makes the one to be a good and the other an evil to him. And please, as Glaucon requested of you, to exclude reputations; for unless you take away from each of them his true reputation and add on the false, we shall say that you do not praise justice, but the appearance of it; we shall think that you are only exhorting us to keep injustice dark, and that you really agree with Thrasymachus in thinking that justice is another's good and the interest of the stronger, and that injustice is a man's own profit and interest, though injurious to the weaker. Now as you have admitted that justice is one of that highest class of goods which are desired indeed for their results, but in a far greater degree for their own sakes--like sight or hearing or knowledge or health, or any other real and natural and not merely conventional good--I would ask you in your praise of justice to regard one point only: I mean the essential good and evil which justice and injustice work in the possessors of them. Let others praise justice and censure injustice, magnifying the rewards and honours of the one and abusing the other; that is a manner of arguing which, coming from them, I am ready to tolerate, but from you who have spent your whole life in the consideration of this question, unless I hear the contrary from your own lips, I expect something better. And therefore, I say, not only prove to us that justice is better than injustice, but show what they either of them do to the possessor of them, which makes the one to be a good and the other an evil, whether seen or unseen by gods and men.

SOCRATES - ADEIMANTUS

I had always admired the genius of Glaucon and Adeimantus, but on hearing these words I was quite delighted, and said: Sons of an illustrious father, that was not a bad beginning of the Elegiac verses which the admirer of Glaucon made in honour of you after you had distinguished yourselves at the battle of Megara:--

'Sons of Ariston,' he sang, 'divine offspring of an illustrious hero.'

The epithet is very appropriate, for there is something truly divine in being able to argue as you have done for the superiority of injustice, and remaining unconvinced by your own arguments. And I do believe that you are not convinced--this I infer from your general character, for had I judged only from your speeches I should have mistrusted you. But
now, the greater my confidence in you, the greater is my difficulty in
knowing what to say. For I am in a strait between two; on the one hand
I feel that I am unequal to the task; and my inability is brought home
to me by the fact that you were not satisfied with the answer which I
made to Thrasymachus, proving, as I thought, the superiority which
justice has over injustice. And yet I cannot refuse to help, while
breath and speech remain to me; I am afraid that there would be an
impiety in being present when justice is evil spoken of and not lifting
up a hand in her defence. And therefore I had best give such help as I
can.

Glaucön and the rest entreated me by all means not to let the question
drop, but to proceed in the investigation. They wanted to arrive at
the truth, first, about the nature of justice and injustice, and
secondly, about their relative advantages. I told them, what I really
thought, that the enquiry would be of a serious nature, and would
require very good eyes. Seeing then, I said, that we are no great
wits, I think that we had better adopt a method which I may illustrate
thus; suppose that a short-sighted person had been asked by some one to
read small letters from a distance; and it occurred to some one else
that they might be found in another place which was larger and in which
the letters were larger--if they were the same and he could read the
larger letters first, and then proceed to the lesser--this would have
been thought a rare piece of good fortune.

Very true, said Adeimanthus; but how does the illustration apply to our
enquiry?

I will tell you, I replied; justice, which is the subject of our
enquiry, is, as you know, sometimes spoken of as the virtue of an
individual, and sometimes as the virtue of a State.

True, he replied.

And is not a State larger than an individual?

It is.

Then in the larger the quantity of justice is likely to be larger and
more easily discernible. I propose therefore that we enquire into the
nature of justice and injustice, first as they appear in the State, and
secondly in the individual, proceeding from the greater to the lesser
and comparing them.

That, he said, is an excellent proposal.

And if we imagine the State in process of creation, we shall see the
justice and injustice of the State in process of creation also.

I dare say.

When the State is completed there may be a hope that the object of our search will be more easily discovered.

Yes, far more easily.

But ought we to attempt to construct one? I said; for to do so, as I am inclined to think, will be a very serious task. Reflect therefore.

I have reflected, said Adeimantus, and am anxious that you should proceed.

A State, I said, arises, as I conceive, out of the needs of mankind; no one is self-sufficing, but all of us have many wants. Can any other origin of a State be imagined?

There can I be no other.

Then, as we have many wants, and many persons are needed to supply them, one takes a helper for one purpose and another for another; and when these partners and helpers are gathered together in one habitation the body of inhabitants is termed a State.

True, he said.

And they exchange with one another, and one gives, and another receives, under the idea that the exchange will be for their good.

Very true.

Then, I said, let us begin and create in idea a State; and yet the true creator is necessity, who is the mother of our invention.

Of course, he replied.

Now the first and greatest of necessities is food, which is the condition of life and existence.

Certainly.

The second is a dwelling, and the third clothing and the like.

True.
And now let us see how our city will be able to supply this great
demand: We may suppose that one man is a husbandman, another a builder,
some one else a weaver—shall we add to them a shoemaker, or perhaps
some other purveyor to our bodily wants?

Quite right.

The barest notion of a State must include four or five men.

Clearly.

And how will they proceed? Will each bring the result of his labours
into a common stock?—the individual husbandman, for example, producing
for four, and labouring four times as long and as much as he need in
the provision of food with which he supplies others as well as himself;
or will he have nothing to do with others and not be at the trouble of
producing for them, but provide for himself alone a fourth of the food
in a fourth of the time, and in the remaining three-fourths of his time
be employed in making a house or a coat or a pair of shoes, having no
partnership with others, but supplying himself all his own wants?

Adeimantus thought that he should aim at producing food only and not at
producing everything.

Probably, I replied, that would be the better way; and when I hear you
say this, I am myself reminded that we are not all alike; there are
diversities of natures among us which are adapted to different
occupations.

Very true.

And will you have a work better done when the workman has many
occupations, or when he has only one?

When he has only one.

Further, there can be no doubt that a work is spoilt when not done at
the right time?

No doubt.

For business is not disposed to wait until the doer of the business is
at leisure; but the doer must follow up what he is doing, and make the
business his first object.

He must.
And if so, we must infer that all things are produced more plentifully and easily and of a better quality when one man does one thing which is natural to him and does it at the right time, and leaves other things.

Undoubtedly..

Then more than four citizens will be required; for the husbandman will not make his own plough or mattock, or other implements of agriculture, if they are to be good for anything. Neither will the builder make his tools--and he too needs many; and in like manner the weaver and shoemaker.

True.

Then carpenters, and smiths, and many other artisans, will be sharers in our little State, which is already beginning to grow?

True.

Yet even if we add neatherds, shepherds, and other herdsmen, in order that our husbandmen may have oxen to plough with, and builders as well as husbandmen may have draught cattle, and curriers and weavers fleeces and hides,--still our State will not be very large.

That is true; yet neither will it be a very small State which contains all these.

Then, again, there is the situation of the city--to find a place where nothing need be imported is well-nigh impossible.

Impossible.

Then there must be another class of citizens who will bring the required supply from another city?

There must.

But if the trader goes empty-handed, having nothing which they require who would supply his need, he will come back empty-handed.

That is certain.

And therefore what they produce at home must be not only enough for themselves, but such both in quantity and quality as to accommodate those from whom their wants are supplied.

Very true.
Then more husbandmen and more artisans will be required?

They will.

Not to mention the importers and exporters, who are called merchants?

Yes.

Then we shall want merchants?

We shall.

And if merchandise is to be carried over the sea, skilful sailors will also be needed, and in considerable numbers?

Yes, in considerable numbers.

Then, again, within the city, how will they exchange their productions? To secure such an exchange was, as you will remember, one of our principal objects when we formed them into a society and constituted a State.

Clearly they will buy and sell.

Then they will need a market-place, and a money-token for purposes of exchange.

Certainly.

Suppose now that a husbandman, or an artisan, brings some production to market, and he comes at a time when there is no one to exchange with him,—is he to leave his calling and sit idle in the market-place?

Not at all; he will find people there who, seeing the want, undertake the office of salesmen. In well-ordered States they are commonly those who are the weakest in bodily strength, and therefore of little use for any other purpose; their duty is to be in the market, and to give money in exchange for goods to those who desire to sell and to take money from those who desire to buy.

This want, then, creates a class of retail-traders in our State. Is not 'retailer' the term which is applied to those who sit in the market-place engaged in buying and selling, while those who wander from one city to another are called merchants?

Yes, he said.
And there is another class of servants, who are intellectually hardly
on the level of companionship; still they have plenty of bodily
strength for labour, which accordingly they sell, and are called, if I
do not mistake, hirelings, hire being the name which is given to the
price of their labour.

True.

Then hirelings will help to make up our population?

Yes.

And now, Adeimantus, is our State matured and perfected?

I think so.

Where, then, is justice, and where is injustice, and in what part of
the State did they spring up?

Probably in the dealings of these citizens with one another. cannot
imagine that they are more likely to be found anywhere else.

I dare say that you are right in your suggestion, I said; we had better
think the matter out, and not shrink from the enquiry.

Let us then consider, first of all, what will be their way of life, now
that we have thus established them. Will they not produce corn, and
wine, and clothes, and shoes, and build houses for themselves? And
when they are housed, they will work, in summer, commonly, stripped and
barefoot, but in winter substantially clothed and shod. They will feed
on barley-meal and flour of wheat, baking and kneading them, making
noble cakes and loaves; these they will serve up on a mat of reeds or
on clean leaves, themselves reclining the while upon beds strewn with
yew or myrtle. And they and their children will feast, drinking of the
wine which they have made, wearing garlands on their heads, and hymning
the praises of the gods, in happy converse with one another. And they
will take care that their families do not exceed their means; having an
eye to poverty or war.

SOCRATES - GLAUCON

But, said Glaucon, interposing, you have not given them a relish to
their meal.

True, I replied, I had forgotten; of course they must have a
relish-salt, and olives, and cheese, and they will boil roots and herbs
such as country people prepare; for a dessert we shall give them figs, and peas, and beans; and they will roast myrtle-berries and acorns at the fire, drinking in moderation. And with such a diet they may be expected to live in peace and health to a good old age, and bequeath a similar life to their children after them.

Yes, Socrates, he said, and if you were providing for a city of pigs, how else would you feed the beasts?

But what would you have, Glaucon? I replied.

Why, he said, you should give them the ordinary conveniences of life. People who are to be comfortable are accustomed to lie on sofas, and dine off tables, and they should have sauces and sweets in the modern style.

Yes, I said, now I understand: the question which you would have me consider is, not only how a State, but how a luxurious State is created; and possibly there is no harm in this, for in such a State we shall be more likely to see how justice and injustice originate. In my opinion the true and healthy constitution of the State is the one which I have described. But if you wish also to see a State at fever heat, I have no objection. For I suspect that many will not be satisfied with the simpler way of way. They will be for adding sofas, and tables, and other furniture; also dainties, and perfumes, and incense, and courtesans, and cakes, all these not of one sort only, but in every variety; we must go beyond the necessaries of which I was at first speaking, such as houses, and clothes, and shoes: the arts of the painter and the embroiderer will have to be set in motion, and gold and ivory and all sorts of materials must be procured.

True, he said.

Then we must enlarge our borders; for the original healthy State is no longer sufficient. Now will the city have to fill and swell with a multitude of callings which are not required by any natural want; such as the whole tribe of hunters and actors, of whom one large class have to do with forms and colours; another will be the votaries of music—poets and their attendant train of rhapsodists, players, dancers, contractors; also makers of divers kinds of articles, including women's dresses. And we shall want more servants. Will not tutors be also in request, and nurses wet and dry, tirewomen and barbers, as well as confectioners and cooks; and swineherds, too, who were not needed and therefore had no place in the former edition of our State, but are needed now? They must not be forgotten: and there will be animals of many other kinds, if people eat them.
Certainly.

And living in this way we shall have much greater need of physicians than before?

Much greater.

And the country which was enough to support the original inhabitants will be too small now, and not enough?

Quite true.

Then a slice of our neighbours' land will be wanted by us for pasture and tillage, and they will want a slice of ours, if, like ourselves, they exceed the limit of necessity, and give themselves up to the unlimited accumulation of wealth?

That, Socrates, will be inevitable.

And so we shall go to war, Glaucon. Shall we not?

Most certainly, he replied.

Then without determining as yet whether war does good or harm, thus much we may affirm, that now we have discovered war to be derived from causes which are also the causes of almost all the evils in States, private as well as public.

Undoubtedly.

And our State must once more enlarge; and this time the will be nothing short of a whole army, which will have to go out and fight with the invaders for all that we have, as well as for the things and persons whom we were describing above.

Why? he said; are they not capable of defending themselves?

No, I said; not if we were right in the principle which was acknowledged by all of us when we were framing the State: the principle, as you will remember, was that one man cannot practise many arts with success.

Very true, he said.

But is not war an art?

Certainly.
And an art requiring as much attention as shoemaking?

Quite true.

And the shoemaker was not allowed by us to be husbandman, or a weaver, a builder—in order that we might have our shoes well made; but to him and to every other worker was assigned one work for which he was by nature fitted, and at that he was to continue working all his life long and at no other; he was not to let opportunities slip, and then he would become a good workman. Now nothing can be more important than that the work of a soldier should be well done. But is war an art so easily acquired that a man may be a warrior who is also a husbandman, or shoemaker, or other artisan; although no one in the world would be a good dice or draught player who merely took up the game as a recreation, and had not from his earliest years devoted himself to this and nothing else?

No tools will make a man a skilled workman, or master of defence, nor be of any use to him who has not learned how to handle them, and has never bestowed any attention upon them. How then will he who takes up a shield or other implement of war become a good fighter all in a day, whether with heavy-armed or any other kind of troops?

Yes, he said, the tools which would teach men their own use would be beyond price.

And the higher the duties of the guardian, I said, the more time, and skill, and art, and application will be needed by him?

No doubt, he replied.

Will he not also require natural aptitude for his calling?

Certainly.

Then it will be our duty to select, if we can, natures which are fitted for the task of guarding the city?

It will.

And the selection will be no easy matter, I said; but we must be brave and do our best.

We must.

Is not the noble youth very like a well-bred dog in respect of guarding
and watching?

What do you mean?

I mean that both of them ought to be quick to see, and swift to overtake the enemy when they see him; and strong too if, when they have caught him, they have to fight with him.

All these qualities, he replied, will certainly be required by them.

Well, and your guardian must be brave if he is to fight well?

Certainly.

And is he likely to be brave who has no spirit, whether horse or dog or any other animal? Have you never observed how invincible and unconquerable is spirit and how the presence of it makes the soul of any creature to be absolutely fearless and indomitable?

I have.

Then now we have a clear notion of the bodily qualities which are required in the guardian.

True.

And also of the mental ones; his soul is to be full of spirit?

Yes.

But are not these spirited natures apt to be savage with one another, and with everybody else?

A difficulty by no means easy to overcome, he replied.

Whereas, I said, they ought to be dangerous to their enemies, and gentle to their friends; if not, they will destroy themselves without waiting for their enemies to destroy them.

True, he said.

What is to be done then? I said; how shall we find a gentle nature which has also a great spirit, for the one is the contradiction of the other?

True.
He will not be a good guardian who is wanting in either of these two qualities; and yet the combination of them appears to be impossible; and hence we must infer that to be a good guardian is impossible.

I am afraid that what you say is true, he replied.

Here feeling perplexed I began to think over what had preceded. My friend, I said, no wonder that we are in a perplexity; for we have lost sight of the image which we had before us.

What do you mean? he said.

I mean to say that there do exist natures gifted with those opposite qualities.

And where do you find them?

Many animals, I replied, furnish examples of them; our friend the dog is a very good one: you know that well-bred dogs are perfectly gentle to their familiar friends and acquaintances, and the reverse to strangers.

Yes, I know.

Then there is nothing impossible or out of the order of nature in our finding a guardian who has a similar combination of qualities?

Certainly not.

Would not he who is fitted to be a guardian, besides the spirited nature, need to have the qualities of a philosopher?

I do not apprehend your meaning.

The trait of which I am speaking, I replied, may be also seen in the dog, and is remarkable in the animal.

What trait?

Why, a dog, whenever he sees a stranger, is angry; when an acquaintance, he welcomes him, although the one has never done him any harm, nor the other any good. Did this never strike you as curious?

The matter never struck me before; but I quite recognise the truth of your remark.

And surely this instinct of the dog is very charming;--your dog is a true philosopher.
Why?

Why, because he distinguishes the face of a friend and of an enemy only by the criterion of knowing and not knowing. And must not an animal be a lover of learning who determines what he likes and dislikes by the test of knowledge and ignorance?

Most assuredly.

And is not the love of learning the love of wisdom, which is philosophy?

They are the same, he replied.

And may we not say confidently of man also, that he who is likely to be gentle to his friends and acquaintances, must by nature be a lover of wisdom and knowledge?

That we may safely affirm.

Then he who is to be a really good and noble guardian of the State will require to unite in himself philosophy and spirit and swiftness and strength?

Undoubtedly.

Then we have found the desired natures; and now that we have found them, how are they to be reared and educated? Is not this enquiry which may be expected to throw light on the greater enquiry which is our final end--How do justice and injustice grow up in States? for we do not want either to omit what is to the point or to draw out the argument to an inconvenient length.

SOCRATES - ADEIMANTUS

Adeimantus thought that the enquiry would be of great service to us.

Then, I said, my dear friend, the task must not be given up, even if somewhat long.

Certainly not.

Come then, and let us pass a leisure hour in story-telling, and our story shall be the education of our heroes.

By all means.
And what shall be their education? Can we find a better than the traditional sort?—and this has two divisions, gymnastic for the body, and music for the soul.

True.

Shall we begin education with music, and go on to gymnastic afterwards?

By all means.

And when you speak of music, do you include literature or not?

I do.

And literature may be either true or false?

Yes.

And the young should be trained in both kinds, and we begin with the false?

I do not understand your meaning, he said.

You know, I said, that we begin by telling children stories which, though not wholly destitute of truth, are in the main fictitious; and these stories are told them when they are not of an age to learn gymnastics.

Very true.

That was my meaning when I said that we must teach music before gymnastics.

Quite right, he said.

You know also that the beginning is the most important part of any work, especially in the case of a young and tender thing; for that is the time at which the character is being formed and the desired impression is more readily taken.

Quite true.

And shall we just carelessly allow children to hear any casual tales which may be devised by casual persons, and to receive into their minds ideas for the most part the very opposite of those which we should wish them to have when they are grown up?
We cannot.

Then the first thing will be to establish a censorship of the writers of fiction, and let the censors receive any tale of fiction which is good, and reject the bad; and we will desire mothers and nurses to tell their children the authorised ones only. Let them fashion the mind with such tales, even more fondly than they mould the body with their hands; but most of those which are now in use must be discarded.

Of what tales are you speaking? he said.

You may find a model of the lesser in the greater, I said; for they are necessarily of the same type, and there is the same spirit in both of them.

Very likely, he replied; but I do not as yet know what you would term the greater.

Those, I said, which are narrated by Homer and Hesiod, and the rest of the poets, who have ever been the great story-tellers of mankind.

But which stories do you mean, he said; and what fault do you find with them?

A fault which is most serious, I said; the fault of telling a lie, and, what is more, a bad lie.

But when is this fault committed?

Whenever an erroneous representation is made of the nature of gods and heroes,--as when a painter paints a portrait not having the shadow of a likeness to the original.

Yes, he said, that sort of thing is certainly very blamable; but what are the stories which you mean?

First of all, I said, there was that greatest of all lies, in high places, which the poet told about Uranus, and which was a bad lie too.--I mean what Hesiod says that Uranus did, and how Cronus retaliated on him. The doings of Cronus, and the sufferings which in turn his son inflicted upon him, even if they were true, ought certainly not to be lightly told to young and thoughtless persons; if possible, they had better be buried in silence. But if there is an absolute necessity for their mention, a chosen few might hear them in a mystery, and they should sacrifice not a common [Eleusinian] pig, but some huge and unprocurable victim; and then the number of the hearers will be very few indeed.
Why, yes, said he, those stories are extremely objectionable.

Yes, Adeimantus, they are stories not to be repeated in our State; the young man should not be told that in committing the worst of crimes he is far from doing anything outrageous; and that even if he chastises his father when does wrong, in whatever manner, he will only be following the example of the first and greatest among the gods.

I entirely agree with you, he said; in my opinion those stories are quite unfit to be repeated.

Neither, if we mean our future guardians to regard the habit of quarrelling among themselves as of all things the basest, should any word be said to them of the wars in heaven, and of the plots and fightings of the gods against one another, for they are not true. No, we shall never mention the battles of the giants, or let them be embroidered on garments; and we shall be silent about the innumerable other quarrels of gods and heroes with their friends and relatives. If they would only believe us we would tell them that quarrelling is unholy, and that never up to this time has there been any, quarrel between citizens; this is what old men and old women should begin by telling children; and when they grow up, the poets also should be told to compose for them in a similar spirit. But the narrative of Hephaestus binding Here his mother, or how on another occasion Zeus sent him flying for taking her part when she was being beaten, and all the battles of the gods in Homer--these tales must not be admitted into our State, whether they are supposed to have an allegorical meaning or not. For a young person cannot judge what is allegorical and what is literal; anything that he receives into his mind at that age is likely to become indelible and unalterable; and therefore it is most important that the tales which the young first hear should be models of virtuous thoughts.

There you are right, he replied; but if any one asks where are such models to be found and of what tales are you speaking--how shall we answer him?

I said to him, You and I, Adeimantus, at this moment are not poets, but founders of a State: now the founders of a State ought to know the general forms in which poets should cast their tales, and the limits which must be observed by them, but to make the tales is not their business.

Very true, he said; but what are these forms of theology which you mean?

Something of this kind, I replied:--God is always to be represented as
he truly is, whatever be the sort of poetry, epic, lyric or tragic, in which the representation is given.

Right.

And is he not truly good? and must he not be represented as such?

Certainly.

And no good thing is hurtful?

No, indeed.

And that which is not hurtful hurts not?

Certainly not.

And that which hurts not does no evil?

No.

And can that which does no evil be a cause of evil?

Impossible.

And the good is advantageous?

Yes.

And therefore the cause of well-being?

Yes.

It follows therefore that the good is not the cause of all things, but of the good only?

Assuredly.

Then God, if he be good, is not the author of all things, as the many assert, but he is the cause of a few things only, and not of most things that occur to men. For few are the goods of human life, and many are the evils, and the good is to be attributed to God alone; of the evils the causes are to be sought elsewhere, and not in him.

That appears to me to be most true, he said.

Then we must not listen to Homer or to any other poet who is guilty of
the folly of saying that two casks

   Lie at the threshold of Zeus, full of lots, one of good,
   the other of evil lots,

and that he to whom Zeus gives a mixture of the two

   Sometimes meets with evil fortune, at other times with good;

but that he to whom is given the cup of unmingled ill,

   Him wild hunger drives o'er the beauteous earth.

And again

   Zeus, who is the dispenser of good and evil to us.

And if any one asserts that the violation of oaths and treaties, which
was really the work of Pandarus, was brought about by Athene and Zeus,
or that the strife and contention of the gods was instigated by Themis
and Zeus, he shall not have our approval; neither will we allow our
young men to hear the words of Aeschylus, that

   God plants guilt among men when he desires utterly to
   destroy a house.

And if a poet writes of the sufferings of Niobe--the subject of the
tragedy in which these iambic verses occur--or of the house of Pelops,
or of the Trojan war or on any similar theme, either we must not permit
him to say that these are the works of God, or if they are of God, he
must devise some explanation of them such as we are seeking; he must
say that God did what was just and right, and they were the better for
being punished; but that those who are punished are miserable, and that
God is the author of their misery--the poet is not to be permitted to
say; though he may say that the wicked are miserable because they
require to be punished, and are benefited by receiving punishment from
God; but that God being good is the author of evil to any one is to be
strenuously denied, and not to be said or sung or heard in verse or
prose by any one whether old or young in any well-ordered commonwealth.
Such a fiction is suicidal, ruinous, impious.

I agree with you, he replied, and am ready to give my assent to the law.

Let this then be one of our rules and principles concerning the gods,
to which our poets and reciters will be expected to conform--that God
is not the author of all things, but of good only.
That will do, he said.

And what do you think of a second principle? Shall I ask you whether God is a magician, and of a nature to appear insidiously now in one shape, and now in another--sometimes himself changing and passing into many forms, sometimes deceiving us with the semblance of such transformations; or is he one and the same immutably fixed in his own proper image?

I cannot answer you, he said, without more thought.

Well, I said; but if we suppose a change in anything, that change must be effected either by the thing itself, or by some other thing?

Most certainly.

And things which are at their best are also least liable to be altered or discomposed; for example, when healthiest and strongest, the human frame is least liable to be affected by meats and drinks, and the plant which is in the fullest vigour also suffers least from winds or the heat of the sun or any similar causes.

Of course.

And will not the bravest and wisest soul be least confused or deranged by any external influence?

True.

And the same principle, as I should suppose, applies to all composite things--furniture, houses, garments; when good and well made, they are least altered by time and circumstances.

Very true.

Then everything which is good, whether made by art or nature, or both, is least liable to suffer change from without?

True.

But surely God and the things of God are in every way perfect?

Of course they are.

Then he can hardly be compelled by external influence to take many shapes?
He cannot.

But may he not change and transform himself?

Clearly, he said, that must be the case if he is changed at all.

And will he then change himself for the better and fairer, or for the worse and more unsightly?

If he change at all he can only change for the worse, for we cannot suppose him to be deficient either in virtue or beauty.

Very true, Adeimantus; but then, would any one, whether God or man, desire to make himself worse?

Impossible.

Then it is impossible that God should ever be willing to change; being, as is supposed, the fairest and best that is conceivable, every god remains absolutely and for ever in his own form.

That necessarily follows, he said, in my judgment.

Then, I said, my dear friend, let none of the poets tell us that

The gods, taking the disguise of strangers from other lands,
walk up and down cities in all sorts of forms;

and let no one slander Proteus and Thetis, neither let any one, either in tragedy or in any other kind of poetry, introduce Here disguised in the likeness of a priestess asking an alms

For the life-giving daughters of Inachus the river of Argos;

--let us have no more lies of that sort. Neither must we have mothers under the influence of the poets scaring their children with a bad version of these myths--telling how certain gods, as they say, 'Go about by night in the likeness of so many strangers and in divers forms'; but let them take heed lest they make cowards of their children, and at the same time speak blasphemy against the gods.

Heaven forbid, he said.

But although the gods are themselves unchangeable, still by witchcraft and deception they may make us think that they appear in various forms?

Perhaps, he replied.
Well, but can you imagine that God will be willing to lie, whether in word or deed, or to put forth a phantom of himself?

I cannot say, he replied.

Do you not know, I said, that the true lie, if such an expression may be allowed, is hated of gods and men?

What do you mean? he said.

I mean that no one is willingly deceived in that which is the truest and highest part of himself, or about the truest and highest matters; there, above all, he is most afraid of a lie having possession of him.

Still, he said, I do not comprehend you.

The reason is, I replied, that you attribute some profound meaning to my words; but I am only saying that deception, or being deceived or uninformed about the highest realities in the highest part of themselves, which is the soul, and in that part of them to have and to hold the lie, is what mankind least like;--that, I say, is what they utterly detest.

There is nothing more hateful to them.

And, as I was just now remarking, this ignorance in the soul of him who is deceived may be called the true lie; for the lie in words is only a kind of imitation and shadowy image of a previous affection of the soul, not pure unadulterated falsehood. Am I not right?

Perfectly right.

The true lie is hated not only by the gods, but also by men?

Yes.

Whereas the lie in words is in certain cases useful and not hateful; in dealing with enemies--that would be an instance; or again, when those whom we call our friends in a fit of madness or illusion are going to do some harm, then it is useful and is a sort of medicine or preventive; also in the tales of mythology, of which we were just now speaking--because we do not know the truth about ancient times, we make falsehood as much like truth as we can, and so turn it to account.

Very true, he said.
But can any of these reasons apply to God? Can we suppose that he is ignorant of antiquity, and therefore has recourse to invention?

That would be ridiculous, he said.

Then the lying poet has no place in our idea of God?

I should say not.

Or perhaps he may tell a lie because he is afraid of enemies?

That is inconceivable.

But he may have friends who are senseless or mad?

But no mad or senseless person can be a friend of God.

Then no motive can be imagined why God should lie?

None whatever.

Then the superhuman and divine is absolutely incapable of falsehood?

Yes.

Then is God perfectly simple and true both in word and deed; he changes not; he deceives not, either by sign or word, by dream or waking vision.

Your thoughts, he said, are the reflection of my own.

You agree with me then, I said, that this is the second type or form in which we should write and speak about divine things. The gods are not magicians who transform themselves, neither do they deceive mankind in any way.

I grant that.

Then, although we are admirers of Homer, we do not admire the lying dream which Zeus sends to Agamemnon; neither will we praise the verses of Aeschylus in which Thetis says that Apollo at her nuptials

Was celebrating in song her fair progeny whose days were to be long, and to know no sickness. And when he had spoken of my lot as in all things blessed of heaven he raised a note of triumph and cheered my soul. And I thought that the word of Phoebus being divine and full of prophecy, would not fail. And now he himself who
uttered the strain, he who was present at the banquet,
and who said this--he it is who has slain my son.

These are the kind of sentiments about the gods which will arouse our anger; and he who utters them shall be refused a chorus; neither shall we allow teachers to make use of them in the instruction of the young, meaning, as we do, that our guardians, as far as men can be, should be true worshippers of the gods and like them.

I entirely agree, he said, in these principles, and promise to make them my laws.

BOOK III

SOCRATES - ADEIMANTUS

SUCH then, I said, are our principles of theology--some tales are to be told, and others are not to be told to our disciples from their youth upwards, if we mean them to honour the gods and their parents, and to value friendship with one another.

Yes; and I think that our principles are right, he said.

But if they are to be courageous, must they not learn other lessons besides these, and lessons of such a kind as will take away the fear of death? Can any man be courageous who has the fear of death in him?

Certainly not, he said.

And can he be fearless of death, or will he choose death in battle rather than defeat and slavery, who believes the world below to be real and terrible?

Impossible.

Then we must assume a control over the narrators of this class of tales as well as over the others, and beg them not simply to but rather to commend the world below, intimating to them that their descriptions are untrue, and will do harm to our future warriors.

That will be our duty, he said.

Then, I said, we shall have to obliterate many obnoxious passages,
beginning with the verses,

I would rather he a serf on the land of a poor and portionless man than rule over all the dead who have come to nought.

We must also expunge the verse, which tells us how Pluto feared,

Lest the mansions grim and squalid which the gods abhor should be seen both of mortals and immortals.

And again:

O heavens! verily in the house of Hades there is soul and ghostly form but no mind at all!

Again of Tiresias:--

[To him even after death did Persephone grant mind,] that he alone should be wise; but the other souls are flitting shades.

Again:--

The soul flying from the limbs had gone to Hades, lamenting her fate, leaving manhood and youth.

Again:--

And the soul, with shrilling cry, passed like smoke beneath the earth.

And,--

As bats in hollow of mystic cavern, whenever any of the has dropped out of the string and falls from the rock, fly shrilling and cling to one another, so did they with shrilling cry hold together as they moved.

And we must beg Homer and the other poets not to be angry if we strike out these and similar passages, not because they are unpoetical, or unattractive to the popular ear, but because the greater the poetical charm of them, the less are they meet for the ears of boys and men who are meant to be free, and who should fear slavery more than death.

Undoubtedly.

Also we shall have to reject all the terrible and appalling names describe the world below--Cocytus and Styx, ghosts under the earth, and
sapless shades, and any similar words of which the very mention causes a shudder to pass through the inmost soul of him who hears them. I do not say that these horrible stories may not have a use of some kind; but there is a danger that the nerves of our guardians may be rendered too excitable and effeminate by them.

There is a real danger, he said.

Then we must have no more of them.

True.

Another and a nobler strain must be composed and sung by us.

Clearly.

And shall we proceed to get rid of the weepings and wailings of famous men?

They will go with the rest.

But shall we be right in getting rid of them? Reflect: our principle is that the good man will not consider death terrible to any other good man who is his comrade.

Yes; that is our principle.

And therefore he will not sorrow for his departed friend as though he had suffered anything terrible?

He will not.

Such an one, as we further maintain, is sufficient for himself and his own happiness, and therefore is least in need of other men.

True, he said.

And for this reason the loss of a son or brother, or the deprivation of fortune, is to him of all men least terrible.

Assuredly.

And therefore he will be least likely to lament, and will bear with the greatest equanimity any misfortune of this sort which may befall him.

Yes, he will feel such a misfortune far less than another.
Then we shall be right in getting rid of the lamentations of famous men, and making them over to women (and not even to women who are good for anything), or to men of a baser sort, that those who are being educated by us to be the defenders of their country may scorn to do the like.

That will be very right.

Then we will once more entreat Homer and the other poets not to depict Achilles, who is the son of a goddess, first lying on his side, then on his back, and then on his face; then starting up and sailing in a frenzy along the shores of the barren sea; now taking the sooty ashes in both his hands and pouring them over his head, or weeping and wailing in the various modes which Homer has delineated. Nor should he describe Priam the kinsman of the gods as praying and beseeching,

Rolling in the dirt, calling each man loudly by his name.

Still more earnestly will we beg of him at all events not to introduce the gods lamenting and saying,

Alas! my misery! Alas! that I bore the harvest to my sorrow.

But if he must introduce the gods, at any rate let him not dare so completely to misrepresent the greatest of the gods, as to make him say--

O heavens! with my eyes verily I behold a dear friend of mine chased round and round the city, and my heart is sorrowful.

Or again:--

Woe is me that I am fated to have Sarpedon, dearest of men to me, subdued at the hands of Patroclus the son of Menoetius.

For if, my sweet Adeimantus, our youth seriously listen to such unworthy representations of the gods, instead of laughing at them as they ought, hardly will any of them deem that he himself, being but a man, can be dishonoured by similar actions; neither will he rebuke any inclination which may arise in his mind to say and do the like. And instead of having any shame or self-control, he will be always whining and lamenting on slight occasions.

Yes, he said, that is most true.

Yes, I replied; but that surely is what ought not to be, as the argument has just proved to us; and by that proof we must abide until
it is disproved by a better.

It ought not to be.

Neither ought our guardians to be given to laughter. For a fit of laughter which has been indulged to excess almost always produces a violent reaction.

So I believe.

Then persons of worth, even if only mortal men, must not be represented as overcome by laughter, and still less must such a representation of the gods be allowed.

Still less of the gods, as you say, he replied.

Then we shall not suffer such an expression to be used about the gods as that of Homer when he describes how

Inextinguishable laughter arose among the blessed gods, when they saw Hephaestus bustling about the mansion.

On your views, we must not admit them.

On my views, if you like to father them on me; that we must not admit them is certain.

Again, truth should be highly valued; if, as we were saying, a lie is useless to the gods, and useful only as a medicine to men, then the use of such medicines should be restricted to physicians; private individuals have no business with them.

Clearly not, he said.

Then if any one at all is to have the privilege of lying, the rulers of the State should be the persons; and they, in their dealings either with enemies or with their own citizens, may be allowed to lie for the public good. But nobody else should meddle with anything of the kind; and although the rulers have this privilege, for a private man to lie to them in return is to be deemed a more heinous fault than for the patient or the pupil of a gymnasium not to speak the truth about his own bodily illnesses to the physician or to the trainer, or for a sailor not to tell the captain what is happening about the ship and the rest of the crew, and how things are going with himself or his fellow sailors.

Most true, he said.
If, then, the ruler catches anybody beside himself lying in the State,

    Any of the craftsmen, whether he priest or physician or carpenter.

he will punish him for introducing a practice which is equally subversive and destructive of ship or State.

Most certainly, he said, if our idea of the State is ever carried out.

In the next place our youth must be temperate?

Certainly.

Are not the chief elements of temperance, speaking generally, obedience to commanders and self-control in sensual pleasures?

True.

Then we shall approve such language as that of Diomede in Homer,

    Friend, sit still and obey my word,

and the verses which follow,

    The Greeks marched breathing prowess,
    ...in silent awe of their leaders,

and other sentiments of the same kind.

We shall.

What of this line,

    O heavy with wine, who hast the eyes of a dog and the heart of a stag,

and of the words which follow? Would you say that these, or any similar impertinences which private individuals are supposed to address to their rulers, whether in verse or prose, are well or ill spoken?

They are ill spoken.

They may very possibly afford some amusement, but they do not conduce to temperance. And therefore they are likely to do harm to our young men--you would agree with me there?
Yes.

And then, again, to make the wisest of men say that nothing in his opinion is more glorious than

When the tables are full of bread and meat, and the cup-bearer carries round wine which he draws from the bowl and pours into the cups,

is it fit or conducive to temperance for a young man to hear such words? Or the verse

The saddest of fates is to die and meet destiny from hunger?

What would you say again to the tale of Zeus, who, while other gods and men were asleep and he the only person awake, lay devising plans, but forgot them all in a moment through his lust, and was so completely overcome at the sight of Here that he would not even go into the hut, but wanted to lie with her on the ground, declaring that he had never been in such a state of rapture before, even when they first met one another

Without the knowledge of their parents;

or that other tale of how Hephaestus, because of similar goings on, cast a chain around Ares and Aphrodite?

Indeed, he said, I am strongly of opinion that they ought not to hear that sort of thing.

But any deeds of endurance which are done or told by famous men, these they ought to see and hear; as, for example, what is said in the verses,

He smote his breast, and thus reproached his heart,
   Endure, my heart; far worse hast thou endured!

Certainly, he said.

In the next place, we must not let them be receivers of gifts or lovers of money.

Certainly not.

Neither must we sing to them of

Gifts persuading gods, and persuading reverend kings.
Neither is Phoenix, the tutor of Achilles, to be approved or deemed to have given his pupil good counsel when he told him that he should take the gifts of the Greeks and assist them; but that without a gift he should not lay aside his anger. Neither will we believe or acknowledge Achilles himself to have been such a lover of money that he took Agamemnon's or that when he had received payment he restored the dead body of Hector, but that without payment he was unwilling to do so.

Undoubtedly, he said, these are not sentiments which can be approved.

Loving Homer as I do, I hardly like to say that in attributing these feelings to Achilles, or in believing that they are truly to him, he is guilty of downright impiety. As little can I believe the narrative of his insolence to Apollo, where he says,

\begin{quote}
Thou hast wronged me, O far-darter, most abominable of deities.
Verily I would he even with thee, if I had only the power,
\end{quote}

or his insubordination to the river-god, on whose divinity he is ready to lay hands; or his offering to the dead Patroclus of his own hair, which had been previously dedicated to the other river-god Spercheius, and that he actually performed this vow; or that he dragged Hector round the tomb of Patroclus, and slaughtered the captives at the pyre; of all this I cannot believe that he was guilty, any more than I can allow our citizens to believe that he, the wise Cheiron's pupil, the son of a goddess and of Peleus who was the gentlest of men and third in descent from Zeus, was so disordered in his wits as to be at one time the slave of two seemingly inconsistent passions, meanness, not untainted by avarice, combined with overweening contempt of gods and men.

You are quite right, he replied.

And let us equally refuse to believe, or allow to be repeated, the tale of Theseus son of Poseidon, or of Peirithous son of Zeus, going forth as they did to perpetrate a horrid rape; or of any other hero or son of a god daring to do such impious and dreadful things as they falsely ascribe to them in our day: and let us further compel the poets to declare either that these acts were not done by them, or that they were not the sons of gods;--both in the same breath they shall not be permitted to affirm. We will not have them trying to persuade our youth that the gods are the authors of evil, and that heroes are no better than men-sentiments which, as we were saying, are neither pious nor true, for we have already proved that evil cannot come from the gods.
Assuredly not.

And further they are likely to have a bad effect on those who hear them; for everybody will begin to excuse his own vices when he is convinced that similar wickednesses are always being perpetrated by--

The kindred of the gods, the relatives of Zeus, whose ancestral altar, the attar of Zeus, is aloft in air on the peak of Ida,

and who have

the blood of deities yet flowing in their veins.

And therefore let us put an end to such tales, lest they engender laxity of morals among the young.

By all means, he replied.

But now that we are determining what classes of subjects are or are not to be spoken of, let us see whether any have been omitted by us. The manner in which gods and demigods and heroes and the world below should be treated has been already laid down.

Very true.

And what shall we say about men? That is clearly the remaining portion of our subject.

Clearly so.

But we are not in a condition to answer this question at present, my friend.

Why not?

Because, if I am not mistaken, we shall have to say that about men poets and story-tellers are guilty of making the gravest misstatements when they tell us that wicked men are often happy, and the good miserable; and that injustice is profitable when undetected, but that justice is a man's own loss and another's gain--these things we shall forbid them to utter, and command them to sing and say the opposite.

To be sure we shall, he replied.

But if you admit that I am right in this, then I shall maintain that you have implied the principle for which we have been all along contending.
I grant the truth of your inference.

That such things are or are not to be said about men is a question which we cannot determine until we have discovered what justice is, and how naturally advantageous to the possessor, whether he seems to be just or not.

Most true, he said.

Enough of the subjects of poetry: let us now speak of the style; and when this has been considered, both matter and manner will have been completely treated.

I do not understand what you mean, said Adeimantus.

Then I must make you understand; and perhaps I may be more intelligible if I put the matter in this way. You are aware, I suppose, that all mythology and poetry is a narration of events, either past, present, or to come?

Certainly, he replied.

And narration may be either simple narration, or imitation, or a union of the two?

That again, he said, I do not quite understand.

I fear that I must be a ridiculous teacher when I have so much difficulty in making myself apprehended. Like a bad speaker, therefore, I will not take the whole of the subject, but will break a piece off in illustration of my meaning. You know the first lines of the Iliad, in which the poet says that Chryses prayed Agamemnon to release his daughter, and that Agamemnon flew into a passion with him; whereupon Chryses, failing of his object, invoked the anger of the God against the Achaeans. Now as far as these lines,

And he prayed all the Greeks, but especially the two sons of Atreus, the chiefs of the people,

the poet is speaking in his own person; he never leads us to suppose that he is any one else. But in what follows he takes the person of Chryses, and then he does all that he can to make us believe that the speaker is not Homer, but the aged priest himself. And in this double form he has cast the entire narrative of the events which occurred at Troy and in Ithaca and throughout the Odyssey.
Yes.

And a narrative it remains both in the speeches which the poet recites from time to time and in the intermediate passages?

Quite true.

But when the poet speaks in the person of another, may we not say that he assimilates his style to that of the person who, as he informs you, is going to speak?

Certainly.

And this assimilation of himself to another, either by the use of voice or gesture, is the imitation of the person whose character he assumes?

Of course.

Then in this case the narrative of the poet may be said to proceed by way of imitation?

Very true.

Or, if the poet everywhere appears and never conceals himself, then again the imitation is dropped, and his poetry becomes simple narration. However, in order that I may make my meaning quite clear, and that you may no more say, I don't understand,' I will show how the change might be effected. If Homer had said, 'The priest came, having his daughter's ransom in his hands, supplicating the Achaeans, and above all the kings;' and then if, instead of speaking in the person of Chryses, he had continued in his own person, the words would have been, not imitation, but simple narration. The passage would have run as follows (I am no poet, and therefore I drop the metre), 'The priest came and prayed the gods on behalf of the Greeks that they might capture Troy and return safely home, but begged that they would give him back his daughter, and take the ransom which he brought, and respect the God. Thus he spoke, and the other Greeks revered the priest and assented. But Agamemnon was wroth, and bade him depart and not come again, lest the staff and chaplets of the God should be of no avail to him--the daughter of Chryses should not be released, he said--she should grow old with him in Argos. And then he told him to go away and not to provoke him, if he intended to get home unscathed. And the old man went away in fear and silence, and, when he had left the camp, he called upon Apollo by his many names, reminding him of everything which he had done pleasing to him, whether in building his temples, or in offering sacrifice, and praying that his good deeds might be returned to him, and that the Achaeans might expiate his tears.
by the arrows of the god,'--and so on. In this way the whole becomes simple narrative.

I understand, he said.

Or you may suppose the opposite case--that the intermediate passages are omitted, and the dialogue only left.

That also, he said, I understand; you mean, for example, as in tragedy.

You have conceived my meaning perfectly; and if I mistake not, what you failed to apprehend before is now made clear to you, that poetry and mythology are, in some cases, wholly imitative--instances of this are supplied by tragedy and comedy; there is likewise the opposite style, in which the my poet is the only speaker--of this the dithyramb affords the best example; and the combination of both is found in epic, and in several other styles of poetry. Do I take you with me?

Yes, he said; I see now what you meant.

I will ask you to remember also what I began by saying, that we had done with the subject and might proceed to the style.

Yes, I remember.

In saying this, I intended to imply that we must come to an understanding about the mimetic art,--whether the poets, in narrating their stories, are to be allowed by us to imitate, and if so, whether in whole or in part, and if the latter, in what parts; or should all imitation be prohibited?

You mean, I suspect, to ask whether tragedy and comedy shall be admitted into our State?

Yes, I said; but there may be more than this in question: I really do not know as yet, but whither the argument may blow, thither we go.

And go we will, he said.

Then, Adeimantus, let me ask you whether our guardians ought to be imitators; or rather, has not this question been decided by the rule already laid down that one man can only do one thing well, and not many; and that if he attempt many, he will altogether fall of gaining much reputation in any?

Certainly.
And this is equally true of imitation; no one man can imitate many things as well as he would imitate a single one?

He cannot.

Then the same person will hardly be able to play a serious part in life, and at the same time to be an imitator and imitate many other parts as well; for even when two species of imitation are nearly allied, the same persons cannot succeed in both, as, for example, the writers of tragedy and comedy—did you not just now call them imitations?

Yes, I did; and you are right in thinking that the same persons cannot succeed in both.

Any more than they can be rhapsodists and actors at once?

True.

Neither are comic and tragic actors the same; yet all these things are but imitations.

They are so.

And human nature, Adeimantus, appears to have been coined into yet smaller pieces, and to be as incapable of imitating many things well, as of performing well the actions of which the imitations are copies.

Quite true, he replied.

If then we adhere to our original notion and bear in mind that our guardians, setting aside every other business, are to dedicate themselves wholly to the maintenance of freedom in the State, making this their craft, and engaging in no work which does not bear on this end, they ought not to practise or imitate anything else; if they imitate at all, they should imitate from youth upward only those characters which are suitable to their profession—the courageous, temperate, holy, free, and the like; but they should not depict or be skilful at imitating any kind of illiberality or baseness, lest from imitation they should come to be what they imitate. Did you never observe how imitations, beginning in early youth and continuing far into life, at length grow into habits and become a second nature, affecting body, voice, and mind?

Yes, certainly, he said.

Then, I said, we will not allow those for whom we profess a care and of
whom we say that they ought to be good men, to imitate a woman, whether young or old, quarrelling with her husband, or striving and vaunting against the gods in conceit of her happiness, or when she is in affliction, or sorrow, or weeping; and certainly not one who is in sickness, love, or labour.

Very right, he said.

Neither must they represent slaves, male or female, performing the offices of slaves?

They must not.

And surely not bad men, whether cowards or any others, who do the reverse of what we have just been prescribing, who scold or mock or revile one another in drink or out of in drink or, or who in any other manner sin against themselves and their neighbours in word or deed, as the manner of such is. Neither should they be trained to imitate the action or speech of men or women who are mad or bad; for madness, like vice, is to be known but not to be practised or imitated.

Very true, he replied.

Neither may they imitate smiths or other artificers, or oarsmen, or boatswains, or the like?

How can they, he said, when they are not allowed to apply their minds to the callings of any of these?

Nor may they imitate the neighing of horses, the bellowing of bulls, the murmur of rivers and roll of the ocean, thunder, and all that sort of thing?

Nay, he said, if madness be forbidden, neither may they copy the behaviour of madmen.

You mean, I said, if I understand you aright, that there is one sort of narrative style which may be employed by a truly good man when he has anything to say, and that another sort will be used by a man of an opposite character and education.

And which are these two sorts? he asked.

Suppose, I answered, that a just and good man in the course of a narration comes on some saying or action of another good man,--I should imagine that he will like to personate him, and will not be ashamed of this sort of imitation: he will be most ready to play the part of the
good man when he is acting firmly and wisely; in a less degree when he is overtaken by illness or love or drink, or has met with any other disaster. But when he comes to a character which is unworthy of him, he will not make a study of that; he will disdain such a person, and will assume his likeness, if at all, for a moment only when he is performing some good action; at other times he will be ashamed to play a part which he has never practised, nor will he like to fashion and frame himself after the baser models; he feels the employment of such an art, unless in jest, to be beneath him, and his mind revolts at it.

So I should expect, he replied.

Then he will adopt a mode of narration such as we have illustrated out of Homer, that is to say, his style will be both imitative and narrative; but there will be very little of the former, and a great deal of the latter. Do you agree?

Certainly, he said; that is the model which such a speaker must necessarily take.

But there is another sort of character who will narrate anything, and, the worse lie is, the more unscrupulous he will be; nothing will be too bad for him: and he will be ready to imitate anything, not as a joke, but in right good earnest, and before a large company. As I was just now saying, he will attempt to represent the roll of thunder, the noise of wind and hall, or the creaking of wheels, and pulleys, and the various sounds of flutes; pipes, trumpets, and all sorts of instruments: he will bark like a dog, bleat like a sheep, or crow like a cock; his entire art will consist in imitation of voice and gesture, and there will be very little narration.

That, he said, will be his mode of speaking.

These, then, are the two kinds of style?

Yes.

And you would agree with me in saying that one of them is simple and has but slight changes; and if the harmony and rhythm are also chosen for their simplicity, the result is that the speaker, if he speaks correctly, is always pretty much the same in style, and he will keep within the limits of a single harmony (for the changes are not great), and in like manner he will make use of nearly the same rhythm?

That is quite true, he said.

Whereas the other requires all sorts of harmonies and all sorts of
rhythms, if the music and the style are to correspond, because the style has all sorts of changes.

That is also perfectly true, he replied.

And do not the two styles, or the mixture of the two, comprehend all poetry, and every form of expression in words? No one can say anything except in one or other of them or in both together.

They include all, he said.

And shall we receive into our State all the three styles, or one only of the two unmixed styles? or would you include the mixed?

I should prefer only to admit the pure imitator of virtue.

Yes, I said, Adeimantus, but the mixed style is also very charming: and indeed the pantomimic, which is the opposite of the one chosen by you, is the most popular style with children and their attendants, and with the world in general.

I do not deny it.

But I suppose you would argue that such a style is unsuitable to our State, in which human nature is not twofold or manifold, for one man plays one part only?

Yes; quite unsuitable.

And this is the reason why in our State, and in our State only, we shall find a shoemaker to be a shoemaker and not a pilot also, and a husbandman to be a husbandman and not a dicast also, and a soldier a soldier and not a trader also, and the same throughout?

True, he said.

And therefore when any one of these pantomimic gentlemen, who are so clever that they can imitate anything, comes to us, and makes a proposal to exhibit himself and his poetry, we will fall down and worship him as a sweet and holy and wonderful being; but we must also inform him that in our State such as he are not permitted to exist; the law will not allow them. And so when we have anointed him with myrrh, and set a garland of wool upon his head, we shall send him away to another city. For we mean to employ for our souls' health the rougher and severer poet or story-teller, who will imitate the style of the virtuous only, and will follow those models which we prescribed at first when we began the education of our soldiers.
We certainly will, he said, if we have the power.

Then now, my friend, I said, that part of music or literary education which relates to the story or myth may be considered to be finished; for the matter and manner have both been discussed.

I think so too, he said.

Next in order will follow melody and song.

That is obvious.

Every one can see already what we ought to say about them, if we are to be consistent with ourselves.

SOCRATES - GLAUCON

I fear, said Glaucon, laughing, that the words 'every one' hardly includes me, for I cannot at the moment say what they should be; though I may guess.

At any rate you can tell that a song or ode has three parts--the words, the melody, and the rhythm; that degree of knowledge I may presuppose?

Yes, he said; so much as that you may.

And as for the words, there surely be no difference words between words which are and which are not set to music; both will conform to the same laws, and these have been already determined by us?

Yes.

And the melody and rhythm will depend upon the words?

Certainly.

We were saying, when we spoke of the subject-matter, that we had no need of lamentations and strains of sorrow?

True.

And which are the harmonies expressive of sorrow? You are musical, and can tell me.

The harmonies which you mean are the mixed or tenor Lydian, and the full-toned or bass Lydian, and such like.
These then, I said, must be banished; even to women who have a character to maintain they are of no use, and much less to men. Certainly.

In the next place, drunkenness and softness and indolence are utterly unbecoming the character of our guardians.

Utterly unbecoming.

And which are the soft or drinking harmonies?

The Ionian, he replied, and the Lydian; they are termed 'relaxed.'

Well, and are these of any military use?

Quite the reverse, he replied; and if so the Dorian and the Phrygian are the only ones which you have left.

I answered: Of the harmonies I know nothing, but I want to have one warlike, to sound the note or accent which a brave man utters in the hour of danger and stern resolve, or when his cause is failing, and he is going to wounds or death or is overtaken by some other evil, and at every such crisis meets the blows of fortune with firm step and a determination to endure; and another to be used by him in times of peace and freedom of action, when there is no pressure of necessity, and he is seeking to persuade God by prayer, or man by instruction and admonition, or on the other hand, when he is expressing his willingness to yield to persuasion or entreaty or admonition, and which represents him when by prudent conduct he has attained his end, not carried away by his success, but acting moderately and wisely under the circumstances, and acquiescing in the event. These two harmonies I ask you to leave; the strain of necessity and the strain of freedom, the strain of the unfortunate and the strain of the fortunate, the strain of courage, and the strain of temperance; these, I say, leave.

And these, he replied, are the Dorian and Phrygian harmonies of which I was just now speaking.

Then, I said, if these and these only are to be used in our songs and melodies, we shall not want multiplicity of notes or a panharmonic scale?

I suppose not.

Then we shall not maintain the artificers of lyres with three corners and complex scales, or the makers of any other many-stringed
curiously-harmonised instruments?

Certainly not.

But what do you say to flute-makers and flute-players? Would you admit them into our State when you reflect that in this composite use of harmony the flute is worse than all the stringed instruments put together; even the panharmonic music is only an imitation of the flute?

Clearly not.

There remain then only the lyre and the harp for use in the city, and the shepherds may have a pipe in the country.

That is surely the conclusion to be drawn from the argument.

The preferring of Apollo and his instruments to Marsyas and his instruments is not at all strange, I said.

Not at all, he replied.

And so, by the dog of Egypt, we have been unconsciously purging the State, which not long ago we termed luxurious.

And we have done wisely, he replied.

Then let us now finish the purgation, I said. Next in order to harmonies, rhythms will naturally follow, and they should be subject to the same rules, for we ought not to seek out complex systems of metre, or metres of every kind, but rather to discover what rhythms are the expressions of a courageous and harmonious life; and when we have found them, we shall adapt the foot and the melody to words having a like spirit, not the words to the foot and melody. To say what these rhythms are will be your duty--you must teach me them, as you have already taught me the harmonies.

But, indeed, he replied, I cannot tell you. I only know that there are some three principles of rhythm out of which metrical systems are framed, just as in sounds there are four notes out of which all the harmonies are composed; that is an observation which I have made. But of what sort of lives they are severally the imitations I am unable to say.

Then, I said, we must take Damon into our counsels; and he will tell us what rhythms are expressive of meanness, or insolence, or fury, or other unworthiness, and what are to be reserved for the expression of opposite feelings. And I think that I have an indistinct recollection
of his mentioning a complex Cretic rhythm; also a dactylic or heroic, and he arranged them in some manner which I do not quite understand, making the rhythms equal in the rise and fall of the foot, long and short alternating; and, unless I am mistaken, he spoke of an iambic as well as of a trochaic rhythm, and assigned to them short and long quantities. Also in some cases he appeared to praise or censure the movement of the foot quite as much as the rhythm; or perhaps a combination of the two; for I am not certain what he meant. These matters, however, as I was saying, had better be referred to Damon himself, for the analysis of the subject would be difficult, you know.

Rather so, I should say.

But there is no difficulty in seeing that grace or the absence of grace is an effect of good or bad rhythm.

None at all.

And also that good and bad rhythm naturally assimilate to a good and bad style; and that harmony and discord in like manner follow style; for our principle is that rhythm and harmony are regulated by the words, and not the words by them.

Just so, he said, they should follow the words.

And will not the words and the character of the style depend on the temper of the soul?

Yes.

And everything else on the style?

Yes.

Then beauty of style and harmony and grace and good rhythm depend on simplicity,—I mean the true simplicity of a rightly and nobly ordered mind and character, not that other simplicity which is only an euphemism for folly?

Very true, he replied.

And if our youth are to do their work in life, must they not make these graces and harmonies their perpetual aim?

They must.

And surely the art of the painter and every other creative and
constructive art are full of them,--weaving, embroidery, architecture, and every kind of manufacture; also nature, animal and vegetable,--in all of them there is grace or the absence of grace. And ugliness and discord and inharmonious motion are nearly allied to ill words and ill nature, as grace and harmony are the twin sisters of goodness and virtue and bear their likeness.

That is quite true, he said.

But shall our superintendence go no further, and are the poets only to be required by us to express the image of the good in their works, on pain, if they do anything else, of expulsion from our State? Or is the same control to be extended to other artists, and are they also to be prohibited from exhibiting the opposite forms of vice and intemperance and meanness and indecency in sculpture and building and the other creative arts; and is he who cannot conform to this rule of ours to be prevented from practising his art in our State, lest the taste of our citizens be corrupted by him? We would not have our guardians grow up amid images of moral deformity, as in some noxious pasture, and there browse and feed upon many a baneful herb and flower day by day, little by little, until they silently gather a festering mass of corruption in their own soul. Let our artists rather be those who are gifted to discern the true nature of the beautiful and graceful; then will our youth dwell in a land of health, amid fair sights and sounds, and receive the good in everything; and beauty, the effluence of fair works, shall flow into the eye and ear, like a health-giving breeze from a purer region, and insensibly draw the soul from earliest years into likeness and sympathy with the beauty of reason.

There can be no nobler training than that, he replied.

And therefore, I said, Glaucon, musical training is a more potent instrument than any other, because rhythm and harmony find their way into the inward places of the soul, on which they mightily fasten, imparting grace, and making the soul of him who is rightly educated graceful, or of him who is ill-educated ungraceful; and also because he who has received this true education of the inner being will most shrewdly perceive omissions or faults in art and nature, and with a true taste, while he praises and rejoices over and receives into his soul the good, and becomes noble and good, he will justly blame and hate the bad, now in the days of his youth, even before he is able to know the reason why; and when reason comes he will recognise and salute the friend with whom his education has made him long familiar.

Yes, he said, I quite agree with you in thinking that our youth should be trained in music and on the grounds which you mention.
Just as in learning to read, I said, we were satisfied when we knew the letters of the alphabet, which are very few, in all their recurring sizes and combinations; not slighting them as unimportant whether they occupy a space large or small, but everywhere eager to make them out; and not thinking ourselves perfect in the art of reading until we recognise them wherever they are found:

True--

Or, as we recognise the reflection of letters in the water, or in a mirror, only when we know the letters themselves; the same art and study giving us the knowledge of both:

Exactly--

Even so, as I maintain, neither we nor our guardians, whom we have to educate, can ever become musical until we and they know the essential forms, in all their combinations, and can recognise them and their images wherever they are found, not slighting them either in small things or great, but believing them all to be within the sphere of one art and study.

Most assuredly.

And when a beautiful soul harmonises with a beautiful form, and the two are cast in one mould, that will be the fairest of sights to him who has an eye to see it?

The fairest indeed.

And the fairest is also the loveliest?

That may be assumed.

And the man who has the spirit of harmony will be most in love with the loveliest; but he will not love him who is of an inharmonious soul?

That is true, he replied, if the deficiency be in his soul; but if there be any merely bodily defect in another he will be patient of it, and will love all the same.

I perceive, I said, that you have or have had experiences of this sort, and I agree. But let me ask you another question: Has excess of pleasure any affinity to temperance?

How can that be? he replied; pleasure deprives a man of the use of his faculties quite as much as pain.
Or any affinity to virtue in general?

None whatever.

Any affinity to wantonness and intemperance?

Yes, the greatest.

And is there any greater or keener pleasure than that of sensual love?

No, nor a madder.

Whereas true love is a love of beauty and order--temperate and harmonious?

Quite true, he said.

Then no intemperance or madness should be allowed to approach true love?

Certainly not.

Then mad or intemperate pleasure must never be allowed to come near the lover and his beloved; neither of them can have any part in it if their love is of the right sort?

No, indeed, Socrates, it must never come near them.

Then I suppose that in the city which we are founding you would make a law to the effect that a friend should use no other familiarity to his love than a father would use to his son, and then only for a noble purpose, and he must first have the other's consent; and this rule is to limit him in all his intercourse, and he is never to be seen going further, or, if he exceeds, he is to be deemed guilty of coarseness and bad taste.

I quite agree, he said.

Thus much of music, which makes a fair ending; for what should be the end of music if not the love of beauty?

I agree, he said.

After music comes gymnastic, in which our youth are next to be trained.

Certainly.
Gymnastic as well as music should begin in early years; the training in it should be careful and should continue through life. Now my belief is,--and this is a matter upon which I should like to have your opinion in confirmation of my own, but my own belief is,--not that the good body by any bodily excellence improves the soul, but, on the contrary, that the good soul, by her own excellence, improves the body as far as this may be possible. What do you say?

Yes, I agree.

Then, to the mind when adequately trained, we shall be right in handing over the more particular care of the body; and in order to avoid prolixity we will now only give the general outlines of the subject.

Very good.

That they must abstain from intoxication has been already remarked by us; for of all persons a guardian should be the last to get drunk and not know where in the world he is.

Yes, he said; that a guardian should require another guardian to take care of him is ridiculous indeed.

But next, what shall we say of their food; for the men are in training for the great contest of all--are they not?

Yes, he said.

And will the habit of body of our ordinary athletes be suited to them?

Why not?

I am afraid, I said, that a habit of body such as they have is but a sleepy sort of thing, and rather perilous to health. Do you not observe that these athletes sleep away their lives, and are liable to most dangerous illnesses if they depart, in ever so slight a degree, from their customary regimen?

Yes, I do.

Then, I said, a finer sort of training will be required for our warrior athletes, who are to be like wakeful dogs, and to see and hear with the utmost keeness; amid the many changes of water and also of food, of summer heat and winter cold, which they will have to endure when on a campaign, they must not be liable to break down in health.

That is my view.
The really excellent gymnastic is twin sister of that simple music which we were just now describing.

How so?

Why, I conceive that there is a gymnastic which, like our music, is simple and good; and especially the military gymnastic.

What do you mean?

My meaning may be learned from Homer; he, you know, feeds his heroes at their feasts, when they are campaigning, on soldiers' fare; they have no fish, although they are on the shores of the Hellespont, and they are not allowed boiled meats but only roast, which is the food most convenient for soldiers, requiring only that they should light a fire, and not involving the trouble of carrying about pots and pans.

True.

And I can hardly be mistaken in saying that sweet sauces are nowhere mentioned in Homer. In proscribing them, however, he is not singular; all professional athletes are well aware that a man who is to be in good condition should take nothing of the kind.

Yes, he said; and knowing this, they are quite right in not taking them.

Then you would not approve of Syracusan dinners, and the refinements of Sicilian cookery?

I think not.

Nor, if a man is to be in condition, would you allow him to have a Corinthian girl as his fair friend?

Certainly not.

Neither would you approve of the delicacies, as they are thought, of Athenian confectionery?

Certainly not.

All such feeding and living may be rightly compared by us to melody and song composed in the panharmonic style, and in all the rhythms.

Exactly.

There complexity engendered license, and here disease; whereas
simplicity in music was the parent of temperance in the soul; and simplicity in gymnastic of health in the body.

Most true, he said.

But when intemperance and disease multiply in a State, halls of justice and medicine are always being opened; and the arts of the doctor and the lawyer give themselves airs, finding how keen is the interest which not only the slaves but the freemen of a city take about them.

Of course.

And yet what greater proof can there be of a bad and disgraceful state of education than this, that not only artisans and the meaner sort of people need the skill of first-rate physicians and judges, but also those who would profess to have had a liberal education? Is it not disgraceful, and a great sign of want of good-breeding, that a man should have to go abroad for his law and physic because he has none of his own at home, and must therefore surrender himself into the hands of other men whom he makes lords and judges over him?

Of all things, he said, the most disgraceful.

Would you say 'most,' I replied, when you consider that there is a further stage of the evil in which a man is not only a life-long litigant, passing all his days in the courts, either as plaintiff or defendant, but is actually led by his bad taste to pride himself on his litigiousness; he imagines that he is a master in dishonesty; able to take every crooked turn, and wriggle into and out of every hole, bending like a withy and getting out of the way of justice: and all for what?--in order to gain small points not worth mentioning, he not knowing that so to order his life as to be able to do without a napping judge is a far higher and nobler sort of thing. Is not that still more disgraceful?

Yes, he said, that is still more disgraceful.

Well, I said, and to require the help of medicine, not when a wound has to be cured, or on occasion of an epidemic, but just because, by indolence and a habit of life such as we have been describing, men fill themselves with waters and winds, as if their bodies were a marsh, compelling the ingenious sons of Asclepius to find more names for diseases, such as flatulence and catarrh; is not this, too, a disgrace?

Yes, he said, they do certainly give very strange and newfangled names to diseases.
Yes, I said, and I do not believe that there were any such diseases in the days of Asclepius; and this I infer from the circumstance that the hero Eurypylus, after he has been wounded in Homer, drinks a posset of Pramnian wine well besprinkled with barley-meal and grated cheese, which are certainly inflammatory, and yet the sons of Asclepius who were at the Trojan war do not blame the damsel who gives him the drink, or rebuke Patroclus, who is treating his case.

Well, he said, that was surely an extraordinary drink to be given to a person in his condition.

Not so extraordinary, I replied, if you bear in mind that in former days, as is commonly said, before the time of Herodicus, the guild of Asclepius did not practise our present system of medicine, which may be said to educate diseases. But Herodicus, being a trainer, and himself of a sickly constitution, by a combination of training and doctoring found out a way of torturing first and chiefly himself, and secondly the rest of the world.

How was that? he said.

By the invention of lingering death; for he had a mortal disease which he perpetually tended, and as recovery was out of the question, he passed his entire life as a valetudinarian; he could do nothing but attend upon himself, and he was in constant torment whenever he departed in anything from his usual regimen, and so dying hard, by the help of science he struggled on to old age.

A rare reward of his skill!

Yes, I said; a reward which a man might fairly expect who never understood that, if Asclepius did not instruct his descendants in valetudinarian arts, the omission arose, not from ignorance or inexperience of such a branch of medicine, but because he knew that in all well-ordered states every individual has an occupation to which he must attend, and has therefore no leisure to spend in continually being ill. This we remark in the case of the artisan, but, ludicrously enough, do not apply the same rule to people of the richer sort.

How do you mean? he said.

I mean this: When a carpenter is ill he asks the physician for a rough and ready cure; an emetic or a purge or a cautery or the knife,—these are his remedies. And if some one prescribes for him a course of dietetics, and tells him that he must swathe and swaddle his head, and all that sort of thing, he replies at once that he has no time to be ill, and that he sees no good in a life which is spent in nursing his
disease to the neglect of his customary employment; and therefore bidding good-bye to this sort of physician, he resumes his ordinary habits, and either gets well and lives and does his business, or, if his constitution falls, he dies and has no more trouble.

Yes, he said, and a man in his condition of life ought to use the art of medicine thus far only.

Has he not, I said, an occupation; and what profit would there be in his life if he were deprived of his occupation?

Quite true, he said.

But with the rich man this is otherwise; of him we do not say that he has any specially appointed work which he must perform, if he would live.

He is generally supposed to have nothing to do.

Then you never heard of the saying of Phocylides, that as soon as a man has a livelihood he should practise virtue?

Nay, he said, I think that he had better begin somewhat sooner.

Let us not have a dispute with him about this, I said; but rather ask ourselves: Is the practice of virtue obligatory on the rich man, or can he live without it? And if obligatory on him, then let us raise a further question, whether this dieting of disorders which is an impediment to the application of the mind in carpentering and the mechanical arts, does not equally stand in the way of the sentiment of Phocylides?

Of that, he replied, there can be no doubt; such excessive care of the body, when carried beyond the rules of gymnastic, is most inimical to the practice of virtue.

Yes, indeed, I replied, and equally incompatible with the management of a house, an army, or an office of state; and, what is most important of all, irreconcilable with any kind of study or thought or self-reflection--there is a constant suspicion that headache and giddiness are to be ascribed to philosophy, and hence all practising or making trial of virtue in the higher sense is absolutely stopped; for a man is always fancying that he is being made ill, and is in constant anxiety about the state of his body.

Yes, likely enough.
And therefore our politic Asclepius may be supposed to have exhibited the power of his art only to persons who, being generally of healthy constitution and habits of life, had a definite ailment; such as these he cured by purges and operations, and bade them live as usual, herein consulting the interests of the State; but bodies which disease had penetrated through and through he would not have attempted to cure by gradual processes of evacuation and infusion: he did not want to lengthen out good-for-nothing lives, or to have weak fathers begetting weaker sons;--if a man was not able to live in the ordinary way he had no business to cure him; for such a cure would have been of no use either to himself, or to the State.

Then, he said, you regard Asclepius as a statesman.

Clearly; and his character is further illustrated by his sons. Note that they were heroes in the days of old and practised the medicines of which I am speaking at the siege of Troy: You will remember how, when Pandarus wounded Menelaus, they

Sucked the blood out of the wound, and sprinkled soothing remedies,

but they never prescribed what the patient was afterwards to eat or drink in the case of Menelaus, any more than in the case of Eurypylus; the remedies, as they conceived, were enough to heal any man who before he was wounded was healthy and regular in habits; and even though he did happen to drink a posset of Pramnian wine, he might get well all the same. But they would have nothing to do with unhealthy and intemperate subjects, whose lives were of no use either to themselves or others; the art of medicine was not designed for their good, and though they were as rich as Midas, the sons of Asclepius would have declined to attend them.

They were very acute persons, those sons of Asclepius.

Naturally so, I replied. Nevertheless, the tragedians and Pindar disobeying our behests, although they acknowledge that Asclepius was the son of Apollo, say also that he was bribed into healing a rich man who was at the point of death, and for this reason he was struck by lightning. But we, in accordance with the principle already affirmed by us, will not believe them when they tell us both;--if he was the son of a god, we maintain that he was not avaricious; or, if he was avaricious he was not the son of a god.

All that, Socrates, is excellent; but I should like to put a question to you: Ought there not to be good physicians in a State, and are not the best those who have treated the greatest number of constitutions good and bad? and are not the best judges in like manner those who are
acquainted with all sorts of moral natures?

Yes, I said, I too would have good judges and good physicians. But do you know whom I think good?

Will you tell me?

I will, if I can. Let me however note that in the same question you join two things which are not the same.

How so? he asked.

Why, I said, you join physicians and judges. Now the most skilful physicians are those who, from their youth upwards, have combined with the knowledge of their art the greatest experience of disease; they had better not be robust in health, and should have had all manner of diseases in their own persons. For the body, as I conceive, is not the instrument with which they cure the body; in that case we could not allow them ever to be or to have been sickly; but they cure the body with the mind, and the mind which has become and is sick can cure nothing.

That is very true, he said.

But with the judge it is otherwise; since he governs mind by mind; he ought not therefore to have been trained among vicious minds, and to have associated with them from youth upwards, and to have gone through the whole calendar of crime, only in order that he may quickly infer the crimes of others as he might their bodily diseases from his own self-consciousness; the honourable mind which is to form a healthy judgment should have had no experience or contamination of evil habits when young. And this is the reason why in youth good men often appear to be simple, and are easily practised upon by the dishonest, because they have no examples of what evil is in their own souls.

Yes, he said, they are far too apt to be deceived.

Therefore, I said, the judge should not be young; he should have learned to know evil, not from his own soul, but from late and long observation of the nature of evil in others: knowledge should be his guide, not personal experience.

Yes, he said, that is the ideal of a judge.

Yes, I replied, and he will be a good man (which is my answer to your question); for he is good who has a good soul. But the cunning and suspicious nature of which we spoke,—he who has committed many crimes,
and fancies himself to be a master in wickedness, when he is amongst his fellows, is wonderful in the precautions which he takes, because he judges of them by himself: but when he gets into the company of men of virtue, who have the experience of age, he appears to be a fool again, owing to his unseasonable suspicions; he cannot recognise an honest man, because he has no pattern of honesty in himself; at the same time, as the bad are more numerous than the good, and he meets with them oftener, he thinks himself, and is by others thought to be, rather wise than foolish.

Most true, he said.

Then the good and wise judge whom we are seeking is not this man, but the other; for vice cannot know virtue too, but a virtuous nature, educated by time, will acquire a knowledge both of virtue and vice: the virtuous, and not the vicious, man has wisdom—in my opinion.

And in mine also.

This is the sort of medicine, and this is the sort of law, which you sanction in your State. They will minister to better natures, giving health both of soul and of body; but those who are diseased in their bodies they will leave to die, and the corrupt and incurable souls they will put an end to themselves.

That is clearly the best thing both for the patients and for the State.

And thus our youth, having been educated only in that simple music which, as we said, inspires temperance, will be reluctant to go to law.

Clearly.

And the musician, who, keeping to the same track, is content to practise the simple gymnastic, will have nothing to do with medicine unless in some extreme case.

That I quite believe.

The very exercises and toils which he undergoes are intended to stimulate the spirited element of his nature, and not to increase his strength; he will not, like common athletes, use exercise and regimen to develop his muscles.

Very right, he said.

Neither are the two arts of music and gymnastic really designed, as is often supposed, the one for the training of the soul, the other for the
training of the body.

What then is the real object of them?

I believe, I said, that the teachers of both have in view chiefly the improvement of the soul.

How can that be? he asked.

Did you never observe, I said, the effect on the mind itself of exclusive devotion to gymnastic, or the opposite effect of an exclusive devotion to music?

In what way shown? he said.

The one producing a temper of hardness and ferocity, the other of softness and effeminacy, I replied.

Yes, he said, I am quite aware that the mere athlete becomes too much of a savage, and that the mere musician is melted and softened beyond what is good for him.

Yet surely, I said, this ferocity only comes from spirit, which, if rightly educated, would give courage, but, if too much intensified, is liable to become hard and brutal.

That I quite think.

On the other hand the philosopher will have the quality of gentleness. And this also, when too much indulged, will turn to softness, but, if educated rightly, will be gentle and moderate.

True.

And in our opinion the guardians ought to have both these qualities?

Assuredly.

And both should be in harmony?

Beyond question.

And the harmonious soul is both temperate and courageous?

Yes.

And the inharmonious is cowardly and boorish?
Very true.

And, when a man allows music to play upon him and to pour into his soul through the funnel of his ears those sweet and soft and melancholy airs of which we were just now speaking, and his whole life is passed in warbling and the delights of song; in the first stage of the process the passion or spirit which is in him is tempered like iron, and made useful, instead of brittle and useless. But, if he carries on the softening and soothing process, in the next stage he begins to melt and waste, until he has wasted away his spirit and cut out the sinews of his soul; and he becomes a feeble warrior.

Very true.

If the element of spirit is naturally weak in him the change is speedily accomplished, but if he have a good deal, then the power of music weakening the spirit renders him excitable;—on the least provocation he flames up at once, and is speedily extinguished; instead of having spirit he grows irritable and passionate and is quite impracticable.

Exactly.

And so in gymnastics, if a man takes violent exercise and is a great feeder, and the reverse of a great student of music and philosophy, at first the high condition of his body fills him with pride and spirit, and he becomes twice the man that he was.

Certainly.

And what happens? if he do nothing else, and holds no con-a verse with the Muses, does not even that intelligence which there may be in him, having no taste of any sort of learning or enquiry or thought or culture, grow feeble and dull and blind, his mind never waking up or receiving nourishment, and his senses not being purged of their mists?

True, he said.

And he ends by becoming a hater of philosophy, uncivilized, never using the weapon of persuasion,—he is like a wild beast, all violence and fierceness, and knows no other way of dealing; and he lives in all ignorance and evil conditions, and has no sense of propriety and grace.

That is quite true, he said.

And as there are two principles of human nature, one the spirited and
the other the philosophical, some God, as I should say, has given mankind two arts answering to them (and only indirectly to the soul and body), in order that these two principles (like the strings of an instrument) may be relaxed or drawn tighter until they are duly harmonised.

That appears to be the intention.

And he who mingles music with gymnastic in the fairest proportions, and best attempers them to the soul, may be rightly called the true musician and harmonist in a far higher sense than the tuner of the strings.

You are quite right, Socrates.

And such a presiding genius will be always required in our State if the government is to last.

Yes, he will be absolutely necessary.

Such, then, are our principles of nurture and education: Where would be the use of going into further details about the dances of our citizens, or about their hunting and coursing, their gymnastic and equestrian contests? For these all follow the general principle, and having found that, we shall have no difficulty in discovering them.

I dare say that there will be no difficulty.

Very good, I said; then what is the next question? Must we not ask who are to be rulers and who subjects?

Certainly.

There can be no doubt that the elder must rule the younger.

Clearly.

And that the best of these must rule.

That is also clear.

Now, are not the best husbandmen those who are most devoted to husbandry?

Yes.

And as we are to have the best of guardians for our city, must they not
be those who have most the character of guardians?

Yes.

And to this end they ought to be wise and efficient, and to have a special care of the State?

True.

And a man will be most likely to care about that which he loves?

To be sure.

And he will be most likely to love that which he regards as having the same interests with himself, and that of which the good or evil fortune is supposed by him at any time most to affect his own?

Very true, he replied.

Then there must be a selection. Let us note among the guardians those who in their whole life show the greatest eagerness to do what is for the good of their country, and the greatest repugnance to do what is against her interests.

Those are the right men.

And they will have to be watched at every age, in order that we may see whether they preserve their resolution, and never, under the influence either of force or enchantment, forget or cast off their sense of duty to the State.

How cast off? he said.

I will explain to you, I replied. A resolution may go out of a man's mind either with his will or against his will; with his will when he gets rid of a falsehood and learns better, against his will whenever he is deprived of a truth.

I understand, he said, the willing loss of a resolution; the meaning of the unwilling I have yet to learn.

Why, I said, do you not see that men are unwillingly deprived of good, and willingly of evil? Is not to have lost the truth an evil, and to possess the truth a good? and you would agree that to conceive things as they are is to possess the truth?

Yes, he replied; I agree with you in thinking that mankind are deprived
of truth against their will.

And is not this involuntary deprivation caused either by theft, or force, or enchantment?

Still, he replied, I do not understand you.

I fear that I must have been talking darkly, like the tragedians. I only mean that some men are changed by persuasion and that others forget; argument steals away the hearts of one class, and time of the other; and this I call theft. Now you understand me?

Yes.

Those again who are forced are those whom the violence of some pain or grief compels to change their opinion.

I understand, he said, and you are quite right.

And you would also acknowledge that the enchanted are those who change their minds either under the softer influence of pleasure, or the sterner influence of fear?

Yes, he said; everything that deceives may be said to enchant.

Therefore, as I was just now saying, we must enquire who are the best guardians of their own conviction that what they think the interest of the State is to be the rule of their lives. We must watch them from their youth upwards, and make them perform actions in which they are most likely to forget or to be deceived, and he who remembers and is not deceived is to be selected, and he who falls in the trial is to be rejected. That will be the way?

Yes.

And there should also be toils and pains and conflicts prescribed for them, in which they will be made to give further proof of the same qualities.

Very right, he replied.

And then, I said, we must try them with enchantments that is the third sort of test--and see what will be their behaviour: like those who take colts amid noise and tumult to see if they are of a timid nature, so must we take our youth amid terrors of some kind, and again pass them into pleasures, and prove them more thoroughly than gold is proved in the furnace, that we may discover whether they are armed against all
enchantments, and of a noble bearing always, good guardians of
themselves and of the music which they have learned, and retaining
under all circumstances a rhythmical and harmonious nature, such as
will be most serviceable to the individual and to the State. And he
who at every age, as boy and youth and in mature life, has come out of
the trial victorious and pure, shall be appointed a ruler and guardian
of the State; he shall be honoured in life and death, and shall receive
sepulture and other memorials of honour, the greatest that we have to
give. But him who fails, we must reject. I am inclined to think that
this is the sort of way in which our rulers and guardians should be
chosen and appointed. I speak generally, and not with any pretension
to exactness.

And, speaking generally, I agree with you, he said.

And perhaps the word 'guardian' in the fullest sense ought to be
applied to this higher class only who preserve us against foreign
enemies and maintain peace among our citizens at home, that the one may
not have the will, or the others the power, to harm us. The young men
whom we before called guardians may be more properly designated
auxiliaries and supporters of the principles of the rulers.

I agree with you, he said.

How then may we devise one of those needful falsehoods of which we
lately spoke—just one royal lie which may deceive the rulers, if that
be possible, and at any rate the rest of the city?

What sort of lie? he said.

Nothing new, I replied; only an old Phoenician tale of what has often
occurred before now in other places, (as the poets say, and have made
the world believe,) though not in our time, and I do not know whether
such an event could ever happen again, or could now even be made
probable, if it did.

How your words seem to hesitate on your lips!

You will not wonder, I replied, at my hesitation when you have heard.

Speak, he said, and fear not.

Well then, I will speak, although I really know not how to look you in
the face, or in what words to utter the audacious fiction, which I
propose to communicate gradually, first to the rulers, then to the
soldiers, and lastly to the people. They are to be told that their
youth was a dream, and the education and training which they received
from us, an appearance only; in reality during all that time they were being formed and fed in the womb of the earth, where they themselves and their arms and appurtenances were manufactured; when they were completed, the earth, their mother, sent them up; and so, their country being their mother and also their nurse, they are bound to advise for her good, and to defend her against attacks, and her citizens they are to regard as children of the earth and their own brothers.

You had good reason, he said, to be ashamed of the lie which you were going to tell.

True, I replied, but there is more coming; I have only told you half. Citizens, we shall say to them in our tale, you are brothers, yet God has framed you differently. Some of you have the power of command, and in the composition of these he has mingled gold, wherefore also they have the greatest honour; others he has made of silver, to be auxiliaries; others again who are to be husbandmen and craftsmen he has composed of brass and iron; and the species will generally be preserved in the children. But as all are of the same original stock, a golden parent will sometimes have a silver son, or a silver parent a golden son. And God proclaims as a first principle to the rulers, and above all else, that there is nothing which should so anxiously guard, or of which they are to be such good guardians, as of the purity of the race. They should observe what elements mingle in their offspring; for if the son of a golden or silver parent has an admixture of brass and iron, then nature orders a transposition of ranks, and the eye of the ruler must not be pitiful towards the child because he has to descend in the scale and become a husbandman or artisan, just as there may be sons of artisans who having an admixture of gold or silver in them are raised to honour, and become guardians or auxiliaries. For an oracle says that when a man of brass or iron guards the State, it will be destroyed. Such is the tale; is there any possibility of making our citizens believe in it?

Not in the present generation, he replied; there is no way of accomplishing this; but their sons may be made to believe in the tale, and their sons' sons, and posterity after them.

I see the difficulty, I replied; yet the fostering of such a belief will make them care more for the city and for one another. Enough, however, of the fiction, which may now fly abroad upon the wings of rumour, while we arm our earth-born heroes, and lead them forth under the command of their rulers. Let them look round and select a spot whence they can best suppress insurrection, if any prove refractory within, and also defend themselves against enemies, who like wolves may come down on the fold from without; there let them encamp, and when they have encamped, let them sacrifice to the proper Gods and prepare
their dwellings.

Just so, he said.

And their dwellings must be such as will shield them against the cold
of winter and the heat of summer.

I suppose that you mean houses, he replied.

Yes, I said; but they must be the houses of soldiers, and not of
shop-keepers.

What is the difference? he said.

That I will endeavour to explain, I replied. To keep watchdogs, who,
from want of discipline or hunger, or some evil habit, or evil habit or
other, would turn upon the sheep and worry them, and behave not like
dogs but wolves, would be a foul and monstrous thing in a shepherd?

Truly monstrous, he said.

And therefore every care must be taken that our auxiliaries, being
stronger than our citizens, may not grow to be too much for them and
become savage tyrants instead of friends and allies?

Yes, great care should be taken.

And would not a really good education furnish the best safeguard?

But they are well-educated already, he replied.

I cannot be so confident, my dear Glaucon, I said; I am much certain
that they ought to be, and that true education, whatever that may be,
will have the greatest tendency to civilize and humanize them in their
relations to one another, and to those who are under their protection.

Very true, he replied.

And not only their education, but their habitations, and all that
belongs to them, should be such as will neither impair their virtue as
guardians, nor tempt them to prey upon the other citizens. Any man of
sense must acknowledge that.

He must.

Then let us consider what will be their way of life, if they are to
realize our idea of them. In the first place, none of them should have
any property of his own beyond what is absolutely necessary; neither should they have a private house or store closed against any one who has a mind to enter; their provisions should be only such as are required by trained warriors, who are men of temperance and courage; they should agree to receive from the citizens a fixed rate of pay, enough to meet the expenses of the year and no more; and they will go and live together like soldiers in a camp. Gold and silver we will tell them that they have from God; the diviner metal is within them, and they have therefore no need of the dross which is current among men, and ought not to pollute the divine by any such earthly admixture; for that commoner metal has been the source of many unholy deeds, but their own is undefiled. And they alone of all the citizens may not touch or handle silver or gold, or be under the same roof with them, or wear them, or drink from them. And this will be their salvation, and they will be the saviours of the State. But should they ever acquire homes or lands or moneys of their own, they will become housekeepers and husbandmen instead of guardians, enemies and tyrants instead of allies of the other citizens; hating and being hated, plotting and being plotted against, they will pass their whole life in much greater terror of internal than of external enemies, and the hour of ruin, both to themselves and to the rest of the State, will be at hand. For all which reasons may we not say that thus shall our State be ordered, and that these shall be the regulations appointed by us for guardians concerning their houses and all other matters? other

Yes, said Glaucon.

BOOK IV

ADEIMANTUS - SOCRATES

HERE Adeimantus interposed a question: How would you answer, Socrates, said he, if a person were to say that you are making these people miserable, and that they are the cause of their own unhappiness; the city in fact belongs to them, but they are none the better for it; whereas other men acquire lands, and build large and handsome houses, and have everything handsome about them, offering sacrifices to the gods on their own account, and practising hospitality; moreover, as you were saying just now, they have gold and silver, and all that is usual among the favourites of fortune; but our poor citizens are no better than mercenaries who are quartered in the city and are always mounting guard?
Yes, I said; and you may add that they are only fed, and not paid in addition to their food, like other men; and therefore they cannot, if they would, take a journey of pleasure; they have no money to spend on a mistress or any other luxurious fancy, which, as the world goes, is thought to be happiness; and many other accusations of the same nature might be added.

But, said he, let us suppose all this to be included in the charge.

You mean to ask, I said, what will be our answer?

Yes.

If we proceed along the old path, my belief, I said, is that we shall find the answer. And our answer will be that, even as they are, our guardians may very likely be the happiest of men; but that our aim in founding the State was not the disproportionate happiness of any one class, but the greatest happiness of the whole; we thought that in a State which is ordered with a view to the good of the whole we should be most likely to find Justice, and in the ill-ordered State injustice: and, having found them, we might then decide which of the two is the happier. At present, I take it, we are fashioning the happy State, not piecemeal, or with a view of making a few happy citizens, but as a whole; and by-and-by we will proceed to view the opposite kind of State. Suppose that we were painting a statue, and some one came up to us and said, Why do you not put the most beautiful colours on the most beautiful parts of the body--the eyes ought to be purple, but you have made them black--to him we might fairly answer, Sir, you would not surely have us beautify the eyes to such a degree that they are no longer eyes; consider rather whether, by giving this and the other features their due proportion, we make the whole beautiful. And so I say to you, do not compel us to assign to the guardians a sort of happiness which will make them anything but guardians; for we too can clothe our husbandmen in royal apparel, and set crowns of gold on their heads, and bid them till the ground as much as they like, and no more. Our potters also might be allowed to repose on couches, and feast by the fireside, passing round the winecup, while their wheel is conveniently at hand, and working at pottery only as much as they like; in this way we might make every class happy--and then, as you imagine, the whole State would be happy. But do not put this idea into our heads; for, if we listen to you, the husbandman will be no longer a husbandman, the potter will cease to be a potter, and no one will have the character of any distinct class in the State. Now this is not of much consequence where the corruption of society, and pretension to be what you are not, is confined to cobbler; but when the guardians of the laws and of the government are only seemingly and not real guardians, then see how they turn the State upside down; and on the
other hand they alone have the power of giving order and happiness to the State. We mean our guardians to be true saviours and not the destroyers of the State, whereas our opponent is thinking of peasants at a festival, who are enjoying a life of revelry, not of citizens who are doing their duty to the State. But, if so, we mean different things, and he is speaking of something which is not a State. And therefore we must consider whether in appointing our guardians we would look to their greatest happiness individually, or whether this principle of happiness does not rather reside in the State as a whole. But the latter be the truth, then the guardians and auxiliaries, and all others equally with them, must be compelled or induced to do their own work in the best way. And thus the whole State will grow up in a noble order, and the several classes will receive the proportion of happiness which nature assigns to them.

I think that you are quite right.

I wonder whether you will agree with another remark which occurs to me.

What may that be?

There seem to be two causes of the deterioration of the arts.

What are they?

Wealth, I said, and poverty.

How do they act?

The process is as follows: When a potter becomes rich, will he, think you, any longer take the same pains with his art?

Certainly not.

He will grow more and more indolent and careless?

Very true.

And the result will be that he becomes a worse potter?

Yes; he greatly deteriorates.

But, on the other hand, if he has no money, and cannot provide himself tools or instruments, he will not work equally well himself, nor will he teach his sons or apprentices to work equally well.

Certainly not.
Then, under the influence either of poverty or of wealth, workmen and their work are equally liable to degenerate?

That is evident.

Here, then, is a discovery of new evils, I said, against which the guardians will have to watch, or they will creep into the city unobserved.

What evils?

Wealth, I said, and poverty; the one is the parent of luxury and indolence, and the other of meanness and viciousness, and both of discontent.

That is very true, he replied; but still I should like to know, Socrates, how our city will be able to go to war, especially against an enemy who is rich and powerful, if deprived of the sinews of war.

There would certainly be a difficulty, I replied, in going to war with one such enemy; but there is no difficulty where there are two of them.

How so? he asked.

In the first place, I said, if we have to fight, our side will be trained warriors fighting against an army of rich men.

That is true, he said.

And do you not suppose, Adeimantus, that a single boxer who was perfect in his art would easily be a match for two stout and well-to-do gentlemen who were not boxers?

Hardly, if they came upon him at once.

What, not, I said, if he were able to run away and then turn and strike at the one who first came up? And supposing he were to do this several times under the heat of a scorching sun, might he not, being an expert, overturn more than one stout personage?

Certainly, he said, there would be nothing wonderful in that.

And yet rich men probably have a greater superiority in the science and practice of boxing than they have in military qualities.

Likely enough.
Then we may assume that our athletes will be able to fight with two or three times their own number?

I agree with you, for I think you right.

And suppose that, before engaging, our citizens send an embassy to one of the two cities, telling them what is the truth: Silver and gold we neither have nor are permitted to have, but you may; do you therefore come and help us in war, of and take the spoils of the other city: Who, on hearing these words, would choose to fight against lean wiry dogs, rather than, with the dogs on their side, against fat and tender sheep?

That is not likely; and yet there might be a danger to the poor State if the wealth of many States were to be gathered into one.

But how simple of you to use the term State at all of any but our own!

Why so?

You ought to speak of other States in the plural number; not one of them is a city, but many cities, as they say in the game. For indeed any city, however small, is in fact divided into two, one the city of the poor, the other of the rich; these are at war with one another; and in either there are many smaller divisions, and you would be altogether beside the mark if you treated them all as a single State. But if you deal with them as many, and give the wealth or power or persons of the one to the others, you will always have a great many friends and not many enemies. And your State, while the wise order which has now been prescribed continues to prevail in her, will be the greatest of States, I do not mean to say in reputation or appearance, but in deed and truth, though she number not more than a thousand defenders. A single State which is her equal you will hardly find, either among Hellenes or barbarians, though many that appear to be as great and many times greater.

That is most true, he said.

And what, I said, will be the best limit for our rulers to fix when they are considering the size of the State and the amount of territory which they are to include, and beyond which they will not go?

What limit would you propose?

I would allow the State to increase so far as is consistent with unity; that, I think, is the proper limit.
Very good, he said.

Here then, I said, is another order which will have to be conveyed to our guardians: Let our city be accounted neither large nor small, but one and self-sufficing.

And surely, said he, this is not a very severe order which we impose upon them.

And the other, said I, of which we were speaking before is lighter still, I mean the duty of degrading the offspring of the guardians when inferior, and of elevating into the rank of guardians the offspring of the lower classes, when naturally superior. The intention was, that, in the case of the citizens generally, each individual should be put to the use for which nature intended him, one to one work, and then every man would do his own business, and be one and not many; and so the whole city would be one and not many.

Yes, he said; that is not so difficult.

The regulations which we are prescribing, my good Adeimantus, are not, as might be supposed, a number of great principles, but trifles all, if care be taken, as the saying is, of the one great thing,—a thing, however, which I would rather call, not great, but sufficient for our purpose.

What may that be? he asked.

Education, I said, and nurture: If our citizens are well educated, and grow into sensible men, they will easily see their way through all these, as well as other matters which I omit; such, for example, as marriage, the possession of women and the procreation of children, which will all follow the general principle that friends have all things in common, as the proverb says.

That will be the best way of settling them.

Also, I said, the State, if once started well, moves with accumulating force like a wheel. For good nurture and education implant good constitutions, and these good constitutions taking root in a good education improve more and more, and this improvement affects the breed in man as in other animals.

Very possibly, he said.

Then to sum up: This is the point to which, above all, the attention
of our rulers should be directed,—that music and gymnastic be preserved in their original form, and no innovation made. They must do their utmost to maintain them intact. And when any one says that mankind most regard

The newest song which the singers have,

they will be afraid that he may be praising, not new songs, but a new kind of song; and this ought not to be praised, or conceived to be the meaning of the poet; for any musical innovation is full of danger to the whole State, and ought to be prohibited. So Damon tells me, and I can quite believe him;—he says that when modes of music change, of the State always change with them.

Yes, said Adeimantus; and you may add my suffrage to Damon's and your own.

Then, I said, our guardians must lay the foundations of their fortress in music?

Yes, he said; the lawlessness of which you speak too easily steals in.

Yes, I replied, in the form of amusement; and at first sight it appears harmless.

Why, yes, he said, and there is no harm; were it not that little by little this spirit of licence, finding a home, imperceptibly penetrates into manners and customs; whence, issuing with greater force, it invades contracts between man and man, and from contracts goes on to laws and constitutions, in utter recklessness, ending at last, Socrates, by an overthrow of all rights, private as well as public.

Is that true? I said.

That is my belief, he replied.

Then, as I was saying, our youth should be trained from the first in a stricter system, for if amusements become lawless, and the youths themselves become lawless, they can never grow up into well-conducted and virtuous citizens.

Very true, he said.

And when they have made a good beginning in play, and by the help of music have gained the habit of good order, then this habit of order, in a manner how unlike the lawless play of the others! will accompany them in all their actions and be a principle of growth to them, and if there
be any fallen places a principle in the State will raise them up again.

Very true, he said.

Thus educated, they will invent for themselves any lesser rules which their predecessors have altogether neglected.

What do you mean?

I mean such things as these:—when the young are to be silent before their elders; how they are to show respect to them by standing and making them sit; what honour is due to parents; what garments or shoes are to be worn; the mode of dressing the hair; deportment and manners in general. You would agree with me?

Yes.

But there is, I think, small wisdom in legislating about such matters.—I doubt if it is ever done; nor are any precise written enactments about them likely to be lasting.

Impossible.

It would seem, Adeimantus, that the direction in which education starts a man, will determine his future life. Does not like always attract like?

To be sure.

Until some one rare and grand result is reached which may be good, and may be the reverse of good?

That is not to be denied.

And for this reason, I said, I shall not attempt to legislate further about them.

Naturally enough, he replied.

Well, and about the business of the agora, dealings and the ordinary dealings between man and man, or again about agreements with the commencement with artisans; about insult and injury, of the commencement of actions, and the appointment of juries, what would you say? there may also arise questions about any impositions and extractions of market and harbour dues which may be required, and in general about the regulations of markets, police, harbours, and the like. But, oh heavens! shall we condescend to legislate on any of
these particulars?

I think, he said, that there is no need to impose laws about them on
good men; what regulations are necessary they will find out soon enough
for themselves.

Yes, I said, my friend, if God will only preserve to them the laws
which we have given them.

And without divine help, said Adeimantus, they will go on for ever
making and mending their laws and their lives in the hope of attaining
perfection.

You would compare them, I said, to those invalids who, having no
self-restraint, will not leave off their habits of intemperance?

Exactly.

Yes, I said; and what a delightful life they lead! they are always
doctoring and increasing and complicating their disorders, and always
fancying that they will be cured by any nostrum which anybody advises
them to try.

Such cases are very common, he said, with invalids of this sort.

Yes, I replied; and the charming thing is that they deem him their
worst enemy who tells them the truth, which is simply that, unless they
give up eating and drinking and wenching and idling, neither drug nor
cautery nor spell nor amulet nor any other remedy will avail.

Charming! he replied. I see nothing charming in going into a passion
with a man who tells you what is right.

These gentlemen, I said, do not seem to be in your good graces.

Assuredly not.

Nor would you praise the behaviour of States which act like the men
whom I was just now describing. For are there not ill-ordered States
in which the citizens are forbidden under pain of death to alter the
constitution; and yet he who most sweetly courts those who live under
this regime and indulges them and fawns upon them and is skilful in
anticipating and gratifying their humours is held to be a great and
good statesman--do not these States resemble the persons whom I was
describing?

Yes, he said; the States are as bad as the men; and I am very far from
praising them.

But do you not admire, I said, the coolness and dexterity of these ready ministers of political corruption?

Yes, he said, I do; but not of all of them, for there are some whom the applause of the multitude has deluded into the belief that they are really statesmen, and these are not much to be admired.

What do you mean? I said; you should have more feeling for them. When a man cannot measure, and a great many others who cannot measure declare that he is four cubits high, can he help believing what they say?

Nay, he said, certainly not in that case.

Well, then, do not be angry with them; for are they not as good as a play, trying their hand at paltry reforms such as I was describing; they are always fancying that by legislation they will make an end of frauds in contracts, and the other rascalities which I was mentioning, not knowing that they are in reality cutting off the heads of a hydra?

Yes, he said; that is just what they are doing.

I conceive, I said, that the true legislator will not trouble himself with this class of enactments whether concerning laws or the constitution either in an ill-ordered or in a well-ordered State; for in the former they are quite useless, and in the latter there will be no difficulty in devising them; and many of them will naturally flow out of our previous regulations.

What, then, he said, is still remaining to us of the work of legislation?

Nothing to us, I replied; but to Apollo, the God of Delphi, there remains the ordering of the greatest and noblest and chiepest things of all.

Which are they? he said.

The institution of temples and sacrifices, and the entire service of gods, demigods, and heroes; also the ordering of the repositories of the dead, and the rites which have to be observed by him who would propitiate the inhabitants of the world below. These are matters of which we are ignorant ourselves, and as founders of a city we should be unwise in trusting them to any interpreter but our ancestral deity. He is the god who sits in the center, on the navel of the earth, and he is
the interpreter of religion to all mankind.

You are right, and we will do as you propose.

But where, amid all this, is justice? son of Ariston, tell me where. Now that our city has been made habitable, light a candle and search, and get your brother and Polemarchus and the rest of our friends to help, and let us see where in it we can discover justice and where injustice, and in what they differ from one another, and which of them the man who would be happy should have for his portion, whether seen or unseen by gods and men.

SOCRATES - GLAUCON

Nonsense, said Glaucon: did you not promise to search yourself, saying that for you not to help justice in her need would be an impiety?

I do not deny that I said so, and as you remind me, I will be as good as my word; but you must join.

We will, he replied.

Well, then, I hope to make the discovery in this way: I mean to begin with the assumption that our State, if rightly ordered, is perfect.

That is most certain.

And being perfect, is therefore wise and valiant and temperate and just.

That is likewise clear.

And whichever of these qualities we find in the State, the one which is not found will be the residue?

Very good.

If there were four things, and we were searching for one of them, wherever it might be, the one sought for might be known to us from the first, and there would be no further trouble; or we might know the other three first, and then the fourth would clearly be the one left.

Very true, he said.

And is not a similar method to be pursued about the virtues, which are also four in number?

Clearly.
First among the virtues found in the State, wisdom comes into view, and in this I detect a certain peculiarity.

What is that?

The State which we have been describing is said to be wise as being good in counsel?

Very true.

And good counsel is clearly a kind of knowledge, for not by ignorance, but by knowledge, do men counsel well?

Clearly.

And the kinds of knowledge in a State are many and diverse?

Of course.

There is the knowledge of the carpenter; but is that the sort of knowledge which gives a city the title of wise and good in counsel?

Certainly not; that would only give a city the reputation of skill in carpentering.

Then a city is not to be called wise because possessing a knowledge which counsels for the best about wooden implements?

Certainly not.

Nor by reason of a knowledge which advises about brazen pots, I said, nor as possessing any other similar knowledge?

Not by reason of any of them, he said.

Nor yet by reason of a knowledge which cultivates the earth; that would give the city the name of agricultural?

Yes.

Well, I said, and is there any knowledge in our recently founded State among any of the citizens which advises, not about any particular thing in the State, but about the whole, and considers how a State can best deal with itself and with other States?

There certainly is.
And what is knowledge, and among whom is it found? I asked.

It is the knowledge of the guardians, he replied, and found among those whom we were just now describing as perfect guardians.

And what is the name which the city derives from the possession of this sort of knowledge?

The name of good in counsel and truly wise.

And will there be in our city more of these true guardians or more smiths?

The smiths, he replied, will be far more numerous.

Will not the guardians be the smallest of all the classes who receive a name from the profession of some kind of knowledge?

Much the smallest.

And so by reason of the smallest part or class, and of the knowledge which resides in this presiding and ruling part of itself, the whole State, being thus constituted according to nature, will be wise; and this, which has the only knowledge worthy to be called wisdom, has been ordained by nature to be of all classes the least.

Most true.

Thus, then, I said, the nature and place in the State of one of the four virtues has somehow or other been discovered.

And, in my humble opinion, very satisfactorily discovered, he replied.

Again, I said, there is no difficulty in seeing the nature of courage; and in what part that quality resides which gives the name of courageous to the State.

How do you mean?

Why, I said, every one who calls any State courageous or cowardly, will be thinking of the part which fights and goes out to war on the State's behalf.

No one, he replied, would ever think of any other.

Certainly not.
The rest of the citizens may be courageous or may be cowardly but their courage or cowardice will not, as I conceive, have the effect of making the city either the one or the other.

The city will be courageous in virtue of a portion of herself which preserves under all circumstances that opinion about the nature of things to be feared and not to be feared in which our legislator educated them; and this is what you term courage.

I should like to hear what you are saying once more, for I do not think that I perfectly understand you.

I mean that courage is a kind of salvation.

Salvation of what?

Of the opinion respecting things to be feared, what they are and of what nature, which the law implants through education; and I mean by the words 'under all circumstances' to intimate that in pleasure or in pain, or under the influence of desire or fear, a man preserves, and does not lose this opinion. Shall I give you an illustration?

If you please.

You know, I said, that dyers, when they want to dye wool for making the true sea-purple, begin by selecting their white colour first; this they prepare and dress with much care and pains, in order that the white ground may take the purple hue in full perfection. The dyeing then proceeds; and whatever is dyed in this manner becomes a fast colour, and no washing either with lyes or without them can take away the bloom. But, when the ground has not been duly prepared, you will have noticed how poor is the look either of purple or of any other colour.

Yes, he said; I know that they have a washed-out and ridiculous appearance.

Then now, I said, you will understand what our object was in selecting our soldiers, and educating them in music and gymnastic; we were contriving influences which would prepare them to take the dye of the laws in perfection, and the colour of their opinion about dangers and of every other opinion was to be indelibly fixed by their nurture and training, not to be washed away by such potent lyes as pleasure--mightier agent far in washing the soul than any soda or lye; or by sorrow, fear, and desire, the mightiest of all other solvents. And this sort of universal saving power of true opinion in conformity with law about real and false dangers I call and maintain to be
courage, unless you disagree.

But I agree, he replied; for I suppose that you mean to exclude mere uninstructed courage, such as that of a wild beast or of a slave--this, in your opinion, is not the courage which the law ordains, and ought to have another name.

Most certainly.

Then I may infer courage to be such as you describe?

Why, yes, said I, you may, and if you add the words 'of a citizen,' you will not be far wrong;--hereafter, if you like, we will carry the examination further, but at present we are seeking not for courage but justice; and for the purpose of our enquiry we have said enough.

You are right, he replied.

Two virtues remain to be discovered in the State-first temperance, and then justice which is the end of our search.

Very true.

Now, can we find justice without troubling ourselves about temperance?

I do not know how that can be accomplished, he said, nor do I desire that justice should be brought to light and temperance lost sight of; and therefore I wish that you would do me the favour of considering temperance first.

Certainly, I replied, I should not be justified in refusing your request.

Then consider, he said.

Yes, I replied; I will; and as far as I can at present see, the virtue of temperance has more of the nature of harmony and symphony than the preceding.

How so? he asked.

Temperance, I replied, is the ordering or controlling of certain pleasures and desires; this is curiously enough implied in the saying of 'a man being his own master' and other traces of the same notion may be found in language.

No doubt, he said.
There is something ridiculous in the expression 'master of himself'; for the master is also the servant and the servant the master; and in all these modes of speaking the same person is denoted.

Certainly.

The meaning is, I believe, that in the human soul there is a better and also a worse principle; and when the better has the worse under control, then a man is said to be master of himself; and this is a term of praise: but when, owing to evil education or association, the better principle, which is also the smaller, is overwhelmed by the greater mass of the worse--in this case he is blamed and is called the slave of self and unprincipled.

Yes, there is reason in that.

And now, I said, look at our newly created State, and there you will find one of these two conditions realised; for the State, as you will acknowledge, may be justly called master of itself, if the words 'temperance' and 'self-mastery' truly express the rule of the better part over the worse.

Yes, he said, I see that what you say is true.

Let me further note that the manifold and complex pleasures and desires and pains are generally found in children and women and servants, and in the freemen so called who are of the lowest and more numerous class.

Certainly, he said.

Whereas the simple and moderate desires which follow reason, and are under the guidance of mind and true opinion, are to be found only in a few, and those the best born and best educated.

Very true. These two, as you may perceive, have a place in our State; and the meaner desires of the are held down by the virtuous desires and wisdom of the few.

That I perceive, he said.

Then if there be any city which may be described as master of its own pleasures and desires, and master of itself, ours may claim such a designation?

Certainly, he replied.
It may also be called temperate, and for the same reasons?

Yes.

And if there be any State in which rulers and subjects will be agreed as to the question who are to rule, that again will be our State?

Undoubtedly.

And the citizens being thus agreed among themselves, in which class will temperance be found--in the rulers or in the subjects?

In both, as I should imagine, he replied.

Do you observe that we were not far wrong in our guess that temperance was a sort of harmony?

Why so?

Why, because temperance is unlike courage and wisdom, each of which resides in a part only, the one making the State wise and the other valiant; not so temperance, which extends to the whole, and runs through all the notes of the scale, and produces a harmony of the weaker and the stronger and the middle class, whether you suppose them to be stronger or weaker in wisdom or power or numbers or wealth, or anything else. Most truly then may we deem temperance to be the agreement of the naturally superior and inferior, as to the right to rule of either, both in states and individuals.

I entirely agree with you.

And so, I said, we may consider three out of the four virtues to have been discovered in our State. The last of those qualities which make a state virtuous must be justice, if we only knew what that was.

The inference is obvious.

The time then has arrived, Glaucon, when, like huntsmen, we should surround the cover, and look sharp that justice does not steal away, and pass out of sight and escape us; for beyond a doubt she is somewhere in this country: watch therefore and strive to catch a sight of her, and if you see her first, let me know.

Would that I could! but you should regard me rather as a follower who has just eyes enough to, see what you show him--that is about as much as I am good for.
Offer up a prayer with me and follow.

I will, but you must show me the way.

Here is no path, I said, and the wood is dark and perplexing; still we must push on.

Let us push on.

Here I saw something: Halloo! I said, I begin to perceive a track, and I believe that the quarry will not escape.

Good news, he said.

Truly, I said, we are stupid fellows.

Why so?

Why, my good sir, at the beginning of our enquiry, ages ago, there was justice tumbling out at our feet, and we never saw her; nothing could be more ridiculous. Like people who go about looking for what they have in their hands--that was the way with us--we looked not at what we were seeking, but at what was far off in the distance; and therefore, I suppose, we missed her.

What do you mean?

I mean to say that in reality for a long time past we have been talking of justice, and have failed to recognise her.

I grow impatient at the length of your exordium.

Well then, tell me, I said, whether I am right or not: You remember the original principle which we were always laying down at the foundation of the State, that one man should practise one thing only, the thing to which his nature was best adapted;--now justice is this principle or a part of it.

Yes, we often said that one man should do one thing only.

Further, we affirmed that justice was doing one's own business, and not being a busybody; we said so again and again, and many others have said the same to us.

Yes, we said so.

Then to do one's own business in a certain way may be assumed to be
justice. Can you tell me whence I derive this inference?

I cannot, but I should like to be told.

Because I think that this is the only virtue which remains in the State when the other virtues of temperance and courage and wisdom are abstracted; and, that this is the ultimate cause and condition of the existence of all of them, and while remaining in them is also their preservative; and we were saying that if the three were discovered by us, justice would be the fourth or remaining one.

That follows of necessity.

If we are asked to determine which of these four qualities by its presence contributes most to the excellence of the State, whether the agreement of rulers and subjects, or the preservation in the soldiers of the opinion which the law ordains about the true nature of dangers, or wisdom and watchfulness in the rulers, or whether this other which I am mentioning, and which is found in children and women, slave and freeman, artisan, ruler, subject,—the quality, I mean, of every one doing his own work, and not being a busybody, would claim the palm—the question is not so easily answered.

Certainly, he replied, there would be a difficulty in saying which.

Then the power of each individual in the State to do his own work appears to compete with the other political virtues, wisdom, temperance, courage.

Yes, he said.

And the virtue which enters into this competition is justice?

Exactly.

Let us look at the question from another point of view: Are not the rulers in a State those to whom you would entrust the office of determining suits at law?

Certainly.

And are suits decided on any other ground but that a man may neither take what is another's, nor be deprived of what is his own?

Yes; that is their principle.

Which is a just principle?
Yes.

Then on this view also justice will be admitted to be the having and doing what is a man's own, and belongs to him?

Very true.

Think, now, and say whether you agree with me or not. Suppose a carpenter to be doing the business of a cobbler, or a cobbler of a carpenter; and suppose them to exchange their implements or their duties, or the same person to be doing the work of both, or whatever be the change; do you think that any great harm would result to the State?

Not much.

But when the cobbler or any other man whom nature designed to be a trader, having his heart lifted up by wealth or strength or the number of his followers, or any like advantage, attempts to force his way into the class of warriors, or a warrior into that of legislators and guardians, for which he is unfitted, and either to take the implements or the duties of the other; or when one man is trader, legislator, and warrior all in one, then I think you will agree with me in saying that this interchange and this meddling of one with another is the ruin of the State.

Most true.

Seeing then, I said, that there are three distinct classes, any meddling of one with another, or the change of one into another, is the greatest harm to the State, and may be most justly termed evil-doing?

Precisely.

And the greatest degree of evil-doing to one's own city would be termed by you injustice?

Certainly.

This then is injustice; and on the other hand when the trader, the auxiliary, and the guardian each do their own business, that is justice, and will make the city just.

I agree with you.

We will not, I said, be over-positive as yet; but if, on trial, this conception of justice be verified in the individual as well as in the
State, there will be no longer any room for doubt; if it be not verified, we must have a fresh enquiry. First let us complete the old investigation, which we began, as you remember, under the impression that, if we could previously examine justice on the larger scale, there would be less difficulty in discerning her in the individual. That larger example appeared to be the State, and accordingly we constructed as good a one as we could, knowing well that in the good State justice would be found. Let the discovery which we made be now applied to the individual—if they agree, we shall be satisfied; or, if there be a difference in the individual, we will come back to the State and have another trial of the theory. The friction of the two when rubbed together may possibly strike a light in which justice will shine forth, and the vision which is then revealed we will fix in our souls.

That will be in regular course; let us do as you say.

I proceeded to ask: When two things, a greater and less, are called by the same name, are they like or unlike in so far as they are called the same?

Like, he replied.

The just man then, if we regard the idea of justice only, will be like the just State?

He will.

And a State was thought by us to be just when the three classes in the State severally did their own business; and also thought to be temperate and valiant and wise by reason of certain other affections and qualities of these same classes?

True, he said.

And so of the individual; we may assume that he has the same three principles in his own soul which are found in the State; and he may be rightly described in the same terms, because he is affected in the same manner?

Certainly, he said.

Once more then, O my friend, we have alighted upon an easy question—whether the soul has these three principles or not?

An easy question! Nay, rather, Socrates, the proverb holds that hard is the good.
Very true, I said; and I do not think that the method which we are employing is at all adequate to the accurate solution of this question; the true method is another and a longer one. Still we may arrive at a solution not below the level of the previous enquiry.

May we not be satisfied with that? he said;--under the circumstances, I am quite content.

I too, I replied, shall be extremely well satisfied.

Then faint not in pursuing the speculation, he said.

Must we not acknowledge, I said, that in each of us there are the same principles and habits which there are in the State; and that from the individual they pass into the State?--how else can they come there? Take the quality of passion or spirit;--it would be ridiculous to imagine that this quality, when found in States, is not derived from the individuals who are supposed to possess it, e.g. the Thracians, Scythians, and in general the northern nations; and the same may be said of the love of knowledge, which is the special characteristic of our part of the world, or of the love of money, which may, with equal truth, be attributed to the Phoenicians and Egyptians.

Exactly so, he said.

There is no difficulty in understanding this.

None whatever.

But the question is not quite so easy when we proceed to ask whether these principles are three or one; whether, that is to say, we learn with one part of our nature, are angry with another, and with a third part desire the satisfaction of our natural appetites; or whether the whole soul comes into play in each sort of action--to determine that is the difficulty.

Yes, he said; there lies the difficulty.

Then let us now try and determine whether they are the same or different.

How can we? he asked.

I replied as follows: The same thing clearly cannot act or be acted upon in the same part or in relation to the same thing at the same time, in contrary ways; and therefore whenever this contradiction occurs in things apparently the same, we know that they are really not
the same, but different.

Good.

For example, I said, can the same thing be at rest and in motion at the same time in the same part?

Impossible.

Still, I said, let us have a more precise statement of terms, lest we should hereafter fall out by the way. Imagine the case of a man who is standing and also moving his hands and his head, and suppose a person to say that one and the same person is in motion and at rest at the same moment—to such a mode of speech we should object, and should rather say that one part of him is in motion while another is at rest.

Very true.

And suppose the objector to refine still further, and to draw the nice distinction that not only parts of tops, but whole tops, when they spin round with their pegs fixed on the spot, are at rest and in motion at the same time (and he may say the same of anything which revolves in the same spot), his objection would not be admitted by us, because in such cases things are not at rest and in motion in the same parts of themselves; we should rather say that they have both an axis and a circumference, and that the axis stands still, for there is no deviation from the perpendicular; and that the circumference goes round. But if, while revolving, the axis inclines either to the right or left, forwards or backwards, then in no point of view can they be at rest.

That is the correct mode of describing them, he replied.

Then none of these objections will confuse us, or incline us to believe that the same thing at the same time, in the same part or in relation to the same thing, can act or be acted upon in contrary ways.

Certainly not, according to my way of thinking.

Yet, I said, that we may not be compelled to examine all such objections, and prove at length that they are untrue, let us assume their absurdity, and go forward on the understanding that hereafter, if this assumption turn out to be untrue, all the consequences which follow shall be withdrawn.

Yes, he said, that will be the best way.
Well, I said, would you not allow that assent and dissent, desire and aversion, attraction and repulsion, are all of them opposites, whether they are regarded as active or passive (for that makes no difference in the fact of their opposition)?

Yes, he said, they are opposites.

Well, I said, and hunger and thirst, and the desires in general, and again willing and wishing.--all these you would refer to the classes already mentioned. You would say--would you not?--that the soul of him who desires is seeking after the object of his desires; or that he is drawing to himself the thing which he wishes to possess: or again, when a person wants anything to be given him, his mind, longing for the realisation of his desires, intimates his wish to have it by a nod of assent, as if he had been asked a question?

Very true.

And what would you say of unwillingness and dislike and the absence of desire; should not these be referred to the opposite class of repulsion and rejection?

Certainly.

Admitting this to be true of desire generally, let us suppose a particular class of desires, and out of these we will select hunger and thirst, as they are termed, which are the most obvious of them?

Let us take that class, he said.

The object of one is food, and of the other drink?

Yes.

And here comes the point: is not thirst the desire which the soul has of drink, and of drink only; not of drink qualified by anything else; for example, warm or cold, or much or little, or, in a word, drink of any particular sort: but if the thirst be accompanied by heat, then the desire is of cold drink; or, if accompanied by cold, then of warm drink; or, if the thirst be excessive, then the drink which is desired will be excessive; or, if not great, the quantity of drink will also be small: but thirst pure and simple will desire drink pure and simple, which is the natural satisfaction of thirst, as food is of hunger?

Yes, he said; the simple desire is, as you say, in every case of the simple object, and the qualified desire of the qualified object.
But here a confusion may arise; and I should wish to guard against an opponent starting up and saying that no man desires drink only, but good drink, or food only, but good food; for good is the universal object of desire, and thirst being a desire, will necessarily be thirst after good drink; and the same is true of every other desire.

Yes, he replied, the opponent might have something to say.

Nevertheless I should still maintain, that of relatives some have a quality attached to either term of the relation; others are simple and have their correlatives simple.

I do not know what you mean.

Well, you know of course that the greater is relative to the less?

Certainly.

And the much greater to the much less?

Yes.

And the sometime greater to the sometime less, and the greater that is to be to the less that is to be?

Certainly, he said.

And so of more and less, and of other correlative terms, such as the double and the half, or again, the heavier and the lighter, the swifter and the slower; and of hot and cold, and of any other relatives;--is not this true of all of them?

Yes.

And does not the same principle hold in the sciences? The object of science is knowledge (assuming that to be the true definition), but the object of a particular science is a particular kind of knowledge; I mean, for example, that the science of house-building is a kind of knowledge which is defined and distinguished from other kinds and is therefore termed architecture.

Certainly.

Because it has a particular quality which no other has?

Yes.
And it has this particular quality because it has an object of a particular kind; and this is true of the other arts and sciences?

Yes.

Now, then, if I have made myself clear, you will understand my original meaning in what I said about relatives. My meaning was, that if one term of a relation is taken alone, the other is taken alone; if one term is qualified, the other is also qualified. I do not mean to say that relatives may not be disparate, or that the science of health is healthy, or of disease necessarily diseased, or that the sciences of good and evil are therefore good and evil; but only that, when the term science is no longer used absolutely, but has a qualified object which in this case is the nature of health and disease, it becomes defined, and is hence called not merely science, but the science of medicine.

I quite understand, and I think as you do.

Would you not say that thirst is one of these essentially relative terms, having clearly a relation--

Yes, thirst is relative to drink.

And a certain kind of thirst is relative to a certain kind of drink; but thirst taken alone is neither of much nor little, nor of good nor bad, nor of any particular kind of drink, but of drink only?

Certainly.

Then the soul of the thirsty one, in so far as he is thirsty, desires only drink; for this he yearns and tries to obtain it?

That is plain.

And if you suppose something which pulls a thirsty soul away from drink, that must be different from the thirsty principle which draws him like a beast to drink; for, as we were saying, the same thing cannot at the same time with the same part of itself act in contrary ways about the same.

Impossible.

No more than you can say that the hands of the archer push and pull the bow at the same time, but what you say is that one hand pushes and the other pulls.

Exactly so, he replied.
And might a man be thirsty, and yet unwilling to drink?

Yes, he said, it constantly happens.

And in such a case what is one to say? Would you not say that there was something in the soul bidding a man to drink, and something else forbidding him, which is other and stronger than the principle which bids him?

I should say so.

And the forbidding principle is derived from reason, and that which bids and attracts proceeds from passion and disease?

Clearly.

Then we may fairly assume that they are two, and that they differ from one another; the one with which man reasons, we may call the rational principle of the soul, the other, with which he loves and hungers and thirsts and feels the flutterings of any other desire, may be termed the irrational or appetitive, the ally of sundry pleasures and satisfactions?

Yes, he said, we may fairly assume them to be different.

Then let us finally determine that there are two principles existing in the soul. And what of passion, or spirit? Is it a third, or akin to one of the preceding?

I should be inclined to say--akin to desire.

Well, I said, there is a story which I remember to have heard, and in which I put faith. The story is, that Leontius, the son of Aglaion, coming up one day from the Piraeus, under the north wall on the outside, observed some dead bodies lying on the ground at the place of execution. He felt a desire to see them, and also a dread and abhorrence of them; for a time he struggled and covered his eyes, but at length the desire got the better of him; and forcing them open, he ran up to the dead bodies, saying, Look, ye wretches, take your fill of the fair sight.

I have heard the story myself, he said.

The moral of the tale is, that anger at times goes to war with desire, as though they were two distinct things.
Yes; that is the meaning, he said.

And are there not many other cases in which we observe that when a man's desires violently prevail over his reason, he reviles himself, and is angry at the violence within him, and that in this struggle, which is like the struggle of factions in a State, his spirit is on the side of his reason;--but for the passionate or spirited element to take part with the desires when reason that she should not be opposed, is a sort of thing which I believe that you never observed occurring in yourself, nor, as I should imagine, in any one else?

Certainly not.

Suppose that a man thinks he has done a wrong to another, the nobler he is the less able is he to feel indignant at any suffering, such as hunger, or cold, or any other pain which the injured person may inflict upon him--these he deems to be just, and, as I say, his anger refuses to be excited by them.

True, he said.

But when he thinks that he is the sufferer of the wrong, then he boils and chafes, and is on the side of what he believes to be justice; and because he suffers hunger or cold or other pain he is only the more determined to persevere and conquer. His noble spirit will not be quelled until he either slays or is slain; or until he hears the voice of the shepherd, that is, reason, bidding his dog bark no more.

The illustration is perfect, he replied; and in our State, as we were saying, the auxiliaries were to be dogs, and to hear the voice of the rulers, who are their shepherds.

I perceive, I said, that you quite understand me; there is, however, a further point which I wish you to consider.

What point?

You remember that passion or spirit appeared at first sight to be a kind of desire, but now we should say quite the contrary; for in the conflict of the soul spirit is arrayed on the side of the rational principle.

Most assuredly.

But a further question arises: Is passion different from reason also, or only a kind of reason; in which latter case, instead of three principles in the soul, there will only be two, the rational and the
concupiscent; or rather, as the State was composed of three classes, traders, auxiliaries, counsellors, so may there not be in the individual soul a third element which is passion or spirit, and when not corrupted by bad education is the natural auxiliary of reason.

Yes, he said, there must be a third.

Yes, I replied, if passion, which has already been shown to be different from desire, turn out also to be different from reason.

But that is easily proved:--We may observe even in young children that they are full of spirit almost as soon as they are born, whereas some of them never seem to attain to the use of reason, and most of them late enough.

Excellent, I said, and you may see passion equally in brute animals, which is a further proof of the truth of what you are saying. And we may once more appeal to the words of Homer, which have been already quoted by us,

    He smote his breast, and thus rebuked his soul,

for in this verse Homer has clearly supposed the power which reasons about the better and worse to be different from the unreasoning anger which is rebuked by it.

Very true, he said.

And so, after much tossing, we have reached land, and are fairly agreed that the same principles which exist in the State exist also in the individual, and that they are three in number.

Exactly.

Must we not then infer that the individual is wise in the same way, and in virtue of the same quality which makes the State wise?

Certainly.

Also that the same quality which constitutes courage in the State constitutes courage in the individual, and that both the State and the individual bear the same relation to all the other virtues?

Assuredly.

And the individual will be acknowledged by us to be just in the same way in which the State is just?
That follows, of course.

We cannot but remember that the justice of the State consisted in each of the three classes doing the work of its own class?

We are not very likely to have forgotten, he said.

We must recollect that the individual in whom the several qualities of his nature do their own work will be just, and will do his own work?

Yes, he said, we must remember that too.

And ought not the rational principle, which is wise, and has the care of the whole soul, to rule, and the passionate or spirited principle to be the subject and ally?

Certainly.

And, as we were saying, the united influence of music and gymnastic will bring them into accord, nerving and sustaining the reason with noble words and lessons, and moderating and soothing and civilizing the wildness of passion by harmony and rhythm?

Quite true, he said.

And these two, thus nurtured and educated, and having learned truly to know their own functions, will rule over the concupiscent, which in each of us is the largest part of the soul and by nature most insatiable of gain; over this they will keep guard, lest, waxing great and strong with the fulness of bodily pleasures, as they are termed, the concupiscent soul, no longer confined to her own sphere, should attempt to enslave and rule those who are not her natural-born subjects, and overturn the whole life of man?

Very true, he said.

Both together will they not be the best defenders of the whole soul and the whole body against attacks from without; the one counselling, and the other fighting under his leader, and courageously executing his commands and counsels?

True.

And he is to be deemed courageous whose spirit retains in pleasure and in pain the commands of reason about what he ought or ought not to fear?
Right, he replied.

And him we call wise who has in him that little part which rules, and which proclaims these commands; that part too being supposed to have a knowledge of what is for the interest of each of the three parts and of the whole?

Assuredly.

And would you not say that he is temperate who has these same elements in friendly harmony, in whom the one ruling principle of reason, and the two subject ones of spirit and desire are equally agreed that reason ought to rule, and do not rebel?

Certainly, he said, that is the true account of temperance whether in the State or individual.

And surely, I said, we have explained again and again how and by virtue of what quality a man will be just.

That is very certain.

And is justice dimmer in the individual, and is her form different, or is she the same which we found her to be in the State?

There is no difference in my opinion, he said.

Because, if any doubt is still lingering in our minds, a few commonplace instances will satisfy us of the truth of what I am saying.

What sort of instances do you mean?

If the case is put to us, must we not admit that the just State, or the man who is trained in the principles of such a State, will be less likely than the unjust to make away with a deposit of gold or silver? Would any one deny this?

No one, he replied.

Will the just man or citizen ever be guilty of sacrilege or theft, or treachery either to his friends or to his country?

Never.

Neither will he ever break faith where there have been oaths or agreements?
Impossible.

No one will be less likely to commit adultery, or to dishonour his father and mother, or to fall in his religious duties?

No one.

And the reason is that each part of him is doing its own business, whether in ruling or being ruled?

Exactly so.

Are you satisfied then that the quality which makes such men and such states is justice, or do you hope to discover some other?

Not I, indeed.

Then our dream has been realised; and the suspicion which we entertained at the beginning of our work of construction, that some divine power must have conducted us to a primary form of justice, has now been verified?

Yes, certainly.

And the division of labour which required the carpenter and the shoemaker and the rest of the citizens to be doing each his own business, and not another's, was a shadow of justice, and for that reason it was of use?

Clearly.

But in reality justice was such as we were describing, being concerned however, not with the outward man, but with the inward, which is the true self and concernment of man: for the just man does not permit the several elements within him to interfere with one another, or any of them to do the work of others,—he sets in order his own inner life, and is his own master and his own law, and at peace with himself; and when he has bound together the three principles within him, which may be compared to the higher, lower, and middle notes of the scale, and the intermediate intervals—when he has bound all these together, and is no longer many, but has become one entirely temperate and perfectly adjusted nature, then he proceeds to act, if he has to act, whether in a matter of property, or in the treatment of the body, or in some affair of politics or private business; always thinking and calling that which preserves and co-operates with this harmonious condition, just and good action, and the knowledge which presides over it, wisdom, and that which at any time impairs this condition, he will call unjust
action, and the opinion which presides over it ignorance.

You have said the exact truth, Socrates.

Very good; and if we were to affirm that we had discovered the just man and the just State, and the nature of justice in each of them, we should not be telling a falsehood?

Most certainly not.

May we say so, then?

Let us say so.

And now, I said, injustice has to be considered.

Clearly.

Must not injustice be a strife which arises among the three principles--a meddlesomeness, and interference, and rising up of a part of the soul against the whole, an assertion of unlawful authority, which is made by a rebellious subject against a true prince, of whom he is the natural vassal,—what is all this confusion and delusion but injustice, and intemperance and cowardice and ignorance, and every form of vice?

Exactly so.

And if the nature of justice and injustice be known, then the meaning of acting unjustly and being unjust, or, again, of acting justly, will also be perfectly clear?

What do you mean? he said.

Why, I said, they are like disease and health; being in the soul just what disease and health are in the body.

How so? he said.

Why, I said, that which is healthy causes health, and that which is unhealthy causes disease.

Yes.

And just actions cause justice, and unjust actions cause injustice?

That is certain.
And the creation of health is the institution of a natural order and government of one by another in the parts of the body; and the creation of disease is the production of a state of things at variance with this natural order?

True.

And is not the creation of justice the institution of a natural order and government of one by another in the parts of the soul, and the creation of injustice the production of a state of things at variance with the natural order?

Exactly so, he said.

Then virtue is the health and beauty and well-being of the soul, and vice the disease and weakness and deformity of the same?

True.

And do not good practices lead to virtue, and evil practices to vice?

Assuredly.

Still our old question of the comparative advantage of justice and injustice has not been answered: Which is the more profitable, to be just and act justly and practise virtue, whether seen or unseen of gods and men, or to be unjust and act unjustly, if only unpunished and unreformed?

In my judgment, Socrates, the question has now become ridiculous. We know that, when the bodily constitution is gone, life is no longer endurable, though pampered with all kinds of meats and drinks, and having all wealth and all power; and shall we be told that when the very essence of the vital principle is undermined and corrupted, life is still worth having to a man, if only he be allowed to do whatever he likes with the single exception that he is not to acquire justice and virtue, or to escape from injustice and vice; assuming them both to be such as we have described?

Yes, I said, the question is, as you say, ridiculous. Still, as we are near the spot at which we may see the truth in the clearest manner with our own eyes, let us not faint by the way.

Certainly not, he replied.

Come up hither, I said, and behold the various forms of vice, those of
them, I mean, which are worth looking at.

I am following you, he replied: proceed.

I said, The argument seems to have reached a height from which, as from some tower of speculation, a man may look down and see that virtue is one, but that the forms of vice are innumerable; there being four special ones which are deserving of note.

What do you mean? he said.

I mean, I replied, that there appear to be as many forms of the soul as there are distinct forms of the State.

How many?

There are five of the State, and five of the soul, I said.

What are they?

The first, I said, is that which we have been describing, and which may be said to have two names, monarchy and aristocracy, accordingly as rule is exercised by one distinguished man or by many.

True, he replied.

But I regard the two names as describing one form only; for whether the government is in the hands of one or many, if the governors have been trained in the manner which we have supposed, the fundamental laws of the State will be maintained.

That is true, he replied.

BOOK V

SOCRATES - GLAUCON - ADEIMANTUS

SUCH is the good and true City or State, and the good and man is of the same pattern; and if this is right every other is wrong; and the evil is one which affects not only the ordering of the State, but also the regulation of the individual soul, and is exhibited in four forms.

What are they? he said.
I was proceeding to tell the order in which the four evil forms appeared to me to succeed one another, when Pole marchus, who was sitting a little way off, just beyond Adeimantus, began to whisper to him: stretching forth his hand, he took hold of the upper part of his coat by the shoulder, and drew him towards him, leaning forward himself so as to be quite close and saying something in his ear, of which I only caught the words, 'Shall we let him off, or what shall we do?'

Certainly not, said Adeimantus, raising his voice.

Who is it, I said, whom you are refusing to let off?

You, he said.

I repeated, Why am I especially not to be let off?

Why, he said, we think that you are lazy, and mean to cheat us out of a whole chapter which is a very important part of the story; and you fancy that we shall not notice your airy way of proceeding; as if it were self-evident to everybody, that in the matter of women and children 'friends have all things in common.'

And was I not right, Adeimantus?

Yes, he said; but what is right in this particular case, like everything else, requires to be explained; for community may be of many kinds. Please, therefore, to say what sort of community you mean. We have been long expecting that you would tell us something about the family life of your citizens--how they will bring children into the world, and rear them when they have arrived, and, in general, what is the nature of this community of women and children--for we are of opinion that the right or wrong management of such matters will have a great and paramount influence on the State for good or for evil. And now, since the question is still undetermined, and you are taking in hand another State, we have resolved, as you heard, not to let you go until you give an account of all this.

To that resolution, said Glaucon, you may regard me as saying Agreed.

SOCRATES - ADEIMANTUS - GLAUCON - THRASYMACHUS

And without more ado, said Thrasymachus, you may consider us all to be equally agreed.

I said, You know not what you are doing in thus assailing me: What an argument are you raising about the State! Just as I thought that I had
finished, and was only too glad that I had laid this question to sleep, and was reflecting how fortunate I was in your acceptance of what I then said, you ask me to begin again at the very foundation, ignorant of what a hornet's nest of words you are stirring. Now I foresaw this gathering trouble, and avoided it.

For what purpose do you conceive that we have come here, said Thrasymachus,—to look for gold, or to hear discourse?

Yes, but discourse should have a limit.

Yes, Socrates, said Glaucon, and the whole of life is the only limit which wise men assign to the hearing of such discourses. But never mind about us; take heart yourself and answer the question in your own way: What sort of community of women and children is this which is to prevail among our guardians? and how shall we manage the period between birth and education, which seems to require the greatest care? Tell us how these things will be.

Yes, my simple friend, but the answer is the reverse of easy; many more doubts arise about this than about our previous conclusions. For the practicability of what is said may be doubted; and looked at in another point of view, whether the scheme, if ever so practicable, would be for the best, is also doubtful. Hence I feel a reluctance to approach the subject, lest our aspiration, my dear friend, should turn out to be a dream only.

Fear not, he replied, for your audience will not be hard upon you; they are not sceptical or hostile.

I said: My good friend, I suppose that you mean to encourage me by these words.

Yes, he said.

Then let me tell you that you are doing just the reverse; the encouragement which you offer would have been all very well had I myself believed that I knew what I was talking about: to declare the truth about matters of high interest which a man honours and loves among wise men who love him need occasion no fear or faltering in his mind; but to carry on an argument when you are yourself only a hesitating enquirer, which is my condition, is a dangerous and slippery thing; and the danger is not that I shall be laughed at (of which the fear would be childish), but that I shall miss the truth where I have most need to be sure of my footing, and drag my friends after me in my fall. And I pray Nemesis not to visit upon me the words which I am going to utter. For I do indeed believe that to be an involuntary
homicide is a less crime than to be a deceiver about beauty or goodness or justice in the matter of laws. And that is a risk which I would rather run among enemies than among friends, and therefore you do well to encourage me.

Glaucon laughed and said: Well then, Socrates, in case you and your argument do us any serious injury you shall be acquitted beforehand of the and shall not be held to be a deceiver; take courage then and speak.

Well, I said, the law says that when a man is acquitted he is free from guilt, and what holds at law may hold in argument.

Then why should you mind?

Well, I replied, I suppose that I must retrace my steps and say what I perhaps ought to have said before in the proper place. The part of the men has been played out, and now properly enough comes the turn of the women. Of them I will proceed to speak, and the more readily since I am invited by you.

For men born and educated like our citizens, the only way, in my opinion, of arriving at a right conclusion about the possession and use of women and children is to follow the path on which we originally started, when we said that the men were to be the guardians and watchdogs of the herd.

True.

Let us further suppose the birth and education of our women to be subject to similar or nearly similar regulations; then we shall see whether the result accords with our design.

What do you mean?

What I mean may be put into the form of a question, I said: Are dogs divided into hes and shes, or do they both share equally in hunting and in keeping watch and in the other duties of dogs? or do we entrust to the males the entire and exclusive care of the flocks, while we leave the females at home, under the idea that the bearing and suckling their puppies is labour enough for them?

No, he said, they share alike; the only difference between them is that the males are stronger and the females weaker.

But can you use different animals for the same purpose, unless they are bred and fed in the same way?
You cannot.

Then, if women are to have the same duties as men, they must have the same nurture and education?

Yes.

The education which was assigned to the men was music and gymnastic. Yes.

Then women must be taught music and gymnastic and also the art of war, which they must practise like the men?

That is the inference, I suppose.

I should rather expect, I said, that several of our proposals, if they are carried out, being unusual, may appear ridiculous.

No doubt of it.

Yes, and the most ridiculous thing of all will be the sight of women naked in the palaestra, exercising with the men, especially when they are no longer young; they certainly will not be a vision of beauty, any more than the enthusiastic old men who in spite of wrinkles and ugliness continue to frequent the gymnasia.

Yes, indeed, he said: according to present notions the proposal would be thought ridiculous.

But then, I said, as we have determined to speak our minds, we must not fear the jests of the wits which will be directed against this sort of innovation; how they will talk of women's attainments both in music and gymnastic, and above all about their wearing armour and riding upon horseback!

Very true, he replied.

Yet having begun we must go forward to the rough places of the law; at the same time begging of these gentlemen for once in their life to be serious. Not long ago, as we shall remind them, the Hellenes were of the opinion, which is still generally received among the barbarians, that the sight of a naked man was ridiculous and improper; and when first the Cretans and then the Lacedaemonians introduced the custom, the wits of that day might equally have ridiculed the innovation.

No doubt.
But when experience showed that to let all things be uncovered was far better than to cover them up, and the ludicrous effect to the outward eye vanished before the better principle which reason asserted, then the man was perceived to be a fool who directs the shafts of his ridicule at any other sight but that of folly and vice, or seriously inclines to weigh the beautiful by any other standard but that of the good.

Very true, he replied.

First, then, whether the question is to be put in jest or in earnest, let us come to an understanding about the nature of woman: Is she capable of sharing either wholly or partially in the actions of men, or not at all? And is the art of war one of those arts in which she can or can not share? That will be the best way of commencing the enquiry, and will probably lead to the fairest conclusion.

That will be much the best way.

Shall we take the other side first and begin by arguing against ourselves; in this manner the adversary's position will not be undefended.

Why not? he said.

Then let us put a speech into the mouths of our opponents. They will say: 'Socrates and Glaucon, no adversary need convict you, for you yourselves, at the first foundation of the State, admitted the principle that everybody was to do the one work suited to his own nature.' And certainly, if I am not mistaken, such an admission was made by us. 'And do not the natures of men and women differ very much indeed?' And we shall reply: Of course they do. Then we shall be asked, 'Whether the tasks assigned to men and to women should not be different, and such as are agreeable to their different natures?' Certainly they should. 'But if so, have you not fallen into a serious inconsistency in saying that men and women, whose natures are so entirely different, ought to perform the same actions?'-- What defence will you make for us, my good Sir, against any one who offers these objections?

That is not an easy question to answer when asked suddenly; and I shall and I do beg of you to draw out the case on our side.

These are the objections, Glaucon, and there are many others of a like kind, which I foresaw long ago; they made me afraid and reluctant to take in hand any law about the possession and nurture of women and children.
By Zeus, he said, the problem to be solved is anything but easy.

Why yes, I said, but the fact is that when a man is out of his depth, whether he has fallen into a little swimming bath or into mid-ocean, he has to swim all the same.

Very true.

And must not we swim and try to reach the shore: we will hope that Arion's dolphin or some other miraculous help may save us?

I suppose so, he said.

Well then, let us see if any way of escape can be found. We acknowledged--did we not? that different natures ought to have different pursuits, and that men's and women's natures are different. And now what are we saying?--that different natures ought to have the same pursuits,--this is the inconsistency which is charged upon us.

Precisely.

Verily, Glaucon, I said, glorious is the power of the art of contradiction!

Why do you say so?

Because I think that many a man falls into the practice against his will. When he thinks that he is reasoning he is really disputing, just because he cannot define and divide, and so know that of which he is speaking; and he will pursue a merely verbal opposition in the spirit of contention and not of fair discussion.

Yes, he replied, such is very often the case; but what has that to do with us and our argument?

A great deal; for there is certainly a danger of our getting unintentionally into a verbal opposition.

In what way?

Why, we valiantly and pugnaciously insist upon the verbal truth, that different natures ought to have different pursuits, but we never considered at all what was the meaning of sameness or difference of nature, or why we distinguished them when we assigned different pursuits to different natures and the same to the same natures.
Why, no, he said, that was never considered by us.

I said: Suppose that by way of illustration we were to ask the question whether there is not an opposition in nature between bald men and hairy men; and if this is admitted by us, then, if bald men are cobblers, we should forbid the hairy men to be cobblers, and conversely?

That would be a jest, he said.

Yes, I said, a jest; and why? because we never meant when we constructed the State, that the opposition of natures should extend to every difference, but only to those differences which affected the pursuit in which the individual is engaged; we should have argued, for example, that a physician and one who is in mind a physician may be said to have the same nature.

True.

Whereas the physician and the carpenter have different natures?

Certainly.

And if, I said, the male and female sex appear to differ in their fitness for any art or pursuit, we should say that such pursuit or art ought to be assigned to one or the other of them; but if the difference consists only in women bearing and men begetting children, this does not amount to a proof that a woman differs from a man in respect of the sort of education she should receive; and we shall therefore continue to maintain that our guardians and their wives ought to have the same pursuits.

Very true, he said.

Next, we shall ask our opponent how, in reference to any of the pursuits or arts of civic life, the nature of a woman differs from that of a man?

That will be quite fair.

And perhaps he, like yourself, will reply that to give a sufficient answer on the instant is not easy; but after a little reflection there is no difficulty.

Yes, perhaps.

Suppose then that we invite him to accompany us in the argument, and then we may hope to show him that there is nothing peculiar in the
constitution of women which would affect them in the administration of the State.

By all means.

Let us say to him: Come now, and we will ask you a question:--when you spoke of a nature gifted or not gifted in any respect, did you mean to say that one man will acquire a thing easily, another with difficulty; a little learning will lead the one to discover a great deal; whereas the other, after much study and application, no sooner learns than he forgets; or again, did you mean, that the one has a body which is a good servant to his mind, while the body of the other is a hindrance to him?—would not these be the sort of differences which distinguish the man gifted by nature from the one who is ungifted?

No one will deny that.

And can you mention any pursuit of mankind in which the male sex has not all these gifts and qualities in a higher degree than the female? Need I waste time in speaking of the art of weaving, and the management of pancakes and preserves, in which womankind does really appear to be great, and in which for her to be beaten by a man is of all things the most absurd?

You are quite right, he replied, in maintaining the general inferiority of the female sex: although many women are in many things superior to many men, yet on the whole what you say is true.

And if so, my friend, I said, there is no special faculty of administration in a state which a woman has because she is a woman, or which a man has by virtue of his sex, but the gifts of nature are alike diffused in both; all the pursuits of men are the pursuits of women also, but in all of them a woman is inferior to a man.

Very true.

Then are we to impose all our enactments on men and none of them on women?

That will never do.

One woman has a gift of healing, another not; one is a musician, and another has no music in her nature?

Very true.

And one woman has a turn for gymnastic and military exercises, and
another is unwarlike and hates gymnastics?

Certainly.

And one woman is a philosopher, and another is an enemy of philosophy; one has spirit, and another is without spirit?

That is also true.

Then one woman will have the temper of a guardian, and another not. Was not the selection of the male guardians determined by differences of this sort?

Yes.

Men and women alike possess the qualities which make a guardian; they differ only in their comparative strength or weakness.

Obviously.

And those women who have such qualities are to be selected as the companions and colleagues of men who have similar qualities and whom they resemble in capacity and in character?

Very true.

And ought not the same natures to have the same pursuits?

They ought.

Then, as we were saying before, there is nothing unnatural in assigning music and gymnastic to the wives of the guardians--to that point we come round again.

Certainly not.

The law which we then enacted was agreeable to nature, and therefore not an impossibility or mere aspiration; and the contrary practice, which prevails at present, is in reality a violation of nature.

That appears to be true.

We had to consider, first, whether our proposals were possible, and secondly whether they were the most beneficial?

Yes.
And the possibility has been acknowledged?

Yes.

The very great benefit has next to be established?

Quite so.

You will admit that the same education which makes a man a good guardian will make a woman a good guardian; for their original nature is the same?

Yes.

I should like to ask you a question.

What is it?

Would you say that all men are equal in excellence, or is one man better than another?

The latter.

And in the commonwealth which we were founding do you conceive the guardians who have been brought up on our model system to be more perfect men, or the cobblers whose education has been cobbling?

What a ridiculous question!

You have answered me, I replied: Well, and may we not further say that our guardians are the best of our citizens?

By far the best.

And will not their wives be the best women?

Yes, by far the best.

And can there be anything better for the interests of the State than that the men and women of a State should be as good as possible?

There can be nothing better.

And this is what the arts of music and gymnastic, when present in such manner as we have described, will accomplish?

Certainly.
Then we have made an enactment not only possible but in the highest degree beneficial to the State?

True.

Then let the wives of our guardians strip, for their virtue will be their robe, and let them share in the toils of war and the defence of their country; only in the distribution of labours the lighter are to be assigned to the women, who are the weaker natures, but in other respects their duties are to be the same. And as for the man who laughs at naked women exercising their bodies from the best of motives, in his laughter he is plucking

A fruit of unripe wisdom,

and he himself is ignorant of what he is laughing at, or what he is about--;for that is, and ever will be, the best of sayings, That the useful is the noble and the hurtful is the base.

Very true.

Here, then, is one difficulty in our law about women, which we may say that we have now escaped; the wave has not swallowed us up alive for enacting that the guardians of either sex should have all their pursuits in common; to the utility and also to the possibility of this arrangement the consistency of the argument with itself bears witness.

Yes, that was a mighty wave which you have escaped.

Yes, I said, but a greater is coming; you will of this when you see the next.

Go on; let me see.

The law, I said, which is the sequel of this and of all that has preceded, is to the following effect,--'that the wives of our guardians are to be common, and their children are to be common, and no parent is to know his own child, nor any child his parent.'

Yes, he said, that is a much greater wave than the other; and the possibility as well as the utility of such a law are far more questionable.

I do not think, I said, that there can be any dispute about the very great utility of having wives and children in common; the possibility is quite another matter, and will be very much disputed.
I think that a good many doubts may be raised about both.

You imply that the two questions must be combined, I replied. Now I meant that you should admit the utility; and in this way, as I thought; I should escape from one of them, and then there would remain only the possibility.

But that little attempt is detected, and therefore you will please to give a defence of both.

Well, I said, I submit to my fate. Yet grant me a little favour: let me feast my mind with the dream as day dreamers are in the habit of feasting themselves when they are walking alone; for before they have discovered any means of effecting their wishes—that is a matter which never troubles them—they would rather not tire themselves by thinking about possibilities; but assuming that what they desire is already granted to them, they proceed with their plan, and delight in detailing what they mean to do when their wish has come true—that is a way which they have of not doing much good to a capacity which was never good for much. Now I myself am beginning to lose heart, and I should like, with your permission, to pass over the question of possibility at present. Assuming therefore the possibility of the proposal, I shall now proceed to enquire how the rulers will carry out these arrangements, and I shall demonstrate that our plan, if executed, will be of the greatest benefit to the State and to the guardians. First of all, then, if you have no objection, I will endeavour with your help to consider the advantages of the measure; and hereafter the question of possibility.

I have no objection; proceed.

First, I think that if our rulers and their auxiliaries are to be worthy of the name which they bear, there must be willingness to obey in the one and the power of command in the other; the guardians must themselves obey the laws, and they must also imitate the spirit of them in any details which are entrusted to their care.

That is right, he said.

You, I said, who are their legislator, having selected the men, will now select the women and give them to them;—they must be as far as possible of like natures with them; and they must live in common houses and meet at common meals, None of them will have anything specially his or her own; they will be together, and will be brought up together, and will associate at gymnastic exercises. And so they will be drawn by a necessity of their natures to have intercourse with each other—necessity is not too strong a word, I think?
Yes, he said;—necessity, not geometrical, but another sort of necessity which lovers know, and which is far more convincing and constraining to the mass of mankind.

True, I said; and this, Glaucon, like all the rest, must proceed after an orderly fashion; in a city of the blessed, licentiousness is an unholy thing which the rulers will forbid.

Yes, he said, and it ought not to be permitted.

Then clearly the next thing will be to make matrimony sacred in the highest degree, and what is most beneficial will be deemed sacred?

Exactly.

And how can marriages be made most beneficial?—that is a question which I put to you, because I see in your house dogs for hunting, and of the nobler sort of birds not a few. Now, I beseech you, do tell me, have you ever attended to their pairing and breeding?

In what particulars?

Why, in the first place, although they are all of a good sort, are not some better than others?

True.

And do you breed from them all indifferently, or do you take care to breed from the best only?

From the best.

And do you take the oldest or the youngest, or only those of ripe age?

I choose only those of ripe age.

And if care was not taken in the breeding, your dogs and birds would greatly deteriorate?

Certainly.

And the same of horses and animals in general?

Undoubtedly.

Good heavens! my dear friend, I said, what consummate skill will our
rulers need if the same principle holds of the human species!

Certainly, the same principle holds; but why does this involve any particular skill?

Because, I said, our rulers will often have to practise upon the body corporate with medicines. Now you know that when patients do not require medicines, but have only to be put under a regimen, the inferior sort of practitioner is deemed to be good enough; but when medicine has to be given, then the doctor should be more of a man.

That is quite true, he said; but to what are you alluding?

I mean, I replied, that our rulers will find a considerable dose of falsehood and deceit necessary for the good of their subjects: we were saying that the use of all these things regarded as medicines might be of advantage.

And we were very right.

And this lawful use of them seems likely to be often needed in the regulations of marriages and births.

How so?

Why, I said, the principle has been already laid down that the best of either sex should be united with the best as often, and the inferior with the inferior, as seldom as possible; and that they should rear the offspring of the one sort of union, but not of the other, if the flock is to be maintained in first-rate condition. Now these goings on must be a secret which the rulers only know, or there will be a further danger of our herd, as the guardians may be termed, breaking out into rebellion.

Very true.

Had we not better appoint certain festivals at which we will bring together the brides and bridegrooms, and sacrifices will be offered and suitable hymeneal songs composed by our poets: the number of weddings is a matter which must be left to the discretion of the rulers, whose aim will be to preserve the average of population? There are many other things which they will have to consider, such as the effects of wars and diseases and any similar agencies, in order as far as this is possible to prevent the State from becoming either too large or too small.

Certainly, he replied.
We shall have to invent some ingenious kind of lots which the less worthy may draw on each occasion of our bringing them together, and then they will accuse their own ill-luck and not the rulers.

To be sure, he said.

And I think that our braver and better youth, besides their other honours and rewards, might have greater facilities of intercourse with women given them; their bravery will be a reason, and such fathers ought to have as many sons as possible.

True.

And the proper officers, whether male or female or both, for offices are to be held by women as well as by men--

Yes--

The proper officers will take the offspring of the good parents to the pen or fold, and there they will deposit them with certain nurses who dwell in a separate quarter; but the offspring of the inferior, or of the better when they chance to be deformed, will be put away in some mysterious, unknown place, as they should be.

Yes, he said, that must be done if the breed of the guardians is to be kept pure.

They will provide for their nurture, and will bring the mothers to the fold when they are full of milk, taking the greatest possible care that no mother recognizes her own child; and other wet-nurses may be engaged if more are required. Care will also be taken that the process of suckling shall not be protracted too long; and the mothers will have no getting up at night or other trouble, but will hand over all this sort of thing to the nurses and attendants.

You suppose the wives of our guardians to have a fine easy time of it when they are having children.

Why, said I, and so they ought. Let us, however, proceed with our scheme. We were saying that the parents should be in the prime of life?

Very true.

And what is the prime of life? May it not be defined as a period of about twenty years in a woman's life, and thirty in a man's?
Which years do you mean to include?

A woman, I said, at twenty years of age may begin to bear children to the State, and continue to bear them until forty; a man may begin at five-and-twenty, when he has passed the point at which the pulse of life beats quickest, and continue to beget children until he be fifty-five.

Certainly, he said, both in men and women those years are the prime of physical as well as of intellectual vigour.

Any one above or below the prescribed ages who takes part in the public hymeneals shall be said to have done an unholy and unrighteous thing; the child of which he is the father, if it steals into life, will have been conceived under auspices very unlike the sacrifices and prayers, which at each hymeneal priestesses and priest and the whole city will offer, that the new generation may be better and more useful than their good and useful parents, whereas his child will be the offspring of darkness and strange lust.

Very true, he replied.

And the same law will apply to any one of those within the prescribed age who forms a connection with any woman in the prime of life without the sanction of the rulers; for we shall say that he is raising up a bastard to the State, uncertified and unconsecrated.

Very true, he replied.

This applies, however, only to those who are within the specified age: after that we allow them to range at will, except that a man may not marry his daughter or his daughter's daughter, or his mother or his mother's mother; and women, on the other hand, are prohibited from marrying their sons or fathers, or son's son or father's father, and so on in either direction. And we grant all this, accompanying the permission with strict orders to prevent any embryo which may come into being from seeing the light; and if any force a way to the birth, the parents must understand that the offspring of such an union cannot be maintained, and arrange accordingly.

That also, he said, is a reasonable proposition. But how will they know who are fathers and daughters, and so on?

They will never know. The way will be this:--dating from the day of the hymeneal, the bridegroom who was then married will call all the male children who are born in the seventh and tenth month afterwards his sons, and the female children his daughters, and they will call him
father, and he will call their children his grandchildren, and they will call the elder generation grandfathers and grandmothers. All who were begotten at the time when their fathers and mothers came together will be called their brothers and sisters, and these, as I was saying, will be forbidden to inter-marry. This, however, is not to be understood as an absolute prohibition of the marriage of brothers and sisters; if the lot favours them, and they receive the sanction of the Pythian oracle, the law will allow them.

Quite right, he replied.

Such is the scheme, Glaucon, according to which the guardians of our State are to have their wives and families in common. And now you would have the argument show that this community is consistent with the rest of our polity, and also that nothing can be better—would you not?

Yes, certainly.

Shall we try to find a common basis by asking of ourselves what ought to be the chief aim of the legislator in making laws and in the organization of a State,—what is the greatest I good, and what is the greatest evil, and then consider whether our previous description has the stamp of the good or of the evil?

By all means.

Can there be any greater evil than discord and distraction and plurality where unity ought to reign? or any greater good than the bond of unity?

There cannot.

And there is unity where there is community of pleasures and pains—where all the citizens are glad or grieved on the same occasions of joy and sorrow?

No doubt.

Yes; and where there is no common but only private feeling a State is disorganized—when you have one half of the world triumphing and the other plunged in grief at the same events happening to the city or the citizens?

Certainly.

Such differences commonly originate in a disagreement about the use of the terms 'mine' and 'not mine,' 'his' and 'not his.'
Exactly so.

And is not that the best-ordered State in which the greatest number of persons apply the terms 'mine' and 'not mine' in the same way to the same thing?

Quite true.

Or that again which most nearly approaches to the condition of the individual--as in the body, when but a finger of one of us is hurt, the whole frame, drawn towards the soul as a center and forming one kingdom under the ruling power therein, feels the hurt and sympathizes all together with the part affected, and we say that the man has a pain in his finger; and the same expression is used about any other part of the body, which has a sensation of pain at suffering or of pleasure at the alleviation of suffering.

Very true, he replied; and I agree with you that in the best-ordered State there is the nearest approach to this common feeling which you describe.

Then when any one of the citizens experiences any good or evil, the whole State will make his case their own, and will either rejoice or sorrow with him?

Yes, he said, that is what will happen in a well-ordered State.

It will now be time, I said, for us to return to our State and see whether this or some other form is most in accordance with these fundamental principles.

Very good.

Our State like every other has rulers and subjects?

True.

All of whom will call one another citizens?

Of course.

But is there not another name which people give to their rulers in other States?

Generally they call them masters, but in democratic States they simply call them rulers.
And in our State what other name besides that of citizens do the people
give the rulers?

They are called saviours and helpers, he replied.

And what do the rulers call the people?

Their maintainers and foster-fathers.

And what do they call them in other States?

Slaves.

And what do the rulers call one another in other States?

Fellow-rulers.

And what in ours?

Fellow-guardians.

Did you ever know an example in any other State of a ruler who would
speak of one of his colleagues as his friend and of another as not
being his friend?

Yes, very often.

And the friend he regards and describes as one in whom he has an
interest, and the other as a stranger in whom he has no interest?

Exactly.

But would any of your guardians think or speak of any other guardian as
a stranger?

Certainly he would not; for every one whom they meet will be regarded
by them either as a brother or sister, or father or mother, or son or
daughter, or as the child or parent of those who are thus connected
with him.

Capital, I said; but let me ask you once more: Shall they be a family
in name only; or shall they in all their actions be true to the name?
For example, in the use of the word 'father,' would the care of a
father be implied and the filial reverence and duty and obedience to
him which the law commands; and is the violator of these duties to be
regarded as an impious and unrighteous person who is not likely to
receive much good either at the hands of God or of man? Are these to be or not to be the strains which the children will hear repeated in their ears by all the citizens about those who are intimated to them to be their parents and the rest of their kinsfolk?

These, he said, and none other; for what can be more ridiculous than for them to utter the names of family ties with the lips only and not to act in the spirit of them?

Then in our city the language of harmony and concord will be more often beard than in any other. As I was describing before, when any one is well or ill, the universal word will be with me 'it is well' or 'it is ill.'

Most true.

And agreeably to this mode of thinking and speaking, were we not saying that they will have their pleasures and pains in common?

Yes, and so they will.

And they will have a common interest in the same thing which they will alike call 'my own,' and having this common interest they will have a common feeling of pleasure and pain?

Yes, far more so than in other States.

And the reason of this, over and above the general constitution of the State, will be that the guardians will have a community of women and children?

That will be the chief reason.

And this unity of feeling we admitted to be the greatest good, as was implied in our own comparison of a well-ordered State to the relation of the body and the members, when affected by pleasure or pain?

That we acknowledged, and very rightly.

Then the community of wives and children among our citizens is clearly the source of the greatest good to the State?

Certainly.

And this agrees with the other principle which we were affirming,—that the guardians were not to have houses or lands or any other property; their pay was to be their food, which they were to receive from the
other citizens, and they were to have no private expenses; for we intended them to preserve their true character of guardians.

Right, he replied.

Both the community of property and the community of families, as I am saying, tend to make them more truly guardians; they will not tear the city in pieces by differing about 'mine' and 'not mine;' each man dragging any acquisition which he has made into a separate house of his own, where he has a separate wife and children and private pleasures and pains; but all will be affected as far as may be by the same pleasures and pains because they are all of one opinion about what is near and dear to them, and therefore they all tend towards a common end.

Certainly, he replied.

And as they have nothing but their persons which they can call their own, suits and complaints will have no existence among them; they will be delivered from all those quarrels of which money or children or relations are the occasion.

Of course they will.

Neither will trials for assault or insult ever be likely to occur among them. For that equals should defend themselves against equals we shall maintain to be honourable and right; we shall make the protection of the person a matter of necessity.

That is good, he said.

Yes; and there is a further good in the law; viz. that if a man has a quarrel with another he will satisfy his resentment then and there, and not proceed to more dangerous lengths.

Certainly.

To the elder shall be assigned the duty of ruling and chastising the younger.

Clearly.

Nor can there be a doubt that the younger will not strike or do any other violence to an elder, unless the magistrates command him; nor will he slight him in any way. For there are two guardians, shame and fear, mighty to prevent him: shame, which makes men refrain from laying hands on those who are to them in the relation of parents; fear, that the injured one will be succoured by the others who are his
brothers, sons, one wi fathers.

That is true, he replied.

Then in every way the laws will help the citizens to keep the peace with one another?

Yes, there will be no want of peace.

And as the guardians will never quarrel among themselves there will be no danger of the rest of the city being divided either against them or against one another.

None whatever.

I hardly like even to mention the little meannesses of which they will be rid, for they are beneath notice: such, for example, as the flattery of the rich by the poor, and all the pains and pangs which men experience in bringing up a family, and in finding money to buy necessaries for their household, borrowing and then repudiating, getting how they can, and giving the money into the hands of women and slaves to keep--the many evils of so many kinds which people suffer in this way are mean enough and obvious enough, and not worth speaking of.

Yes, he said, a man has no need of eyes in order to perceive that.

And from all these evils they will be delivered, and their life will be blessed as the life of Olympic victors and yet more blessed.

How so?

The Olympic victor, I said, is deemed happy in receiving a part only of the blessedness which is secured to our citizens, who have won a more glorious victory and have a more complete maintenance at the public cost. For the victory which they have won is the salvation of the whole State; and the crown with which they and their children are crowned is the fulness of all that life needs; they receive rewards from the hands of their country while living, and after death have an honourable burial.

Yes, he said, and glorious rewards they are.

Do you remember, I said, how in the course of the previous discussion some one who shall be nameless accused us of making our guardians unhappy--they had nothing and might have possessed all things—to whom we replied that, if an occasion offered, we might perhaps hereafter consider this question, but that, as at present advised, we would make
our guardians truly guardians, and that we were fashioning the State with a view to the greatest happiness, not of any particular class, but of the whole?

Yes, I remember.

And what do you say, now that the life of our protectors is made out to be far better and nobler than that of Olympic victors--is the life of shoemakers, or any other artisans, or of husbandmen, to be compared with it?

Certainly not.

At the same time I ought here to repeat what I have said elsewhere, that if any of our guardians shall try to be happy in such a manner that he will cease to be a guardian, and is not content with this safe and harmonious life, which, in our judgment, is of all lives the best, but infatuated by some youthful conceit of happiness which gets up into his head shall seek to appropriate the whole State to himself, then he will have to learn how wisely Hesiod spoke, when he said, 'half is more than the whole.'

If he were to consult me, I should say to him: Stay where you are, when you have the offer of such a life.

You agree then, I said, that men and women are to have a common way of life such as we have described--common education, common children; and they are to watch over the citizens in common whether abiding in the city or going out to war; they are to keep watch together, and to hunt together like dogs; and always and in all things, as far as they are able, women are to share with the men? And in so doing they will do what is best, and will not violate, but preserve the natural relation of the sexes.

I agree with you, he replied.

The enquiry, I said, has yet to be made, whether such a community be found possible--as among other animals, so also among men--and if possible, in what way possible?

You have anticipated the question which I was about to suggest.

There is no difficulty, I said, in seeing how war will be carried on by them.

How?
Why, of course they will go on expeditions together; and will take with them any of their children who are strong enough, that, after the manner of the artisan's child, they may look on at the work which they will have to do when they are grown up; and besides looking on they will have to help and be of use in war, and to wait upon their fathers and mothers. Did you never observe in the arts how the potters' boys look on and help, long before they touch the wheel?

Yes, I have.

And shall potters be more careful in educating their children and in giving them the opportunity of seeing and practising their duties than our guardians will be?

The idea is ridiculous, he said.

There is also the effect on the parents, with whom, as with other animals, the presence of their young ones will be the greatest incentive to valour.

That is quite true, Socrates; and yet if they are defeated, which may often happen in war, how great the danger is! the children will be lost as well as their parents, and the State will never recover.

True, I said; but would you never allow them to run any risk?

I am far from saying that.

Well, but if they are ever to run a risk should they not do so on some occasion when, if they escape disaster, they will be the better for it?

Clearly.

Whether the future soldiers do or do not see war in the days of their youth is a very important matter, for the sake of which some risk may fairly be incurred.

Yes, very important.

This then must be our first step,—to make our children spectators of war; but we must also contrive that they shall be secured against danger; then all will be well.

True.

Their parents may be supposed not to be blind to the risks of war, but to know, as far as human foresight can, what expeditions are safe and
what dangerous?

That may be assumed.

And they will take them on the safe expeditions and be cautious about the dangerous ones?

True.

And they will place them under the command of experienced veterans who will be their leaders and teachers?

Very properly.

Still, the dangers of war cannot be always foreseen; there is a good deal of chance about them?

True.

Then against such chances the children must be at once furnished with wings, in order that in the hour of need they may fly away and escape.

What do you mean? he said.

I mean that we must mount them on horses in their earliest youth, and when they have learnt to ride, take them on horseback to see war: the horses must be spirited and warlike, but the most tractable and yet the swiftest that can be had. In this way they will get an excellent view of what is hereafter to be their own business; and if there is danger they have only to follow their elder leaders and escape.

I believe that you are right, he said.

Next, as to war; what are to be the relations of your soldiers to one another and to their enemies? I should be inclined to propose that the soldier who leaves his rank or throws away his arms, or is guilty of any other act of cowardice, should be degraded into the rank of a husbandman or artisan. What do you think?

By all means, I should say.

And he who allows himself to be taken prisoner may as well be made a present of to his enemies; he is their lawful prey, and let them do what they like with him.

Certainly.
But the hero who has distinguished himself, what shall be done to him? In the first place, he shall receive honour in the army from his youthful comrades; every one of them in succession shall crown him. What do you say?

I approve.

And what do you say to his receiving the right hand of fellowship?

To that too, I agree.

But you will hardly agree to my next proposal.

What is your proposal?

That he should kiss and be kissed by them.

Most certainly, and I should be disposed to go further, and say: Let no one whom he has a mind to kiss refuse to be kissed by him while the expedition lasts. So that if there be a lover in the army, whether his love be youth or maiden, he may be more eager to win the prize of valour.

Capital, I said. That the brave man is to have more wives than others has been already determined: and he is to have first choices in such matters more than others, in order that he may have as many children as possible?

Agreed.

Again, there is another manner in which, according to Homer, brave youths should be honoured; for he tells how Ajax, after he had distinguished himself in battle, was rewarded with long chines, which seems to be a compliment appropriate to a hero in the flower of his age, being not only a tribute of honour but also a very strengthening thing.

Most true, he said.

Then in this, I said, Homer shall be our teacher; and we too, at sacrifices and on the like occasions, will honour the brave according to the measure of their valour, whether men or women, with hymns and those other distinctions which we were mentioning; also with seats of precedence, and meats and full cups;

and in honouring them, we shall be at the same time training them.
That, he replied, is excellent.

Yes, I said; and when a man dies gloriously in war shall we not say, in the first place, that he is of the golden race?

To be sure.

Nay, have we not the authority of Hesiod for affirming that when they are dead

They are holy angels upon the earth, authors of good, averters of evil, the guardians of speech-gifted men?

Yes; and we accept his authority.

We must learn of the god how we are to order the sepulture of divine and heroic personages, and what is to be their special distinction and we must do as he bids?

By all means.

And in ages to come we will reverence them and kneel before their sepulchres as at the graves of heroes. And not only they but any who are deemed pre-eminently good, whether they die from age, or in any other way, shall be admitted to the same honours.

That is very right, he said.

Next, how shall our soldiers treat their enemies? What about this?

In what respect do you mean?

First of all, in regard to slavery? Do you think it right that Hellenes should enslave Hellenic States, or allow others to enslave them, if they can help? Should not their custom be to spare them, considering the danger which there is that the whole race may one day fall under the yoke of the barbarians?

To spare them is infinitely better.

Then no Hellene should be owned by them as a slave; that is a rule which they will observe and advise the other Hellenes to observe.

Certainly, he said; they will in this way be united against the barbarians and will keep their hands off one another.
Next as to the slain; ought the conquerors, I said, to take anything but their armour? Does not the practice of despoiling an enemy afford an excuse for not facing the battle? Cowards skulk about the dead, pretending that they are fulfilling a duty, and many an army before now has been lost from this love of plunder.

Very true.

And is there not illiberality and avarice in robbing a corpse, and also a degree of meanness and womanishness in making an enemy of the dead body when the real enemy has flown away and left only his fighting gear behind him,—is not this rather like a dog who cannot get at his assailant, quarrelling with the stones which strike him instead?

Very like a dog, he said.

Then we must abstain from spoiling the dead or hindering their burial?

Yes, he replied, we most certainly must.

Neither shall we offer up arms at the temples of the gods, least of all the arms of Hellenes, if we care to maintain good feeling with other Hellenes; and, indeed, we have reason to fear that the offering of spoils taken from kinsmen may be a pollution unless commanded by the god himself?

Very true.

Again, as to the devastation of Hellenic territory or the burning of houses, what is to be the practice?

May I have the pleasure, he said, of hearing your opinion?

Both should be forbidden, in my judgment; I would take the annual produce and no more. Shall I tell you why?

Pray do.

Why, you see, there is a difference in the names 'discord' and 'war,' and I imagine that there is also a difference in their natures; the one is expressive of what is internal and domestic, the other of what is external and foreign; and the first of the two is termed discord, and only the second, war.

That is a very proper distinction, he replied.

And may I not observe with equal propriety that the Hellenic race is
all united together by ties of blood and friendship, and alien and strange to the barbarians?

Very good, he said.

And therefore when Hellenes fight with barbarians and barbarians with Hellenes, they will be described by us as being at war when they fight, and by nature enemies, and this kind of antagonism should be called war; but when Hellenes fight with one another we shall say that Hellas is then in a state of disorder and discord, they being by nature friends and such enmity is to be called discord.

I agree.

Consider then, I said, when that which we have acknowledged to be discord occurs, and a city is divided, if both parties destroy the lands and burn the houses of one another, how wicked does the strife appear! No true lover of his country would bring himself to tear in pieces his own nurse and mother: There might be reason in the conqueror depriving the conquered of their harvest, but still they would have the idea of peace in their hearts and would not mean to go on fighting for ever.

Yes, he said, that is a better temper than the other.

And will not the city, which you are founding, be an Hellenic city?

It ought to be, he replied.

Then will not the citizens be good and civilized?

Yes, very civilized.

And will they not be lovers of Hellas, and think of Hellas as their own land, and share in the common temples?

Most certainly.

And any difference which arises among them will be regarded by them as discord only—a quarrel among friends, which is not to be called a war?

Certainly not.

Then they will quarrel as those who intend some day to be reconciled? Certainly.

They will use friendly correction, but will not enslave or destroy
their opponents; they will be correctors, not enemies?

Just so.

And as they are Hellenes themselves they will not devastate Hellas, nor will they burn houses, not even suppose that the whole population of a city--men, women, and children--are equally their enemies, for they know that the guilt of war is always confined to a few persons and that the many are their friends. And for all these reasons they will be unwilling to waste their lands and raze their houses; their enmity to them will only last until the many innocent sufferers have compelled the guilty few to give satisfaction?

I agree, he said, that our citizens should thus deal with their Hellenic enemies; and with barbarians as the Hellenes now deal with one another.

Then let us enact this law also for our guardians:-that they are neither to devastate the lands of Hellenes nor to burn their houses.

Agreed; and we may agree also in thinking that these, all our previous enactments, are very good.

But still I must say, Socrates, that if you are allowed to go on in this way you will entirely forget the other question which at the commencement of this discussion you thrust aside:--Is such an order of things possible, and how, if at all? For I am quite ready to acknowledge that the plan which you propose, if only feasible, would do all sorts of good to the State. I will add, what you have omitted, that your citizens will be the bravest of warriors, and will never leave their ranks, for they will all know one another, and each will call the other father, brother, son; and if you suppose the women to join their armies, whether in the same rank or in the rear, either as a terror to the enemy, or as auxiliaries in case of need, I know that they will then be absolutely invincible; and there are many domestic advantages which might also be mentioned and which I also fully acknowledge: but, as I admit all these advantages and as many more as you please, if only this State of yours were to come into existence, we need say no more about them; assuming then the existence of the State, let us now turn to the question of possibility and ways and means--the rest may be left.

If I loiter for a moment, you instantly make a raid upon me, I said, and have no mercy; I have hardly escaped the first and second waves, and you seem not to be aware that you are now bringing upon me the third, which is the greatest and heaviest. When you have seen and heard the third wave, I think you be more considerate and will
acknowledge that some fear and hesitation was natural respecting a proposal so extraordinary as that which I have now to state and investigate.

The more appeals of this sort which you make, he said, the more determined are we that you shall tell us how such a State is possible: speak out and at once.

Let me begin by reminding you that we found our way hither in the search after justice and injustice.

True, he replied; but what of that?

I was only going to ask whether, if we have discovered them, we are to require that the just man should in nothing fail of absolute justice; or may we be satisfied with an approximation, and the attainment in him of a higher degree of justice than is to be found in other men?

The approximation will be enough.

We are enquiring into the nature of absolute justice and into the character of the perfectly just, and into injustice and the perfectly unjust, that we might have an ideal. We were to look at these in order that we might judge of our own happiness and unhappiness according to the standard which they exhibited and the degree in which we resembled them, but not with any view of showing that they could exist in fact.

True, he said.

Would a painter be any the worse because, after having delineated with consummate art an ideal of a perfectly beautiful man, he was unable to show that any such man could ever have existed?

He would be none the worse.

Well, and were we not creating an ideal of a perfect State?

To be sure.

And is our theory a worse theory because we are unable to prove the possibility of a city being ordered in the manner described?

Surely not, he replied.

That is the truth, I said. But if, at your request, I am to try and show how and under what conditions the possibility is highest, I must ask you, having this in view, to repeat your former admissions.
What admissions?

I want to know whether ideals are ever fully realised in language? Does not the word express more than the fact, and must not the actual, whatever a man may think, always, in the nature of things, fall short of the truth? What do you say?

I agree.

Then you must not insist on my proving that the actual State will in every respect coincide with the ideal: if we are only able to discover how a city may be governed nearly as we proposed, you will admit that we have discovered the possibility which you demand; and will be contented. I am sure that I should be contented--will not you?

Yes, I will.

Let me next endeavour to show what is that fault in States which is the cause of their present maladministration, and what is the least change which will enable a State to pass into the truer form; and let the change, if possible, be of one thing only, or if not, of two; at any rate, let the changes be as few and slight as possible.

Certainly, he replied.

I think, I said, that there might be a reform of the State if only one change were made, which is not a slight or easy though still a possible one.

What is it? he said.

Now then, I said, I go to meet that which I liken to the greatest of the waves; yet shall the word be spoken, even though the wave break and drown me in laughter and dishonour; and do you mark my words.

Proceed.

I said: Until philosophers are kings, or the kings and princes of this world have the spirit and power of philosophy, and political greatness and wisdom meet in one, and those commoner natures who pursue either to the exclusion of the other are compelled to stand aside, cities will never have rest from their evils,--nor the human race, as I believe,--and then only will this our State have a possibility of life and behold the light of day. Such was the thought, my dear Glaucon, which I would fain have uttered if it had not seemed too extravagant; for to be convinced that in no other State can there be happiness
private or public is indeed a hard thing.

Socrates, what do you mean? I would have you consider that the word which you have uttered is one at which numerous persons, and very respectable persons too, in a figure pulling off their coats all in a moment, and seizing any weapon that comes to hand, will run at you might and main, before you know where you are, intending to do heaven knows what; and if you don't prepare an answer, and put yourself in motion, you will be prepared by their fine wits,' and no mistake.

You got me into the scrape, I said.

And I was quite right; however, I will do all I can to get you out of it; but I can only give you good-will and good advice, and, perhaps, I may be able to fit answers to your questions better than another--that is all. And now, having such an auxiliary, you must do your best to show the unbelievers that you are right.

I ought to try, I said, since you offer me such invaluable assistance. And I think that, if there is to be a chance of our escaping, we must explain to them whom we mean when we say that philosophers are to rule in the State; then we shall be able to defend ourselves: There will be discovered to be some natures who ought to study philosophy and to be leaders in the State; and others who are not born to be philosophers, and are meant to be followers rather than leaders.

Then now for a definition, he said.

Follow me, I said, and I hope that I may in some way or other be able to give you a satisfactory explanation.

Proceed.

I dare say that you remember, and therefore I need not remind you, that a lover, if he is worthy of the name, ought to show his love, not to some one part of that which he loves, but to the whole.

I really do not understand, and therefore beg of you to assist my memory.

Another person, I said, might fairly reply as you do; but a man of pleasure like yourself ought to know that all who are in the flower of youth do somehow or other raise a pang or emotion in a lover's breast, and are thought by him to be worthy of his affectionate regards. Is not this a way which you have with the fair: one has a snub nose, and you praise his charming face; the hook-nose of another has, you say, a royal look; while he who is neither snub nor hooked has the grace of
regularity: the dark visage is manly, the fair are children of the
gods; and as to the sweet 'honey pale,' as they are called, what is the
very name but the invention of a lover who talks in diminutives, and is
not adverse to paleness if appearing on the cheek of youth? In a word,
there is no excuse which you will not make, and nothing which you will
not say, in order not to lose a single flower that blooms in the
spring-time of youth.

If you make me an authority in matters of love, for the sake of the
argument, I assent.

And what do you say of lovers of wine? Do you not see them doing the
same? They are glad of any pretext of drinking any wine.

Very good.

And the same is true of ambitious men; if they cannot command an army,
they are willing to command a file; and if they cannot be honoured by
really great and important persons, they are glad to be honoured by
lesser and meaner people, but honour of some kind they must have.

Exactly.

Once more let me ask: Does he who desires any class of goods, desire
the whole class or a part only?

The whole.

And may we not say of the philosopher that he is a lover, not of a part
of wisdom only, but of the whole?

Yes, of the whole.

And he who dislikes learnings, especially in youth, when he has no
power of judging what is good and what is not, such an one we maintain
not to be a philosopher or a lover of knowledge, just as he who refuses
his food is not hungry, and may be said to have a bad appetite and not
a good one?

Very true, he said.

Whereas he who has a taste for every sort of knowledge and who is
curious to learn and is never satisfied, may be justly termed a
philosopher? Am I not right?

Glaucous said: If curiosity makes a philosopher, you will find many a
strange being will have a title to the name. All the lovers of sights
have a delight in learning, and must therefore be included. Musical amateurs, too, are a folk strangely out of place among philosophers, for they are the last persons in the world who would come to anything like a philosophical discussion, if they could help, while they run about at the Dionysiac festivals as if they had let out their ears to hear every chorus; whether the performance is in town or country—that makes no difference—they are there. Now are we to maintain that all these and any who have similar tastes, as well as the professors of quite minor arts, are philosophers?

Certainly not, I replied; they are only an imitation.

He said: Who then are the true philosophers?

Those, I said, who are lovers of the vision of truth.

That is also good, he said; but I should like to know what you mean?

To another, I replied, I might have a difficulty in explaining; but I am sure that you will admit a proposition which I am about to make.

What is the proposition?

That since beauty is the opposite of ugliness, they are two?

Certainly.

And inasmuch as they are two, each of them is one?

True again.

And of just and unjust, good and evil, and of every other class, the same remark holds: taken singly, each of them one; but from the various combinations of them with actions and things and with one another, they are seen in all sorts of lights and appear many? Very true.

And this is the distinction which I draw between the sight-loving, art-loving, practical class and those of whom I am speaking, and who are alone worthy of the name of philosophers.

How do you distinguish them? he said.

The lovers of sounds and sights, I replied, are, as I conceive, fond of fine tones and colours and forms and all the artificial products that are made out of them, but their mind is incapable of seeing or loving absolute beauty.
True, he replied.

Few are they who are able to attain to the sight of this.

Very true.

And he who, having a sense of beautiful things has no sense of absolute beauty, or who, if another lead him to a knowledge of that beauty is unable to follow--of such an one I ask, Is he awake or in a dream only? Reflect: is not the dreamer, sleeping or waking, one who likens dissimilar things, who puts the copy in the place of the real object?

I should certainly say that such an one was dreaming.

But take the case of the other, who recognises the existence of absolute beauty and is able to distinguish the idea from the objects which participate in the idea, neither putting the objects in the place of the idea nor the idea in the place of the objects--is he a dreamer, or is he awake?

He is wide awake.

And may we not say that the mind of the one who knows has knowledge, and that the mind of the other, who opines only, has opinion

Certainly.

But suppose that the latter should quarrel with us and dispute our statement, can we administer any soothing cordial or advice to him, without revealing to him that there is sad disorder in his wits?

We must certainly offer him some good advice, he replied.

Come, then, and let us think of something to say to him. Shall we begin by assuring him that he is welcome to any knowledge which he may have, and that we are rejoiced at his having it? But we should like to ask him a question: Does he who has knowledge know something or nothing? (You must answer for him.)

I answer that he knows something.

Something that is or is not?

Something that is; for how can that which is not ever be known?

And are we assured, after looking at the matter from many points of
view, that absolute being is or may be absolutely known, but that the utterly non-existent is utterly unknown?

Nothing can be more certain.

Good. But if there be anything which is of such a nature as to be and not to be, that will have a place intermediate between pure being and the absolute negation of being?

Yes, between them.

And, as knowledge corresponded to being and ignorance of necessity to not-being, for that intermediate between being and not-being there has to be discovered a corresponding intermediate between ignorance and knowledge, if there be such?

Certainly.

Do we admit the existence of opinion?

Undoubtedly.

As being the same with knowledge, or another faculty?

Another faculty.

Then opinion and knowledge have to do with different kinds of matter corresponding to this difference of faculties?

Yes.

And knowledge is relative to being and knows being. But before I proceed further I will make a division.

What division?

I will begin by placing faculties in a class by themselves: they are powers in us, and in all other things, by which we do as we do. Sight and hearing, for example, I should call faculties. Have I clearly explained the class which I mean?

Yes, I quite understand.

Then let me tell you my view about them. I do not see them, and therefore the distinctions of fire, colour, and the like, which enable me to discern the differences of some things, do not apply to them. In speaking of a faculty I think only of its sphere and its result; and
that which has the same sphere and the same result I call the same faculty, but that which has another sphere and another result I call different. Would that be your way of speaking?

Yes.

And will you be so very good as to answer one more question? Would you say that knowledge is a faculty, or in what class would you place it?

Certainly knowledge is a faculty, and the mightiest of all faculties.

And is opinion also a faculty?

Certainly, he said; for opinion is that with which we are able to form an opinion.

And yet you were acknowledging a little while ago that knowledge is not the same as opinion?

Why, yes, he said: how can any reasonable being ever identify that which is infallible with that which errs?

An excellent answer, proving, I said, that we are quite conscious of a distinction between them.

Yes.

Then knowledge and opinion having distinct powers have also distinct spheres or subject-matters?

That is certain.

Being is the sphere or subject-matter of knowledge, and knowledge is to know the nature of being?

Yes.

And opinion is to have an opinion?

Yes.

And do we know what we opine? or is the subject-matter of opinion the same as the subject-matter of knowledge?

Nay, he replied, that has been already disproven; if difference in faculty implies difference in the sphere or subject matter, and if, as we were saying, opinion and knowledge are distinct faculties, then the
sphere of knowledge and of opinion cannot be the same.

Then if being is the subject-matter of knowledge, something else must be the subject-matter of opinion?

Yes, something else.

Well then, is not-being the subject-matter of opinion? or, rather, how can there be an opinion at all about not-being? Reflect: when a man has an opinion, has he not an opinion about something? Can he have an opinion which is an opinion about nothing?

Impossible.

He who has an opinion has an opinion about some one thing?

Yes.

And not-being is not one thing but, properly speaking, nothing?

True.

Of not-being, ignorance was assumed to be the necessary correlative; of being, knowledge?

True, he said.

Then opinion is not concerned either with being or with not-being?

Not with either.

And can therefore neither be ignorance nor knowledge?

That seems to be true.

But is opinion to be sought without and beyond either of them, in a greater clearness than knowledge, or in a greater darkness than ignorance?

In neither.

Then I suppose that opinion appears to you to be darker than knowledge, but lighter than ignorance?

Both; and in no small degree.

And also to be within and between them?
Yes.

Then you would infer that opinion is intermediate?

No question.

But were we not saying before, that if anything appeared to be of a sort which is and is not at the same time, that sort of thing would appear also to lie in the interval between pure being and absolute not-being; and that the corresponding faculty is neither knowledge nor ignorance, but will be found in the interval between them?

True.

And in that interval there has now been discovered something which we call opinion?

There has.

Then what remains to be discovered is the object which partakes equally of the nature of being and not-being, and cannot rightly be termed either, pure and simple; this unknown term, when discovered, we may truly call the subject of opinion, and assign each to its proper faculty, the extremes to the faculties of the extremes and the mean to the faculty of the mean.

True.

This being premised, I would ask the gentleman who is of opinion that there is no absolute or unchangeable idea of beauty--in whose opinion the beautiful is the manifold--he, I say, your lover of beautiful sights, who cannot bear to be told that the beautiful is one, and the just is one, or that anything is one--to him I would appeal, saying, Will you be so very kind, sir, as to tell us whether, of all these beautiful things, there is one which will not be found ugly; or of the just, which will not be found unjust; or of the holy, which will not also be unholy?

No, he replied; the beautiful will in some point of view be found ugly; and the same is true of the rest.

And may not the many which are doubles be also halves?--doubles, that is, of one thing, and halves of another?

Quite true.
And things great and small, heavy and light, as they are termed, will not be denoted by these any more than by the opposite names?

True; both these and the opposite names will always attach to all of them.

And can any one of those many things which are called by particular names be said to be this rather than not to be this?

He replied: They are like the punning riddles which are asked at feasts or the children's puzzle about the eunuch aiming at the bat, with what he hit him, as they say in the puzzle, and upon what the bat was sitting. The individual objects of which I am speaking are also a riddle, and have a double sense: nor can you fix them in your mind, either as being or not-being, or both, or neither.

Then what will you do with them? I said. Can they have a better place than between being and not-being? For they are clearly not in greater darkness or negation than not-being, or more full of light and existence than being.

That is quite true, he said.

Thus then we seem to have discovered that the many ideas which the multitude entertain about the beautiful and about all other things are tossing about in some region which is halfway between pure being and pure not-being?

We have.

Yes; and we had before agreed that anything of this kind which we might find was to be described as matter of opinion, and not as matter of knowledge; being the intermediate flux which is caught and detained by the intermediate faculty.

Quite true.

Then those who see the many beautiful, and who yet neither see absolute beauty, nor can follow any guide who points the way thither; who see the many just, and not absolute justice, and the like,—such persons may be said to have opinion but not knowledge?

That is certain.

But those who see the absolute and eternal and immutable may be said to know, and not to have opinion only?
Neither can that be denied.

The one loves and embraces the subjects of knowledge, the other those of opinion? The latter are the same, as I dare say will remember, who listened to sweet sounds and gazed upon fair colours, but would not tolerate the existence of absolute beauty.

Yes, I remember.

Shall we then be guilty of any impropriety in calling them lovers of opinion rather than lovers of wisdom, and will they be very angry with us for thus describing them?

I shall tell them not to be angry; no man should be angry at what is true.

But those who love the truth in each thing are to be called lovers of wisdom and not lovers of opinion.

Assuredly.

BOOK VI

SOCRATES - GLAUCON

AND thus, Glaucon, after the argument has gone a weary way, the true and the false philosophers have at length appeared in view.

I do not think, he said, that the way could have been shortened.

I suppose not, I said; and yet I believe that we might have had a better view of both of them if the discussion could have been confined to this one subject and if there were not many other questions awaiting us, which he who desires to see in what respect the life of the just differs from that of the unjust must consider.

And what is the next question? he asked.

Surely, I said, the one which follows next in order. Inasmuch as philosophers only are able to grasp the eternal and unchangeable, and those who wander in the region of the many and variable are not philosophers, I must ask you which of the two classes should be the rulers of our State?
And how can we rightly answer that question?

Whichever of the two are best able to guard the laws and institutions of our State--let them be our guardians.

Very good.

Neither, I said, can there be any question that the guardian who is to keep anything should have eyes rather than no eyes?

There can be no question of that.

And are not those who are verily and indeed wanting in the knowledge of the true being of each thing, and who have in their souls no clear pattern, and are unable as with a painter's eye to look at the absolute truth and to that original to repair, and having perfect vision of the other world to order the laws about beauty, goodness, justice in this, if not already ordered, and to guard and preserve the order of them--are not such persons, I ask, simply blind?

Truly, he replied, they are much in that condition.

And shall they be our guardians when there are others who, besides being their equals in experience and falling short of them in no particular of virtue, also know the very truth of each thing?

There can be no reason, he said, for rejecting those who have this greatest of all great qualities; they must always have the first place unless they fail in some other respect.

Suppose then, I said, that we determine how far they can unite this and the other excellences.

By all means.

In the first place, as we began by observing, the nature of the philosopher has to be ascertained. We must come to an understanding about him, and, when we have done so, then, if I am not mistaken, we shall also acknowledge that such an union of qualities is possible, and that those in whom they are united, and those only, should be rulers in the State.

What do you mean?

Let us suppose that philosophical minds always love knowledge of a sort which shows them the eternal nature not varying from generation and
corruption.

Agreed.

And further, I said, let us agree that they are lovers of all true
being; there is no part whether greater or less, or more or less
honourable, which they are willing to renounce; as we said before of
the lover and the man of ambition.

True.

And if they are to be what we were describing, is there not another
quality which they should also possess?

What quality?

Truthfulness: they will never intentionally receive into their mind
falsehood, which is their detestation, and they will love the truth.

Yes, that may be safely affirmed of them.

'May be,' my friend, I replied, is not the word; say rather 'must be
affirmed:'  for he whose nature is amorous of anything cannot help
loving all that belongs or is akin to the object of his affections.

Right, he said.

And is there anything more akin to wisdom than truth?

How can there be?

Can the same nature be a lover of wisdom and a lover of falsehood?

Never.

The true lover of learning then must from his earliest youth, as far as
in him lies, desire all truth?

Assuredly.

But then again, as we know by experience, he whose desires are strong
in one direction will have them weaker in others; they will be like a
stream which has been drawn off into another channel.

True.

He whose desires are drawn towards knowledge in every form will be
absorbed in the pleasures of the soul, and will hardly feel bodily pleasure--I mean, if he be a true philosopher and not a sham one.

That is most certain.

Such an one is sure to be temperate and the reverse of covetous; for the motives which make another man desirous of having and spending, have no place in his character.

Very true.

Another criterion of the philosophical nature has also to be considered.

What is that?

There should be no secret corner of illiberality; nothing can more antagonistic than meanness to a soul which is ever longing after the whole of things both divine and human.

Most true, he replied.

Then how can he who has magnificence of mind and is the spectator of all time and all existence, think much of human life?

He cannot.

Or can such an one account death fearful?

No indeed.

Then the cowardly and mean nature has no part in true philosophy?

Certainly not.

Or again: can he who is harmoniously constituted, who is not covetous or mean, or a boaster, or a coward-can he, I say, ever be unjust or hard in his dealings?

Impossible.

Then you will soon observe whether a man is just and gentle, or rude and unsociable; these are the signs which distinguish even in youth the philosophical nature from the unphilosophical.

True.

There is another point which should be remarked.
What point?

Whether he has or has not a pleasure in learning; for no one will love that which gives him pain, and in which after much toil he makes little progress.

Certainly not.

And again, if he is forgetful and retains nothing of what he learns, will he not be an empty vessel?

That is certain.

Labouring in vain, he must end in hating himself and his fruitless occupation? Yes.

Then a soul which forgets cannot be ranked among genuine philosophic natures; we must insist that the philosopher should have a good memory?

Certainly.

And once more, the inharmonious and unseemly nature can only tend to disproportion?

Undoubtedly.

And do you consider truth to be akin to proportion or to disproportion?

To proportion.

Then, besides other qualities, we must try to find a naturally well-proportioned and gracious mind, which will move spontaneously towards the true being of everything.

Certainly.

Well, and do not all these qualities, which we have been enumerating, go together, and are they not, in a manner, necessary to a soul, which is to have a full and perfect participation of being?

They are absolutely necessary, he replied.

And must not that be a blameless study which he only can pursue who has the gift of a good memory, and is quick to learn,—noble, gracious, the friend of truth, justice, courage, temperance, who are his kindred?
The god of jealousy himself, he said, could find no fault with such a study.

And to men like him, I said, when perfected by years and education, and to these only you will entrust the State.

SOCRATES - ADEIMANTUS

Here Adeimantus interposed and said: To these statements, Socrates, no one can offer a reply; but when you talk in this way, a strange feeling passes over the minds of your hearers: They fancy that they are led astray a little at each step in the argument, owing to their own want of skill in asking and answering questions; these littles accumulate, and at the end of the discussion they are found to have sustained a mighty overthrow and all their former notions appear to be turned upside down. And as unskilful players of draughts are at last shut up by their more skilful adversaries and have no piece to move, so they too find themselves shut up at last; for they have nothing to say in this new game of which words are the counters; and yet all the time they are in the right. The observation is suggested to me by what is now occurring. For any one of us might say, that although in words he is not able to meet you at each step of the argument, he sees as a fact that the votaries of philosophy, when they carry on the study, not only in youth as a part of education, but as the pursuit of their maturer years, most of them become strange monsters, not to say utter rogues, and that those who may be considered the best of them are made useless to the world by the very study which you extol.

Well, and do you think that those who say so are wrong?

I cannot tell, he replied; but I should like to know what is your opinion.

Hear my answer; I am of opinion that they are quite right.

Then how can you be justified in saying that cities will not cease from evil until philosophers rule in them, when philosophers are acknowledged by us to be of no use to them?

You ask a question, I said, to which a reply can only be given in a parable.

Yes, Socrates; and that is a way of speaking to which you are not at all accustomed, I suppose.

I perceive, I said, that you are vastly amused at having plunged me into such a hopeless discussion; but now hear the parable, and then you
will be still more amused at the meagreness of my imagination: for the manner in which the best men are treated in their own States is so grievous that no single thing on earth is comparable to it; and therefore, if I am to plead their cause, I must have recourse to fiction, and put together a figure made up of many things, like the fabulous unions of goats and stags which are found in pictures. Imagine then a fleet or a ship in which there is a captain who is taller and stronger than any of the crew, but he is a little deaf and has a similar infirmity in sight, and his knowledge of navigation is not much better. The sailors are quarrelling with one another about the steering—every one is of opinion that he has a right to steer, though he has never learned the art of navigation and cannot tell who taught him or when he learned, and will further assert that it cannot be taught, and they are ready to cut in pieces any one who says the contrary. They throng about the captain, begging and praying him to commit the helm to them; and if at any time they do not prevail, but others are preferred to them, they kill the others or throw them overboard, and having first chained up the noble captain's senses with drink or some narcotic drug, they mutiny and take possession of the ship and make free with the stores; thus, eating and drinking, they proceed on their voyage in such a manner as might be expected of them. Him who is their partisan and cleverly aids them in their plot for getting the ship out of the captain's hands into their own whether by force or persuasion, they compliment with the name of sailor, pilot, able seaman, and abuse the other sort of man, whom they call a good-for-nothing; but that the true pilot must pay attention to the year and seasons and sky and stars and winds, and whatever else belongs to his art, if he intends to be really qualified for the command of a ship, and that he must and will be the steerer, whether other people like or not—the possibility of this union of authority with the steerer's art has never seriously entered into their thoughts or been made part of their calling. Now in vessels which are in a state of mutiny and by sailors who are mutineers, how will the true pilot be regarded? Will he not be called by them a prater, a star-gazer, a good-for-nothing?

Of course, said Adeimantus.

Then you will hardly need, I said, to hear the interpretation of the figure, which describes the true philosopher in his relation to the State; for you understand already.

Certainly.

Then suppose you now take this parable to the gentleman who is surprised at finding that philosophers have no honour in their cities; explain it to him and try to convince him that their having honour
would be far more extraordinary.

I will.

Say to him, that, in deeming the best votaries of philosophy to be useless to the rest of the world, he is right; but also tell him to attribute their uselessness to the fault of those who will not use them, and not to themselves. The pilot should not humbly beg the sailors to be commanded by him--that is not the order of nature; neither are 'the wise to go to the doors of the rich'--the ingenious author of this saying told a lie--but the truth is, that, when a man is ill, whether he be rich or poor, to the physician he must go, and he who wants to be governed, to him who is able to govern. The ruler who is good for anything ought not to beg his subjects to be ruled by him; although the present governors of mankind are of a different stamp; they may be justly compared to the mutinous sailors, and the true helmsmen to those who are called by them good-for-nothings and star-gazers.

Precisely so, he said.

For these reasons, and among men like these, philosophy, the noblest pursuit of all, is not likely to be much esteemed by those of the opposite faction; not that the greatest and most lasting injury is done to her by her opponents, but by her own professing followers, the same of whom you suppose the accuser to say, that the greater number of them are arrant rogues, and the best are useless; in which opinion I agreed.

Yes.

And the reason why the good are useless has now been explained?

True.

Then shall we proceed to show that the corruption of the majority is also unavoidable, and that this is not to be laid to the charge of philosophy any more than the other?

By all means.

And let us ask and answer in turn, first going back to the description of the gentle and noble nature. Truth, as you will remember, was his leader, whom he followed always and in all things; failing in this, he was an impostor, and had no part or lot in true philosophy.

Yes, that was said.
Well, and is not this one quality, to mention no others, greatly at variance with present notions of him?

Certainly, he said.

And have we not a right to say in his defence, that the true lover of knowledge is always striving after being--that is his nature; he will not rest in the multiplicity of individuals which is an appearance only, but will go on--the keen edge will not be blunted, nor the force of his desire abate until he have attained the knowledge of the true nature of every essence by a sympathetic and kindred power in the soul, and by that power drawing near and mingling and becoming incorporate with very being, having begotten mind and truth, he will have knowledge and will live and grow truly, and then, and not till then, will he cease from his travail.

Nothing, he said, can be more just than such a description of him.

And will the love of a lie be any part of a philosopher's nature? Will he not utterly hate a lie?

He will.

And when truth is the captain, we cannot suspect any evil of the band which he leads?

Impossible.

Justice and health of mind will be of the company, and temperance will follow after?

True, he replied.

Neither is there any reason why I should again set in array the philosopher's virtues, as you will doubtless remember that courage, magnificence, apprehension, memory, were his natural gifts. And you objected that, although no one could deny what I then said, still, if you leave words and look at facts, the persons who are thus described are some of them manifestly useless, and the greater number utterly depraved; we were then led to enquire into the grounds of these accusations, and have now arrived at the point of asking why are the majority bad, which question of necessity brought us back to the examination and definition of the true philosopher.

Exactly.

And we have next to consider the corruptions of the philosophic nature,
why so many are spoiled and so few escape spoiling--I am speaking of those who were said to be useless but not wicked--and, when we have done with them, we will speak of the imitators of philosophy, what manner of men are they who aspire after a profession which is above them and of which they are unworthy, and then, by their manifold inconsistencies, bring upon philosophy, and upon all philosophers, that universal reprobation of which we speak.

What are these corruptions? he said.

I will see if I can explain them to you. Every one will admit that a nature having in perfection all the qualities which we required in a philosopher, is a rare plant which is seldom seen among men.

Rare indeed.

And what numberless and powerful causes tend to destroy these rare natures!

What causes?

In the first place there are their own virtues, their courage, temperance, and the rest of them, every one of which praise worthy qualities (and this is a most singular circumstance) destroys and distracts from philosophy the soul which is the possessor of them.

That is very singular, he replied.

Then there are all the ordinary goods of life--beauty, wealth, strength, rank, and great connections in the State--you understand the sort of things--these also have a corrupting and distracting effect.

I understand; but I should like to know more precisely what you mean about them.

Grasp the truth as a whole, I said, and in the right way; you will then have no difficulty in apprehending the preceding remarks, and they will no longer appear strange to you.

And how am I to do so? he asked.

Why, I said, we know that all germs or seeds, whether vegetable or animal, when they fail to meet with proper nutriment or climate or soil, in proportion to their vigour, are all the more sensitive to the want of a suitable environment, for evil is a greater enemy to what is good than what is not.
Very true.

There is reason in supposing that the finest natures, when under alien conditions, receive more injury than the inferior, because the contrast is greater.

Certainly.

And may we not say, Adeimantus, that the most gifted minds, when they are ill-educated, become pre-eminently bad? Do not great crimes and the spirit of pure evil spring out of a fulness of nature ruined by education rather than from any inferiority, whereas weak natures are scarcely capable of any very great good or very great evil?

There I think that you are right.

And our philosopher follows the same analogy—he is like a plant which, having proper nurture, must necessarily grow and mature into all virtue, but, if sown and planted in an alien soil, becomes the most noxious of all weeds, unless he be preserved by some divine power. Do you really think, as people so often say, that our youth are corrupted by Sophists, or that private teachers of the art corrupt them in any degree worth speaking of? Are not the public who say these things the greatest of all Sophists? And do they not educate to perfection young and old, men and women alike, and fashion them after their own hearts?

When is this accomplished? he said.

When they meet together, and the world sits down at an assembly, or in a court of law, or a theatre, or a camp, or in any other popular resort, and there is a great uproar, and they praise some things which are being said or done, and blame other things, equally exaggerating both, shouting and clapping their hands, and the echo of the rocks and the place in which they are assembled redoubles the sound of the praise or blame—at such a time will not a young man's heart, as they say, leap within him? Will any private training enable him to stand firm against the overwhelming flood of popular opinion? or will he be carried away by the stream? Will he not have the notions of good and evil which the public in general have—he will do as they do, and as they are, such will he be?

Yes, Socrates; necessity will compel him.

And yet, I said, there is a still greater necessity, which has not been mentioned.

What is that?
The gentle force of attainder or confiscation or death which, as you are aware, these new Sophists and educators who are the public, apply when their words are powerless.

Indeed they do; and in right good earnest.

Now what opinion of any other Sophist, or of any private person, can be expected to overcome in such an unequal contest?

None, he replied.

No, indeed, I said, even to make the attempt is a great piece of folly; there neither is, nor has been, nor is ever likely to be, any different type of character which has had no other training in virtue but that which is supplied by public opinion--I speak, my friend, of human virtue only; what is more than human, as the proverb says, is not included: for I would not have you ignorant that, in the present evil state of governments, whatever is saved and comes to good is saved by the power of God, as we may truly say.

I quite assent, he replied.

Then let me crave your assent also to a further observation.

What are you going to say?

Why, that all those mercenary individuals, whom the many call Sophists and whom they deem to be their adversaries, do, in fact, teach nothing but the opinion of the many, that is to say, the opinions of their assemblies; and this is their wisdom. I might compare them to a man who should study the tempers and desires of a mighty strong beast who is fed by him—he would learn how to approach and handle him, also at what times and from what causes he is dangerous or the reverse, and what is the meaning of his several cries, and by what sounds, when another utters them, he is soothed or infuriated; and you may suppose further, that when, by continually attending upon him, he has become perfect in all this, he calls his knowledge wisdom, and makes of it a system or art, which he proceeds to teach, although he has no real notion of what he means by the principles or passions of which he is speaking, but calls this honourable and that dishonourable, or good or evil, or just or unjust, all in accordance with the tastes and tempers of the great brute. Good he pronounces to be that in which the beast delights and evil to be that which he dislikes; and he can give no other account of them except that the just and noble are the necessary, having never himself seen, and having no power of explaining to others the nature of either, or the difference between them, which is immense.
By heaven, would not such an one be a rare educator?

Indeed, he would.

And in what way does he who thinks that wisdom is the discernment of the tempers and tastes of the motley multitude, whether in painting or music, or, finally, in politics, differ from him whom I have been describing? For when a man consorts with the many, and exhibits to them his poem or other work of art or the service which he has done the State, making them his judges when he is not obliged, the so-called necessity of Diomede will oblige him to produce whatever they praise. And yet the reasons are utterly ludicrous which they give in confirmation of their own notions about the honourable and good. Did you ever hear any of them which were not?

No, nor am I likely to hear.

You recognise the truth of what I have been saying? Then let me ask you to consider further whether the world will ever be induced to believe in the existence of absolute beauty rather than of the many beautiful, or of the absolute in each kind rather than of the many in each kind?

Certainly not.

Then the world cannot possibly be a philosopher?

Impossible.

And therefore philosophers must inevitably fall under the censure of the world?

They must.

And of individuals who consort with the mob and seek to please them?

That is evident.

Then, do you see any way in which the philosopher can be preserved in his calling to the end? and remember what we were saying of him, that he was to have quickness and memory and courage and magnificence--these were admitted by us to be the true philosopher's gifts.

Yes.

Will not such an one from his early childhood be in all things first among all, especially if his bodily endowments are like his mental ones?
Certainly, he said.

And his friends and fellow-citizens will want to use him as he gets older for their own purposes?

No question.

Falling at his feet, they will make requests to him and do him honour and flatter him, because they want to get into their hands now, the power which he will one day possess.

That often happens, he said.

And what will a man such as he be likely to do under such circumstances, especially if he be a citizen of a great city, rich and noble, and a tall proper youth? Will he not be full of boundless aspirations, and fancy himself able to manage the affairs of Hellenes and of barbarians, and having got such notions into his head will he not dilate and elevate himself in the fulness of vain pomp and senseless pride?

To be sure he will.

Now, when he is in this state of mind, if some one gently comes to him and tells him that he is a fool and must get understanding, which can only be got by slaving for it, do you think that, under such adverse circumstances, he will be easily induced to listen?

Far otherwise.

And even if there be some one who through inherent goodness or natural reasonableness has had his eyes opened a little and is humbled and taken captive by philosophy, how will his friends behave when they think that they are likely to lose the advantage which they were hoping to reap from his companionship? Will they not do and say anything to prevent him from yielding to his better nature and to render his teacher powerless, using to this end private intrigues as well as public prosecutions?

There can be no doubt of it.

And how can one who is thus circumstanced ever become a philosopher?

Impossible.

Then were we not right in saying that even the very qualities which
make a man a philosopher may, if he be ill-educated, divert him from philosophy, no less than riches and their accompaniments and the other so-called goods of life?

We were quite right.

Thus, my excellent friend, is brought about all that ruin and failure which I have been describing of the natures best adapted to the best of all pursuits; they are natures which we maintain to be rare at any time; this being the class out of which come the men who are the authors of the greatest evil to States and individuals; and also of the greatest good when the tide carries them in that direction; but a small man never was the doer of any great thing either to individuals or to States.

That is most true, he said.

And so philosophy is left desolate, with her marriage rite incomplete: for her own have fallen away and forsaken her, and while they are leading a false and unbecoming life, other unworthy persons, seeing that she has no kinsmen to be her protectors, enter in and dishonour her; and fasten upon her the reproaches which, as you say, her reprovers utter, who affirm of her votaries that some are good for nothing, and that the greater number deserve the severest punishment.

That is certainly what people say.

Yes; and what else would you expect, I said, when you think of the puny creatures who, seeing this land open to them—a land well stocked with fair names and showy titles—like prisoners running out of prison into a sanctuary, take a leap out of their trades into philosophy; those who do so being probably the cleverest hands at their own miserable crafts? For, although philosophy be in this evil case, still there remains a dignity about her which is not to be found in the arts. And many are thus attracted by her whose natures are imperfect and whose souls are maimed and disfigured by their meannesses, as their bodies are by their trades and crafts. Is not this unavoidable?

Yes.

Are they not exactly like a bald little tinker who has just got out of durance and come into a fortune; he takes a bath and puts on a new coat, and is decked out as a bridegroom going to marry his master's daughter, who is left poor and desolate?

A most exact parallel.
What will be the issue of such marriages? Will they not be vile and bastard?

There can be no question of it.

And when persons who are unworthy of education approach philosophy and make an alliance with her who is a rank above them what sort of ideas and opinions are likely to be generated? Will they not be sophisms captivating to the ear, having nothing in them genuine, or worthy of or akin to true wisdom?

No doubt, he said.

Then, Adeimantus, I said, the worthy disciples of philosophy will be but a small remnant: perchance some noble and well-educated person, detained by exile in her service, who in the absence of corrupting influences remains devoted to her; or some lofty soul born in a mean city, the politics of which he contemns and neglects; and there may be a gifted few who leave the arts, which they justly despise, and come to her;--or peradventure there are some who are restrained by our friend Theages' bridle; for everything in the life of Theages conspired to divert him from philosophy; but ill-health kept him away from politics. My own case of the internal sign is hardly worth mentioning, for rarely, if ever, has such a monitor been given to any other man. Those who belong to this small class have tasted how sweet and blessed a possession philosophy is, and have also seen enough of the madness of the multitude; and they know that no politician is honest, nor is there any champion of justice at whose side they may fight and be saved. Such an one may be compared to a man who has fallen among wild beasts--he will not join in the wickedness of his fellows, but neither is he able singly to resist all their fierce natures, and therefore seeing that he would be of no use to the State or to his friends, and reflecting that he would have to throw away his life without doing any good either to himself or others, he holds his peace, and goes his own way. He is like one who, in the storm of dust and sleet which the driving wind hurries along, retires under the shelter of a wall; and seeing the rest of mankind full of wickedness, he is content, if only he can live his own life and be pure from evil or unrighteousness, and depart in peace and good-will, with bright hopes.

Yes, he said, and he will have done a great work before he departs.

A great work--yes; but not the greatest, unless he find a State suitable to him; for in a State which is suitable to him, he will have a larger growth and be the saviour of his country, as well as of himself.
The causes why philosophy is in such an evil name have now been sufficiently explained: the injustice of the charges against her has been shown—is there anything more which you wish to say?

Nothing more on that subject, he replied; but I should like to know which of the governments now existing is in your opinion the one adapted to her.

Not any of them, I said; and that is precisely the accusation which I bring against them—not one of them is worthy of the philosophic nature, and hence that nature is warped and estranged;—as the exotic seed which is sown in a foreign land becomes denaturalized, and is wont to be overpowered and to lose itself in the new soil, even so this growth of philosophy, instead of persisting, degenerates and receives another character. But if philosophy ever finds in the State that perfection which she herself is, then will be seen that she is in truth divine, and that all other things, whether natures of men or institutions, are but human;—and now, I know that you are going to ask, what that State is.

No, he said; there you are wrong, for I was going to ask another question—whether it is the State of which we are the founders and inventors, or some other?

Yes, I replied, ours in most respects; but you may remember my saying before, that some living authority would always be required in the State having the same idea of the constitution which guided you when as legislator you were laying down the laws.

That was said, he replied.

Yes, but not in a satisfactory manner; you frightened us by interposing objections, which certainly showed that the discussion would be long and difficult; and what still remains is the reverse of easy.

What is there remaining?

The question how the study of philosophy may be so ordered as not to be the ruin of the State: All great attempts are attended with risk; 'hard is the good,' as men say.

Still, he said, let the point be cleared up, and the enquiry will then be complete.

I shall not be hindered, I said, by any want of will, but, if at all, by a want of power: my zeal you may see for yourselves; and please to remark in what I am about to say how boldly and unhesitatingly I
declare that States should pursue philosophy, not as they do now, but in a different spirit.

In what manner?

At present, I said, the students of philosophy are quite young; beginning when they are hardly past childhood, they devote only the time saved from moneymaking and housekeeping to such pursuits; and even those of them who are reputed to have most of the philosophic spirit, when they come within sight of the great difficulty of the subject, I mean dialectic, take themselves off. In after life when invited by some one else, they may, perhaps, go and hear a lecture, and about this they make much ado, for philosophy is not considered by them to be their proper business: at last, when they grow old, in most cases they are extinguished more truly than Heracleitus' sun, inasmuch as they never light up again.

But what ought to be their course?

Just the opposite. In childhood and youth their study, and what philosophy they learn, should be suited to their tender years: during this period while they are growing up towards manhood, the chief and special care should be given to their bodies that they may have them to use in the service of philosophy; as life advances and the intellect begins to mature, let them increase the gymnastics of the soul; but when the strength of our citizens fails and is past civil and military duties, then let them range at will and engage in no serious labour, as we intend them to live happily here, and to crown this life with a similar happiness in another.

How truly in earnest you are, Socrates! he said; I am sure of that; and yet most of your hearers, if I am not mistaken, are likely to be still more earnest in their opposition to you, and will never be convinced; Thrasymachus least of all.

Do not make a quarrel, I said, between Thrasymachus and me, who have recently become friends, although, indeed, we were never enemies; for I shall go on striving to the utmost until I either convert him and other men, or do something which may profit them against the day when they live again, and hold the like discourse in another state of existence.

You are speaking of a time which is not very near.

Rather, I replied, of a time which is as nothing in comparison with eternity. Nevertheless, I do not wonder that the many refuse to believe; for they have never seen that of which we are now speaking realised; they have seen only a conventional imitation of philosophy,
consisting of words artificially brought together, not like these of ours having a natural unity. But a human being who in word and work is perfectly moulded, as far as he can be, into the proportion and likeness of virtue—such a man ruling in a city which bears the same image, they have never yet seen, neither one nor many of them—do you think that they ever did?

No indeed.

No, my friend, and they have seldom, if ever, heard free and noble sentiments; such as men utter when they are earnestly and by every means in their power seeking after truth for the sake of knowledge, while they look coldly on the subtleties of controversy, of which the end is opinion and strife, whether they meet with them in the courts of law or in society.

They are strangers, he said, to the words of which you speak.

And this was what we foresaw, and this was the reason why truth forced us to admit, not without fear and hesitation, that neither cities nor States nor individuals will ever attain perfection until the small class of philosophers whom we termed useless but not corrupt are providentially compelled, whether they will or not, to take care of the State, and until a like necessity be laid on the State to obey them; or until kings, or if not kings, the sons of kings or princes, are divinely inspired with a true love of true philosophy. That either or both of these alternatives are impossible, I see no reason to affirm: if they were so, we might indeed be justly ridiculed as dreamers and visionaries. Am I not right?

Quite right.

If then, in the countless ages of the past, or at the present hour in some foreign clime which is far away and beyond our ken, the perfected philosopher is or has been or hereafter shall be compelled by a superior power to have the charge of the State, we are ready to assert to the death, that this our constitution has been, and is—yea, and will be whenever the Muse of Philosophy is queen. There is no impossibility in all this; that there is a difficulty, we acknowledge ourselves.

My opinion agrees with yours, he said.

But do you mean to say that this is not the opinion of the multitude?

I should imagine not, he replied.
O my friend, I said, do not attack the multitude: they will change their minds, if, not in an aggressive spirit, but gently and with the view of soothing them and removing their dislike of over-education, you show them your philosophers as they really are and describe as you were just now doing their character and profession, and then mankind will see that he of whom you are speaking is not such as they supposed—if they view him in this new light, they will surely change their notion of him, and answer in another strain. Who can be at enmity with one who loves them, who that is himself gentle and free from envy will be jealous of one in whom there is no jealousy? Nay, let me answer for you, that in a few this harsh temper may be found but not in the majority of mankind.

I quite agree with you, he said.

And do you not also think, as I do, that the harsh feeling which the many entertain towards philosophy originates in the pretenders, who rush in uninvited, and are always abusing them, and finding fault with them, who make persons instead of things the theme of their conversation? and nothing can be more unbecoming in philosophers than this.

It is most unbecoming.

For he, Adeimantus, whose mind is fixed upon true being, has surely no time to look down upon the affairs of earth, or to be filled with malice and envy, contending against men; his eye is ever directed towards things fixed and immutable, which he sees neither injuring nor injured by one another, but all in order moving according to reason; these he imitates, and to these he will, as far as he can, conform himself. Can a man help imitating that with which he holds reverential converse?

Impossible.

And the philosopher holding converse with the divine order, becomes orderly and divine, as far as the nature of man allows; but like every one else, he will suffer from detraction.

Of course.

And if a necessity be laid upon him of fashioning, not only himself, but human nature generally, whether in States or individuals, into that which he beholds elsewhere, will he, think you, be an unskilful artificer of justice, temperance, and every civil virtue?

Anything but unskilful.
And if the world perceives that what we are saying about him is the truth, will they be angry with philosophy? Will they disbelieve us, when we tell them that no State can be happy which is not designed by artists who imitate the heavenly pattern?

They will not be angry if they understand, he said. But how will they draw out the plan of which you are speaking?

They will begin by taking the State and the manners of men, from which, as from a tablet, they will rub out the picture, and leave a clean surface. This is no easy task. But whether easy or not, herein will lie the difference between them and every other legislator,—they will have nothing to do either with individual or State, and will inscribe no laws, until they have either found, or themselves made, a clean surface.

They will be very right, he said.

Having effected this, they will proceed to trace an outline of the constitution?

No doubt.

And when they are filling in the work, as I conceive, they will often turn their eyes upwards and downwards: I mean that they will first look at absolute justice and beauty and temperance, and again at the human copy; and will mingle and temper the various elements of life into the image of a man; and thus they will conceive according to that other image, which, when existing among men, Homer calls the form and likeness of God.

Very true, he said.

And one feature they will erase, and another they will put in, they have made the ways of men, as far as possible, agreeable to the ways of God?

Indeed, he said, in no way could they make a fairer picture.

And now, I said, are we beginning to persuade those whom you described as rushing at us with might and main, that the painter of constitutions is such an one as we are praising; at whom they were so very indignant because to his hands we committed the State; and are they growing a little calmer at what they have just heard?

Much calmer, if there is any sense in them.
Why, where can they still find any ground for objection? Will they
doubt that the philosopher is a lover of truth and being?

They would not be so unreasonable.

Or that his nature, being such as we have delineated, is akin to the
highest good?

Neither can they doubt this.

But again, will they tell us that such a nature, placed under
favourable circumstances, will not be perfectly good and wise if any
ever was? Or will they prefer those whom we have rejected?

Surely not.

Then will they still be angry at our saying, that, until philosophers
bear rule, States and individuals will have no rest from evil, nor will
this our imaginary State ever be realised?

I think that they will be less angry.

Shall we assume that they are not only less angry but quite gentle, and
that they have been converted and for very shame, if for no other
reason, cannot refuse to come to terms?

By all means, he said.

Then let us suppose that the reconciliation has been effected. Will
any one deny the other point, that there may be sons of kings or
princes who are by nature philosophers?

Surely no man, he said.

And when they have come into being will any one say that they must of
necessity be destroyed; that they can hardly be saved is not denied
even by us; but that in the whole course of ages no single one of them
can escape--who will venture to affirm this?

Who indeed!

But, said I, one is enough; let there be one man who has a city
obedient to his will, and he might bring into existence the ideal
polity about which the world is so incredulous.

Yes, one is enough.
The ruler may impose the laws and institutions which we have been describing, and the citizens may possibly be willing to obey them?

Certainly.

And that others should approve of what we approve, is no miracle or impossibility?

I think not.

But we have sufficiently shown, in what has preceded, that all this, if only possible, is assuredly for the best.

We have.

And now we say not only that our laws, if they could be enacted, would be for the best, but also that the enactment of them, though difficult, is not impossible.

Very good.

And so with pain and toil we have reached the end of one subject, but more remains to be discussed;--how and by what studies and pursuits will the saviours of the constitution be created, and at what ages are they to apply themselves to their several studies?

Certainly.

I omitted the troublesome business of the possession of women, and the procreation of children, and the appointment of the rulers, because I knew that the perfect State would be eyed with jealousy and was difficult of attainment; but that piece of cleverness was not of much service to me, for I had to discuss them all the same. The women and children are now disposed of, but the other question of the rulers must be investigated from the very beginning. We were saying, as you will remember, that they were to be lovers of their country, tried by the test of pleasures and pains, and neither in hardships, nor in dangers, nor at any other critical moment were to lose their patriotism--he was to be rejected who failed, but he who always came forth pure, like gold tried in the refiner's fire, was to be made a ruler, and to receive honours and rewards in life and after death. This was the sort of thing which was being said, and then the argument turned aside and veiled her face; not liking to stir the question which has now arisen.

I perfectly remember, he said.
Yes, my friend, I said, and I then shrank from hazarding the bold word; but now let me dare to say--that the perfect guardian must be a philosopher.

Yes, he said, let that be affirmed.

And do not suppose that there will be many of them; for the gifts which were deemed by us to be essential rarely grow together; they are mostly found in shreds and patches.

What do you mean? he said.

You are aware, I replied, that quick intelligence, memory, sagacity, cleverness, and similar qualities, do not often grow together, and that persons who possess them and are at the same time high-spirited and magnanimous are not so constituted by nature as to live orderly and in a peaceful and settled manner; they are driven any way by their impulses, and all solid principle goes out of them.

Very true, he said.

On the other hand, those steadfast natures which can better be depended upon, which in a battle are impregnable to fear and immovable, are equally immovable when there is anything to be learned; they are always in a torpid state, and are apt to yawn and go to sleep over any intellectual toil.

Quite true.

And yet we were saying that both qualities were necessary in those to whom the higher education is to be imparted, and who are to share in any office or command.

Certainly, he said.

And will they be a class which is rarely found?

Yes, indeed.

Then the aspirant must not only be tested in those labours and dangers and pleasures which we mentioned before, but there is another kind of probation which we did not mention--he must be exercised also in many kinds of knowledge, to see whether the soul will be able to endure the highest of all, will faint under them, as in any other studies and exercises.

Yes, he said, you are quite right in testing him. But what do you mean
by the highest of all knowledge?

You may remember, I said, that we divided the soul into three parts; and distinguished the several natures of justice, temperance, courage, and wisdom?

Indeed, he said, if I had forgotten, I should not deserve to hear more.

And do you remember the word of caution which preceded the discussion of them?

To what do you refer?

We were saying, if I am not mistaken, that he who wanted to see them in their perfect beauty must take a longer and more circuitous way, at the end of which they would appear; but that we could add on a popular exposition of them on a level with the discussion which had preceded. And you replied that such an exposition would be enough for you, and so the enquiry was continued in what to me seemed to be a very inaccurate manner; whether you were satisfied or not, it is for you to say.

Yes, he said, I thought and the others thought that you gave us a fair measure of truth.

But, my friend, I said, a measure of such things Which in any degree falls short of the whole truth is not fair measure; for nothing imperfect is the measure of anything, although persons are too apt to be contented and think that they need search no further.

Not an uncommon case when people are indolent.

Yes, I said; and there cannot be any worse fault in a guardian of the State and of the laws.

True.

The guardian then, I said, must be required to take the longer circuit, and toll at learning as well as at gymnastics, or he will never reach the highest knowledge of all which, as we were just now saying, is his proper calling.

What, he said, is there a knowledge still higher than this--higher than justice and the other virtues?

Yes, I said, there is. And of the virtues too we must behold not the outline merely, as at present--nothing short of the most finished picture should satisfy us. When little things are elaborated with an
infinity of pains, in order that they may appear in their full beauty and utmost clearness, how ridiculous that we should not think the highest truths worthy of attaining the highest accuracy!

A right noble thought; but do you suppose that we shall refrain from asking you what is this highest knowledge?

Nay, I said, ask if you will; but I am certain that you have heard the answer many times, and now you either do not understand me or, as I rather think, you are disposed to be troublesome; for you have of been told that the idea of good is the highest knowledge, and that all other things become useful and advantageous only by their use of this. You can hardly be ignorant that of this I was about to speak, concerning which, as you have often heard me say, we know so little; and, without which, any other knowledge or possession of any kind will profit us nothing. Do you think that the possession of all other things is of any value if we do not possess the good? or the knowledge of all other things if we have no knowledge of beauty and goodness?

Assuredly not.

You are further aware that most people affirm pleasure to be the good, but the finer sort of wits say it is knowledge

Yes.

And you are aware too that the latter cannot explain what they mean by knowledge, but are obliged after all to say knowledge of the good?

How ridiculous!

Yes, I said, that they should begin by reproaching us with our ignorance of the good, and then presume our knowledge of it--for the good they define to be knowledge of the good, just as if we understood them when they use the term 'good'--this is of course ridiculous.

Most true, he said.

And those who make pleasure their good are in equal perplexity; for they are compelled to admit that there are bad pleasures as well as good.

Certainly.

And therefore to acknowledge that bad and good are the same?

True.
There can be no doubt about the numerous difficulties in which this question is involved.

There can be none.

Further, do we not see that many are willing to do or to have or to seem to be what is just and honourable without the reality; but no one is satisfied with the appearance of good--the reality is what they seek; in the case of the good, appearance is despised by every one.

Very true, he said.

Of this then, which every soul of man pursues and makes the end of all his actions, having a presentiment that there is such an end, and yet hesitating because neither knowing the nature nor having the same assurance of this as of other things, and therefore losing whatever good there is in other things,--of a principle such and so great as this ought the best men in our State, to whom everything is entrusted, to be in the darkness of ignorance?

Certainly not, he said.

I am sure, I said, that he who does not know now the beautiful and the just are likewise good will be but a sorry guardian of them; and I suspect that no one who is ignorant of the good will have a true knowledge of them.

That, he said, is a shrewd suspicion of yours.

And if we only have a guardian who has this knowledge our State will be perfectly ordered?

Of course, he replied; but I wish that you would tell me whether you conceive this supreme principle of the good to be knowledge or pleasure, or different from either.

Aye, I said, I knew all along that a fastidious gentleman like you would not be contented with the thoughts of other people about these matters.

True, Socrates; but I must say that one who like you has passed a lifetime in the study of philosophy should not be always repeating the opinions of others, and never telling his own.

Well, but has any one a right to say positively what he does not know?
Not, he said, with the assurance of positive certainty; he has no right
to do that: but he may say what he thinks, as a matter of opinion.

And do you not know, I said, that all mere opinions are bad, and the
best of them blind? You would not deny that those who have any true
notion without intelligence are only like blind men who feel their way
along the road?

Very true.

And do you wish to behold what is blind and crooked and base, when
others will tell you of brightness and beauty?

GLAUCON - SOCRATES

Still, I must implore you, Socrates, said Glaucon, not to turn away
just as you are reaching the goal; if you will only give such an
explanation of the good as you have already given of justice and
temperance and the other virtues, we shall be satisfied.

Yes, my friend, and I shall be at least equally satisfied, but I cannot
help fearing that I shall fall, and that my indiscreet zeal will bring
ridicule upon me. No, sweet sirs, let us not at present ask what is
the actual nature of the good, for to reach what is now in my thoughts
would be an effort too great for me. But of the child of the good who
is likest him, I would fain speak, if I could be sure that you wished
to hear--otherwise, not.

By all means, he said, tell us about the child, and you shall remain in
our debt for the account of the parent.

I do indeed wish, I replied, that I could pay, and you receive, the
account of the parent, and not, as now, of the offspring only; take,
however, this latter by way of interest, and at the same time have a
care that I do not render a false account, although I have no intention
of deceiving you.

Yes, we will take all the care that we can: proceed.

Yes, I said, but I must first come to an understanding with you, and
remind you of what I have mentioned in the course of this discussion,
and at many other times.

What?

The old story, that there is a many beautiful and a many good, and so
of other things which we describe and define; to all of them 'many' is
applied.

True, he said.

And there is an absolute beauty and an absolute good, and of other things to which the term 'many' is applied there is an absolute; for they may be brought under a single idea, which is called the essence of each.

Very true.

The many, as we say, are seen but not known, and the ideas are known but not seen.

Exactly.

And what is the organ with which we see the visible things?

The sight, he said.

And with the hearing, I said, we hear, and with the other senses perceive the other objects of sense?

True.

But have you remarked that sight is by far the most costly and complex piece of workmanship which the artificer of the senses ever contrived?

No, I never have, he said.

Then reflect; has the ear or voice need of any third or additional nature in order that the one may be able to hear and the other to be heard?

Nothing of the sort.

No, indeed, I replied; and the same is true of most, if not all, the other senses--you would not say that any of them requires such an addition?

Certainly not.

But you see that without the addition of some other nature there is no seeing or being seen?

How do you mean?
Sight being, as I conceive, in the eyes, and he who has eyes wanting to see; colour being also present in them, still unless there be a third nature specially adapted to the purpose, the owner of the eyes will see nothing and the colours will be invisible.

Of what nature are you speaking?

Of that which you term light, I replied.

True, he said.

Noble, then, is the bond which links together sight and visibility, and great beyond other bonds by no small difference of nature; for light is their bond, and light is no ignoble thing?

Nay, he said, the reverse of ignoble.

And which, I said, of the gods in heaven would you say was the lord of this element? Whose is that light which makes the eye to see perfectly and the visible to appear?

You mean the sun, as you and all mankind say.

May not the relation of sight to this deity be described as follows?

How?

Neither sight nor the eye in which sight resides is the sun?

No.

Yet of all the organs of sense the eye is the most like the sun?

By far the most like.

And the power which the eye possesses is a sort of effluence which is dispensed from the sun?

Exactly.

Then the sun is not sight, but the author of sight who is recognised by sight.

True, he said.

And this is he whom I call the child of the good, whom the good begat in his own likeness, to be in the visible world, in relation to sight
and the things of sight, what the good is in the intellectual world in relation to mind and the things of mind.

Will you be a little more explicit? he said.

Why, you know, I said, that the eyes, when a person directs them towards objects on which the light of day is no longer shining, but the moon and stars only, see dimly, and are nearly blind; they seem to have no clearness of vision in them?

Very true.

But when they are directed towards objects on which the sun shines, they see clearly and there is sight in them?

Certainly.

And the soul is like the eye: when resting upon that on which truth and being shine, the soul perceives and understands and is radiant with intelligence; but when turned towards the twilight of becoming and perishing, then she has opinion only, and goes blinking about, and is first of one opinion and then of another, and seems to have no intelligence?

Just so.

Now, that which imparts truth to the known and the power of knowing to the knower is what I would have you term the idea of good, and this you will deem to be the cause of science, and of truth in so far as the latter becomes the subject of knowledge; beautiful too, as are both truth and knowledge, you will be right in esteeming this other nature as more beautiful than either; and, as in the previous instance, light and sight may be truly said to be like the sun, and yet not to be the sun, so in this other sphere, science and truth may be deemed to be like the good, but not the good; the good has a place of honour yet higher.

What a wonder of beauty that must be, he said, which is the author of science and truth, and yet surpasses them in beauty; for you surely cannot mean to say that pleasure is the good?

God forbid, I replied; but may I ask you to consider the image in another point of view?

In what point of view?

You would say, would you not, that the sun is only the author of
visibility in all visible things, but of generation and nourishment and
growth, though he himself is not generation?

Certainly.

In like manner the good may be said to be not only the author of
knowledge to all things known, but of their being and essence, and yet
the good is not essence, but far exceeds essence in dignity and power.

Glaucon said, with a ludicrous earnestness: By the light of heaven,
how amazing!

Yes, I said, and the exaggeration may be set down to you; for you made
me utter my fancies.

And pray continue to utter them; at any rate let us hear if there is
anything more to be said about the similitude of the sun.

Yes, I said, there is a great deal more.

Then omit nothing, however slight.

I will do my best, I said; but I should think that a great deal will
have to be omitted.

You have to imagine, then, that there are two ruling powers, and that
one of them is set over the intellectual world, the other over the
visible. I do not say heaven, lest you should fancy that I am playing
upon the name ('ourhanoz, orhatoz'). May I suppose that you have this
distinction of the visible and intelligible fixed in your mind?

I have.

Now take a line which has been cut into two unequal parts, and divide
each of them again in the same proportion, and suppose the two main
divisions to answer, one to the visible and the other to the
intelligible, and then compare the subdivisions in respect of their
clearness and want of clearness, and you will find that the first
section in the sphere of the visible consists of images. And by images
I mean, in the first place, shadows, and in the second place,
reflections in water and in solid, smooth and polished bodies and the
like: Do you understand?

Yes, I understand.

Imagine, now, the other section, of which this is only the resemblance,
to include the animals which we see, and everything that grows or is
Would you not admit that both the sections of this division have different degrees of truth, and that the copy is to the original as the sphere of opinion is to the sphere of knowledge?

Most undoubtedly.

Next proceed to consider the manner in which the sphere of the intellectual is to be divided.

In what manner?

Thus:--There are two subdivisions, in the lower or which the soul uses the figures given by the former division as images; the enquiry can only be hypothetical, and instead of going upwards to a principle descends to the other end; in the higher of the two, the soul passes out of hypotheses, and goes up to a principle which is above hypotheses, making no use of images as in the former case, but proceeding only in and through the ideas themselves.

I do not quite understand your meaning, he said.

Then I will try again; you will understand me better when I have made some preliminary remarks. You are aware that students of geometry, arithmetic, and the kindred sciences assume the odd and the even and the figures and three kinds of angles and the like in their several branches of science; these are their hypotheses, which they and everybody are supposed to know, and therefore they do not deign to give any account of them either to themselves or others; but they begin with them, and go on until they arrive at last, and in a consistent manner, at their conclusion?

Yes, he said, I know.

And do you not know also that although they make use of the visible forms and reason about them, they are thinking not of these, but of the ideals which they resemble; not of the figures which they draw, but of the absolute square and the absolute diameter, and so on--the forms which they draw or make, and which have shadows and reflections in water of their own, are converted by them into images, but they are really seeking to behold the things themselves, which can only be seen with the eye of the mind?

That is true.
And of this kind I spoke as the intelligible, although in the search after it the soul is compelled to use hypotheses; not ascending to a first principle, because she is unable to rise above the region of hypothesis, but employing the objects of which the shadows below are resemblances in their turn as images, they having in relation to the shadows and reflections of them a greater distinctness, and therefore a higher value.

I understand, he said, that you are speaking of the province of geometry and the sister arts.

And when I speak of the other division of the intelligible, you will understand me to speak of that other sort of knowledge which reason herself attains by the power of dialectic, using the hypotheses not as first principles, but only as hypotheses—that is to say, as steps and points of departure into a world which is above hypotheses, in order that she may soar beyond them to the first principle of the whole; and clinging to this and then to that which depends on this, by successive steps she descends again without the aid of any sensible object, from ideas, through ideas, and in ideas she ends.

I understand you, he replied; not perfectly, for you seem to me to be describing a task which is really tremendous; but, at any rate, I understand you to say that knowledge and being, which the science of dialectic contemplates, are clearer than the notions of the arts, as they are termed, which proceed from hypotheses only: these are also contemplated by the understanding, and not by the senses: yet, because they start from hypotheses and do not ascend to a principle, those who contemplate them appear to you not to exercise the higher reason upon them, although when a first principle is added to them they are cognizable by the higher reason. And the habit which is concerned with geometry and the cognate sciences I suppose that you would term understanding and not reason, as being intermediate between opinion and reason.

You have quite conceived my meaning, I said; and now, corresponding to these four divisions, let there be four faculties in the soul-reason answering to the highest, understanding to the second, faith (or conviction) to the third, and perception of shadows to the last—and let there be a scale of them, and let us suppose that the several faculties have clearness in the same degree that their objects have truth.

I understand, he replied, and give my assent, and accept your arrangement.
AND now, I said, let me show in a figure how far our nature is enlightened or unenlightened:—Behold! human beings living in a underground den, which has a mouth open towards the light and reaching all along the den; here they have been from their childhood, and have their legs and necks chained so that they cannot move, and can only see before them, being prevented by the chains from turning round their heads. Above and behind them a fire is blazing at a distance, and between the fire and the prisoners there is a raised way; and you will see, if you look, a low wall built along the way, like the screen which marionette players have in front of them, over which they show the puppets.

I see.

And do you see, I said, men passing along the wall carrying all sorts of vessels, and statues and figures of animals made of wood and stone and various materials, which appear over the wall? Some of them are talking, others silent.

You have shown me a strange image, and they are strange prisoners.

Like ourselves, I replied; and they see only their own shadows, or the shadows of one another, which the fire throws on the opposite wall of the cave?

True, he said; how could they see anything but the shadows if they were never allowed to move their heads?

And of the objects which are being carried in like manner they would only see the shadows?

Yes, he said.

And if they were able to converse with one another, would they not suppose that they were naming what was actually before them?

Very true.

And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy when one of the passers-by
spoke that the voice which they heard came from the passing shadow?

No question, he replied.

To them, I said, the truth would be literally nothing but the shadows of the images.

That is certain.

And now look again, and see what will naturally follow it' the prisoners are released and disabused of their error. At first, when any of them is liberated and compelled suddenly to stand up and turn his neck round and walk and look towards the light, he will suffer sharp pains; the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the shadows; and then conceive some one saying to him, that what he saw before was an illusion, but that now, when he is approaching nearer to being and his eye is turned towards more real existence, he has a clearer vision, what will be his reply? And you may further imagine that his instructor is pointing to the objects as they pass and requiring him to name them,--will he not be perplexed? Will he not fancy that the shadows which he formerly saw are truer than the objects which are now shown to him?

Far truer.

And if he is compelled to look straight at the light, will he not have a pain in his eyes which will make him turn away to take and take in the objects of vision which he can see, and which he will conceive to be in reality clearer than the things which are now being shown to him?

True, he now

And suppose once more, that he is reluctantly dragged up a steep and rugged ascent, and held fast until he's forced into the presence of the sun himself, is he not likely to be pained and irritated? When he approaches the light his eyes will be dazzled, and he will not be able to see anything at all of what are now called realities.

Not all in a moment, he said.

He will require to grow accustomed to the sight of the upper world. And first he will see the shadows best, next the reflections of men and other objects in the water, and then the objects themselves; then he will gaze upon the light of the moon and the stars and the spangled heaven; and he will see the sky and the stars by night better than the sun or the light of the sun by day?
Certainly.

Last of he will be able to see the sun, and not mere reflections of him in the water, but he will see him in his own proper place, and not in another; and he will contemplate him as he is.

Certainly.

He will then proceed to argue that this is he who gives the season and the years, and is the guardian of all that is in the visible world, and in a certain way the cause of all things which he and his fellows have been accustomed to behold?

Clearly, he said, he would first see the sun and then reason about him.

And when he remembered his old habitation, and the wisdom of the den and his fellow-prisoners, do you not suppose that he would felicitate himself on the change, and pity them?

Certainly, he would.

And if they were in the habit of conferring honours among themselves on those who were quickest to observe the passing shadows and to remark which of them went before, and which followed after, and which were together; and who were therefore best able to draw conclusions as to the future, do you think that he would care for such honours and glories, or envy the possessors of them? Would he not say with Homer,

\[
\text{Better to be the poor servant of a poor master,}
\]

and to endure anything, rather than think as they do and live after their manner?

Yes, he said, I think that he would rather suffer anything than entertain these false notions and live in this miserable manner.

Imagine once more, I said, such an one coming suddenly out of the sun to be replaced in his old situation; would he not be certain to have his eyes full of darkness?

To be sure, he said.

And if there were a contest, and he had to compete in measuring the shadows with the prisoners who had never moved out of the den, while his sight was still weak, and before his eyes had become steady (and the time which would be needed to acquire this new habit of sight might
be very considerable) would he not be ridiculous? Men would say of him that up he went and down he came without his eyes; and that it was better not even to think of ascending; and if any one tried to loose another and lead him up to the light, let them only catch the offender, and they would put him to death.

No question, he said.

This entire allegory, I said, you may now append, dear Glaucon, to the previous argument; the prison-house is the world of sight, the light of the fire is the sun, and you will not misapprehend me if you interpret the journey upwards to be the ascent of the soul into the intellectual world according to my poor belief, which, at your desire, I have expressed whether rightly or wrongly God knows. But, whether true or false, my opinion is that in the world of knowledge the idea of good appears last of all, and is seen only with an effort; and, when seen, is also inferred to be the universal author of all things beautiful and right, parent of light and of the lord of light in this visible world, and the immediate source of reason and truth in the intellectual; and that this is the power upon which he who would act rationally, either in public or private life must have his eye fixed.

I agree, he said, as far as I am able to understand you.

Moreover, I said, you must not wonder that those who attain to this beatific vision are unwilling to descend to human affairs; for their souls are ever hastening into the upper world where they desire to dwell; which desire of theirs is very natural, if our allegory may be trusted.

Yes, very natural.

And is there anything surprising in one who passes from divine contemplations to the evil state of man, misbehaving himself in a ridiculous manner; if, while his eyes are blinking and before he has become accustomed to the surrounding darkness, he is compelled to fight in courts of law, or in other places, about the images or the shadows of images of justice, and is endeavouring to meet the conceptions of those who have never yet seen absolute justice?

Anything but surprising, he replied.

Any one who has common sense will remember that the bewilderments of the eyes are of two kinds, and arise from two causes, either from coming out of the light or from going into the light, which is true of the mind's eye, quite as much as of the bodily eye; and he who remembers this when he sees any one whose vision is perplexed and weak,
will not be too ready to laugh; he will first ask whether that soul of
man has come out of the brighter light, and is unable to see because
unaccustomed to the dark, or having turned from darkness to the day is
dazzled by excess of light. And he will count the one happy in his
condition and state of being, and he will pity the other; or, if he
have a mind to laugh at the soul which comes from below into the light,
there will be more reason in this than in the laugh which greets him
who returns from above out of the light into the den.

That, he said, is a very just distinction.

But then, if I am right, certain professors of education must be wrong
when they say that they can put a knowledge into the soul which was not
there before, like sight into blind eyes.

They undoubtedly say this, he replied.

Whereas, our argument shows that the power and capacity of learning
exists in the soul already; and that just as the eye was unable to turn
from darkness to light without the whole body, so too the instrument of
knowledge can only by the movement of the whole soul be turned from the
world of becoming into that of being, and learn by degrees to endure
the sight of being, and of the brightest and best of being, or in other
words, of the good.

Very true.

And must there not be some art which will effect conversion in the
easiest and quickest manner; not implanting the faculty of sight, for
that exists already, but has been turned in the wrong direction, and is
looking away from the truth?

Yes, he said, such an art may be presumed.

And whereas the other so-called virtues of the soul seem to be akin to
bodily qualities, for even when they are not originally innate they can
be implanted later by habit and exercise, the of wisdom more than
anything else contains a divine element which always remains, and by
this conversion is rendered useful and profitable; or, on the other
hand, hurtful and useless. Did you never observe the narrow
intelligence flashing from the keen eye of a clever rogue--how eager he
is, how clearly his paltry soul sees the way to his end; he is the
reverse of blind, but his keen eyesight is forced into the service of
evil, and he is mischievous in proportion to his cleverness.

Very true, he said.
But what if there had been a circumcision of such natures in the days of their youth; and they had been severed from those sensual pleasures, such as eating and drinking, which, like leaden weights, were attached to them at their birth, and which drag them down and turn the vision of their souls upon the things that are below—if, I say, they had been released from these impediments and turned in the opposite direction, the very same faculty in them would have seen the truth as keenly as they see what their eyes are turned to now.

Very likely.

Yes, I said; and there is another thing which is likely, or rather a necessary inference from what has preceded, that neither the uneducated and uninformed of the truth, nor yet those who never make an end of their education, will be able ministers of State; not the former, because they have no single aim of duty which is the rule of all their actions, private as well as public; nor the latter, because they will not act at all except upon compulsion, fancying that they are already dwelling apart in the islands of the blest.

Very true, he replied.

Then, I said, the business of us who are the founders of the State will be to compel the best minds to attain that knowledge which we have already shown to be the greatest of all—they must continue to ascend until they arrive at the good; but when they have ascended and seen enough we must not allow them to do as they do now.

What do you mean?

I mean that they remain in the upper world: but this must not be allowed; they must be made to descend again among the prisoners in the den, and partake of their labours and honours, whether they are worth having or not.

But is not this unjust? he said; ought we to give them a worse life, when they might have a better?

You have again forgotten, my friend, I said, the intention of the legislator, who did not aim at making any one class in the State happy above the rest; the happiness was to be in the whole State, and he held the citizens together by persuasion and necessity, making them benefactors of the State, and therefore benefactors of one another; to this end he created them, not to please themselves, but to be his instruments in binding up the State.

True, he said, I had forgotten.
Observe, Glaucon, that there will be no injustice in compelling our philosophers to have a care and providence of others; we shall explain to them that in other States, men of their class are not obliged to share in the toils of politics: and this is reasonable, for they grow up at their own sweet will, and the government would rather not have them. Being self-taught, they cannot be expected to show any gratitude for a culture which they have never received. But we have brought you into the world to be rulers of the hive, kings of yourselves and of the other citizens, and have educated you far better and more perfectly than they have been educated, and you are better able to share in the double duty. Wherefore each of you, when his turn comes, must go down to the general underground abode, and get the habit of seeing in the dark. When you have acquired the habit, you will see ten thousand times better than the inhabitants of the den, and you will know what the several images are, and what they represent, because you have seen the beautiful and just and good in their truth. And thus our State which is also yours will be a reality, and not a dream only, and will be administered in a spirit unlike that of other States, in which men fight with one another about shadows only and are distracted in the struggle for power, which in their eyes is a great good. Whereas the truth is that the State in which the rulers are most reluctant to govern is always the best and most quietly governed, and the State in which they are most eager, the worst.

Quite true, he replied.

And will our pupils, when they hear this, refuse to take their turn at the toils of State, when they are allowed to spend the greater part of their time with one another in the heavenly light?

Impossible, he answered; for they are just men, and the commands which we impose upon them are just; there can be no doubt that every one of them will take office as a stern necessity, and not after the fashion of our present rulers of State.

Yes, my friend, I said; and there lies the point. You must contrive for your future rulers another and a better life than that of a ruler, and then you may have a well-ordered State; for only in the State which offers this, will they rule who are truly rich, not in silver and gold, but in virtue and wisdom, which are the true blessings of life. Whereas if they go to the administration of public affairs, poor and hungering after their own private advantage, thinking that hence they are to snatch the chief good, order there can never be; for they will be fighting about office, and the civil and domestic broils which thus arise will be the ruin of the rulers themselves and of the whole State.
Most true, he replied.

And the only life which looks down upon the life of political ambition is that of true philosophy. Do you know of any other?

Indeed, I do not, he said.

And those who govern ought not to be lovers of the task? For, if they are, there will be rival lovers, and they will fight.

No question.

Who then are those whom we shall compel to be guardians? Surely they will be the men who are wisest about affairs of State, and by whom the State is best administered, and who at the same time have other honours and another and a better life than that of politics?

They are the men, and I will choose them, he replied.

And now shall we consider in what way such guardians will be produced, and how they are to be brought from darkness to light,—as some are said to have ascended from the world below to the gods?

By all means, he replied.

The process, I said, is not the turning over of an oyster-shell, but the turning round of a soul passing from a day which is little better than night to the true day of being, that is, the ascent from below, which we affirm to be true philosophy?

Quite so.

And should we not enquire what sort of knowledge has the power of effecting such a change?

Certainly.

What sort of knowledge is there which would draw the soul from becoming to being? And another consideration has just occurred to me: You will remember that our young men are to be warrior athletes

Yes, that was said.

Then this new kind of knowledge must have an additional quality?

What quality?
Usefulness in war.

Yes, if possible.

There were two parts in our former scheme of education, were there not?

Just so.

There was gymnastic which presided over the growth and decay of the body, and may therefore be regarded as having to do with generation and corruption?

True.

Then that is not the knowledge which we are seeking to discover? No.

But what do you say of music, which also entered to a certain extent into our former scheme?

Music, he said, as you will remember, was the counterpart of gymnastic, and trained the guardians by the influences of habit, by harmony making them harmonious, by rhythm rhythmical, but not giving them science; and the words, whether fabulous or possibly true, had kindred elements of rhythm and harmony in them. But in music there was nothing which tended to that good which you are now seeking.

You are most accurate, I said, in your recollection; in music there certainly was nothing of the kind. But what branch of knowledge is there, my dear Glaucon, which is of the desired nature; since all the useful arts were reckoned mean by us?

Undoubtedly; and yet if music and gymnastic are excluded, and the arts are also excluded, what remains?

Well, I said, there may be nothing left of our special subjects; and then we shall have to take something which is not special, but of universal application.

What may that be?

A something which all arts and sciences and intelligences use in common, and which every one first has to learn among the elements of education.

What is that?

The little matter of distinguishing one, two, and three--in a word,
number and calculation:--do not all arts and sciences necessarily partake of them?

Yes.

Then the art of war partakes of them?

To the sure.

Then Palamedes, whenever he appears in tragedy, proves Agamemnon ridiculously unfit to be a general. Did you never remark how he declares that he had invented number, and had numbered the ships and set in array the ranks of the army at Troy; which implies that they had never been numbered before, and Agamemnon must be supposed literally to have been incapable of counting his own feet--how could he if he was ignorant of number? And if that is true, what sort of general must he have been?

I should say a very strange one, if this was as you say.

Can we deny that a warrior should have a knowledge of arithmetic?

Certainly he should, if he is to have the smallest understanding of military tactics, or indeed, I should rather say, if he is to be a man at all.

I should like to know whether you have the same notion which I have of this study?

What is your notion?

It appears to me to be a study of the kind which we are seeking, and which leads naturally to reflection, but never to have been rightly used; for the true use of it is simply to draw the soul towards being.

Will you explain your meaning? he said.

I will try, I said; and I wish you would share the enquiry with me, and say 'yes' or 'no' when I attempt to distinguish in my own mind what branches of knowledge have this attracting power, in order that we may have clearer proof that arithmetic is, as I suspect, one of them.

Explain, he said.

I mean to say that objects of sense are of two kinds; some of them do not invite thought because the sense is an adequate judge of them; while in the case of other objects sense is so untrustworthy that
further enquiry is imperatively demanded.

You are clearly referring, he said, to the manner in which the senses are imposed upon by distance, and by painting in light and shade.

No, I said, that is not at all my meaning.

Then what is your meaning?

When speaking of uninviting objects, I mean those which do not pass from one sensation to the opposite; inviting objects are those which do; in this latter case the sense coming upon the object, whether at a distance or near, gives no more vivid idea of anything in particular than of its opposite. An illustration will make my meaning clearer:--here are three fingers--a little finger, a second finger, and a middle finger.

Very good.

You may suppose that they are seen quite close: And here comes the point.

What is it?

Each of them equally appears a finger, whether seen in the middle or at the extremity, whether white or black, or thick or thin--it makes no difference; a finger is a finger all the same. In these cases a man is not compelled to ask of thought the question, what is a finger? for the sight never intimates to the mind that a finger is other than a finger.

True.

And therefore, I said, as we might expect, there is nothing here which invites or excites intelligence.

There is not, he said.

But is this equally true of the greatness and smallness of the fingers? Can sight adequately perceive them? and is no difference made by the circumstance that one of the fingers is in the middle and another at the extremity? And in like manner does the touch adequately perceive the qualities of thickness or thinness, or softness or hardness? And so of the other senses; do they give perfect intimations of such matters? Is not their mode of operation on this wise--the sense which is concerned with the quality of hardness is necessarily concerned also with the quality of softness, and only intimates to the soul that the same thing is felt to be both hard and soft?
You are quite right, he said.

And must not the soul be perplexed at this intimation which the sense gives of a hard which is also soft? What, again, is the meaning of light and heavy, if that which is light is also heavy, and that which is heavy, light?

Yes, he said, these intimations which the soul receives are very curious and require to be explained.

Yes, I said, and in these perplexities the soul naturally summons to her aid calculation and intelligence, that she may see whether the several objects announced to her are one or two.

True.

And if they turn out to be two, is not each of them one and different?

Certainly.

And if each is one, and both are two, she will conceive the two as in a state of division, for if there were undivided they could only be conceived of as one?

True.

The eye certainly did see both small and great, but only in a confused manner; they were not distinguished.

Yes.

Whereas the thinking mind, intending to light up the chaos, was compelled to reverse the process, and look at small and great as separate and not confused.

Very true.

Was not this the beginning of the enquiry 'What is great?' and 'What is small'?

Exactly so.

And thus arose the distinction of the visible and the intelligible.

Most true.
This was what I meant when I spoke of impressions which invited the intellect, or the reverse--those which are simultaneous with opposite impressions, invite thought; those which are not simultaneous do not.

I understand, he said, and agree with you.

And to which class do unity and number belong?

I do not know, he replied.

Think a little and you will see that what has preceded will supply the answer: for if simple unity could be adequately perceived by the sight or by any other sense, then, as we were saying in the case of the finger, there would be nothing to attract towards being; but when there is some contradiction always present, and one is the reverse of one and involves the conception of plurality, then thought begins to be aroused within us, and the soul perplexed and wanting to arrive at a decision asks 'What is absolute unity?' This is the way in which the study of the one has a power of drawing and converting the mind to the contemplation of true being.

And surely, he said, this occurs notably in the case of one; for we see the same thing to be both one and infinite in multitude?

Yes, I said; and this being true of one must be equally true of all number?

Certainly.

And all arithmetic and calculation have to do with number?

Yes.

And they appear to lead the mind towards truth?

Yes, in a very remarkable manner.

Then this is knowledge of the kind for which we are seeking, having a double use, military and philosophical; for the man of war must learn the art of number or he will not know how to array his troops, and the philosopher also, because he has to rise out of the sea of change and lay hold of true being, and therefore he must be an arithmetician.

That is true.

And our guardian is both warrior and philosopher?
Certainly.

Then this is a kind of knowledge which legislation may fitly prescribe; and we must endeavour to persuade those who are prescribe to be the principal men of our State to go and learn arithmetic, not as amateurs, but they must carry on the study until they see the nature of numbers with the mind only; nor again, like merchants or retail-traders, with a view to buying or selling, but for the sake of their military use, and of the soul herself; and because this will be the easiest way for her to pass from becoming to truth and being.

That is excellent, he said.

Yes, I said, and now having spoken of it, I must add how charming the science is! and in how many ways it conduces to our desired end, if pursued in the spirit of a philosopher, and not of a shopkeeper!

How do you mean?

I mean, as I was saying, that arithmetic has a very great and elevating effect, compelling the soul to reason about abstract number, and rebelling against the introduction of visible or tangible objects into the argument. You know how steadily the masters of the art repel and ridicule any one who attempts to divide absolute unity when he is calculating, and if you divide, they multiply, taking care that one shall continue one and not become lost in fractions.

That is very true.

Now, suppose a person were to say to them: O my friends, what are these wonderful numbers about which you are reasoning, in which, as you say, there is a unity such as you demand, and each unit is equal, invariable, indivisible,—what would they answer?

They would answer, as I should conceive, that they were speaking of those numbers which can only be realised in thought.

Then you see that this knowledge may be truly called necessary, necessitating as it clearly does the use of the pure intelligence in the attainment of pure truth?

Yes; that is a marked characteristic of it.

And have you further observed, that those who have a natural talent for calculation are generally quick at every other kind of knowledge; and even the dull if they have had an arithmetical training, although they may derive no other advantage from it, always become much quicker than
they would otherwise have been.

Very true, he said.

And indeed, you will not easily find a more difficult study, and not
many as difficult.

You will not.

And, for all these reasons, arithmetic is a kind of knowledge in which
the best natures should be trained, and which must not be given up.

I agree.

Let this then be made one of our subjects of education. And next,
shall we enquire whether the kindred science also concerns us?

You mean geometry?

Exactly so.

Clearly, he said, we are concerned with that part of geometry which
relates to war; for in pitching a camp, or taking up a position, or
closing or extending the lines of an army, or any other military
manoeuvre, whether in actual battle or on a march, it will make all the
difference whether a general is or is not a geometrician.

Yes, I said, but for that purpose a very little of either geometry or
calculation will be enough; the question relates rather to the greater
and more advanced part of geometry--whether that tends in any degree to
make more easy the vision of the idea of good; and thither, as I was
saying, all things tend which compel the soul to turn her gaze towards
that place, where is the full perfection of being, which she ought, by
all means, to behold.

True, he said.

Then if geometry compels us to view being, it concerns us; if becoming
only, it does not concern us?

Yes, that is what we assert.

Yet anybody who has the least acquaintance with geometry will not deny
that such a conception of the science is in flat contradiction to the
ordinary language of geometricians.

How so?
They have in view practice only, and are always speaking in a narrow and ridiculous manner, of squaring and extending and applying and the like—they confuse the necessities of geometry with those of daily life; whereas knowledge is the real object of the whole science.

Certainly, he said.

Then must not a further admission be made?

What admission?

That the knowledge at which geometry aims is knowledge of the eternal, and not of aught perishing and transient.

That, he replied, may be readily allowed, and is true.

Then, my noble friend, geometry will draw the soul towards truth, and create the spirit of philosophy, and raise up that which is now unhappily allowed to fall down.

Nothing will be more likely to have such an effect.

Then nothing should be more sternly laid down than that the inhabitants of your fair city should by all means learn geometry. Moreover the science has indirect effects, which are not small.

Of what kind? he said.

There are the military advantages of which you spoke, I said; and in all departments of knowledge, as experience proves, any one who has studied geometry is infinitely quicker of apprehension than one who has not.

Yes indeed, he said, there is an infinite difference between them.

Then shall we propose this as a second branch of knowledge which our youth will study?

Let us do so, he replied.

And suppose we make astronomy the third—what do you say?

I am strongly inclined to it, he said; the observation of the seasons and of months and years is as essential to the general as it is to the farmer or sailor.
I am amused, I said, at your fear of the world, which makes you guard against the appearance of insisting upon useless studies; and I quite admit the difficulty of believing that in every man there is an eye of the soul which, when by other pursuits lost and dimmed, is by these purified and re-illumined; and is more precious far than ten thousand bodily eyes, for by it alone is truth seen. Now there are two classes of persons: one class of those who will agree with you and will take your words as a revelation; another class to whom they will be utterly unmeaning, and who will naturally deem them to be idle tales, for they see no sort of profit which is to be obtained from them. And therefore you had better decide at once with which of the two you are proposing to argue. You will very likely say with neither, and that your chief aim in carrying on the argument is your own improvement; at the same time you do not grudge to others any benefit which they may receive.

I think that I should prefer to carry on the argument mainly on my own behalf.

Then take a step backward, for we have gone wrong in the order of the sciences.

What was the mistake? he said.

After plane geometry, I said, we proceeded at once to solids in revolution, instead of taking solids in themselves; whereas after the second dimension the third, which is concerned with cubes and dimensions of depth, ought to have followed.

That is true, Socrates; but so little seems to be known as yet about these subjects.

Why, yes, I said, and for two reasons:--in the first place, no government patronises them; this leads to a want of energy in the pursuit of them, and they are difficult; in the second place, students cannot learn them unless they have a director. But then a director can hardly be found, and even if he could, as matters now stand, the students, who are very conceited, would not attend to him. That, however, would be otherwise if the whole State became the director of these studies and gave honour to them; then disciples would want to come, and there would be continuous and earnest search, and discoveries would be made; since even now, disregarded as they are by the world, and maimed of their fair proportions, and although none of their votaries can tell the use of them, still these studies force their way by their natural charm, and very likely, if they had the help of the State, they would some day emerge into light.

Yes, he said, there is a remarkable charm in them. But I do not
clearly understand the change in the order. First you began with a geometry of plane surfaces?

Yes, I said.

And you placed astronomy next, and then you made a step backward?

Yes, and I have delayed you by my hurry; the ludicrous state of solid geometry, which, in natural order, should have followed, made me pass over this branch and go on to astronomy, or motion of solids.

True, he said.

Then assuming that the science now omitted would come into existence if encouraged by the State, let us go on to astronomy, which will be fourth.

The right order, he replied. And now, Socrates, as you rebuked the vulgar manner in which I praised astronomy before, my praise shall be given in your own spirit. For every one, as I think, must see that astronomy compels the soul to look upwards and leads us from this world to another.

Every one but myself, I said; to every one else this may be clear, but not to me.

And what then would you say?

I should rather say that those who elevate astronomy into philosophy appear to me to make us look downwards and not upwards.

What do you mean? he asked.

You, I replied, have in your mind a truly sublime conception of our knowledge of the things above. And I dare say that if a person were to throw his head back and study the fretted ceiling, you would still think that his mind was the percipient, and not his eyes. And you are very likely right, and I may be a simpleton: but, in my opinion, that knowledge only which is of being and of the unseen can make the soul look upwards, and whether a man gapes at the heavens or blinks on the ground, seeking to learn some particular of sense, I would deny that he can learn, for nothing of that sort is matter of science; his soul is looking downwards, not upwards, whether his way to knowledge is by water or by land, whether he floats, or only lies on his back.

I acknowledge, he said, the justice of your rebuke. Still, I should like to ascertain how astronomy can be learned in any manner more
conducive to that knowledge of which we are speaking?

I will tell you, I said: The starry heaven which we behold is wrought upon a visible ground, and therefore, although the fairest and most perfect of visible things, must necessarily be deemed inferior far to the true motions of absolute swiftness and absolute slowness, which are relative to each other, and carry with them that which is contained in them, in the true number and in every true figure. Now, these are to be apprehended by reason and intelligence, but not by sight.

True, he replied.

The spangled heavens should be used as a pattern and with a view to that higher knowledge; their beauty is like the beauty of figures or pictures excellently wrought by the hand of Daedalus, or some other great artist, which we may chance to behold; any geometrician who saw them would appreciate the exquisiteness of their workmanship, but he would never dream of thinking that in them he could find the true equal or the true double, or the truth of any other proportion.

No, he replied, such an idea would be ridiculous.

And will not a true astronomer have the same feeling when he looks at the movements of the stars? Will he not think that heaven and the things in heaven are framed by the Creator of them in the most perfect manner? But he will never imagine that the proportions of night and day, or of both to the month, or of the month to the year, or of the stars to these and to one another, and any other things that are material and visible can also be eternal and subject to no deviation—that would be absurd; and it is equally absurd to take so much pains in investigating their exact truth.

I quite agree, though I never thought of this before.

Then, I said, in astronomy, as in geometry, we should employ problems, and let the heavens alone if we would approach the subject in the right way and so make the natural gift of reason to be of any real use.

That, he said, is a work infinitely beyond our present astronomers.

Yes, I said; and there are many other things which must also have a similar extension given to them, if our legislation is to be of any value. But can you tell me of any other suitable study?

No, he said, not without thinking.

Motion, I said, has many forms, and not one only; two of them are
obvious enough even to wits no better than ours; and there are others, as I imagine, which may be left to wiser persons.

But where are the two?

There is a second, I said, which is the counterpart of the one already named.

And what may that be?

The second, I said, would seem relatively to the ears to be what the first is to the eyes; for I conceive that as the eyes are designed to look up at the stars, so are the ears to hear harmonious motions; and these are sister sciences--as the Pythagoreans say, and we, Glaucon, agree with them?

Yes, he replied.

But this, I said, is a laborious study, and therefore we had better go and learn of them; and they will tell us whether there are any other applications of these sciences. At the same time, we must not lose sight of our own higher object.

What is that?

There is a perfection which all knowledge ought to reach, and which our pupils ought also to attain, and not to fall short of, as I was saying that they did in astronomy. For in the science of harmony, as you probably know, the same thing happens. The teachers of harmony compare the sounds and consonances which are heard only, and their labour, like that of the astronomers, is in vain.

Yes, by heaven! he said; and 'tis as good as a play to hear them talking about their condensed notes, as they call them; they put their ears close alongside of the strings like persons catching a sound from their neighbour's wall--one set of them declaring that they distinguish an intermediate note and have found the least interval which should be the unit of measurement; the others insisting that the two sounds have passed into the same--either party setting their ears before their understanding.

You mean, I said, those gentlemen who tease and torture the strings and rack them on the pegs of the instrument: might carry on the metaphor and speak after their manner of the blows which the plectrum gives, and make accusations against the strings, both of backwardness and forwardness to sound; but this would be tedious, and therefore I will only say that these are not the men, and that I am referring to the
Pythagoreans, of whom I was just now proposing to enquire about harmony. For they too are in error, like the astronomers; they investigate the numbers of the harmonies which are heard, but they never attain to problems—that is to say, they never reach the natural harmonies of number, or reflect why some numbers are harmonious and others not.

That, he said, is a thing of more than mortal knowledge.

A thing, I replied, which I would rather call useful; that is, if sought after with a view to the beautiful and good; but if pursued in any other spirit, useless. Very true, he said.

Now, when all these studies reach the point of inter-communion and connection with one another, and come to be considered in their mutual affinities, then, I think, but not till then, will the pursuit of them have a value for our objects; otherwise there is no profit in them.

I suspect so; but you are speaking, Socrates, of a vast work.

What do you mean? I said; the prelude or what? Do you not know that all this is but the prelude to the actual strain which we have to learn? For you surely would not regard the skilled mathematician as a dialectician?

Assuredly not, he said; I have hardly ever known a mathematician who was capable of reasoning.

But do you imagine that men who are unable to give and take a reason will have the knowledge which we require of them?

Neither can this be supposed.

And so, Glaucon, I said, we have at last arrived at the hymn of dialectic. This is that strain which is of the intellect only, but which the faculty of sight will nevertheless be found to imitate; for sight, as you may remember, was imagined by us after a while to behold the real animals and stars, and last of all the sun himself. And so with dialectic; when a person starts on the discovery of the absolute by the light of reason only, and without any assistance of sense, and perseveres until by pure intelligence he arrives at the perception of the absolute good, he at last finds himself at the end of the intellectual world, as in the case of sight at the end of the visible.

Exactly, he said.

Then this is the progress which you call dialectic?
True.

But the release of the prisoners from chains, and their translation from the shadows to the images and to the light, and the ascent from the underground den to the sun, while in his presence they are vainly trying to look on animals and plants and the light of the sun, but are able to perceive even with their weak eyes the images in the water (which are divine), and are the shadows of true existence (not shadows of images cast by a light of fire, which compared with the sun is only an image)--this power of elevating the highest principle in the soul to the contemplation of that which is best in existence, with which we may compare the raising of that faculty which is the very light of the body to the sight of that which is brightest in the material and visible world--this power is given, as I was saying, by all that study and pursuit of the arts which has been described.

I agree in what you are saying, he replied, which may be hard to believe, yet, from another point of view, is harder still to deny. This, however, is not a theme to be treated of in passing only, but will have to be discussed again and again. And so, whether our conclusion be true or false, let us assume all this, and proceed at once from the prelude or preamble to the chief strain, and describe that in like manner. Say, then, what is the nature and what are the divisions of dialectic, and what are the paths which lead thither; for these paths will also lead to our final rest?

Dear Glaucon, I said, you will not be able to follow me here, though I would do my best, and you should behold not an image only but the absolute truth, according to my notion. Whether what I told you would or would not have been a reality I cannot venture to say; but you would have seen something like reality; of that I am confident.

Doubtless, he replied.

But I must also remind you, that the power of dialectic alone can reveal this, and only to one who is a disciple of the previous sciences.

Of that assertion you may be as confident as of the last.

And assuredly no one will argue that there is any other method of comprehending by any regular process all true existence or of ascertaining what each thing is in its own nature; for the arts in general are concerned with the desires or opinions of men, or are cultivated with a view to production and construction, or for the preservation of such productions and constructions; and as to the mathematical sciences which, as we were saying, have some apprehension
of true being--geometry and the like--they only dream about being, but never can they behold the waking reality so long as they leave the hypotheses which they use unexamined, and are unable to give an account of them. For when a man knows not his own first principle, and when the conclusion and intermediate steps are also constructed out of he knows not what, how can he imagine that such a fabric of convention can ever become science?

Impossible, he said.

Then dialectic, and dialectic alone, goes directly to the first principle and is the only science which does away with hypotheses in order to make her ground secure; the eye of the soul, which is literally buried in an outlandish slough, is by her gentle aid lifted upwards; and she uses as handmaids and helpers in the work of conversion, the sciences which we have been discussing. Custom terms them sciences, but they ought to have some other name, implying greater clearness than opinion and less clearness than science: and this, in our previous sketch, was called understanding. But why should we dispute about names when we have realities of such importance to consider?

Why indeed, he said, when any name will do which expresses the thought of the mind with clearness?

At any rate, we are satisfied, as before, to have four divisions; two for intellect and two for opinion, and to call the first division science, the second understanding, the third belief, and the fourth perception of shadows, opinion being concerned with becoming, and intellect with being; and so to make a proportion:--

As being is to becoming, so is pure intellect to opinion.
And as intellect is to opinion, so is science to belief, and understanding to the perception of shadows.

But let us defer the further correlation and subdivision of the subjects of opinion and of intellect, for it will be a long enquiry, many times longer than this has been.

As far as I understand, he said, I agree.

And do you also agree, I said, in describing the dialectician as one who attains a conception of the essence of each thing? And he who does not possess and is therefore unable to impart this conception, in whatever degree he fails, may in that degree also be said to fail in intelligence? Will you admit so much?
Yes, he said; how can I deny it?

And you would say the same of the conception of the good?

Until the person is able to abstract and define rationally the idea of good, and unless he can run the gauntlet of all objections, and is ready to disprove them, not by appeals to opinion, but to absolute truth, never faltering at any step of the argument--unless he can do all this, you would say that he knows neither the idea of good nor any other good; he apprehends only a shadow, if anything at all, which is given by opinion and not by science;--dreaming and slumbering in this life, before he is well awake here, he arrives at the world below, and has his final quietus.

In all that I should most certainly agree with you.

And surely you would not have the children of your ideal State, whom you are nurturing and educating--if the ideal ever becomes a reality--you would not allow the future rulers to be like posts, having no reason in them, and yet to be set in authority over the highest matters?

Certainly not.

Then you will make a law that they shall have such an education as will enable them to attain the greatest skill in asking and answering questions?

Yes, he said, you and I together will make it.

Dialectic, then, as you will agree, is the coping-stone of the sciences, and is set over them; no other science can be placed higher--the nature of knowledge can no further go?

I agree, he said.

But to whom we are to assign these studies, and in what way they are to be assigned, are questions which remain to be considered?

Yes, clearly.

You remember, I said, how the rulers were chosen before?

Certainly, he said.

The same natures must still be chosen, and the preference again given to the surest and the bravest, and, if possible, to the fairest; and,
having noble and generous tempers, they should also have the natural
gifts which will facilitate their education.

And what are these?

Such gifts as keenness and ready powers of acquisition; for the mind
more often faints from the severity of study than from the severity of
gymnastics: the toil is more entirely the mind's own, and is not
shared with the body.

Very true, he replied.

Further, he of whom we are in search should have a good memory, and be
an unwearied solid man who is a lover of labour in any line; or he will
never be able to endure the great amount of bodily exercise and to go
through all the intellectual discipline and study which we require of
him.

Certainly, he said; he must have natural gifts.

The mistake at present is, that those who study philosophy have no
vocation, and this, as I was before saying, is the reason why she has
fallen into disrepute: her true sons should take her by the hand and
not bastards.

What do you mean?

In the first place, her votary should not have a lame or halting
industry--I mean, that he should not be half industrious and half idle:
as, for example, when a man is a lover of gymnastic and hunting, and
all other bodily exercises, but a hater rather than a lover of the
labour of learning or listening or enquiring. Or the occupation to
which he devotes himself may be of an opposite kind, and he may have
the other sort of lameness.

Certainly, he said.

And as to truth, I said, is not a soul equally to be deemed halt and
lame which hates voluntary falsehood and is extremely indignant at
herself and others when they tell lies, but is patient of involuntary
falsehood, and does not mind wallowing like a swinish beast in the mire
of ignorance, and has no shame at being detected?

To be sure.

And, again, in respect of temperance, courage, magnificence, and every
other virtue, should we not carefully distinguish between the true son
and the bastard? for where there is no discernment of such qualities
States and individuals unconsciously err and the State makes a ruler,
and the individual a friend, of one who, being defective in some part
of virtue, is in a figure lame or a bastard.

That is very true, he said.

All these things, then, will have to be carefully considered by us; and
if only those whom we introduce to this vast system of education and
training are sound in body and mind, justice herself will have nothing
to say against us, and we shall be the saviours of the constitution and
of the State; but, if our pupils are men of another stamp, the reverse
will happen, and we shall pour a still greater flood of ridicule on
philosophy than she has to endure at present.

That would not be creditable.

Certainly not, I said; and yet perhaps, in thus turning jest into
earnest I am equally ridiculous.

In what respect?

I had forgotten, I said, that we were not serious, and spoke with too
much excitement. For when I saw philosophy so undeservedly trampled
under foot of men I could not help feeling a sort of indignation at the
authors of her disgrace: and my anger made me too vehement.

Indeed! I was listening, and did not think so.

But I, who am the speaker, felt that I was. And now let me remind you
that, although in our former selection we chose old men, we must not do
so in this. Solon was under a delusion when he said that a man when he
grows old may learn many things--for he can no more learn much than he
can run much; youth is the time for any extraordinary toil.

Of course.

And, therefore, calculation and geometry and all the other elements of
instruction, which are a preparation for dialectic, should be presented
to the mind in childhood; not, however, under any notion of forcing our
system of education.

Why not?

Because a freeman ought not to be a slave in the acquisition of
knowledge of any kind. Bodily exercise, when compulsory, does no harm
to the body; but knowledge which is acquired under compulsion obtains
no hold on the mind.

Very true.

Then, my good friend, I said, do not use compulsion, but let early education be a sort of amusement; you will then be better able to find out the natural bent.

That is a very rational notion, he said.

Do you remember that the children, too, were to be taken to see the battle on horseback; and that if there were no danger they were to be brought close up and, like young hounds, have a taste of blood given them?

Yes, I remember.

The same practice may be followed, I said, in all these things—labours, lessons, dangers—and he who is most at home in all of them ought to be enrolled in a select number.

At what age?

At the age when the necessary gymnastics are over: the period whether of two or three years which passes in this sort of training is useless for any other purpose; for sleep and exercise are unpropitious to learning; and the trial of who is first in gymnastic exercises is one of the most important tests to which our youth are subjected.

Certainly, he replied.

After that time those who are selected from the class of twenty years old will be promoted to higher honour, and the sciences which they learned without any order in their early education will now be brought together, and they will be able to see the natural relationship of them to one another and to true being.

Yes, he said, that is the only kind of knowledge which takes lasting root.

Yes, I said; and the capacity for such knowledge is the great criterion of dialectical talent: the comprehensive mind is always the dialectical.

I agree with you, he said.

These, I said, are the points which you must consider; and those who
have most of this comprehension, and who are more steadfast in their learning, and in their military and other appointed duties, when they have arrived at the age of thirty have to be chosen by you out of the select class, and elevated to higher honour; and you will have to prove them by the help of dialectic, in order to learn which of them is able to give up the use of sight and the other senses, and in company with truth to attain absolute being: And here, my friend, great caution is required.

Why great caution?

Do you not remark, I said, how great is the evil which dialectic has introduced?

What evil? he said.

The students of the art are filled with lawlessness.

Quite true, he said.

Do you think that there is anything so very unnatural or inexcusable in their case? or will you make allowance for them?

In what way make allowance?

I want you, I said, by way of parallel, to imagine a supposititious son who is brought up in great wealth; he is one of a great and numerous family, and has many flatterers. When he grows up to manhood, he learns that his alleged are not his real parents; but who the real are he is unable to discover. Can you guess how he will be likely to behave towards his flatterers and his supposed parents, first of all during the period when he is ignorant of the false relation, and then again when he knows? Or shall I guess for you?

If you please.

Then I should say, that while he is ignorant of the truth he will be likely to honour his father and his mother and his supposed relations more than the flatterers; he will be less inclined to neglect them when in need, or to do or say anything against them; and he will be less willing to disobey them in any important matter.

He will.

But when he has made the discovery, I should imagine that he would diminish his honour and regard for them, and would become more devoted to the flatterers; their influence over him would greatly increase; he
would now live after their ways, and openly associate with them, and, unless he were of an unusually good disposition, he would trouble himself no more about his supposed parents or other relations.

Well, all that is very probable. But how is the image applicable to the disciples of philosophy?

In this way: you know that there are certain principles about justice and honour, which were taught us in childhood, and under their parental authority we have been brought up, obeying and honouring them.

That is true.

There are also opposite maxims and habits of pleasure which flatter and attract the soul, but do not influence those of us who have any sense of right, and they continue to obey and honour the maxims of their fathers.

True.

Now, when a man is in this state, and the questioning spirit asks what is fair or honourable, and he answers as the legislator has taught him, and then arguments many and diverse refute his words, until he is driven into believing that nothing is honourable any more than dishonourable, or just and good any more than the reverse, and so of all the notions which he most valued, do you think that he will still honour and obey them as before?

Impossible.

And when he ceases to think them honourable and natural as heretofore, and he fails to discover the true, can he be expected to pursue any life other than that which flatters his desires?

He cannot.

And from being a keeper of the law he is converted into a breaker of it?

Unquestionably.

Now all this is very natural in students of philosophy such as I have described, and also, as I was just now saying, most excusable.

Yes, he said; and, I may add, pitiable.

Therefore, that your feelings may not be moved to pity about our citizens who are now thirty years of age, every care must be taken in
introducing them to dialectic.

Certainly.

There is a danger lest they should taste the dear delight too early; for youngsters, as you may have observed, when they first get the taste in their mouths, argue for amusement, and are always contradicting and refuting others in imitation of those who refute them; like puppy-dogs, they rejoice in pulling and tearing at all who come near them.

Yes, he said, there is nothing which they like better.

And when they have made many conquests and received defeats at the hands of many, they violently and speedily get into a way of not believing anything which they believed before, and hence, not only they, but philosophy and all that relates to it is apt to have a bad name with the rest of the world.

Too true, he said.

But when a man begins to get older, he will no longer be guilty of such insanity; he will imitate the dialectician who is seeking for truth, and not the eristic, who is contradicting for the sake of amusement; and the greater moderation of his character will increase instead of diminishing the honour of the pursuit.

Very true, he said.

And did we not make special provision for this, when we said that the disciples of philosophy were to be orderly and steadfast, not, as now, any chance aspirant or intruder?

Very true.

Suppose, I said, the study of philosophy to take the place of gymnastics and to be continued diligently and earnestly and exclusively for twice the number of years which were passed in bodily exercise--will that be enough?

Would you say six or four years? he asked.

Say five years, I replied; at the end of the time they must be sent down again into the den and compelled to hold any military or other office which young men are qualified to hold: in this way they will get their experience of life, and there will be an opportunity of trying whether, when they are drawn all manner of ways by temptation, they will stand firm or flinch.
And how long is this stage of their lives to last?

Fifteen years, I answered; and when they have reached fifty years of age, then let those who still survive and have distinguished themselves in every action of their lives and in every branch of knowledge come at last to their consummation; the time has now arrived at which they must raise the eye of the soul to the universal light which lightens all things, and behold the absolute good; for that is the pattern according to which they are to order the State and the lives of individuals, and the remainder of their own lives also; making philosophy their chief pursuit, but, when their turn comes, toiling also at politics and ruling for the public good, not as though they were performing some heroic action, but simply as a matter of duty; and when they have brought up in each generation others like themselves and left them in their place to be governors of the State, then they will depart to the Islands of the Blest and dwell there; and the city will give them public memorials and sacrifices and honour them, if the Pythian oracle consent, as demi-gods, but if not, as in any case blessed and divine.

You are a sculptor, Socrates, and have made statues of our governors faultless in beauty.

Yes, I said, Glaucon, and of our governesses too; for you must not suppose that what I have been saying applies to men only and not to women as far as their natures can go.

There you are right, he said, since we have made them to share in all things like the men.

Well, I said, and you would agree (would you not?) that what has been said about the State and the government is not a mere dream, and although difficult not impossible, but only possible in the way which has been supposed; that is to say, when the true philosopher kings are born in a State, one or more of them, despising the honours of this present world which they deem mean and worthless, esteeming above all things right and the honour that springs from right, and regarding justice as the greatest and most necessary of all things, whose ministers they are, and whose principles will be exalted by them when they set in order their own city?

How will they proceed?

They will begin by sending out into the country all the inhabitants of the city who are more than ten years old, and will take possession of their children, who will be unaffected by the habits of their parents; these they will train in their own habits and laws, I mean in the laws
which we have given them: and in this way the State and constitution of which we were speaking will soonest and most easily attain happiness, and the nation which has such a constitution will gain most.

Yes, that will be the best way. And I think, Socrates, that you have very well described how, if ever, such a constitution might come into being.

Enough then of the perfect State, and of the man who bears its image--there is no difficulty in seeing how we shall describe him.

There is no difficulty, he replied; and I agree with you in thinking that nothing more need be said.

BOOK VIII

SOCRATES - GLAUCON

AND so, Glaucon, we have arrived at the conclusion that in the perfect State wives and children are to be in common; and that all education and the pursuits of war and peace are also to be common, and the best philosophers and the bravest warriors are to be their kings?

That, replied Glaucon, has been acknowledged.

Yes, I said; and we have further acknowledged that the governors, when appointed themselves, will take their soldiers and place them in houses such as we were describing, which are common to all, and contain nothing private, or individual; and about their property, you remember what we agreed?

Yes, I remember that no one was to have any of the ordinary possessions of mankind; they were to be warrior athletes and guardians, receiving from the other citizens, in lieu of annual payment, only their maintenance, and they were to take care of themselves and of the whole State.

True, I said; and now that this division of our task is concluded, let us find the point at which we digressed, that we may return into the old path.

There is no difficulty in returning; you implied, then as now, that you had finished the description of the State: you said that such a State
was good, and that the man was good who answered to it, although, as now appears, you had more excellent things to relate both of State and man. And you said further, that if this was the true form, then the others were false; and of the false forms, you said, as I remember, that there were four principal ones, and that their defects, and the defects of the individuals corresponding to them, were worth examining. When we had seen all the individuals, and finally agreed as to who was the best and who was the worst of them, we were to consider whether the best was not also the happiest, and the worst the most miserable. I asked you what were the four forms of government of which you spoke, and then Polemarchus and Adeimantus put in their word; and you began again, and have found your way to the point at which we have now arrived.

Your recollection, I said, is most exact.

Then, like a wrestler, he replied, you must put yourself again in the same position; and let me ask the same questions, and do you give me the same answer which you were about to give me then.

Yes, if I can, I will, I said.

I shall particularly wish to hear what were the four constitutions of which you were speaking.

That question, I said, is easily answered: the four governments of which I spoke, so far as they have distinct names, are, first, those of Crete and Sparta, which are generally applauded; what is termed oligarchy comes next; this is not equally approved, and is a form of government which teems with evils: thirdly, democracy, which naturally follows oligarchy, although very different: and lastly comes tyranny, great and famous, which differs from them all, and is the fourth and worst disorder of a State. I do not know, do you? of any other constitution which can be said to have a distinct character. There are lordships and principalities which are bought and sold, and some other intermediate forms of government. But these are nondescripts and may be found equally among Hellenes and among barbarians.

Yes, he replied, we certainly hear of many curious forms of government which exist among them.

Do you know, I said, that governments vary as the dispositions of men vary, and that there must be as many of the one as there are of the other? For we cannot suppose that States are made of 'oak and rock,' and not out of the human natures which are in them, and which in a figure turn the scale and draw other things after them?
Yes, he said, the States are as the men are; they grow out of human characters.

Then if the constitutions of States are five, the dispositions of individual minds will also be five?

Certainly.

Him who answers to aristocracy, and whom we rightly call just and good, we have already described.

We have.

Then let us now proceed to describe the inferior sort of natures, being the contentious and ambitious, who answer to the Spartan polity; also the oligarchical, democratical, and tyrannical. Let us place the most just by the side of the most unjust, and when we see them we shall be able to compare the relative happiness or unhappiness of him who leads a life of pure justice or pure injustice. The enquiry will then be completed. And we shall know whether we ought to pursue injustice, as Thrasymachus advises, or in accordance with the conclusions of the argument to prefer justice.

Certainly, he replied, we must do as you say.

Shall we follow our old plan, which we adopted with a view to clearness, of taking the State first and then proceeding to the individual, and begin with the government of honour?--I know of no name for such a government other than timocracy, or perhaps timarchy. We will compare with this the like character in the individual; and, after that, consider oligarchical man; and then again we will turn our attention to democracy and the democratical man; and lastly, we will go and view the city of tyranny, and once more take a look into the tyrant's soul, and try to arrive at a satisfactory decision.

That way of viewing and judging of the matter will be very suitable.

First, then, I said, let us enquire how timocracy (the government of honour) arises out of aristocracy (the government of the best). Clearly, all political changes originate in divisions of the actual governing power; a government which is united, however small, cannot be moved.

Very true, he said.

In what way, then, will our city be moved, and in what manner the two classes of auxiliaries and rulers disagree among themselves or with one
another? Shall we, after the manner of Homer, pray the Muses to tell us 'how discord first arose'? Shall we imagine them in solemn mockery, to play and jest with us as if we were children, and to address us in a lofty tragic vein, making believe to be in earnest?

How would they address us?

After this manner:--A city which is thus constituted can hardly be shaken; but, seeing that everything which has a beginning has also an end, even a constitution such as yours will not last for ever, but will in time be dissolved. And this is the dissolution:--In plants that grow in the earth, as well as in animals that move on the earth's surface, fertility and sterility of soul and body occur when the circumferences of the circles of each are completed, which in short-lived existences pass over a short space, and in long-lived ones over a long space. But to the knowledge of human fecundity and sterility all the wisdom and education of your rulers will not attain; the laws which regulate them will not be discovered by an intelligence which is alloyed with sense, but will escape them, and they will bring children into the world when they ought not. Now that which is of divine birth has a period which is contained in a perfect number, but the period of human birth is comprehended in a number in which first increments by involution and evolution (or squared and cubed) obtaining three intervals and four terms of like and unlike, waxing and waning numbers, make all the terms commensurable and agreeable to one another. The base of these (3) with a third added (4) when combined with five (20) and raised to the third power furnishes two harmonies; the first a square which is a hundred times as great (400 = 4 X 100), and the other a figure having one side equal to the former, but oblong, consisting of a hundred numbers squared upon rational diameters of a square (i.e. omitting fractions), the side of which is five (7 X 7 = 49 X 100 = 4900), each of them being less by one (than the perfect square which includes the fractions, sc. 50) or less by two perfect squares of irrational diameters (of a square the side of which is five = 50 + 50 = 100); and a hundred cubes of three (27 X 100 = 2700 + 4900 + 400 = 8000). Now this number represents a geometrical figure which has control over the good and evil of births. For when your guardians are ignorant of the law of births, and unite bride and bridegroom out of season, the children will not be goodly or fortunate. And though only the best of them will be appointed by their predecessors, still they will be unworthy to hold their fathers' places, and when they come into power as guardians, they will soon be found to fall in taking care of us, the Muses, first by under-valuing music; which neglect will soon extend to gymnastic; and hence the young men of your State will be less cultivated. In the succeeding generation rulers will be appointed who have lost the guardian power of testing the metal of your different races, which, like Hesiod's, are of gold and silver and brass and iron.
And so iron will be mingled with silver, and brass with gold, and hence there will arise dissimilarity and inequality and irregularity, which always and in all places are causes of hatred and war. This the Muses affirm to be the stock from which discord has sprung, wherever arising; and this is their answer to us.

Yes, and we may assume that they answer truly.

Why, yes, I said, of course they answer truly; how can the Muses speak falsely?

And what do the Muses say next?

When discord arose, then the two races were drawn different ways: the iron and brass fell to acquiring money and land and houses and gold and silver; but the gold and silver races, not wanting money but having the true riches in their own nature, inclined towards virtue and the ancient order of things. There was a battle between them, and at last they agreed to distribute their land and houses among individual owners; and they enslaved their friends and maintainers, whom they had formerly protected in the condition of freemen, and made of them subjects and servants; and they themselves were engaged in war and in keeping a watch against them.

I believe that you have rightly conceived the origin of the change.

And the new government which thus arises will be of a form intermediate between oligarchy and aristocracy?

Very true.

Such will be the change, and after the change has been made, how will they proceed? Clearly, the new State, being in a mean between oligarchy and the perfect State, will partly follow one and partly the other, and will also have some peculiarities.

True, he said.

In the honour given to rulers, in the abstinence of the warrior class from agriculture, handicrafts, and trade in general, in the institution of common meals, and in the attention paid to gymnastics and military training--in all these respects this State will resemble the former.

True.

But in the fear of admitting philosophers to power, because they are no longer to be had simple and earnest, but are made up of mixed elements;
and in turning from them to passionate and less complex characters, who are by nature fitted for war rather than peace; and in the value set by them upon military stratagems and contrivances, and in the waging of everlasting wars--this State will be for the most part peculiar.

Yes.

Yes, I said; and men of this stamp will be covetous of money, like those who live in oligarchies; they will have, a fierce secret longing after gold and silver, which they will hoard in dark places, having magazines and treasuries of their own for the deposit and concealment of them; also castles which are just nests for their eggs, and in which they will spend large sums on their wives, or on any others whom they please.

That is most true, he said.

And they are miserly because they have no means of openly acquiring the money which they prize; they will spend that which is another man's on the gratification of their desires, stealing their pleasures and running away like children from the law, their father: they have been schooled not by gentle influences but by force, for they have neglected her who is the true Muse, the companion of reason and philosophy, and have honoured gymnastic more than music.

Undoubtedly, he said, the form of government which you describe is a mixture of good and evil.

Why, there is a mixture, I said; but one thing, and one thing only, is predominantly seen,—the spirit of contention and ambition; and these are due to the prevalence of the passionate or spirited element.

Assuredly, he said.

Such is the origin and such the character of this State, which has been described in outline only; the more perfect execution was not required, for a sketch is enough to show the type of the most perfectly just and most perfectly unjust; and to go through all the States and all the characters of men, omitting none of them, would be an interminable labour.

Very true, he replied.

Now what man answers to this form of government—how did he come into being, and what is he like?

SOCRATES - ADEIMANTUS
I think, said Adeimantus, that in the spirit of contention which characterises him, he is not unlike our friend Glaucon.

Perhaps, I said, he may be like him in that one point; but there are other respects in which he is very different.

In what respects?

He should have more of self-assertion and be less cultivated, and yet a friend of culture; and he should be a good listener, but no speaker. Such a person is apt to be rough with slaves, unlike the educated man, who is too proud for that; and he will also be courteous to freemen, and remarkably obedient to authority; he is a lover of power and a lover of honour; claiming to be a ruler, not because he is eloquent, or on any ground of that sort, but because he is a soldier and has performed feats of arms; he is also a lover of gymnastic exercises and of the chase.

Yes, that is the type of character which answers to timocracy.

Such an one will despise riches only when he is young; but as he gets older he will be more and more attracted to them, because he has a piece of the avaricious nature in him, and is not singleminded towards virtue, having lost his best guardian.

Who was that? said Adeimantus.

Philosophy, I said, tempered with music, who comes and takes her abode in a man, and is the only saviour of his virtue throughout life.

Good, he said.

Such, I said, is the timocratical youth, and he is like the timocratical State.

Exactly.

His origin is as follows:--He is often the young son of a grave father, who dwells in an ill-governed city, of which he declines the honours and offices, and will not go to law, or exert himself in any way, but is ready to waive his rights in order that he may escape trouble.

And how does the son come into being?

The character of the son begins to develop when he hears his mother complaining that her husband has no place in the government, of which
the consequence is that she has no precedence among other women. Further, when she sees her husband not very eager about money, and instead of battling and railing in the law courts or assembly, taking whatever happens to him quietly; and when she observes that his thoughts always centre in himself, while he treats her with very considerable indifference, she is annoyed, and says to her son that his father is only half a man and far too easy-going: adding all the other complaints about her own ill-treatment which women are so fond of rehearsing.

Yes, said Adeimantus, they give us plenty of them, and their complaints are so like themselves.

And you know, I said, that the old servants also, who are supposed to be attached to the family, from time to time talk privately in the same strain to the son; and if they see any one who owes money to his father, or is wronging him in any way, and he falls to prosecute them, they tell the youth that when he grows up he must retaliate upon people of this sort, and be more of a man than his father. He has only to walk abroad and he hears and sees the same sort of thing: those who do their own business in the city are called simpletons, and held in no esteem, while the busy-bodies are honoured and applauded. The result is that the young man, hearing and seeing all these thing--hearing too, the words of his father, and having a nearer view of his way of life, and making comparisons of him and others--is drawn opposite ways: while his father is watering and nourishing the rational principle in his soul, the others are encouraging the passionate and appetitive; and he being not originally of a bad nature, but having kept bad company, is at last brought by their joint influence to a middle point, and gives up the kingdom which is within him to the middle principle of contentiousness and passion, and becomes arrogant and ambitious.

You seem to me to have described his origin perfectly.

Then we have now, I said, the second form of government and the second type of character?

We have.

Next, let us look at another man who, as Aeschylus says,

Is set over against another State;

or rather, as our plan requires, begin with the State.

By all means.
I believe that oligarchy follows next in order.

And what manner of government do you term oligarchy?

A government resting on a valuation of property, in which the rich have power and the poor man is deprived of it.

I understand, he replied.

Ought I not to begin by describing how the change from timocracy to oligarchy arises?

Yes.

Well, I said, no eyes are required in order to see how the one passes into the other.

How?

The accumulation of gold in the treasury of private individuals is ruin the of timocracy; they invent illegal modes of expenditure; for what do they or their wives care about the law?

Yes, indeed.

And then one, seeing another grow rich, seeks to rival him, and thus the great mass of the citizens become lovers of money.

Likely enough.

And so they grow richer and richer, and the more they think of making a fortune the less they think of virtue; for when riches and virtue are placed together in the scales of the balance, the one always rises as the other falls.

True.

And in proportion as riches and rich men are honoured in the State, virtue and the virtuous are dishonoured.

Clearly.

And what is honoured is cultivated, and that which has no honour is neglected.

That is obvious.
And so at last, instead of loving contention and glory, men become lovers of trade and money; they honour and look up to the rich man, and make a ruler of him, and dishonour the poor man.

They do so.

They next proceed to make a law which fixes a sum of money as the qualification of citizenship; the sum is higher in one place and lower in another, as the oligarchy is more or less exclusive; and they allow no one whose property falls below the amount fixed to have any share in the government. These changes in the constitution they effect by force of arms, if intimidation has not already done their work.

Very true.

And this, speaking generally, is the way in which oligarchy is established.

Yes, he said; but what are the characteristics of this form of government, and what are the defects of which we were speaking?

First of all, I said, consider the nature of the qualification just think what would happen if pilots were to be chosen according to their property, and a poor man were refused permission to steer, even though he were a better pilot?

You mean that they would shipwreck?

Yes; and is not this true of the government of anything?

I should imagine so.

Except a city?--or would you include a city?

Nay, he said, the case of a city is the strongest of all, inasmuch as the rule of a city is the greatest and most difficult of all.

This, then, will be the first great defect of oligarchy?

Clearly.

And here is another defect which is quite as bad.

What defect?

The inevitable division: such a State is not one, but two States, the one of poor, the other of rich men; and they are living on the same
spot and always conspiring against one another.

That, surely, is at least as bad.

Another discreditable feature is, that, for a like reason, they are incapable of carrying on any war. Either they arm the multitude, and then they are more afraid of them than of the enemy; or, if they do not call them out in the hour of battle, they are oligarchs indeed, few to fight as they are few to rule. And at the same time their fondness for money makes them unwilling to pay taxes.

How discreditable!

And, as we said before, under such a constitution the same persons have too many callings--they are husbandmen, tradesmen, warriors, all in one. Does that look well?

Anything but well.

There is another evil which is, perhaps, the greatest of all, and to which this State first begins to be liable.

What evil?

A man may sell all that he has, and another may acquire his property; yet after the sale he may dwell in the city of which he is no longer a part, being neither trader, nor artisan, nor horseman, nor hoplite, but only a poor, helpless creature.

Yes, that is an evil which also first begins in this State.

The evil is certainly not prevented there; for oligarchies have both the extremes of great wealth and utter poverty.

True.

But think again: In his wealthy days, while he was spending his money, was a man of this sort a whit more good to the State for the purposes of citizenship? Or did he only seem to be a member of the ruling body, although in truth he was neither ruler nor subject, but just a spendthrift?

As you say, he seemed to be a ruler, but was only a spendthrift.

May we not say that this is the drone in the house who is like the drone in the honeycomb, and that the one is the plague of the city as the other is of the hive?
Just so, Socrates.

And God has made the flying drones, Adeimantus, all without stings, whereas of the walking drones he has made some without stings but others have dreadful stings; of the stingless class are those who in their old age end as paupers; of the stingers come all the criminal class, as they are termed.

Most true, he said.

Clearly then, whenever you see paupers in a State, somewhere in that neighborhood there are hidden away thieves, and cutpurses and robbers of temples, and all sorts of malefactors.

Clearly.

Well, I said, and in oligarchical States do you not find paupers?

Yes, he said; nearly everybody is a pauper who is not a ruler.

And may we be so bold as to affirm that there are also many criminals to be found in them, rogues who have stings, and whom the authorities are careful to restrain by force?

Certainly, we may be so bold.

The existence of such persons is to be attributed to want of education, ill-training, and an evil constitution of the State?

True.

Such, then, is the form and such are the evils of oligarchy; and there may be many other evils.

Very likely.

Then oligarchy, or the form of government in which the rulers are elected for their wealth, may now be dismissed. Let us next proceed to consider the nature and origin of the individual who answers to this State.

By all means.

Does not the timocratical man change into the oligarchical on this wise?

How?
A time arrives when the representative of timocracy has a son: at first he begins by emulating his father and walking in his footsteps, but presently he sees him of a sudden foundering against the State as upon a sunken reef, and he and all that he has is lost; he may have been a general or some other high officer who is brought to trial under a prejudice raised by informers, and either put to death, or exiled, or deprived of the privileges of a citizen, and all his property taken from him.

Nothing more likely.

And the son has seen and known all this--he is a ruined man, and his fear has taught him to knock ambition and passion head-foremost from his bosom's throne; humbled by poverty he takes to money-making and by mean and miserly savings and hard work gets a fortune together. Is not such an one likely to seat the concupiscent and covetous element on the vacant throne and to suffer it to play the great king within him, girt with tiara and chain and scimitar?

Most true, he replied.

And when he has made reason and spirit sit down on the ground obediently on either side of their sovereign, and taught them to know their place, he compels the one to think only of how lesser sums may be turned into larger ones, and will not allow the other to worship and admire anything but riches and rich men, or to be ambitious of anything so much as the acquisition of wealth and the means of acquiring it.

Of all changes, he said, there is none so speedy or so sure as the conversion of the ambitious youth into the avaricious one.

And the avaricious, I said, is the oligarchical youth?

Yes, he said; at any rate the individual out of whom he came is like the State out of which oligarchy came.

Let us then consider whether there is any likeness between them.

Very good.

First, then, they resemble one another in the value which they set upon wealth?

Certainly.

Also in their penurious, laborious character; the individual only
satisfies his necessary appetites, and confines his expenditure to them; his other desires he subdues, under the idea that they are unprofitable.

True.

He is a shabby fellow, who saves something out of everything and makes a purse for himself; and this is the sort of man whom the vulgar applaud. Is he not a true image of the State which he represents?

He appears to me to be so; at any rate money is highly valued by him as well as by the State.

You see that he is not a man of cultivation, I said.

I imagine not, he said; had he been educated he would never have made a blind god director of his chorus, or given him chief honour.

Excellent! I said. Yet consider: Must we not further admit that owing to this want of cultivation there will be found in him dronelike desires as of pauper and rogue, which are forcibly kept down by his general habit of life?

True.

Do you know where you will have to look if you want to discover his rogueries?

Where must I look?

You should see him where he has some great opportunity of acting dishonestly, as in the guardianship of an orphan.

Aye.

It will be clear enough then that in his ordinary dealings which give him a reputation for honesty he coerces his bad passions by an enforced virtue; not making them see that they are wrong, or taming them by reason, but by necessity and fear constraining them, and because he trembles for his possessions.

To be sure.

Yes, indeed, my dear friend, but you will find that the natural desires of the drone commonly exist in him all the same whenever he has to spend what is not his own.
Yes, and they will be strong in him too.

The man, then, will be at war with himself; he will be two men, and not one; but, in general, his better desires will be found to prevail over his inferior ones.

True.

For these reasons such an one will be more respectable than most people; yet the true virtue of a unanimous and harmonious soul will flee far away and never come near him.

I should expect so.

And surely, the miser individually will be an ignoble competitor in a State for any prize of victory, or other object of honourable ambition; he will not spend his money in the contest for glory; so afraid is he of awakening his expensive appetites and inviting them to help and join in the struggle; in true oligarchical fashion he fights with a small part only of his resources, and the result commonly is that he loses the prize and saves his money.

Very true.

Can we any longer doubt, then, that the miser and money-maker answers to the oligarchical State?

There can be no doubt.

Next comes democracy; of this the origin and nature have still to be considered by us; and then we will enquire into the ways of the democratic man, and bring him up for judgement.

That, he said, is our method.

Well, I said, and how does the change from oligarchy into democracy arise? Is it not on this wise?--The good at which such a State alms is to become as rich as possible, a desire which is insatiable?

What then?

The rulers, being aware that their power rests upon their wealth, refuse to curtail by law the extravagance of the spendthrift youth because they gain by their ruin; they take interest from them and buy up their estates and thus increase their own wealth and importance?

To be sure.
There can be no doubt that the love of wealth and the spirit of moderation cannot exist together in citizens of the same State to any considerable extent; one or the other will be disregarded.

That is tolerably clear.

And in oligarchical States, from the general spread of carelessness and extravagance, men of good family have often been reduced to beggary?

Yes, often.

And still they remain in the city; there they are, ready to sting and fully armed, and some of them owe money, some have forfeited their citizenship; a third class are in both predicaments; and they hate and conspire against those who have got their property, and against everybody else, and are eager for revolution.

That is true.

On the other hand, the men of business, stooping as they walk, and pretending not even to see those whom they have already ruined, insert their sting—that is, their money—into some one else who is not on his guard against them, and recover the parent sum many times over multiplied into a family of children: and so they make drone and pauper to abound in the State.

Yes, he said, there are plenty of them—that is certain.

The evil blazes up like a fire; and they will not extinguish it, either by restricting a man's use of his own property, or by another remedy:

What other?

One which is the next best, and has the advantage of compelling the citizens to look to their characters:—Let there be a general rule that every one shall enter into voluntary contracts at his own risk, and there will be less of this scandalous money-making, and the evils of which we were speaking will be greatly lessened in the State.

Yes, they will be greatly lessened.

At present the governors, induced by the motives which I have named, treat their subjects badly; while they and their adherents, especially the young men of the governing class, are habituated to lead a life of luxury and idleness both of body and mind; they do nothing, and are incapable of resisting either pleasure or pain.
Very true.

They themselves care only for making money, and are as indifferent as the pauper to the cultivation of virtue.

Yes, quite as indifferent.

Such is the state of affairs which prevails among them. And often rulers and their subjects may come in one another's way, whether on a pilgrimage or a march, as fellow-soldiers or fellow-sailors; aye, and they may observe the behaviour of each other in the very moment of danger--for where danger is, there is no fear that the poor will be despised by the rich--and very likely the wiry sunburnt poor man may be placed in battle at the side of a wealthy one who has never spoilt his complexion and has plenty of superfluous flesh--when he sees such an one puffing and at his wit's end, how can he avoid drawing the conclusion that men like him are only rich because no one has the courage to despoil them? And when they meet in private will not people be saying to one another 'Our warriors are not good for much'?

Yes, he said, I am quite aware that this is their way of talking.

And, as in a body which is diseased the addition of a touch from without may bring on illness, and sometimes even when there is no external provocation a commotion may arise within-in the same way wherever there is weakness in the State there is also likely to be illness, of which the occasions may be very slight, the one party introducing from without their oligarchical, the other their democratical allies, and then the State falls sick, and is at war with herself; and may be at times distracted, even when there is no external cause.

Yes, surely.

And then democracy comes into being after the poor have conquered their opponents, slaughtering some and banishing some, while to the remainder they give an equal share of freedom and power; and this is the form of government in which the magistrates are commonly elected by lot.

Yes, he said, that is the nature of democracy, whether the revolution has been effected by arms, or whether fear has caused the opposite party to withdraw.

And now what is their manner of life, and what sort of a government have they? for as the government is, such will be the man.
Clearly, he said.

In the first place, are they not free; and is not the city full of freedom and frankness--a man may say and do what he likes?

'Tis said so, he replied.

And where freedom is, the individual is clearly able to order for himself his own life as he pleases?

Clearly.

Then in this kind of State there will be the greatest variety of human natures?

There will.

This, then, seems likely to be the fairest of States, being an embroidered robe which is spangled with every sort of flower. And just as women and children think a variety of colours to be of all things most charming, so there are many men to whom this State, which is spangled with the manners and characters of mankind, will appear to be the fairest of States.

Yes.

Yes, my good Sir, and there will be no better in which to look for a government.

Why?

Because of the liberty which reigns there--they have a complete assortment of constitutions; and he who has a mind to establish a State, as we have been doing, must go to a democracy as he would to a bazaar at which they sell them, and pick out the one that suits him; then, when he has made his choice, he may found his State.

He will be sure to have patterns enough.

And there being no necessity, I said, for you to govern in this State, even if you have the capacity, or to be governed, unless you like, or go to war when the rest go to war, or to be at peace when others are at peace, unless you are so disposed--there being no necessity also, because some law forbids you to hold office or be a dicast, that you should not hold office or be a dicast, if you have a fancy--is not this a way of life which for the moment is supremely delightful
For the moment, yes.

And is not their humanity to the condemned in some cases quite charming? Have you not observed how, in a democracy, many persons, although they have been sentenced to death or exile, just stay where they are and walk about the world--the gentleman parades like a hero, and nobody sees or cares?

Yes, he replied, many and many a one.

See too, I said, the forgiving spirit of democracy, and the 'don't care' about trifles, and the disregard which she shows of all the fine principles which we solemnly laid down at the foundation of the city--as when we said that, except in the case of some rarely gifted nature, there never will be a good man who has not from his childhood been used to play amid things of beauty and make of them a joy and a study--how grandly does she trample all these fine notions of ours under her feet, never giving a thought to the pursuits which make a statesman, and promoting to honour any one who professes to be the people's friend.

Yes, she is of a noble spirit.

These and other kindred characteristics are proper to democracy, which is a charming form of government, full of variety and disorder, and dispensing a sort of equality to equals and unequals alike.

We know her well.

Consider now, I said, what manner of man the individual is, or rather consider, as in the case of the State, how he comes into being.

Very good, he said.

Is not this the way--he is the son of the miserly and oligarchical father who has trained him in his own habits?

Exactly.

And, like his father, he keeps under by force the pleasures which are of the spending and not of the getting sort, being those which are called unnecessary?

Obviously.

Would you like, for the sake of clearness, to distinguish which are the necessary and which are the unnecessary pleasures?
I should.

Are not necessary pleasures those of which we cannot get rid, and of which the satisfaction is a benefit to us? And they are rightly so, because we are framed by nature to desire both what is beneficial and what is necessary, and cannot help it.

True.

We are not wrong therefore in calling them necessary?

We are not.

And the desires of which a man may get rid, if he takes pains from his youth upwards--of which the presence, moreover, does no good, and in some cases the reverse of good--shall we not be right in saying that all these are unnecessary?

Yes, certainly.

Suppose we select an example of either kind, in order that we may have a general notion of them?

Very good.

Will not the desire of eating, that is, of simple food and condiments, in so far as they are required for health and strength, be of the necessary class?

That is what I should suppose.

The pleasure of eating is necessary in two ways; it does us good and it is essential to the continuance of life?

Yes.

But the condiments are only necessary in so far as they are good for health?

Certainly.

And the desire which goes beyond this, or more delicate food, or other luxuries, which might generally be got rid of, if controlled and trained in youth, and is hurtful to the body, and hurtful to the soul in the pursuit of wisdom and virtue, may be rightly called unnecessary?
Very true.

May we not say that these desires spend, and that the others make money because they conduce to production?

Certainly.

And of the pleasures of love, and all other pleasures, the same holds good?

True.

And the drone of whom we spoke was he who was surfeited in pleasures and desires of this sort, and was the slave of the unnecessary desires, whereas he who was subject to the necessary only was miserly and oligarchical?

Very true.

Again, let us see how the democratical man grows out of the oligarchical: the following, as I suspect, is commonly the process.

What is the process?

When a young man who has been brought up as we were just now describing, in a vulgar and miserly way, has tasted drones' honey and has come to associate with fierce and crafty natures who are able to provide for him all sorts of refinements and varieties of pleasure--then, as you may imagine, the change will begin of the oligarchical principle within him into the democratical?

Inevitably.

And as in the city like was helping like, and the change was effected by an alliance from without assisting one division of the citizens, so too the young man is changed by a class of desires coming from without to assist the desires within him, that which is and alike again helping that which is akin and alike?

Certainly.

And if there be any ally which aids the oligarchical principle within him, whether the influence of a father or of kindred, advising or rebuking him, then there arises in his soul a faction and an opposite faction, and he goes to war with himself.

It must be so.
And there are times when the democratical principle gives way to the oligarchical, and some of his desires die, and others are banished; a spirit of reverence enters into the young man's soul and order is restored.

Yes, he said, that sometimes happens.

And then, again, after the old desires have been driven out, fresh ones spring up, which are akin to them, and because he, their father, does not know how to educate them, wax fierce and numerous.

Yes, he said, that is apt to be the way.

They draw him to his old associates, and holding secret intercourse with them, breed and multiply in him.

Very true.

At length they seize upon the citadel of the young man's soul, which they perceive to be void of all accomplishments and fair pursuits and true words, which make their abode in the minds of men who are dear to the gods, and are their best guardians and sentinels.

None better.

False and boastful conceits and phrases mount upwards and take their place.

They are certain to do so.

And so the young man returns into the country of the lotus-eaters, and takes up his dwelling there in the face of all men; and if any help be sent by his friends to the oligarchical part of him, the aforesaid vain conceits shut the gate of the king's fastness; and they will neither allow the embassy itself to enter, private if private advisers offer the fatherly counsel of the aged will they listen to them or receive them. There is a battle and they gain the day, and then modesty, which they call silliness, is ignominiously thrust into exile by them, and temperance, which they nickname unmanliness, is trampled in the mire and cast forth; they persuade men that moderation and orderly expenditure are vulgarity and meanness, and so, by the help of a rabble of evil appetites, they drive them beyond the border.

Yes, with a will.

And when they have emptied and swept clean the soul of him who is now
in their power and who is being initiated by them in great mysteries, the next thing is to bring back to their house insolence and anarchy and waste and impudence in bright array having garlands on their heads, and a great company with them, hymning their praises and calling them by sweet names; insolence they term breeding, and anarchy liberty, and waste magnificence, and impudence courage. And so the young man passes out of his original nature, which was trained in the school of necessity, into the freedom and libertinism of useless and unnecessary pleasures.

Yes, he said, the change in him is visible enough.

After this he lives on, spending his money and labour and time on unnecessary pleasures quite as much as on necessary ones; but if he be fortunate, and is not too much disordered in his wits, when years have elapsed, and the heyday of passion is over--supposing that he then re-admits into the city some part of the exiled virtues, and does not wholly give himself up to their successors--in that case he balances his pleasures and lives in a sort of equilibrium, putting the government of himself into the hands of the one which comes first and wins the turn; and when he has had enough of that, then into the hands of another; he despises none of them but encourages them all equally.

Very true, he said.

Neither does he receive or let pass into the fortress any true word of advice; if any one says to him that some pleasures are the satisfactions of good and noble desires, and others of evil desires, and that he ought to use and honour some and chastise and master the others--whenever this is repeated to him he shakes his head and says that they are all alike, and that one is as good as another.

Yes, he said; that is the way with him.

Yes, I said, he lives from day to day indulging the appetite of the hour; and sometimes he is lapped in drink and strains of the flute; then he becomes a water-drinker, and tries to get thin; then he takes a turn at gymnastics; sometimes idling and neglecting everything, then once more living the life of a philosopher; often he is busy with politics, and starts to his feet and says and does whatever comes into his head; and, if he is emulous of any one who is a warrior, off he is in that direction, or of men of business, once more in that. His life has neither law nor order; and this distracted existence he terms joy and bliss and freedom; and so he goes on.

Yes, he replied, he is all liberty and equality.
Yes, I said; his life is motley and manifold and an epitome of the lives of many;--he answers to the State which we described as fair and spangled. And many a man and many a woman will take him for their pattern, and many a constitution and many an example of manners is contained in him.

Just so.

Let him then be set over against democracy; he may truly be called the democratic man.

Let that be his place, he said.

Last of all comes the most beautiful of all, man and State alike, tyranny and the tyrant; these we have now to consider.

Quite true, he said.

Say then, my friend, in what manner does tyranny arise?--that it has a democratic origin is evident.

Clearly.

And does not tyranny spring from democracy in the same manner as democracy from oligarchy--I mean, after a sort?

How?

The good which oligarchy proposed to itself and the means by which it was maintained was excess of wealth--am I not right?

Yes.

And the insatiable desire of wealth and the neglect of all other things for the sake of money-getting was also the ruin of oligarchy?

True.

And democracy has her own good, of which the insatiable desire brings her to dissolution?

What good?

Freedom, I replied; which, as they tell you in a democracy, is the glory of the State--and that therefore in a democracy alone will the freeman of nature deign to dwell.
Yes; the saying is in everybody's mouth.

I was going to observe, that the insatiable desire of this and the neglect of other things introduces the change in democracy, which occasions a demand for tyranny.

How so?

When a democracy which is thirsting for freedom has evil cupbearers presiding over the feast, and has drunk too deeply of the strong wine of freedom, then, unless her rulers are very amenable and give a plentiful draught, she calls them to account and punishes them, and says that they are cursed oligarchs.

Yes, he replied, a very common occurrence.

Yes, I said; and loyal citizens are insultingly termed by her slaves who hug their chains and men of naught; she would have subjects who are like rulers, and rulers who are like subjects: these are men after her own heart, whom she praises and honours both in private and public. Now, in such a State, can liberty have any limit?

Certainly not.

By degrees the anarchy finds a way into private houses, and ends by getting among the animals and infecting them.

How do you mean?

I mean that the father grows accustomed to descend to the level of his sons and to fear them, and the son is on a level with his father, he having no respect or reverence for either of his parents; and this is his freedom, and metic is equal with the citizen and the citizen with the metic, and the stranger is quite as good as either.

Yes, he said, that is the way.

And these are not the only evils, I said--there are several lesser ones: In such a state of society the master fears and flatters his scholars, and the scholars despise their masters and tutors; young and old are all alike; and the young man is on a level with the old, and is ready to compete with him in word or deed; and old men condescend to the young and are full of pleasantry and gaiety; they are loth to be thought morose and authoritative, and therefore they adopt the manners of the young.

Quite true, he said.
The last extreme of popular liberty is when the slave bought with money, whether male or female, is just as free as his or her purchaser; nor must I forget to tell of the liberty and equality of the two sexes in relation to each other.

Why not, as Aeschylus says, utter the word which rises to our lips?

That is what I am doing, I replied; and I must add that no one who does not know would believe, how much greater is the liberty which the animals who are under the dominion of man have in a democracy than in any other State: for truly, the she-dogs, as the proverb says, are as good as their she-mistresses, and the horses and asses have a way of marching along with all the rights and dignities of freemen; and they will run at anybody who comes in their way if he does not leave the road clear for them: and all things are just ready to burst with liberty.

When I take a country walk, he said, I often experience what you describe. You and I have dreamed the same thing.

And above all, I said, and as the result of all, see how sensitive the citizens become; they chafe impatiently at the least touch of authority and at length, as you know, they cease to care even for the laws, written or unwritten; they will have no one over them.

Yes, he said, I know it too well.

Such, my friend, I said, is the fair and glorious beginning out of which springs tyranny.

Glorious indeed, he said. But what is the next step?

The ruin of oligarchy is the ruin of democracy; the same disease magnified and intensified by liberty overmasters democracy--the truth being that the excessive increase of anything often causes a reaction in the opposite direction; and this is the case not only in the seasons and in vegetable and animal life, but above all in forms of government.

True.

The excess of liberty, whether in States or individuals, seems only to pass into excess of slavery.

Yes, the natural order.

And so tyranny naturally arises out of democracy, and the most
aggravated form of tyranny and slavery out of the most extreme form of liberty?

As we might expect.

That, however, was not, as I believe, your question—you rather desired to know what is that disorder which is generated alike in oligarchy and democracy, and is the ruin of both?

Just so, he replied.

Well, I said, I meant to refer to the class of idle spendthrifts, of whom the more courageous are the leaders and the more timid the followers, the same whom we were comparing to drones, some stingless, and others having stings.

A very just comparison.

These two classes are the plagues of every city in which they are generated, being what phlegm and bile are to the body. And the good physician and lawgiver of the State ought, like the wise bee-master, to keep them at a distance and prevent, if possible, their ever coming in; and if they have anyhow found a way in, then he should have them and their cells cut out as speedily as possible.

Yes, by all means, he said.

Then, in order that we may see clearly what we are doing, let us imagine democracy to be divided, as indeed it is, into three classes; for in the first place freedom creates rather more drones in the democratic than there were in the oligarchical State.

That is true.

And in the democracy they are certainly more intensified.

How so?

Because in the oligarchical State they are disqualified and driven from office, and therefore they cannot train or gather strength; whereas in a democracy they are almost the entire ruling power, and while the keener sort speak and act, the rest keep buzzing about the bema and do not suffer a word to be said on the other side; hence in democracies almost everything is managed by the drones.

Very true, he said.
Then there is another class which is always being severed from the mass.

What is that?

They are the orderly class, which in a nation of traders sure to be the richest.

Naturally so.

They are the most squeezable persons and yield the largest amount of honey to the drones.

Why, he said, there is little to be squeezed out of people who have little.

And this is called the wealthy class, and the drones feed upon them.

That is pretty much the case, he said.

The people are a third class, consisting of those who work with their own hands; they are not politicians, and have not much to live upon. This, when assembled, is the largest and most powerful class in a democracy.

True, he said; but then the multitude is seldom willing to congregate unless they get a little honey.

And do they not share? I said. Do not their leaders deprive the rich of their estates and distribute them among the people; at the same time taking care to reserve the larger part for themselves?

Why, yes, he said, to that extent the people do share.

And the persons whose property is taken from them are compelled to defend themselves before the people as they best can?

What else can they do?

And then, although they may have no desire of change, the others charge them with plotting against the people and being friends of oligarchy?

True.

And the end is that when they see the people, not of their own accord, but through ignorance, and because they are deceived by informers, seeking to do them wrong, then at last they are forced to become oligarchs in reality; they do not wish to be, but the sting of the drones torments them and breeds revolution in them.
That is exactly the truth.

Then come impeachments and judgments and trials of one another.

True.

The people have always some champion whom they set over them and nurse into greatness.

Yes, that is their way.

This and no other is the root from which a tyrant springs; when he first appears above ground he is a protector.

Yes, that is quite clear.

How then does a protector begin to change into a tyrant? Clearly when he does what the man is said to do in the tale of the Arcadian temple of Lycaean Zeus.

What tale?

The tale is that he who has tasted the entrails of a single human victim minced up with the entrails of other victims is destined to become a wolf. Did you never hear it?

Oh, yes.

And the protector of the people is like him; having a mob entirely at his disposal, he is not restrained from shedding the blood of kinsmen; by the favourite method of false accusation he brings them into court and murders them, making the life of man to disappear, and with unholy tongue and lips tasting the blood of his fellow citizen; some he kills and others he banishes, at the same time hinting at the abolition of debts and partition of lands: and after this, what will be his destiny? Must he not either perish at the hands of his enemies, or from being a man become a wolf--that is, a tyrant?

Inevitably.

This, I said, is he who begins to make a party against the rich?

The same.

After a while he is driven out, but comes back, in spite of his enemies, a tyrant full grown.
That is clear.

And if they are unable to expel him, or to get him condemned to death by a public accusation, they conspire to assassinate him.

Yes, he said, that is their usual way.

Then comes the famous request for a bodyguard, which is the device of all those who have got thus far in their tyrannical career--'Let not the people's friend,' as they say, 'be lost to them.'

Exactly.

The people readily assent; all their fears are for him--they have none for themselves.

Very true.

And when a man who is wealthy and is also accused of being an enemy of the people sees this, then, my friend, as the oracle said to Croesus,

   By pebbly Hermus' shore he flees and rests not and is not ashamed to be a coward.

And quite right too, said he, for if he were, he would never be ashamed again.

But if he is caught he dies.

Of course.

And he, the protector of whom we spoke, is to be seen, not 'larding the plain' with his bulk, but himself the over thrower of many, standing up in the chariot of State with the reins in his hand, no longer protector, but tyrant absolute.

No doubt, he said.

And now let us consider the happiness of the man, and also of the State in which a creature like him is generated.

Yes, he said, let us consider that.

At first, in the early days of his power, he is full of smiles, and he salutes every one whom he meets;--he to be called a tyrant, who is making promises in public and also in private! liberating debtors, and
distributing land to the people and his followers, and wanting to be so kind and good to every one!

Of course, he said.

But when he has disposed of foreign enemies by conquest or treaty, and there is nothing to fear from them, then he is always stirring up some war or other, in order that the people may require a leader.

To be sure.

Has he not also another object, which is that they may be impoverished by payment of taxes, and thus compelled to devote themselves to their daily wants and therefore less likely to conspire against him? Clearly.

And if any of them are suspected by him of having notions of freedom, and of resistance to his authority, he will have a good pretext for destroying them by placing them at the mercy of the enemy; and for all these reasons the tyrant must be always getting up a war.

He must.

Now he begins to grow unpopular.

A necessary result.

Then some of those who joined in setting him up, and who are in power, speak their minds to him and to one another, and the more courageous of them cast in his teeth what is being done.

Yes, that may be expected.

And the tyrant, if he means to rule, must get rid of them; he cannot stop while he has a friend or an enemy who is good for anything.

He cannot.

And therefore he must look about him and see who is valiant, who is high-minded, who is wise, who is wealthy; happy man, he is the enemy of them all, and must seek occasion against them whether he will or no, until he has made a purgation of the State.

Yes, he said, and a rare purgation.

Yes, I said, not the sort of purgation which the physicians make of the body; for they take away the worse and leave the better part, but he does the reverse.
If he is to rule, I suppose that he cannot help himself.

What a blessed alternative, I said:--to be compelled to dwell only with the many bad, and to be by them hated, or not to live at all!

Yes, that is the alternative.

And the more detestable his actions are to the citizens the more satellites and the greater devotion in them will he require?

Certainly.

And who are the devoted band, and where will he procure them?

They will flock to him, he said, of their own accord, if lie pays them.

By the dog! I said, here are more drones, of every sort and from every land.

Yes, he said, there are.

But will he not desire to get them on the spot?

How do you mean?

He will rob the citizens of their slaves; he will then set them free and enrol them in his bodyguard.

To be sure, he said; and he will be able to trust them best of all.

What a blessed creature, I said, must this tyrant be; he has put to death the others and has these for his trusted friends.

Yes, he said; they are quite of his sort.

Yes, I said, and these are the new citizens whom he has called into existence, who admire him and are his companions, while the good hate and avoid him.

Of course.

Verily, then, tragedy is a wise thing and Euripides a great tragedian.

Why so?

Why, because he is the author of the pregnant saying,
Tyrants are wise by living with the wise;

and he clearly meant to say that they are the wise whom the tyrant makes his companions.

Yes, he said, and he also praises tyranny as godlike; and many other things of the same kind are said by him and by the other poets.

And therefore, I said, the tragic poets being wise men will forgive us and any others who live after our manner if we do not receive them into our State, because they are the eulogists of tyranny.

Yes, he said, those who have the wit will doubtless forgive us.

But they will continue to go to other cities and attract mobs, and hire voices fair and loud and persuasive, and draw the cities over to tyrannies and democracies.

Very true.

Moreover, they are paid for this and receive honour--the greatest honour, as might be expected, from tyrants, and the next greatest from democracies; but the higher they ascend our constitution hill, the more their reputation fails, and seems unable from shortness of breath to proceed further.

True.

But we are wandering from the subject: Let us therefore return and enquire how the tyrant will maintain that fair and numerous and various and ever-changing army of his.

If, he said, there are sacred treasures in the city, he will confiscate and spend them; and in so far as the fortunes of attainted persons may suffice, he will be able to diminish the taxes which he would otherwise have to impose upon the people.

And when these fail?

Why, clearly, he said, then he and his boon companions, whether male or female, will be maintained out of his father's estate.

You mean to say that the people, from whom he has derived his being, will maintain him and his companions?

Yes, he said; they cannot help themselves.
But what if the people fly into a passion, and aver that a grown-up son ought not to be supported by his father, but that the father should be supported by the son? The father did not bring him into being, or settle him in life, in order that when his son became a man he should himself be the servant of his own servants and should support him and his rabble of slaves and companions; but that his son should protect him, and that by his help he might be emancipated from the government of the rich and aristocratic, as they are termed. And so he bids him and his companions depart, just as any other father might drive out of the house a riotous son and his undesirable associates.

By heaven, he said, then the parent will discover what a monster he has been fostering in his bosom; and, when he wants to drive him out, he will find that he is weak and his son strong.

Why, you do not mean to say that the tyrant will use violence? What! beat his father if he opposes him?

Yes, he will, having first disarmed him.

Then he is a parricide, and a cruel guardian of an aged parent; and this is real tyranny, about which there can be no longer a mistake: as the saying is, the people who would escape the smoke which is the slavery of freemen, has fallen into the fire which is the tyranny of slaves. Thus liberty, getting out of all order and reason, passes into the harshest and bitterest form of slavery.

True, he said.

Very well; and may we not rightly say that we have sufficiently discussed the nature of tyranny, and the manner of the transition from democracy to tyranny?

Yes, quite enough, he said.

BOOK IX

SOCRATES - ADEIMANTUS

LAST of all comes the tyrannical man; about whom we have once more to ask, how is he formed out of the democratical? and how does he live, in happiness or in misery?
Yes, he said, he is the only one remaining.

There is, however, I said, a previous question which remains unanswered.

What question?

I do not think that we have adequately determined the nature and number of the appetites, and until this is accomplished the enquiry will always be confused.

Well, he said, it is not too late to supply the omission.

Very true, I said; and observe the point which I want to understand: Certain of the unnecessary pleasures and appetites I conceive to be unlawful; every one appears to have them, but in some persons they are controlled by the laws and by reason, and the better desires prevail over them--either they are wholly banished or they become few and weak; while in the case of others they are stronger, and there are more of them.

Which appetites do you mean?

I mean those which are awake when the reasoning and human and ruling power is asleep; then the wild beast within us, gorged with meat or drink, starts up and having shaken off sleep, goes forth to satisfy his desires; and there is no conceivable folly or crime--not excepting incest or any other unnatural union, or parricide, or the eating of forbidden food--which at such a time, when he has parted company with all shame and sense, a man may not be ready to commit.

Most true, he said.

But when a man's pulse is healthy and temperate, and when before going to sleep he has awakened his rational powers, and fed them on noble thoughts and enquiries, collecting himself in meditation; after having first indulged his appetites neither too much nor too little, but just enough to lay them to sleep, and prevent them and their enjoyments and pains from interfering with the higher principle--which he leaves in the solitude of pure abstraction, free to contemplate and aspire to the knowledge of the unknown, whether in past, present, or future: when again he has allayed the passionate element, if he has a quarrel against any one--I say, when, after pacifying the two irrational principles, he rouses up the third, which is reason, before he takes his rest, then, as you know, he attains truth most nearly, and is least likely to be the sport of fantastic and lawless visions.
I quite agree.

In saying this I have been running into a digression; but the point which I desire to note is that in all of us, even in good men, there is a lawless wild-beast nature, which peers out in sleep. Pray, consider whether I am right, and you agree with me.

Yes, I agree.

And now remember the character which we attributed to the democratic man. He was supposed from his youth upwards to have been trained under a miserly parent, who encouraged the saving appetites in him, but discountenanced the unnecessary, which aim only at amusement and ornament?

True.

And then he got into the company of a more refined, licentious sort of people, and taking to all their wanton ways rushed into the opposite extreme from an abhorrence of his father's meanness. At last, being a better man than his corruptors, he was drawn in both directions until he halted midway and led a life, not of vulgar and slavish passion, but of what he deemed moderate indulgence in various pleasures. After this manner the democrat was generated out of the oligarch?

Yes, he said; that was our view of him, and is so still.

And now, I said, years will have passed away, and you must conceive this man, such as he is, to have a son, who is brought up in his father's principles.

I can imagine him.

Then you must further imagine the same thing to happen to the son which has already happened to the father:--he is drawn into a perfectly lawless life, which by his seducers is termed perfect liberty; and his father and friends take part with his moderate desires, and the opposite party assist the opposite ones. As soon as these dire magicians and tyrant-makers find that they are losing their hold on him, they contrive to implant in him a master passion, to be lord over his idle and spendthrift lusts--a sort of monstrous winged drone--that is the only image which will adequately describe him.

Yes, he said, that is the only adequate image of him.

And when his other lusts, amid clouds of incense and perfumes and garlands and wines, and all the pleasures of a dissolute life, now let
loose, come buzzing around him, nourishing to the utmost the sting of
desire which they implant in his drone-like nature, then at last this
lord of the soul, having Madness for the captain of his guard, breaks
out into a frenzy: and if he finds in himself any good opinions or
appetites in process of formation, and there is in him any sense of
shame remaining, to these better principles he puts an end, and casts
them forth until he has purged away temperance and brought in madness
to the full.

Yes, he said, that is the way in which the tyrannical man is generated.

And is not this the reason why of old love has been called a tyrant?

I should not wonder.

Further, I said, has not a drunken man also the spirit of a tyrant?

He has.

And you know that a man who is deranged and not right in his mind, will
fancy that he is able to rule, not only over men, but also over the
gods?

That he will.

And the tyrannical man in the true sense of the word comes into being
when, either under the influence of nature, or habit, or both, he
becomes drunken, lustful, passionate? O my friend, is not that so?

Assuredly.

Such is the man and such is his origin. And next, how does he live?

Suppose, as people facetiously say, you were to tell me.

I imagine, I said, at the next step in his progress, that there will be
feasts and carousals and revellings and courtesans, and all that sort
of thing; Love is the lord of the house within him, and orders all the
concerns of his soul.

That is certain.

Yes; and every day and every night desires grow up many and formidable,
and their demands are many.

They are indeed, he said.
His revenues, if he has any, are soon spent.

True.

Then comes debt and the cutting down of his property.

Of course.

When he has nothing left, must not his desires, crowding in the nest like young ravens, be crying aloud for food; and he, goaded on by them, and especially by love himself, who is in a manner the captain of them, is in a frenzy, and would fain discover whom he can defraud or despoil of his property, in order that he may gratify them?

Yes, that is sure to be the case.

He must have money, no matter how, if he is to escape horrid pains and pangs.

He must.

And as in himself there was a succession of pleasures, and the new got the better of the old and took away their rights, so he being younger will claim to have more than his father and his mother, and if he has spent his own share of the property, he will take a slice of theirs.

No doubt he will.

And if his parents will not give way, then he will try first of all to cheat and deceive them.

Very true.

And if he fails, then he will use force and plunder them.

Yes, probably.

And if the old man and woman fight for their own, what then, my friend? Will the creature feel any compunction at tyrannizing over them?

Nay, he said, I should not feel at all comfortable about his parents.

But, O heavens! Adeimantus, on account of some newfangled love of a harlot, who is anything but a necessary connection, can you believe that he would strike the mother who is his ancient friend and necessary to his very existence, and would place her under the authority of the other, when she is brought under the same roof with her; or that, under
like circumstances, he would do the same to his withered old father, first and most indispensable of friends, for the sake of some newly found blooming youth who is the reverse of indispensable?

Yes, indeed, he said; I believe that he would.

Truly, then, I said, a tyrannical son is a blessing to his father and mother.

He is indeed, he replied.

He first takes their property, and when that falls, and pleasures are beginning to swarm in the hive of his soul, then he breaks into a house, or steals the garments of some nightly wayfarer; next he proceeds to clear a temple. Meanwhile the old opinions which he had when a child, and which gave judgment about good and evil, are overthrown by those others which have just been emancipated, and are now the bodyguard of love and share his empire. These in his democratic days, when he was still subject to the laws and to his father, were only let loose in the dreams of sleep. But now that he is under the dominion of love, he becomes always and in waking reality what he was then very rarely and in a dream only; he will commit the foulest murder, or eat forbidden food, or be guilty of any other horrid act. Love is his tyrant, and lives lordly in him and lawlessly, and being himself a king, leads him on, as a tyrant leads a State, to the performance of any reckless deed by which he can maintain himself and the rabble of his associates, whether those whom evil communications have brought in from without, or those whom he himself has allowed to break loose within him by reason of a similar evil nature in himself. Have we not here a picture of his way of life?

Yes, indeed, he said.

And if there are only a few of them in the State, the rest of the people are well disposed, they go away and become the bodyguard or mercenary soldiers of some other tyrant who may probably want them for a war; and if there is no war, they stay at home and do many little pieces of mischief in the city.

What sort of mischief?

For example, they are the thieves, burglars, cutpurses, footpads, robbers of temples, man-stealers of the community; or if they are able to speak they turn informers, and bear false witness, and take bribes.

A small catalogue of evils, even if the perpetrators of them are few in number.
Yes, I said; but small and great are comparative terms, and all these things, in the misery and evil which they inflict upon a State, do not come within a thousand miles of the tyrant; when this noxious class and their followers grow numerous and become conscious of their strength, assisted by the infatuation of the people, they choose from among themselves the one who has most of the tyrant in his own soul, and him they create their tyrant.

Yes, he said, and he will be the most fit to be a tyrant.

If the people yield, well and good; but if they resist him, as he began by beating his own father and mother, so now, if he has the power, he beats them, and will keep his dear old fatherland or motherland, as the Cretans say, in subjection to his young retainers whom he has introduced to be their rulers and masters. This is the end of his passions and desires.

Exactly.

When such men are only private individuals and before they get power, this is their character; they associate entirely with their own flatterers or ready tools; or if they want anything from anybody, they in their turn are equally ready to bow down before them: they profess every sort of affection for them; but when they have gained their point they know them no more.

Yes, truly.

They are always either the masters or servants and never the friends of anybody; the tyrant never tastes of true freedom or friendship.

Certainly not.

And may we not rightly call such men treacherous?

No question.

Also they are utterly unjust, if we were right in our notion of justice?

Yes, he said, and we were perfectly right.

Let us then sum up in a word, I said, the character of the worst man: he is the waking reality of what we dreamed.

Most true.
And this is he who being by nature most of a tyrant bears rule, and the longer he lives the more of a tyrant he becomes.

SOCRATES - GLAUCON

That is certain, said Glaucon, taking his turn to answer.

And will not he who has been shown to be the wickedest, be also the most miserable? and he who has tyrannized longest and most, most continually and truly miserable; although this may not be the opinion of men in general?

Yes, he said, inevitably.

And must not the tyrannical man be like the tyrannical, State, and the democratical man like the democratical State; and the same of the others?

Certainly.

And as State is to State in virtue and happiness, so is man in relation to man?

To be sure.

Then comparing our original city, which was under a king, and the city which is under a tyrant, how do they stand as to virtue?

They are the opposite extremes, he said, for one is the very best and the other is the very worst.

There can be no mistake, I said, as to which is which, and therefore I will at once enquire whether you would arrive at a similar decision about their relative happiness and misery. And here we must not allow ourselves to be panic-stricken at the apparition of the tyrant, who is only a unit and may perhaps have a few retainers about him; but let us go as we ought into every corner of the city and look all about, and then we will give our opinion.

A fair invitation, he replied; and I see, as every one must, that a tyranny is the wretchedest form of government, and the rule of a king the happiest.

And in estimating the men too, may I not fairly make a like request, that I should have a judge whose mind can enter into and see through human nature? He must not be like a child who looks at the outside and is dazzled at the pompous aspect which the tyrannical nature assumes to
the beholder, but let him be one who has a clear insight. May I suppose that the judgment is given in the hearing of us all by one who is able to judge, and has dwelt in the same place with him, and been present at his daily life and known him in his family relations, where he may be seen stripped of his tragedy attire, and again in the hour of public danger—he shall tell us about the happiness and misery of the tyrant when compared with other men?

That again, he said, is a very fair proposal.

Shall I assume that we ourselves are able and experienced judges and have before now met with such a person? We shall then have some one who will answer our enquiries.

By all means.

Let me ask you not to forget the parallel of the individual and the State; bearing this in mind, and glancing in turn from one to the other of them, will you tell me their respective conditions?

What do you mean? he asked.

Beginning with the State, I replied, would you say that a city which is governed by a tyrant is free or enslaved?

No city, he said, can be more completely enslaved.

And yet, as you see, there are freemen as well as masters in such a State?

Yes, he said, I see that there are—a few; but the people, speaking generally, and the best of them, are miserably degraded and enslaved.

Then if the man is like the State, I said, must not the same rule prevail? his soul is full of meanness and vulgarity—the best elements in him are enslaved; and there is a small ruling part, which is also the worst and maddest.

Inevitably.

And would you say that the soul of such an one is the soul of a freeman, or of a slave?

He has the soul of a slave, in my opinion.

And the State which is enslaved under a tyrant is utterly incapable of acting voluntarily?
Utterly incapable.

And also the soul which is under a tyrant (I am speaking of the soul taken as a whole) is least capable of doing what she desires; there is a gadfly which goads her, and she is full of trouble and remorse?

Certainly.

And is the city which is under a tyrant rich or poor?

Poor.

And the tyrannical soul must be always poor and insati able?

True.

And must not such a State and such a man be always full of fear?

Yes, indeed.

Is there any State in which you will find more of lamentation and sorrow and groaning and pain?

Certainly not.

And is there any man in whom you will find more of this sort of misery than in the tyrannical man, who is in a fury of passions and desires?

Impossible.

Reflecting upon these and similar evils, you held the tyrannical State to be the most miserable of States?

And I was right, he said.

Certainly, I said. And when you see the same evils in the tyrannical man, what do you say of him?

I say that he is by far the most miserable of all men.

There, I said, I think that you are beginning to go wrong.

What do you mean?

I do not think that he has as yet reached the utmost extreme of misery.
Then who is more miserable?

One of whom I am about to speak.

Who is that?

He who is of a tyrannical nature, and instead of leading a private life has been cursed with the further misfortune of being a public tyrant.

From what has been said, I gather that you are right.

Yes, I replied, but in this high argument you should be a little more certain, and should not conjecture only; for of all questions, this respecting good and evil is the greatest.

Very true, he said.

Let me then offer you an illustration, which may, I think, throw a light upon this subject.

What is your illustration?

The case of rich individuals in cities who possess many slaves: from them you may form an idea of the tyrant's condition, for they both have slaves; the only difference is that he has more slaves.

Yes, that is the difference.

You know that they live securely and have nothing to apprehend from their servants?

What should they fear?

Nothing. But do you observe the reason of this?

Yes; the reason is, that the whole city is leagued together for the protection of each individual.

Very true, I said. But imagine one of these owners, the master say of some fifty slaves, together with his family and property and slaves, carried off by a god into the wilderness, where there are no freemen to help him—will he not be in an agony of fear lest he and his wife and children should be put to death by his slaves?

Yes, he said, he will be in the utmost fear.

The time has arrived when he will be compelled to flatter divers of his
slaves, and make many promises to them of freedom and other things, much against his will--he will have to cajole his own servants.

Yes, he said, that will be the only way of saving himself.

And suppose the same god, who carried him away, to surround him with neighbours who will not suffer one man to be the master of another, and who, if they could catch the offender, would take his life?

His case will be still worse, if you suppose him to be everywhere surrounded and watched by enemies.

And is not this the sort of prison in which the tyrant will be bound--he who being by nature such as we have described, is full of all sorts of fears and lusts? His soul is dainty and greedy, and yet alone, of all men in the city, he is never allowed to go on a journey, or to see the things which other freemen desire to see, but he lives in his hole like a woman hidden in the house, and is jealous of any other citizen who goes into foreign parts and sees anything of interest.

Very true, he said.

And amid evils such as these will not he who is ill-governed in his own person--the tyrannical man, I mean--whom you just now decided to be the most miserable of all--will not he be yet more miserable when, instead of leading a private life, he is constrained by fortune to be a public tyrant? He has to be master of others when he is not master of himself: he is like a diseased or paralytic man who is compelled to pass his life, not in retirement, but fighting and combating with other men.

Yes, he said, the similitude is most exact.

Is not his case utterly miserable? and does not the actual tyrant lead a worse life than he whose life you determined to be the worst?

Certainly.

He who is the real tyrant, whatever men may think, is the real slave, and is obliged to practise the greatest adulation and servility, and to be the flatterer of the vilest of mankind. He has desires which he is utterly unable to satisfy, and has more wants than any one, and is truly poor, if you know how to inspect the whole soul of him: all his life long he is beset with fear and is full of convulsions, and distractions, even as the State which he resembles: and surely the resemblance holds?
Very true, he said.

Moreover, as we were saying before, he grows worse from having power: he becomes and is of necessity more jealous, more faithless, more unjust, more friendless, more impious, than he was at first; he is the purveyor and cherisher of every sort of vice, and the consequence is that he is supremely miserable, and that he makes everybody else as miserable as himself.

No man of any sense will dispute your words.

Come then, I said, and as the general umpire in theatrical contests proclaims the result, do you also decide who in your opinion is first in the scale of happiness, and who second, and in what order the others follow: there are five of them in all--they are the royal, timocratical, oligarchical, democratical, tyrannical.

The decision will be easily given, he replied; they shall be choruses coming on the stage, and I must judge them in the order in which they enter, by the criterion of virtue and vice, happiness and misery.

Need we hire a herald, or shall I announce, that the son of Ariston (the best) has decided that the best and justest is also the happiest, and that this is he who is the most royal man and king over himself; and that the worst and most unjust man is also the most miserable, and that this is he who being the greatest tyrant of himself is also the greatest tyrant of his State?

Make the proclamation yourself, he said.

And shall I add, 'whether seen or unseen by gods and men'?

Let the words be added.

Then this, I said, will be our first proof; and there is another, which may also have some weight.

What is that?

The second proof is derived from the nature of the soul: seeing that the individual soul, like the State, has been divided by us into three principles, the division may, I think, furnish a new demonstration.

Of what nature?

It seems to me that to these three principles three pleasures correspond; also three desires and governing powers.
How do you mean? he said.

There is one principle with which, as we were saying, a man learns, another with which he is angry; the third, having many forms, has no special name, but is denoted by the general term appetitive, from the extraordinary strength and vehemence of the desires of eating and drinking and the other sensual appetites which are the main elements of it; also money-loving, because such desires are generally satisfied by the help of money.

That is true, he said.

If we were to say that the loves and pleasures of this third part were concerned with gain, we should then be able to fall back on a single notion; and might truly and intelligibly describe this part of the soul as loving gain or money.

I agree with you.

Again, is not the passionate element wholly set on ruling and conquering and getting fame?

True.

Suppose we call it the contentious or ambitious--would the term be suitable?

Extremely suitable.

On the other hand, every one sees that the principle of knowledge is wholly directed to the truth, and cares less than either of the others for gain or fame.

Far less.

'Lover of wisdom,' 'lover of knowledge,' are titles which we may fitly apply to that part of the soul?

Certainly.

One principle prevails in the souls of one class of men, another in others, as may happen?

Yes.

Then we may begin by assuming that there are three classes of
men--lovers of wisdom, lovers of honour, lovers of gain?

Exactly.

And there are three kinds of pleasure, which are their several objects?

Very true.

Now, if you examine the three classes of men, and ask of them in turn which of their lives is pleasantest, each will be found praising his own and depreciating that of others: the money-maker will contrast the vanity of honour or of learning if they bring no money with the solid advantages of gold and silver?

True, he said.

And the lover of honour--what will be his opinion? Will he not think that the pleasure of riches is vulgar, while the pleasure of learning, if it brings no distinction, is all smoke and nonsense to him?

Very true.

And are we to suppose, I said, that the philosopher sets any value on other pleasures in comparison with the pleasure of knowing the truth, and in that pursuit abiding, ever learning, not so far indeed from the heaven of pleasure? Does he not call the other pleasures necessary, under the idea that if there were no necessity for them, he would rather not have them?

There can be no doubt of that, he replied.

Since, then, the pleasures of each class and the life of each are in dispute, and the question is not which life is more or less honourable, or better or worse, but which is the more pleasant or painless--how shall we know who speaks truly?

I cannot myself tell, he said.

Well, but what ought to be the criterion? Is any better than experience and wisdom and reason?

There cannot be a better, he said.

Then, I said, reflect. Of the three individuals, which has the greatest experience of all the pleasures which we enumerated? Has the lover of gain, in learning the nature of essential truth, greater experience of the pleasure of knowledge than the philosopher has of the
pleasure of gain?

The philosopher, he replied, has greatly the advantage; for he has of necessity always known the taste of the other pleasures from his childhood upwards: but the lover of gain in all his experience has not of necessity tasted--or, I should rather say, even had he desired, could hardly have tasted--the sweetness of learning and knowing truth.

Then the lover of wisdom has a great advantage over the lover of gain, for he has a double experience?

Yes, very great.

Again, has he greater experience of the pleasures of honour, or the lover of honour of the pleasures of wisdom?

Nay, he said, all three are honoured in proportion as they attain their object; for the rich man and the brave man and the wise man alike have their crowd of admirers, and as they all receive honour they all have experience of the pleasures of honour; but the delight which is to be found in the knowledge of true being is known to the philosopher only.

His experience, then, will enable him to judge better than any one?

Far better.

And he is the only one who has wisdom as well as experience?

Certainly.

Further, the very faculty which is the instrument of judgment is not possessed by the covetous or ambitious man, but only by the philosopher?

What faculty?

Reason, with whom, as we were saying, the decision ought to rest.

Yes.

And reasoning is peculiarly his instrument?

Certainly.

If wealth and gain were the criterion, then the praise or blame of the lover of gain would surely be the most trustworthy?

Assuredly.
Or if honour or victory or courage, in that case the judgement of the ambitious or pugnacious would be the truest?

Clearly.

But since experience and wisdom and reason are the judges--

The only inference possible, he replied, is that pleasures which are approved by the lover of wisdom and reason are the truest.

And so we arrive at the result, that the pleasure of the intelligent part of the soul is the pleasantest of the three, and that he of us in whom this is the ruling principle has the pleasantest life.

Unquestionably, he said, the wise man speaks with authority when he approves of his own life.

And what does the judge affirm to be the life which is next, and the pleasure which is next?

Clearly that of the soldier and lover of honour; who is nearer to himself than the money-maker.

Last comes the lover of gain?

Very true, he said.

Twice in succession, then, has the just man overthrown the unjust in this conflict; and now comes the third trial, which is dedicated to Olympian Zeus the saviour: a sage whispers in my ear that no pleasure except that of the wise is quite true and pure--all others are a shadow only; and surely this will prove the greatest and most decisive of falls?

Yes, the greatest; but will you explain yourself?

I will work out the subject and you shall answer my questions.

Proceed.

Say, then, is not pleasure opposed to pain?

True.

And there is a neutral state which is neither pleasure nor pain?
There is.

A state which is intermediate, and a sort of repose of the soul about either--that is what you mean?

Yes.

You remember what people say when they are sick?

What do they say?

That after all nothing is pleasanter than health. But then they never knew this to be the greatest of pleasures until they were ill.

Yes, I know, he said.

And when persons are suffering from acute pain, you must have heard them say that there is nothing pleasanter than to get rid of their pain?

I have.

And there are many other cases of suffering in which the mere rest and cessation of pain, and not any positive enjoyment, is extolled by them as the greatest pleasure?

Yes, he said; at the time they are pleased and well content to be at rest.

Again, when pleasure ceases, that sort of rest or cessation will be painful?

Doubtless, he said.

Then the intermediate state of rest will be pleasure and will also be pain?

So it would seem.

But can that which is neither become both?

I should say not.

And both pleasure and pain are motions of the soul, are they not?

Yes.

But that which is neither was just now shown to be rest and not motion,
and in a mean between them?

Yes.

How, then, can we be right in supposing that the absence of pain is pleasure, or that the absence of pleasure is pain?

Impossible.

This then is an appearance only and not a reality; that is to say, the rest is pleasure at the moment and in comparison of what is painful, and painful in comparison of what is pleasant; but all these representations, when tried by the test of true pleasure, are not real but a sort of imposition?

That is the inference.

Look at the other class of pleasures which have no antecedent pains and you will no longer suppose, as you perhaps may at present, that pleasure is only the cessation of pain, or pain of pleasure.

What are they, he said, and where shall I find them?

There are many of them: take as an example the pleasures, of smell, which are very great and have no antecedent pains; they come in a moment, and when they depart leave no pain behind them.

Most true, he said.

Let us not, then, be induced to believe that pure pleasure is the cessation of pain, or pain of pleasure.

No.

Still, the more numerous and violent pleasures which reach the soul through the body are generally of this sort--they are reliefs of pain.

That is true.

And the anticipations of future pleasures and pains are of a like nature?

Yes.

Shall I give you an illustration of them?

Let me hear.
You would allow, I said, that there is in nature an upper and lower and middle region?

I should.

And if a person were to go from the lower to the middle region, would he not imagine that he is going up; and he who is standing in the middle and sees whence he has come, would imagine that he is already in the upper region, if he has never seen the true upper world?

To be sure, he said; how can he think otherwise?

But if he were taken back again he would imagine, and truly imagine, that he was descending?

No doubt.

All that would arise out of his ignorance of the true upper and middle and lower regions?

Yes.

Then can you wonder that persons who are inexperienced in the truth, as they have wrong ideas about many other things, should also have wrong ideas about pleasure and pain and the intermediate state; so that when they are only being drawn towards the painful they feel pain and think the pain which they experience to be real, and in like manner, when drawn away from pain to the neutral or intermediate state, they firmly believe that they have reached the goal of satiety and pleasure; they, not knowing pleasure, err in contrasting pain with the absence of pain, which is like contrasting black with grey instead of white--can you wonder, I say, at this?

No, indeed; I should be much more disposed to wonder at the opposite.

Look at the matter thus:--Hunger, thirst, and the like, are inanities of the bodily state?

Yes.

And ignorance and folly are inanities of the soul?

True.

And food and wisdom are the corresponding satisfactions of either?
Certainly.

And is the satisfaction derived from that which has less or from that which has more existence the truer?

Clearly, from that which has more.

What classes of things have a greater share of pure existence in your judgment--those of which food and drink and condiments and all kinds of sustenance are examples, or the class which contains true opinion and knowledge and mind and all the different kinds of virtue? Put the question in this way:--Which has a more pure being--that which is concerned with the invariable, the immortal, and the true, and is of such a nature, and is found in such natures; or that which is concerned with and found in the variable and mortal, and is itself variable and mortal?

Far purer, he replied, is the being of that which is concerned with the invariable.

And does the essence of the invariable partake of knowledge in the same degree as of essence?

Yes, of knowledge in the same degree.

And of truth in the same degree?

Yes.

And, conversely, that which has less of truth will also have less of essence?

Necessarily.

Then, in general, those kinds of things which are in the service of the body have less of truth and essence than those which are in the service of the soul?

Far less.

And has not the body itself less of truth and essence than the soul?

Yes.

What is filled with more real existence, and actually has a more real existence, is more really filled than that which is filled with less real existence and is less real?
Of course.

And if there be a pleasure in being filled with that which is according to nature, that which is more really filled with more real being will more really and truly enjoy true pleasure; whereas that which participates in less real being will be less truly and surely satisfied, and will participate in an illusory and less real pleasure?

Unquestionably.

Those then who know not wisdom and virtue, and are always busy with gluttony and sensuality, go down and up again as far as the mean; and in this region they move at random throughout life, but they never pass into the true upper world; thither they neither look, nor do they ever find their way, neither are they truly filled with true being, nor do they taste of pure and abiding pleasure. Like cattle, with their eyes always looking down and their heads stooping to the earth, that is, to the dining-table, they fatten and feed and breed, and, in their excessive love of these delights, they kick and butt at one another with horns and hoofs which are made of iron; and they kill one another by reason of their insatiable lust. For they fill themselves with that which is not substantial, and the part of themselves which they fill is also unsubstantial and incontinent.

Verily, Socrates, said Glaucon, you describe the life of the many like an oracle.

Their pleasures are mixed with pains--how can they be otherwise? For they are mere shadows and pictures of the true, and are coloured by contrast, which exaggerates both light and shade, and so they implant in the minds of fools insane desires of themselves; and they are fought about as Stesichorus says that the Greeks fought about the shadow of Helen at Troy in ignorance of the truth.

Something of that sort must inevitably happen.

And must not the like happen with the spirited or passionate element of the soul? Will not the passionate man who carries his passion into action, be in the like case, whether he is envious and ambitious, or violent and contentious, or angry and discontented, if he be seeking to attain honour and victory and the satisfaction of his anger without reason or sense?

Yes, he said, the same will happen with the spirited element also.

Then may we not confidently assert that the lovers of money and honour,
when they seek their pleasures under the guidance and in the company of reason and knowledge, and pursue after and win the pleasures which wisdom shows them, will also have the truest pleasures in the highest degree which is attainable to them, inasmuch as they follow truth; and they will have the pleasures which are natural to them, if that which is best for each one is also most natural to him?

Yes, certainly; the best is the most natural.

And when the whole soul follows the philosophical principle, and there is no division, the several parts are just, and do each of them their own business, and enjoy severally the best and truest pleasures of which they are capable?

Exactly.

But when either of the two other principles prevails, it fails in attaining its own pleasure, and compels the rest to pursue after a pleasure which is a shadow only and which is not their own?

True.

And the greater the interval which separates them from philosophy and reason, the more strange and illusive will be the pleasure?

Yes.

And is not that farthest from reason which is at the greatest distance from law and order?

Clearly.

And the lustful and tyrannical desires are, as we saw, at the greatest distance? Yes.

And the royal and orderly desires are nearest?

Yes.

Then the tyrant will live at the greatest distance from true or natural pleasure, and the king at the least?

Certainly.

But if so, the tyrant will live most unpleasantly, and the king most pleasantly?
Inevitably.

Would you know the measure of the interval which separates them?

Will you tell me?

There appear to be three pleasures, one genuine and two spurious: now the transgression of the tyrant reaches a point beyond the spurious; he has run away from the region of law and reason, and taken up his abode with certain slave pleasures which are his satellites, and the measure of his inferiority can only be expressed in a figure.

How do you mean?

I assume, I said, that the tyrant is in the third place from the oligarch; the democrat was in the middle?

Yes.

And if there is truth in what has preceded, he will be wedded to an image of pleasure which is thrice removed as to truth from the pleasure of the oligarch?

He will.

And the oligarch is third from the royal; since we count as one royal and aristocratical?

Yes, he is third.

Then the tyrant is removed from true pleasure by the space of a number which is three times three?

Manifestly.

The shadow then of tyrannical pleasure determined by the number of length will be a plane figure.

Certainly.

And if you raise the power and make the plane a solid, there is no difficulty in seeing how vast is the interval by which the tyrant is parted from the king.

Yes; the arithmetician will easily do the sum.

Or if some person begins at the other end and measures the interval by
which the king is parted from the tyrant in truth of pleasure, he will find him, when the multiplication is complete, living 729 times more pleasantly, and the tyrant more painfully by this same interval.

What a wonderful calculation! And how enormous is the distance which separates the just from the unjust in regard to pleasure and pain!

Yet a true calculation, I said, and a number which nearly concerns human life, if human beings are concerned with days and nights and months and years.

Yes, he said, human life is certainly concerned with them.

Then if the good and just man be thus superior in pleasure to the evil and unjust, his superiority will be infinitely greater in propriety of life and in beauty and virtue?

Immeasurably greater.

Well, I said, and now having arrived at this stage of the argument, we may revert to the words which brought us hither: Was not some one saying that injustice was a gain to the perfectly unjust who was reputed to be just?

Yes, that was said.

Now then, having determined the power and quality of justice and injustice, let us have a little conversation with him.

What shall we say to him?

Let us make an image of the soul, that he may have his own words presented before his eyes.

Of what sort?

An ideal image of the soul, like the composite creations of ancient mythology, such as the Chimera or Scylla or Cerberus, and there are many others in which two or more different natures are said to grow into one.

There are said of have been such unions.

Then do you now model the form of a multitudinous, many-headed monster, having a ring of heads of all manner of beasts, tame and wild, which he is able to generate and metamorphose at will.
You suppose marvellous powers in the artist; but, as language is more pliable than wax or any similar substance, let there be such a model as you propose.

Suppose now that you make a second form as of a lion, and a third of a man, the second smaller than the first, and the third smaller than the second.

That, he said, is an easier task; and I have made them as you say.

And now join them, and let the three grow into one.

That has been accomplished.

Next fashion the outside of them into a single image, as of a man, so that he who is not able to look within, and sees only the outer hull, may believe the beast to be a single human creature. I have done so, he said.

And now, to him who maintains that it is profitable for the human creature to be unjust, and unprofitable to be just, let us reply that, if he be right, it is profitable for this creature to feast the multitudinous monster and strengthen the lion and the lion-like qualities, but to starve and weaken the man, who is consequently liable to be dragged about at the mercy of either of the other two; and he is not to attempt to familiarize or harmonize them with one another--he ought rather to suffer them to fight and bite and devour one another.

Certainly, he said; that is what the approver of injustice says.

To him the supporter of justice makes answer that he should ever so speak and act as to give the man within him in some way or other the most complete mastery over the entire human creature.

He should watch over the many-headed monster like a good husbandman, fostering and cultivating the gentle qualities, and preventing the wild ones from growing; he should be making the lion-heart his ally, and in common care of them all should be uniting the several parts with one another and with himself.

Yes, he said, that is quite what the maintainer of justice say.

And so from every point of view, whether of pleasure, honour, or advantage, the approver of justice is right and speaks the truth, and the disapprover is wrong and false and ignorant.

Yes, from every point of view.
Come, now, and let us gently reason with the unjust, who is not intentionally in error. 'Sweet Sir,' we will say to him, what think you of things esteemed noble and ignoble? Is not the noble that which subjects the beast to the man, or rather to the god in man; and the ignoble that which subjects the man to the beast?' He can hardly avoid saying yes--can he now?

Not if he has any regard for my opinion.

But, if he agree so far, we may ask him to answer another question: 'Then how would a man profit if he received gold and silver on the condition that he was to enslave the noblest part of him to the worst? Who can imagine that a man who sold his son or daughter into slavery for money, especially if he sold them into the hands of fierce and evil men, would be the gainer, however large might be the sum which he received? And will any one say that he is not a miserable caitiff who remorselessly sells his own divine being to that which is most godless and detestable? Eriphyle took the necklace as the price of her husband's life, but he is taking a bribe in order to compass a worse ruin.'

Yes, said Glaucon, far worse--I will answer for him.

Has not the intemperate been censured of old, because in him the huge multiform monster is allowed to be too much at large?

Clearly.

And men are blamed for pride and bad temper when the lion and serpent element in them disproportionately grows and gains strength?

Yes.

And luxury and softness are blamed, because they relax and weaken this same creature, and make a coward of him?

Very true.

And is not a man reproached for flattery and meanness who subordinates the spirited animal to the unruly monster, and, for the sake of money, of which he can never have enough, habituates him in the days of his youth to be trampled in the mire, and from being a lion to become a monkey?

True, he said.
And why are mean employments and manual arts a reproach Only because they imply a natural weakness of the higher principle; the individual is unable to control the creatures within him, but has to court them, and his great study is how to flatter them.

Such appears to be the reason.

And therefore, being desirous of placing him under a rule like that of the best, we say that he ought to be the servant of the best, in whom the Divine rules; not, as Thrasymachus supposed, to the injury of the servant, but because every one had better be ruled by divine wisdom dwelling within him; or, if this be impossible, then by an external authority, in order that we may be all, as far as possible, under the same government, friends and equals.

True, he said.

And this is clearly seen to be the intention of the law, which is the ally of the whole city; and is seen also in the authority which we exercise over children, and the refusal to let them be free until we have established in them a principle analogous to the constitution of a state, and by cultivation of this higher element have set up in their hearts a guardian and ruler like our own, and when this is done they may go their ways.

Yes, he said, the purpose of the law is manifest.

From what point of view, then, and on what ground can we say that a man is profited by injustice or intemperance or other baseness, which will make him a worse man, even though he acquire money or power by his wickedness?

From no point of view at all.

What shall he profit, if his injustice be undetected and unpunished? He who is undetected only gets worse, whereas he who is detected and punished has the brutal part of his nature silenced and humanized; the gentler element in him is liberated, and his whole soul is perfected and ennobled by the acquirement of justice and temperance and wisdom, more than the body ever is by receiving gifts of beauty, strength and health, in proportion as the soul is more honourable than the body.

Certainly, he said.

To this nobler purpose the man of understanding will devote the energies of his life. And in the first place, he will honour studies which impress these qualities on his soul and disregard others?
Clearly, he said.

In the next place, he will regulate his bodily habit and training, and so far will he be from yielding to brutal and irrational pleasures, that he will regard even health as quite a secondary matter; his first object will be not that he may be fair or strong or well, unless he is likely thereby to gain temperance, but he will always desire so to attemper the body as to preserve the harmony of the soul?

Certainly he will, if he has true music in him.

And in the acquisition of wealth there is a principle of order and harmony which he will also observe; he will not allow himself to be dazzled by the foolish applause of the world, and heap up riches to his own infinite harm?

Certainly not, he said.

He will look at the city which is within him, and take heed that no disorder occur in it, such as might arise either from superfluity or from want; and upon this principle he will regulate his property and gain or spend according to his means.

Very true.

And, for the same reason, he will gladly accept and enjoy such honours as he deems likely to make him a better man; but those, whether private or public, which are likely to disorder his life, he will avoid?

Then, if that is his motive, he will not be a statesman.

By the dog of Egypt, he will! in the city which is his own he certainly will, though in the land of his birth perhaps not, unless he have a divine call.

I understand; you mean that he will be a ruler in the city of which we are the founders, and which exists in idea only; for I do not believe that there is such an one anywhere on earth?

In heaven, I replied, there is laid up a pattern of it, methinks, which he who desires may behold, and beholding, may set his own house in order. But whether such an one exists, or ever will exist in fact, is no matter; for he will live after the manner of that city, having nothing to do with any other.

I think so, he said.
OF THE many excellences which I perceive in the order of our State, there is none which upon reflection pleases me better than the rule about poetry.

To what do you refer?

To the rejection of imitative poetry, which certainly ought not to be received; as I see far more clearly now that the parts of the soul have been distinguished.

What do you mean?

Speaking in confidence, for I should not like to have my words repeated to the tragedians and the rest of the imitative tribe--but I do not mind saying to you, that all poetical imitations are ruinous to the understanding of the hearers, and that the knowledge of their true nature is the only antidote to them.

Explain the purport of your remark.

Well, I will tell you, although I have always from my earliest youth had an awe and love of Homer, which even now makes the words falter on my lips, for he is the great captain and teacher of the whole of that charming tragic company; but a man is not to be reverenced more than the truth, and therefore I will speak out.

Very good, he said.

Listen to me then, or rather, answer me.

Put your question.

Can you tell me what imitation is? for I really do not know.

A likely thing, then, that I should know.

Why not? for the duller eye may often see a thing sooner than the keener.
Very true, he said; but in your presence, even if I had any faint notion, I could not muster courage to utter it. Will you enquire yourself?

Well then, shall we begin the enquiry in our usual manner: Whenever a number of individuals have a common name, we assume them to have also a corresponding idea or form. Do you understand me?

I do.

Let us take any common instance; there are beds and tables in the world--plenty of them, are there not?

Yes.

But there are only two ideas or forms of them--one the idea of a bed, the other of a table.

True.

And the maker of either of them makes a bed or he makes a table for our use, in accordance with the idea--that is our way of speaking in this and similar instances--but no artificer makes the ideas themselves: how could he?

 Impossible.

And there is another artist,--I should like to know what you would say of him.

Who is he?

One who is the maker of all the works of all other workmen.

What an extraordinary man!

Wait a little, and there will be more reason for your saying so. For this is he who is able to make not only vessels of every kind, but plants and animals, himself and all other things--the earth and heaven, and the things which are in heaven or under the earth; he makes the gods also.

He must be a wizard and no mistake.

Oh! you are incredulous, are you? Do you mean that there is no such maker or creator, or that in one sense there might be a maker of all
these things but in another not? Do you see that there is a way in which you could make them all yourself?

What way?

An easy way enough; or rather, there are many ways in which the feat might be quickly and easily accomplished, none quicker than that of turning a mirror round and round—you would soon enough make the sun and the heavens, and the earth and yourself, and other animals and plants, and all the other things of which we were just now speaking, in the mirror.

Yes, he said; but they would be appearances only.

Very good, I said, you are coming to the point now. And the painter too is, as I conceive, just such another—a creator of appearances, is he not?

Of course.

But then I suppose you will say that what he creates is untrue. And yet there is a sense in which the painter also creates a bed?

Yes, he said, but not a real bed.

And what of the maker of the bed? Were you not saying that he too makes, not the idea which, according to our view, is the essence of the bed, but only a particular bed?

Yes, I did.

Then if he does not make that which exists he cannot make true existence, but only some semblance of existence; and if any one were to say that the work of the maker of the bed, or of any other workman, has real existence, he could hardly be supposed to be speaking the truth.

At any rate, he replied, philosophers would say that he was not speaking the truth.

No wonder, then, that his work too is an indistinct expression of truth.

No wonder.

Suppose now that by the light of the examples just offered we enquire who this imitator is?

If you please.
Well then, here are three beds: one existing in nature, which is made by God, as I think that we may say—for no one else can be the maker?

No.

There is another which is the work of the carpenter?

Yes.

And the work of the painter is a third?

Yes.

Beds, then, are of three kinds, and there are three artists who superintend them: God, the maker of the bed, and the painter?

Yes, there are three of them.

God, whether from choice or from necessity, made one bed in nature and one only; two or more such ideal beds neither ever have been nor ever will be made by God.

Why is that?

Because even if He had made but two, a third would still appear behind them which both of them would have for their idea, and that would be the ideal bed and the two others.

Very true, he said.

God knew this, and He desired to be the real maker of a real bed, not a particular maker of a particular bed, and therefore He created a bed which is essentially and by nature one only.

So we believe.

Shall we, then, speak of Him as the natural author or maker of the bed?

Yes, he replied; inasmuch as by the natural process of creation He is the author of this and of all other things.

And what shall we say of the carpenter—is not he also the maker of the bed?

Yes.
But would you call the painter a creator and maker?

Certainly not.

Yet if he is not the maker, what is he in relation to the bed?

I think, he said, that we may fairly designate him as the imitator of that which the others make.

Good, I said; then you call him who is third in the descent from nature an imitator?

Certainly, he said.

And the tragic poet is an imitator, and therefore, like all other imitators, he is thrice removed from the king and from the truth?

That appears to be so.

Then about the imitator we are agreed. And what about the painter?-- I would like to know whether he may be thought to imitate that which originally exists in nature, or only the creations of artists?

The latter.

As they are or as they appear? You have still to determine this.

What do you mean?

I mean, that you may look at a bed from different points of view, obliquely or directly or from any other point of view, and the bed will appear different, but there is no difference in reality. And the same of all things.

Yes, he said, the difference is only apparent.

Now let me ask you another question: Which is the art of painting designed to be--an imitation of things as they are, or as they appear--of appearance or of reality?

Of appearance.

Then the imitator, I said, is a long way off the truth, and can do all things because he lightly touches on a small part of them, and that part an image. For example: A painter will paint a cobbler, carpenter, or any other artist, though he knows nothing of their arts; and, if he is a good artist, he may deceive children or simple persons,
when he shows them his picture of a carpenter from a distance, and they
will fancy that they are looking at a real carpenter.

Certainly.

And whenever any one informs us that he has found a man knows all the
arts, and all things else that anybody knows, and every single thing
with a higher degree of accuracy than any other man--whoever tells us
this, I think that we can only imagine to be a simple creature who is
likely to have been deceived by some wizard or actor whom he met, and
whom he thought all-knowing, because he himself was unable to analyse
the nature of knowledge and ignorance and imitation.

Most true.

And so, when we hear persons saying that the tragedians, and Homer, who
is at their head, know all the arts and all things human, virtue as
well as vice, and divine things too, for that the good poet cannot
compose well unless he knows his subject, and that he who has not this
knowledge can never be a poet, we ought to consider whether here also
there may not be a similar illusion. Perhaps they may have come across
imitators and been deceived by them; they may not have remembered when
they saw their works that these were but imitations thrice removed from
the truth, and could easily be made without any knowledge of the truth,
because they are appearances only and not realities? Or, after all,
they may be in the right, and poets do really know the things about
which they seem to the many to speak so well?

The question, he said, should by all means be considered.

Now do you suppose that if a person were able to make the original as
well as the image, he would seriously devote himself to the
image-making branch? Would he allow imitation to be the ruling
principle of his life, as if he had nothing higher in him?

I should say not.

The real artist, who knew what he was imitating, would be interested in
realities and not in imitations; and would desire to leave as memorials
of himself works many and fair; and, instead of being the author of
encomiums, he would prefer to be the theme of them.

Yes, he said, that would be to him a source of much greater honour and
profit.

Then, I said, we must put a question to Homer; not about medicine, or
any of the arts to which his poems only incidentally refer: we are not
going to ask him, or any other poet, whether he has cured patients like Asclepius, or left behind him a school of medicine such as the Asclepiads were, or whether he only talks about medicine and other arts at second hand; but we have a right to know respecting military tactics, politics, education, which are the chiepest and noblest subjects of his poems, and we may fairly ask him about them. 'Friend Homer,' then we say to him, 'if you are only in the second remove from truth in what you say of virtue, and not in the third--not an image maker or imitator--and if you are able to discern what pursuits make men better or worse in private or public life, tell us what State was ever better governed by your help? The good order of Lacedaemon is due to Lycurgus, and many other cities great and small have been similarly benefited by others; but who says that you have been a good legislator to them and have done them any good? Italy and Sicily boast of Charondas, and there is Solon who is renowned among us; but what city has anything to say about you?' Is there any city which he might name?

I think not, said Glaucon; not even the Homerids themselves pretend that he was a legislator.

Well, but is there any war on record which was carried on successfully by him, or aided by his counsels, when he was alive?

There is not.

Or is there any invention of his, applicable to the arts or to human life, such as Thales the Milesian or Anacharsis the Scythian, and other ingenious men have conceived, which is attributed to him?

There is absolutely nothing of the kind.

But, if Homer never did any public service, was he privately a guide or teacher of any? Had he in his lifetime friends who loved to associate with him, and who handed down to posterity an Homeric way of life, such as was established by Pythagoras who was so greatly beloved for his wisdom, and whose followers are to this day quite celebrated for the order which was named after him?

Nothing of the kind is recorded of him. For surely, Socrates, Creophylus, the companion of Homer, that child of flesh, whose name always makes us laugh, might be more justly ridiculed for his stupidity, if, as is said, Homer was greatly neglected by him and others in his own day when he was alive?

Yes, I replied, that is the tradition. But can you imagine, Glaucon, that if Homer had really been able to educate and improve mankind--if he had possessed knowledge and not been a mere imitator--can you
imagine, I say, that he would not have had many followers, and been
honoured and loved by them? Protagoras of Abdera, and Prodicus of
Ceos, and a host of others, have only to whisper to their
contemporaries: 'You will never be able to manage either your own house
or your own State until you appoint us to be your ministers of
education'—and this ingenious device of theirs has such an effect in
making them love them that their companions all but carry them about on
their shoulders. And is it conceivable that the contemporaries of
Homer, or again of Hesiod, would have allowed either of them to go
about as rhapsodists, if they had really been able to make mankind
virtuous? Would they not have been as unwilling to part with them as
with gold, and have compelled them to stay at home with them? Or, if
the master would not stay, then the disciples would have followed him
about everywhere, until they had got education enough?

Yes, Socrates, that, I think, is quite true.

Then must we not infer that all these poetical individuals, beginning
with Homer, are only imitators; they copy images of virtue and the
like, but the truth they never reach? The poet is like a painter who,
as we have already observed, will make a likeness of a cobbler though
he understands nothing of cobbling; and his picture is good enough for
those who know no more than he does, and judge only by colours and
figures.

Quite so.

In like manner the poet with his words and phrases may be said to lay
on the colours of the several arts, himself understanding their nature
only enough to imitate them; and other people, who are as ignorant as
he is, and judge only from his words, imagine that if he speaks of
cobbling, or of military tactics, or of anything else, in metre and
harmony and rhythm, he speaks very well—such is the sweet influence
which melody and rhythm by nature have. And I think that you must have
observed again and again what a poor appearance the tales of poets make
when stripped of the colours which music puts upon them, and recited in
simple prose.

Yes, he said.

They are like faces which were never really beautiful, but only
blooming; and now the bloom of youth has passed away from them?

Exactly.

Here is another point: The imitator or maker of the image knows
nothing of true existence; he knows appearances only. Am I not right?
Yes.

Then let us have a clear understanding, and not be satisfied with half an explanation.

Proceed.

Of the painter we say that he will paint reins, and he will paint a bit?

Yes.

And the worker in leather and brass will make them?

Certainly.

But does the painter know the right form of the bit and reins? Nay, hardly even the workers in brass and leather who make them; only the horseman who knows how to use them—he knows their right form.

Most true.

And may we not say the same of all things?

What?

That there are three arts which are concerned with all things: one which uses, another which makes, a third which imitates them?

Yes.

And the excellence or beauty or truth of every structure, animate or inanimate, and of every action of man, is relative to the use for which nature or the artist has intended them.

True.

Then the user of them must have the greatest experience of them, and he must indicate to the maker the good or bad qualities which develop themselves in use; for example, the flute-player will tell the flute-maker which of his flutes is satisfactory to the performer; he will tell him how he ought to make them, and the other will attend to his instructions?

Of course.

The one knows and therefore speaks with authority about the goodness
and badness of flutes, while the other, confiding in him, will do what
he is told by him?

True.

The instrument is the same, but about the excellence or badness of it
the maker will only attain to a correct belief; and this he will gain
from him who knows, by talking to him and being compelled to hear what
he has to say, whereas the user will have knowledge?

True.

But will the imitator have either? Will he know from use whether or no
his drawing is correct or beautiful? Or will he have right opinion
from being compelled to associate with another who knows and gives him
instructions about what he should draw?

Neither.

Then he will no more have true opinion than he will have knowledge
about the goodness or badness of his imitations?

I suppose not.

The imitative artist will be in a brilliant state of intelligence about
his own creations?

Nay, very much the reverse.

And still he will go on imitating without knowing what makes a thing
good or bad, and may be expected therefore to imitate only that which
appears to be good to the ignorant multitude?

Just so.

Thus far then we are pretty well agreed that the imitator has no
knowledge worth mentioning of what he imitates. Imitation is only a
kind of play or sport, and the tragic poets, whether they write in
iambic or in Heroic verse, are imitators in the highest degree?

Very true.

And now tell me, I conjure you, has not imitation been shown by us to
be concerned with that which is thrice removed from the truth?

Certainly.
And what is the faculty in man to which imitation is addressed?

What do you mean?

I will explain: The body which is large when seen near, appears small when seen at a distance?

True.

And the same object appears straight when looked at out of the water, and crooked when in the water; and the concave becomes convex, owing to the illusion about colours to which the sight is liable. Thus every sort of confusion is revealed within us; and this is that weakness of the human mind on which the art of conjuring and of deceiving by light and shadow and other ingenious devices imposes, having an effect upon us like magic.

True.

And the arts of measuring and numbering and weighing come to the rescue of the human understanding—there is the beauty of them—and the apparent greater or less, or more or heavier, no longer have the mastery over us, but give way before calculation and measure and weight?

Most true.

And this, surely, must be the work of the calculating and rational principle in the soul

To be sure.

And when this principle measures and certifies that some things are equal, or that some are greater or less than others, there occurs an apparent contradiction?

True.

But were we not saying that such a contradiction is the same faculty cannot have contrary opinions at the same time about the same thing?

Very true.

Then that part of the soul which has an opinion contrary to measure is not the same with that which has an opinion in accordance with measure?

True.
And the better part of the soul is likely to be that which trusts to measure and calculation?

Certainly.

And that which is opposed to them is one of the inferior principles of the soul?

No doubt.

This was the conclusion at which I was seeking to arrive when I said that painting or drawing, and imitation in general, when doing their own proper work, are far removed from truth, and the companions and friends and associates of a principle within us which is equally removed from reason, and that they have no true or healthy aim.

Exactly.

The imitative art is an inferior who marries an inferior, and has inferior offspring.

Very true.

And is this confined to the sight only, or does it extend to the hearing also, relating in fact to what we term poetry?

Probably the same would be true of poetry.

Do not rely, I said, on a probability derived from the analogy of painting; but let us examine further and see whether the faculty with which poetical imitation is concerned is good or bad.

By all means.

We may state the question thus:--Imitation imitates the actions of men, whether voluntary or involuntary, on which, as they imagine, a good or bad result has ensued, and they rejoice or sorrow accordingly. Is there anything more?

No, there is nothing else.

But in all this variety of circumstances is the man at unity with himself--or rather, as in the instance of sight there was confusion and opposition in his opinions about the same things, so here also is there not strife and inconsistency in his life? Though I need hardly raise the question again, for I remember that all this has been already admitted; and the soul has been acknowledged by us to be full of these
and ten thousand similar oppositions occurring at the same moment?

And we were right, he said.

Yes, I said, thus far we were right; but there was an omission which must now be supplied.

What was the omission?

Were we not saying that a good man, who has the misfortune to lose his son or anything else which is most dear to him, will bear the loss with more equanimity than another?

Yes.

But will he have no sorrow, or shall we say that although he cannot help sorrowing, he will moderate his sorrow?

The latter, he said, is the truer statement.

Tell me: will he be more likely to struggle and hold out against his sorrow when he is seen by his equals, or when he is alone?

It will make a great difference whether he is seen or not.

When he is by himself he will not mind saying or doing many things which he would be ashamed of any one hearing or seeing him do?

True.

There is a principle of law and reason in him which bids him resist, as well as a feeling of his misfortune which is forcing him to indulge his sorrow?

True.

But when a man is drawn in two opposite directions, to and from the same object, this, as we affirm, necessarily implies two distinct principles in him?

Certainly.

One of them is ready to follow the guidance of the law?

How do you mean?

The law would say that to be patient under suffering is best, and that
we should not give way to impatience, as there is no knowing whether such things are good or evil; and nothing is gained by impatience; also, because no human thing is of serious importance, and grief stands in the way of that which at the moment is most required.

What is most required? he asked.

That we should take counsel about what has happened, and when the dice have been thrown order our affairs in the way which reason deems best; not, like children who have had a fall, keeping hold of the part struck and wasting time in setting up a howl, but always accustoming the soul forthwith to apply a remedy, raising up that which is sickly and fallen, banishing the cry of sorrow by the healing art.

Yes, he said, that is the true way of meeting the attacks of fortune.

Yes, I said; and the higher principle is ready to follow this suggestion of reason?

Clearly.

And the other principle, which inclines us to recollection of our troubles and to lamentation, and can never have enough of them, we may call irrational, useless, and cowardly?

Indeed, we may.

And does not the latter--I mean the rebellious principle--furnish a great variety of materials for imitation? Whereas the wise and calm temperament, being always nearly equable, is not easy to imitate or to appreciate when imitated, especially at a public festival when a promiscuous crowd is assembled in a theatre. For the feeling represented is one to which they are strangers.

Certainly.

Then the imitative poet who aims at being popular is not by nature made, nor is his art intended, to please or to affect the principle in the soul; but he will prefer the passionate and fitful temper, which is easily imitated?

Clearly.

And now we may fairly take him and place him by the side of the painter, for he is like him in two ways: first, inasmuch as his creations have an inferior degree of truth--in this, I say, he is like him; and he is also like him in being concerned with an inferior part
of the soul; and therefore we shall be right in refusing to admit him into a well-ordered State, because he awakens and nourishes and strengthens the feelings and impairs the reason. As in a city when the evil are permitted to have authority and the good are put out of the way, so in the soul of man, as we maintain, the imitative poet implants an evil constitution, for he indulges the irrational nature which has no discernment of greater and less, but thinks the same thing at one time great and at another small—he is a manufacturer of images and is very far removed from the truth.

Exactly.

But we have not yet brought forward the heaviest count in our accusation:—the power which poetry has of harming even the good (and there are very few who are not harmed), is surely an awful thing?

Yes, certainly, if the effect is what you say.

Hear and judge: The best of us, as I conceive, when we listen to a passage of Homer, or one of the tragedians, in which he represents some pitiful hero who is drawling out his sorrows in a long oration, or weeping, and smiting his breast—the best of us, you know, delight in giving way to sympathy, and are in raptures at the excellence of the poet who stirs our feelings most.

Yes, of course I know.

But when any sorrow of our own happens to us, then you may observe that we pride ourselves on the opposite quality—we would fain be quiet and patient; this is the manly part, and the other which delighted us in the recitation is now deemed to be the part of a woman.

Very true, he said.

Now can we be right in praising and admiring another who is doing that which any one of us would abominate and be ashamed of in his own person?

No, he said, that is certainly not reasonable.

Nay, I said, quite reasonable from one point of view.

What point of view?

If you consider, I said, that when in misfortune we feel a natural hunger and desire to relieve our sorrow by weeping and lamentation, and that this feeling which is kept under control in our own calamities is satisfied and delighted by the poets;—the better nature in each of us,
not having been sufficiently trained by reason or habit, allows the sympathetic element to break loose because the sorrow is another's; and the spectator fancies that there can be no disgrace to himself in praising and pitying any one who comes telling him what a good man he is, and making a fuss about his troubles; he thinks that the pleasure is a gain, and why should he be supercilious and lose this and the poem too? Few persons ever reflect, as I should imagine, that from the evil of other men something of evil is communicated to themselves. And so the feeling of sorrow which has gathered strength at the sight of the misfortunes of others is with difficulty repressed in our own.

How very true!

And does not the same hold also of the ridiculous? There are jests which you would be ashamed to make yourself, and yet on the comic stage, or indeed in private, when you hear them, you are greatly amused by them, and are not at all disgusted at their unseemliness;--the case of pity is repeated;--there is a principle in human nature which is disposed to raise a laugh, and this which you once restrained by reason, because you were afraid of being thought a buffoon, is now let out again; and having stimulated the risible faculty at the theatre, you are betrayed unconsciously to yourself into playing the comic poet at home.

Quite true, he said.

And the same may be said of lust and anger and all the other affections, of desire and pain and pleasure, which are held to be inseparable from every action--in all of them poetry feeds and waters the passions instead of drying them up; she lets them rule, although they ought to be controlled, if mankind are ever to increase in happiness and virtue.

I cannot deny it.

Therefore, Glaucon, I said, whenever you meet with any of the eulogists of Homer declaring that he has been the educator of Hellas, and that he is profitable for education and for the ordering of human things, and that you should take him up again and again and get to know him and regulate your whole life according to him, we may love and honour those who say these things--they are excellent people, as far as their lights extend; and we are ready to acknowledge that Homer is the greatest of poets and first of tragedy writers; but we must remain firm in our conviction that hymns to the gods and praises of famous men are the only poetry which ought to be admitted into our State. For if you go beyond this and allow the honeyed muse to enter, either in epic or lyric verse, not law and the reason of mankind, which by common consent
have ever been deemed best, but pleasure and pain will be the rulers in our State.

That is most true, he said.

And now since we have reverted to the subject of poetry, let this our defence serve to show the reasonableness of our former judgment in sending away out of our State an art having the tendencies which we have described; for reason constrained us. But that she may impute to us any harshness or want of politeness, let us tell her that there is an ancient quarrel between philosophy and poetry; of which there are many proofs, such as the saying of 'the yelping hound howling at her lord,' or of one 'mighty in the vain talk of fools,' and 'the mob of sages circumventing Zeus,' and the 'subtle thinkers who are beggars after all'; and there are innumerable other signs of ancient enmity between them. Notwithstanding this, let us assure our sweet friend and the sister arts of imitation that if she will only prove her title to exist in a well-ordered State we shall be delighted to receive her--we are very conscious of her charms; but we may not on that account betray the truth. I dare say, Glaucon, that you are as much charmed by her as I am, especially when she appears in Homer?

Yes, indeed, I am greatly charmed.

Shall I propose, then, that she be allowed to return from exile, but upon this condition only--that she make a defence of herself in lyrical or some other metre?

Certainly.

And we may further grant to those of her defenders who are lovers of poetry and yet not poets the permission to speak in prose on her behalf: let them show not only that she is pleasant but also useful to States and to human life, and we will listen in a kindly spirit; for if this can be proved we shall surely be the gainers--I mean, if there is a use in poetry as well as a delight?

Certainly, he said, we shall the gainers.

If her defence fails, then, my dear friend, like other persons who are enamoured of something, but put a restraint upon themselves when they think their desires are opposed to their interests, so too must we after the manner of lovers give her up, though not without a struggle. We too are inspired by that love of poetry which the education of noble States has implanted in us, and therefore we would have her appear at her best and truest; but so long as she is unable to make good her defence, this argument of ours shall be a charm to us, which we will
repeat to ourselves while we listen to her strains; that we may not fall away into the childish love of her which captivates the many. At all events we are well aware that poetry being such as we have described is not to be regarded seriously as attaining to the truth; and he who listens to her, fearing for the safety of the city which is within him, should be on his guard against her seductions and make our words his law.

Yes, he said, I quite agree with you.

Yes, I said, my dear Glaucon, for great is the issue at stake, greater than appears, whether a man is to be good or bad. And what will any one be profited if under the influence of honour or money or power, aye, or under the excitement of poetry, he neglect justice and virtue?

Yes, he said; I have been convinced by the argument, as I believe that any one else would have been.

And yet no mention has been made of the greatest prizes and rewards which await virtue.

What, are there any greater still? If there are, they must be of an inconceivable greatness.

Why, I said, what was ever great in a short time? The whole period of three-score years and ten is surely but a little thing in comparison with eternity?

Say rather 'nothing,' he replied.

And should an immortal being seriously think of this little space rather than of the whole?

Of the whole, certainly. But why do you ask?

Are you not aware, I said, that the soul of man is immortal and imperishable?

He looked at me in astonishment, and said: No, by heaven: And are you really prepared to maintain this?

Yes, I said, I ought to be, and you too--there is no difficulty in proving it.

I see a great difficulty; but I should like to hear you state this argument of which you make so light.
Listen then.

I am attending.

There is a thing which you call good and another which you call evil?

Yes, he replied.

Would you agree with me in thinking that the corrupting and destroying element is the evil, and the saving and improving element the good?

Yes.

And you admit that every thing has a good and also an evil; as ophthalmia is the evil of the eyes and disease of the whole body; as mildew is of corn, and rot of timber, or rust of copper and iron: in everything, or in almost everything, there is an inherent evil and disease?

Yes, he said.

And anything which is infected by any of these evils is made evil, and at last wholly dissolves and dies?

True.

The vice and evil which is inherent in each is the destruction of each; and if this does not destroy them there is nothing else that will; for good certainly will not destroy them, nor again, that which is neither good nor evil.

Certainly not.

If, then, we find any nature which having this inherent corruption cannot be dissolved or destroyed, we may be certain that of such a nature there is no destruction?

That may be assumed.

Well, I said, and is there no evil which corrupts the soul?

Yes, he said, there are all the evils which we were just now passing in review: unrighteousness, intemperance, cowardice, ignorance.

But does any of these dissolve or destroy her?--and here do not let us fall into the error of supposing that the unjust and foolish man, when he is detected, perishes through his own injustice, which is an evil of
the soul. Take the analogy of the body: The evil of the body is a
disease which wastes and reduces and annihilates the body; and all the
things of which we were just now speaking come to annihilation through
their own corruption attaching to them and inhering in them and so
destroying them. Is not this true?

Yes.

Consider the soul in like manner. Does the injustice or other evil
which exists in the soul waste and consume her? Do they by attaching
to the soul and inhering in her at last bring her to death, and so
separate her from the body?

Certainly not.

And yet, I said, it is unreasonable to suppose that anything can perish
from without through affection of external evil which could not be
destroyed from within by a corruption of its own?

It is, he replied.

Consider, I said, Glaucon, that even the badness of food, whether
staleness, decomposition, or any other bad quality, when confined to
the actual food, is not supposed to destroy the body; although, if the
badness of food communicates corruption to the body, then we should say
that the body has been destroyed by a corruption of itself, which is
disease, brought on by this; but that the body, being one thing, can be
destroyed by the badness of food, which is another, and which does not
engender any natural infection--this we shall absolutely deny?

Very true.

And, on the same principle, unless some bodily evil can produce an evil
of the soul, we must not suppose that the soul, which is one thing, can
be dissolved by any merely external evil which belongs to another?

Yes, he said, there is reason in that.

Either then, let us refute this conclusion, or, while it remains
unrefuted, let us never say that fever, or any other disease, or the
knife put to the throat, or even the cutting up of the whole body into
the minutest pieces, can destroy the soul, until she herself is proved
to become more unholy or unrighteous in consequence of these things
being done to the body; but that the soul, or anything else if not
destroyed by an internal evil, can be destroyed by an external one, is
not to be affirmed by any man.
And surely, he replied, no one will ever prove that the souls of men become more unjust in consequence of death.

But if some one who would rather not admit the immortality of the soul boldly denies this, and says that the dying do really become more evil and unrighteous, then, if the speaker is right, I suppose that injustice, like disease, must be assumed to be fatal to the unjust, and that those who take this disorder die by the natural inherent power of destruction which evil has, and which kills them sooner or later, but in quite another way from that in which, at present, the wicked receive death at the hands of others as the penalty of their deeds?

Nay, he said, in that case injustice, if fatal to the unjust, will not be so very terrible to him, for he will be delivered from evil. But I rather suspect the opposite to be the truth, and that injustice which, if it have the power, will murder others, keeps the murderer alive--aye, and well awake too; so far removed is her dwelling-place from being a house of death.

True, I said; if the inherent natural vice or evil of the soul is unable to kill or destroy her, hardly will that which is appointed to be the destruction of some other body, destroy a soul or anything else except that of which it was appointed to be the destruction.

Yes, that can hardly be.

But the soul which cannot be destroyed by an evil, whether inherent or external, must exist for ever, and if existing for ever, must be immortal?

Certainly.

That is the conclusion, I said; and, if a true conclusion, then the souls must always be the same, for if none be destroyed they will not diminish in number. Neither will they increase, for the increase of the immortal natures must come from something mortal, and all things would thus end in immortality.

Very true.

But this we cannot believe--reason will not allow us--any more than we can believe the soul, in her truest nature, to be full of variety and difference and dissimilarity.

What do you mean? he said.

The soul, I said, being, as is now proven, immortal, must be the
faiest of compositions and cannot be compounded of many elements?

Certainly not.

Her immortality is demonstrated by the previous argument, and there are many other proofs; but to see her as she really is, not as we now behold her, marred by communion with the body and other miseries, you must contemplate her with the eye of reason, in her original purity; and then her beauty will be revealed, and justice and injustice and all the things which we have described will be manifested more clearly. Thus far, we have spoken the truth concerning her as she appears at present, but we must remember also that we have seen her only in a condition which may be compared to that of the sea-god Glauclus, whose original image can hardly be discerned because his natural members are broken off and crushed and damaged by the waves in all sorts of ways, and incrustations have grown over them of seaweed and shells and stones, so that he is more like some monster than he is to his own natural form. And the soul which we behold is in a similar condition, disfigured by ten thousand ills. But not there, Glaucon, not there must we look.

Where then?

At her love of wisdom. Let us see whom she affects, and what society and converse she seeks in virtue of her near kindred with the immortal and eternal and divine; also how different she would become if wholly following this superior principle, and borne by a divine impulse out of the ocean in which she now is, and disengaged from the stones and shells and things of earth and rock which in wild variety spring up around her because she feeds upon earth, and is overgrown by the good things of this life as they are termed: then you would see her as she is, and know whether she has one shape only or many, or what her nature is. Of her affections and of the forms which she takes in this present life I think that we have now said enough.

True, he replied.

And thus, I said, we have fulfilled the conditions of the argument; we have not introduced the rewards and glories of justice, which, as you were saying, are to be found in Homer and Hesiod; but justice in her own nature has been shown to be best for the soul in her own nature. Let a man do what is just, whether he have the ring of Gyges or not, and even if in addition to the ring of Gyges he put on the helmet of Hades.

Very true.
And now, Glaucon, there will be no harm in further enumerating how many and how great are the rewards which justice and the other virtues procure to the soul from gods and men, both in life and after death.

Certainly not, he said.

Will you repay me, then, what you borrowed in the argument?

What did I borrow?

The assumption that the just man should appear unjust and the unjust just: for you were of opinion that even if the true state of the case could not possibly escape the eyes of gods and men, still this admission ought to be made for the sake of the argument, in order that pure justice might be weighed against pure injustice. Do you remember?

I should be much to blame if I had forgotten.

Then, as the cause is decided, I demand on behalf of justice that the estimation in which she is held by gods and men and which we acknowledge to be her due should now be restored to her by us; since she has been shown to confer reality, and not to deceive those who truly possess her, let what has been taken from her be given back, that so she may win that palm of appearance which is hers also, and which she gives to her own.

The demand, he said, is just.

In the first place, I said— and this is the first thing which you will have to give back— the nature both of the just and unjust is truly known to the gods.

Granted.

And if they are both known to them, one must be the friend and the other the enemy of the gods, as we admitted from the beginning?

True.

And the friend of the gods may be supposed to receive from them all things at their best, excepting only such evil as is the necessary consequence of former sins?

Certainly.

Then this must be our notion of the just man, that even when he is in poverty or sickness, or any other seeming misfortune, all things will
in the end work together for good to him in life and death: for the
gods have a care of any one whose desire is to become just and to be
like God, as far as man can attain the divine likeness, by the pursuit
of virtue?

Yes, he said; if he is like God he will surely not be neglected by him.

And of the unjust may not the opposite be supposed?

Certainly.

Such, then, are the palms of victory which the gods give the just?

That is my conviction.

And what do they receive of men? Look at things as they really are,
and you will see that the clever unjust are in the case of runners, who
run well from the starting-place to the goal but not back again from
the goal: they go off at a great pace, but in the end only look
foolish, slinking away with their ears dragging on their shoulders,
and without a crown; but the true runner comes to the finish and
receives the prize and is crowned. And this is the way with the just;
he who endures to the end of every action and occasion of his entire
life has a good report and carries off the prize which men have to
bestow.

True.

And now you must allow me to repeat of the just the blessings which you
were attributing to the fortunate unjust. I shall say of them, what
you were saying of the others, that as they grow older, they become
rulers in their own city if they care to be; they marry whom they like
and give in marriage to whom they will; all that you said of the others
I now say of these. And, on the other hand, of the unjust I say that
the greater number, even though they escape in their youth, are found
out at last and look foolish at the end of their course, and when they
come to be old and miserable are flouted alike by stranger and citizen;
they are beaten and then come those things unfit for ears polite, as
you truly term them; they will be racked and have their eyes burned
out, as you were saying. And you may suppose that I have repeated the
remainder of your tale of horrors. But will you let me assume, without
reciting them, that these things are true?

Certainly, he said, what you say is true.

These, then, are the prizes and rewards and gifts which are bestowed
upon the just by gods and men in this present life, in addition to the
other good things which justice of herself provides.

Yes, he said; and they are fair and lasting.

And yet, I said, all these are as nothing, either in number or greatness in comparison with those other recompenses which await both just and unjust after death. And you ought to hear them, and then both just and unjust will have received from us a full payment of the debt which the argument owes to them.

Speak, he said; there are few things which I would more gladly hear.

SOCRATES

Well, I said, I will tell you a tale; not one of the tales which Odysseus tells to the hero Alcinous, yet this too is a tale of a hero, Er the son of Armenius, a Pamphylian by birth. He was slain in battle, and ten days afterwards, when the bodies of the dead were taken up already in a state of corruption, his body was found unaffected by decay, and carried away home to be buried. And on the twelfth day, as he was lying on the funeral pile, he returned to life and told them what he had seen in the other world. He said that when his soul left the body he went on a journey with a great company, and that they came to a mysterious place at which there were two openings in the earth; they were near together, and over against them were two other openings in the heaven above. In the intermediate space there were judges seated, who commanded the just, after they had given judgment on them and had bound their sentences in front of them, to ascend by the heavenly way on the right hand; and in like manner the unjust were bidden by them to descend by the lower way on the left hand; these also bore the symbols of their deeds, but fastened on their backs. He drew near, and they told him that he was to be the messenger who would carry the report of the other world to men, and they bade him hear and see all that was to be heard and seen in that place. Then he beheld and saw on one side the souls departing at either opening of heaven and earth when sentence had been given on them; and at the two other openings other souls, some ascending out of the earth dusty and worn with travel, some descending out of heaven clean and bright. And arriving ever and anon they seemed to have come from a long journey, and they went forth with gladness into the meadow, where they encamped as at a festival; and those who knew one another embraced and conversed, the souls which came from earth curiously enquiring about the things above, and the souls which came from heaven about the things beneath. And they told one another of what had happened by the way, those from below weeping and sorrowing at the remembrance of the things which they had endured and seen in their journey beneath the earth (now the journey lasted a thousand years), while those from above were
describing heavenly delights and visions of inconceivable beauty. The Story, Glaucon, would take too long to tell; but the sum was this:--He said that for every wrong which they had done to any one they suffered tenfold; or once in a hundred years--such being reckoned to be the length of man's life, and the penalty being thus paid ten times in a thousand years. If, for example, there were any who had been the cause of many deaths, or had betrayed or enslaved cities or armies, or been guilty of any other evil behaviour, for each and all of their offences they received punishment ten times over, and the rewards of beneficence and justice and holiness were in the same proportion. I need hardly repeat what he said concerning young children dying almost as soon as they were born. Of piety and impiety to gods and parents, and of murderers, there were retributions other and greater far which he described. He mentioned that he was present when one of the spirits asked another, 'Where is Ardiaeus the Great?' (Now this Ardiaeus lived a thousand years before the time of Er: he had been the tyrant of some city of Pamphylia, and had murdered his aged father and his elder brother, and was said to have committed many other abominable crimes.) The answer of the other spirit was: 'He comes not hither and will never come. And this,' said he, 'was one of the dreadful sights which we ourselves witnessed. We were at the mouth of the cavern, and, having completed all our experiences, were about to reascend, when of a sudden Ardiaeus appeared and several others, most of whom were tyrants; and there were also besides the tyrants private individuals who had been great criminals: they were just, as they fancied, about to return into the upper world, but the mouth, instead of admitting them, gave a roar, whenever any of these incurable sinners or some one who had not been sufficiently punished tried to ascend; and then wild men of fiery aspect, who were standing by and heard the sound, seized and carried them off; and Ardiaeus and others they bound head and foot and hand, and threw them down and flayed them with scourges, and dragged them along the road at the side, carding them on thorns like wool, and declaring to the passers-by what were their crimes, and that they were being taken away to be cast into hell.' And of all the many terrors which they had endured, he said that there was none like the terror which each of them felt at that moment, lest they should hear the voice; and when there was silence, one by one they ascended with exceeding joy. These, said Er, were the penalties and retributions, and there were blessings as great.

Now when the spirits which were in the meadow had tarried seven days, on the eighth they were obliged to proceed on their journey, and, on the fourth day after, he said that they came to a place where they could see from above a line of light, straight as a column, extending right through the whole heaven and through the earth, in colour resembling the rainbow, only brighter and purer; another day's journey brought them to the place, and there, in the midst of the light, they
saw the ends of the chains of heaven let down from above: for this light is the belt of heaven, and holds together the circle of the universe, like the under-girders of a trireme. From these ends is extended the spindle of Necessity, on which all the revolutions turn. The shaft and hook of this spindle are made of steel, and the whorl is made partly of steel and also partly of other materials. Now the whorl is in form like the whorl used on earth; and the description of it implied that there is one large hollow whorl which is quite scooped out, and into this is fitted another lesser one, and another, and another, and four others, making eight in all, like vessels which fit into one another; the whorls show their edges on the upper side, and on their lower side all together form one continuous whorl. This is pierced by the spindle, which is driven home through the centre of the eighth. The first and outermost whorl has the rim broadest, and the seven inner whorls are narrower, in the following proportions--the sixth is next to the first in size, the fourth next to the sixth; then comes the eighth; the seventh is fifth, the fifth is sixth, the third is seventh, last and eighth comes the second. The largest (of fixed stars) is spangled, and the seventh (or sun) is brightest; the eighth (or moon) coloured by the reflected light of the seventh; the second and fifth (Saturn and Mercury) are in colour like one another, and yellower than the preceding; the third (Venus) has the whitest light; the fourth (Mars) is reddish; the sixth (Jupiter) is in whiteness second. Now the whole spindle has the same motion; but, as the whole revolves in one direction, the seven inner circles move slowly in the other, and of these the swiftest is the eighth; next in swiftness are the seventh, sixth, and fifth, which move together; third in swiftness appeared to move according to the law of this reversed motion the fourth; the third appeared fourth and the second fifth. The spindle turns on the knees of Necessity; and on the upper surface of each circle is a siren, who goes round with them, hymning a single tone or note. The eight together form one harmony; and round about, at equal intervals, there is another band, three in number, each sitting upon her throne: these are the Fates, daughters of Necessity, who are clothed in white robes and have chaplets upon their heads, Lachesis and Clotho and Atropos, who accompany with their voices the harmony of the sirens--Lachesis singing of the past, Clotho of the present, Atropos of the future; Clotho from time to time assisting with a touch of her right hand the revolution of the outer circle of the whorl or spindle, and Atropos with her left hand touching and guiding the inner ones, and Lachesis laying hold of either in turn, first with one hand and then with the other.

When Er and the spirits arrived, their duty was to go at once to Lachesis; but first of all there came a prophet who arranged them in order; then he took from the knees of Lachesis lots and samples of lives, and having mounted a high pulpit, spoke as follows: 'Hear the
word of Lachesis, the daughter of Necessity. Mortal souls, behold a
new cycle of life and mortality. Your genius will not be allotted to
you, but you choose your genius; and let him who draws the first lot
have the first choice, and the life which he chooses shall be his
destiny. Virtue is free, and as a man honours or dishonours her he
will have more or less of her; the responsibility is with the
chooser--God is justified.' When the Interpreter had thus spoken he
scattered lots indifferently among them all, and each of them took up
the lot which fell near him, all but Er himself (he was not allowed),
and each as he took his lot perceived the number which he had obtained.
Then the Interpreter placed on the ground before them the samples of
lives; and there were many more lives than the souls present, and they
were of all sorts. There were lives of every animal and of man in
every condition. And there were tyrannies among them, some lasting out
the tyrant's life, others which broke off in the middle and came to an
end in poverty and exile and beggary; and there were lives of famous
men, some who were famous for their form and beauty as well as for
their strength and success in games, or, again, for their birth and the
qualities of their ancestors; and some who were the reverse of famous
for the opposite qualities. And of women likewise; there was not,
however, any definite character them, because the soul, when choosing a
new life, must of necessity become different. But there was every
other quality, and the all mingled with one another, and also with
elements of wealth and poverty, and disease and health; and there were
mean states also. And here, my dear Glaucon, is the supreme peril of
our human state; and therefore the utmost care should be taken. Let
each one of us leave every other kind of knowledge and seek and follow
one thing only, if peradventure he may be able to learn and may find
some one who will make him able to learn and discern between good and
evil, and so to choose always and everywhere the better life as he has
opportunity. He should consider the bearing of all these things which
have been mentioned severally and collectively upon virtue; he should
know what the effect of beauty is when combined with poverty or wealth
in a particular soul, and what are the good and evil consequences of
noble and humble birth, of private and public station, of strength and
weakness, of cleverness and dullness, and of all the soul, and the
operation of them when conjoined; he will then look at the nature of
the soul, and from the consideration of all these qualities he will be
able to determine which is the better and which is the worse; and so he
will choose, giving the name of evil to the life which will make his
soul more unjust, and good to the life which will make his soul more
just; all else he will disregard. For we have seen and know that this
is the best choice both in life and after death. A man must take with
him into the world below an adamantine faith in truth and right, that
there too he may be undazzled by the desire of wealth or the other
allurements of evil, lest, coming upon tyrannies and similar
villainies, he do irremediable wrongs to others and suffer yet worse
himself; but let him know how to choose the mean and avoid the extremes on either side, as far as possible, not only in this life but in all that which is to come. For this is the way of happiness.

And according to the report of the messenger from the other world this was what the prophet said at the time: 'Even for the last comer, if he chooses wisely and will live diligently, there is appointed a happy and not undesirable existence. Let not him who chooses first be careless, and let not the last despair.' And when he had spoken, he who had the first choice came forward and in a moment chose the greatest tyranny; his mind having been darkened by folly and sensuality, he had not thought out the whole matter before he chose, and did not at first sight perceive that he was fated, among other evils, to devour his own children. But when he had time to reflect, and saw what was in the lot, he began to beat his breast and lament over his choice, forgetting the proclamation of the prophet; for, instead of throwing the blame of his misfortune on himself, he accused chance and the gods, and everything rather than himself. Now he was one of those who came from heaven, and in a former life had dwelt in a well-ordered State, but his virtue was a matter of habit only, and he had no philosophy. And it was true of others who were similarly overtaken, that the greater number of them came from heaven and therefore they had never been schooled by trial, whereas the pilgrims who came from earth, having themselves suffered and seen others suffer, were not in a hurry to choose. And owing to this inexperience of theirs, and also because the lot was a chance, many of the souls exchanged a good destiny for an evil or an evil for a good. For if a man had always on his arrival in this world dedicated himself from the first to sound philosophy, and had been moderately fortunate in the number of the lot, he might, as the messenger reported, be happy here, and also his journey to another life and return to this, instead of being rough and underground, would be smooth and heavenly. Most curious, he said, was the spectacle—sad and laughable and strange; for the choice of the souls was in most cases based on their experience of a previous life. There he saw the soul which had once been Orpheus choosing the life of a swan out of enmity to the race of women, hating to be born of a woman because they had been his murderers; he beheld also the soul of Thamyiras choosing the life of a nightingale; birds, on the other hand, like the swan and other musicians, wanting to be men. The soul which obtained the twentieth lot chose the life of a lion, and this was the soul of Ajax the son of Telamon, who would not be a man, remembering the injustice which was done him the judgment about the arms. The next was Agamemnon, who took the life of an eagle, because, like Ajax, he hated human nature by reason of his sufferings. About the middle came the lot of Atalanta; she, seeing the great fame of an athlete, was unable to resist the temptation: and after her there followed the soul of Epeus the son of Panopeus passing into the nature of a woman cunning in
the arts; and far away among the last who chose, the soul of the jester Thersites was putting on the form of a monkey. There came also the soul of Odysseus having yet to make a choice, and his lot happened to be the last of them all. Now the recollection of former tolls had disenchanted him of ambition, and he went about for a considerable time in search of the life of a private man who had no cares; he had some difficulty in finding this, which was lying about and had been neglected by everybody else; and when he saw it, he said that he would have done the had his lot been first instead of last, and that he was delighted to have it. And not only did men pass into animals, but I must also mention that there were animals tame and wild who changed into one another and into corresponding human natures--the good into the gentle and the evil into the savage, in all sorts of combinations.

All the souls had now chosen their lives, and they went in the order of their choice to Lachesis, who sent with them the genius whom they had severally chosen, to be the guardian of their lives and the fulfiller of the choice: this genius led the souls first to Clotho, and drew them within the revolution of the spindle impelled by her hand, thus ratifying the destiny of each; and then, when they were fastened to this, carried them to Atropos, who spun the threads and made them irreversible, whence without turning round they passed beneath the throne of Necessity; and when they had all passed, they marched on in a scorching heat to the plain of Forgetfulness, which was a barren waste destitute of trees and verdure; and then towards evening they encamped by the river of Unmindfulness, whose water no vessel can hold; of this they were all obliged to drink a certain quantity, and those who were not saved by wisdom drank more than was necessary; and each one as he drank forgot all things. Now after they had gone to rest, about the middle of the night there was a thunderstorm and earthquake, and then in an instant they were driven upwards in all manner of ways to their birth, like stars shooting. He himself was hindered from drinking the water. But in what manner or by what means he returned to the body he could not say; only, in the morning, awaking suddenly, he found himself lying on the pyre.

And thus, Glaucon, the tale has been saved and has not perished, and will save us if we are obedient to the word spoken; and we shall pass safely over the river of Forgetfulness and our soul will not be defiled. Wherefore my counsel is that we hold fast ever to the heavenly way and follow after justice and virtue always, considering that the soul is immortal and able to endure every sort of good and every sort of evil. Thus shall we live dear to one another and to the gods, both while remaining here and when, like conquerors in the games who go round to gather gifts, we receive our reward. And it shall be well with us both in this life and in the pilgrimage of a thousand years which we have been describing.
End of the Project Gutenberg EBook of Plato's Republic, by Plato
INTRODUCTION AND ANALYSIS.

Some dialogues of Plato are of so various a character that their relation to the other dialogues cannot be determined with any degree of certainty. The Theaetetus, like the Parmenides, has points of similarity both with his earlier and his later writings. The perfection of style, the humour, the dramatic interest, the complexity of structure, the fertility of illustration, the shifting of the points of view, are characteristic of his best period of authorship. The vain search, the negative conclusion, the figure of the midwives, the constant profession of ignorance on the part of Socrates, also bear the stamp of the early dialogues, in which the original Socrates is not yet Platonized. Had we no other indications, we should be disposed to range the Theaetetus with the Apology and the Phaedrus, and perhaps even with the Protagoras and the Laches.

But when we pass from the style to an examination of the subject, we trace a connection with the later rather than with the earlier dialogues. In the first place there is the connexion, indicated by Plato himself at the end of the dialogue, with the Sophist, to which in many respects the Theaetetus is so little akin. (1) The same persons reappear, including the younger Socrates, whose name is just mentioned in the Theaetetus; (2) the theory of rest, which Socrates has declined to consider, is resumed by the Eleatic Stranger; (3) there is a similar allusion in both dialogues to the meeting of Parmenides and Socrates (Theaet., Soph.); and (4) the inquiry into non-being in the Sophist supplements the question of false opinion which is raised in the Theaetetus. (Compare also Theaet. and Soph. for parallel turns of thought.) Secondly, the later date of the dialogue is confirmed by the absence of the doctrine of recollection and of any doctrine of ideas except that which derives them from generalization and from reflection of the mind upon itself. The general character of the Theaetetus is dialectical, and there are traces of the same Megarian influences which appear in the Parmenides, and which later writers, in their matter of fact way, have explained by the residence of Plato at Megara. Socrates disclaims the character of a professional eristic, and also, with a sort of ironical admiration, expresses his inability to attain the Megarian
precision in the use of terms. Yet he too employs a similar sophistical skill in overturning every conceivable theory of knowledge.

The direct indications of a date amount to no more than this: the conversation is said to have taken place when Theaetetus was a youth, and shortly before the death of Socrates. At the time of his own death he is supposed to be a full-grown man. Allowing nine or ten years for the interval between youth and manhood, the dialogue could not have been written earlier than 390, when Plato was about thirty-nine years of age. No more definite date is indicated by the engagement in which Theaetetus is said to have fallen or to have been wounded, and which may have taken place any time during the Corinthian war, between the years 390-387. The later date which has been suggested, 369, when the Athenians and Lacedaemonians disputed the Isthmus with Epaminondas, would make the age of Theaetetus at his death forty-five or forty-six. This a little impairs the beauty of Socrates' remark, that 'he would be a great man if he lived.'

In this uncertainty about the place of the Theaetetus, it seemed better, as in the case of the Republic, Timaeus, Critias, to retain the order in which Plato himself has arranged this and the two companion dialogues. We cannot exclude the possibility which has been already noticed in reference to other works of Plato, that the Theaetetus may not have been all written continuously; or the probability that the Sophist and Politicus, which differ greatly in style, were only appended after a long interval of time. The allusion to Parmenides compared with the Sophist, would probably imply that the dialogue which is called by his name was already in existence; unless, indeed, we suppose the passage in which the allusion occurs to have been inserted afterwards. Again, the Theaetetus may be connected with the Gorgias, either dialogue from different points of view containing an analysis of the real and apparent (Schleiermacher); and both may be brought into relation with the Apology as illustrating the personal life of Socrates. The Philebus, too, may with equal reason be placed either after or before what, in the language of Thrasyllus, may be called the Second Platonic Trilogy. Both the Parmenides and the Sophist, and still more the Theaetetus, have points of affinity with the Cratylus, in which the principles of rest and motion are again contrasted, and the Sophistical or Protagorean theory of language is opposed to that which is attributed to the disciple of Heracleitus, not to speak of lesser resemblances in thought and language. The Parmenides, again, has been thought by some to hold an intermediate position between the Theaetetus and the Sophist; upon this view, the Sophist may be regarded as the answer to the problems about One and Being which have been raised in the Parmenides. Any of these arrangements may suggest new views to the student of Plato; none of them can lay claim to an exclusive probability in its favour.

The Theaetetus is one of the narrated dialogues of Plato, and is the only one which is supposed to have been written down. In a short introductory
scene, Euclides and Terpsion are described as meeting before the door of Euclides' house in Megara. This may have been a spot familiar to Plato (for Megara was within a walk of Athens), but no importance can be attached to the accidental introduction of the founder of the Megarian philosophy. The real intention of the preface is to create an interest about the person of Theaetetus, who has just been carried up from the army at Corinth in a dying state. The expectation of his death recalls the promise of his youth, and especially the famous conversation which Socrates had with him when he was quite young, a few days before his own trial and death, as we are once more reminded at the end of the dialogue. Yet we may observe that Plato has himself forgotten this, when he represents Euclides as from time to time coming to Athens and correcting the copy from Socrates' own mouth. The narrative, having introduced Theaetetus, and having guaranteed the authenticity of the dialogue (compare Symposium, Phaedo, Parmenides), is then dropped. No further use is made of the device. As Plato himself remarks, who in this as in some other minute points is imitated by Cicero (De Amicitia), the interlocutory words are omitted.

Theaetetus, the hero of the battle of Corinth and of the dialogue, is a disciple of Theodorus, the great geometrician, whose science is thus indicated to be the propaedeutic to philosophy. An interest has been already excited about him by his approaching death, and now he is introduced to us anew by the praises of his master Theodorus. He is a youthful Socrates, and exhibits the same contrast of the fair soul and the ungainly face and frame, the Silenus mask and the god within, which are described in the Symposium. The picture which Theodorus gives of his courage and patience and intelligence and modesty is verified in the course of the dialogue. His courage is shown by his behaviour in the battle, and his other qualities shine forth as the argument proceeds. Socrates takes an evident delight in 'the wise Theaetetus,' who has more in him than 'many bearded men'; he is quite inspired by his answers. At first the youth is lost in wonder, and is almost too modest to speak, but, encouraged by Socrates, he rises to the occasion, and grows full of interest and enthusiasm about the great question. Like a youth, he has not finally made up his mind, and is very ready to follow the lead of Socrates, and to enter into each successive phase of the discussion which turns up. His great dialectical talent is shown in his power of drawing distinctions, and of foreseeing the consequences of his own answers. The enquiry about the nature of knowledge is not new to him; long ago he has felt the 'pang of philosophy,' and has experienced the youthful intoxication which is depicted in the Philebus. But he has hitherto been unable to make the transition from mathematics to metaphysics. He can form a general conception of square and oblong numbers, but he is unable to attain a similar expression of knowledge in the abstract. Yet at length he begins to recognize that there are universal conceptions of being, likeness, sameness, number, which the mind contemplates in herself, and with the help of Socrates is conducted from a theory of sense to a theory of ideas.
There is no reason to doubt that Theaetetus was a real person, whose name survived in the next generation. But neither can any importance be attached to the notices of him in Suidas and Proclus, which are probably based on the mention of him in Plato. According to a confused statement in Suidas, who mentions him twice over, first, as a pupil of Socrates, and then of Plato, he is said to have written the first work on the Five Solids. But no early authority cites the work, the invention of which may have been easily suggested by the division of roots, which Plato attributes to him, and the allusion to the backward state of solid geometry in the Republic. At any rate, there is no occasion to recall him to life again after the battle of Corinth, in order that we may allow time for the completion of such a work (Muller). We may also remark that such a supposition entirely destroys the pathetic interest of the introduction.

Theodorus, the geometrician, had once been the friend and disciple of Protagoras, but he is very reluctant to leave his retirement and defend his old master. He is too old to learn Socrates' game of question and answer, and prefers the digressions to the main argument, because he finds them easier to follow. The mathematician, as Socrates says in the Republic, is not capable of giving a reason in the same manner as the dialectician, and Theodorus could not therefore have been appropriately introduced as the chief respondent. But he may be fairly appealed to, when the honour of his master is at stake. He is the 'guardian of his orphans,' although this is a responsibility which he wishes to throw upon Callias, the friend and patron of all Sophists, declaring that he himself had early 'run away' from philosophy, and was absorbed in mathematics. His extreme dislike to the Heraclitean fanatics, which may be compared with the dislike of Theaetetus to the materialists, and his ready acceptance of the noble words of Socrates, are noticeable traits of character.

The Socrates of the Theaetetus is the same as the Socrates of the earlier dialogues. He is the invincible disputant, now advanced in years, of the Protagoras and Symposium; he is still pursuing his divine mission, his 'Herculean labours,' of which he has described the origin in the Apology; and he still hears the voice of his oracle, bidding him receive or not receive the truant souls. There he is supposed to have a mission to convict men of self-conceit; in the Theaetetus he has assigned to him by God the functions of a man-midwife, who delivers men of their thoughts, and under this character he is present throughout the dialogue. He is the true prophet who has an insight into the natures of men, and can divine their future; and he knows that sympathy is the secret power which unlocks their thoughts. The hit at Aristides, the son of Lysimachus, who was specially committed to his charge in the Laches, may be remarked by the way. The attempt to discover the definition of knowledge is in accordance with the character of Socrates as he is described in the Memorabilia, asking What is justice? what is temperance? and the like. But there is no reason to
suppose that he would have analyzed the nature of perception, or traced the
connexion of Protagoras and Heracleitus, or have raised the difficulty
respecting false opinion. The humorous illustrations, as well as the
serious thoughts, run through the dialogue. The snubnosedness of
Theaetetus, a characteristic which he shares with Socrates, and the man-
midwifery of Socrates, are not forgotten in the closing words. At the end
of the dialogue, as in the Euthyphro, he is expecting to meet Meletus at
the porch of the king Archon; but with the same indifference to the result
which is everywhere displayed by him, he proposes that they shall
reassemble on the following day at the same spot. The day comes, and in
the Sophist the three friends again meet, but no further allusion is made
to the trial, and the principal share in the argument is assigned, not to
Socrates, but to an Eleatic stranger; the youthful Theaetetus also plays a
different and less independent part. And there is no allusion in the
Introduction to the second and third dialogues, which are afterwards
 appended. There seems, therefore, reason to think that there is a real
change, both in the characters and in the design.

The dialogue is an enquiry into the nature of knowledge, which is
interrupted by two digressions. The first is the digression about the
midwives, which is also a leading thought or continuous image, like the
wave in the Republic, appearing and reappearing at intervals. Again and
again we are reminded that the successive conceptions of knowledge are
extracted from Theaetetus, who in his turn truly declares that Socrates has
got a great deal more out of him than ever was in him. Socrates is never
weary of working out the image in humorous details,—discerning the
symptoms of labour, carrying the child round the hearth, fearing that
Theaetetus will bite him, comparing his conceptions to wind-eggs, asserting
an hereditary right to the occupation. There is also a serious side to the
image, which is an apt similitude of the Socratic theory of education
(compare Republic, Sophist), and accords with the ironical spirit in which
the wisest of men delights to speak of himself.

The other digression is the famous contrast of the lawyer and philosopher.
This is a sort of landing-place or break in the middle of the dialogue. At
the commencement of a great discussion, the reflection naturally arises,
How happy are they who, like the philosopher, have time for such
discussions (compare Republic)! There is no reason for the introduction of
such a digression; nor is a reason always needed, any more than for the
introduction of an episode in a poem, or of a topic in conversation. That
which is given by Socrates is quite sufficient, viz. that the philosopher
may talk and write as he pleases. But though not very closely connected,
neither is the digression out of keeping with the rest of the dialogue.
The philosopher naturally desires to pour forth the thoughts which are
always present to him, and to discourse of the higher life. The idea of
knowledge, although hard to be defined, is realised in the life of
philosophy. And the contrast is the favourite antithesis between the
world, in the various characters of sophist, lawyer, statesman, speaker, and the philosopher,—between opinion and knowledge,—between the conventional and the true.

The greater part of the dialogue is devoted to setting up and throwing down definitions of science and knowledge. Proceeding from the lower to the higher by three stages, in which perception, opinion, reasoning are successively examined, we first get rid of the confusion of the idea of knowledge and specific kinds of knowledge,—a confusion which has been already noticed in the Lysis, Laches, Meno, and other dialogues. In the infancy of logic, a form of thought has to be invented before the content can be filled up. We cannot define knowledge until the nature of definition has been ascertained. Having succeeded in making his meaning plain, Socrates proceeds to analyze (1) the first definition which Theaetetus proposes: 'Knowledge is sensible perception.' This is speedily identified with the Protagorean saying, 'Man is the measure of all things;' and of this again the foundation is discovered in the perpetual flux of Heracleitus. The relativeness of sensation is then developed at length, and for a moment the definition appears to be accepted. But soon the Protagorean thesis is pronounced to be suicidal; for the adversaries of Protagoras are as good a measure as he is, and they deny his doctrine. He is then supposed to reply that the perception may be true at any given instant. But the reply is in the end shown to be inconsistent with the Heraclitean foundation, on which the doctrine has been affirmed to rest. For if the Heraclitean flux is extended to every sort of change in every instant of time, how can any thought or word be detained even for an instant? Sensible perception, like everything else, is tumbling to pieces. Nor can Protagoras himself maintain that one man is as good as another in his knowledge of the future; and 'the expedient,' if not 'the just and true,' belongs to the sphere of the future.

And so we must ask again, What is knowledge? The comparison of sensations with one another implies a principle which is above sensation, and which resides in the mind itself. We are thus led to look for knowledge in a higher sphere, and accordingly Theaetetus, when again interrogated, replies (2) that 'knowledge is true opinion.' But how is false opinion possible? The Megarian or Eristic spirit within us revives the question, which has been already asked and indirectly answered in the Meno: 'How can a man be ignorant of that which he knows?' No answer is given to this not unanswerable question. The comparison of the mind to a block of wax, or to a decoy of birds, is found wanting.

But are we not inverting the natural order in looking for opinion before we have found knowledge? And knowledge is not true opinion; for the Athenian dicasts have true opinion but not knowledge. What then is knowledge? We answer (3), 'True opinion, with definition or explanation.' But all the different ways in which this statement may be understood are set aside,
like the definitions of courage in the Laches, or of friendship in the Lysis, or of temperance in the Charmides. At length we arrive at the conclusion, in which nothing is concluded.

There are two special difficulties which beset the student of the Theaetetus: (1) he is uncertain how far he can trust Plato's account of the theory of Protagoras; and he is also uncertain (2) how far, and in what parts of the dialogue, Plato is expressing his own opinion. The dramatic character of the work renders the answer to both these questions difficult.

1. In reply to the first, we have only probabilities to offer. Three main points have to be decided: (a) Would Protagoras have identified his own thesis, 'Man is the measure of all things,' with the other, 'All knowledge is sensible perception'? (b) Would he have based the relativity of knowledge on the Heraclitean flux? (c) Would he have asserted the absoluteness of sensation at each instant? Of the work of Protagoras on 'Truth' we know nothing, with the exception of the two famous fragments, which are cited in this dialogue, 'Man is the measure of all things,' and, 'Whether there are gods or not, I cannot tell.' Nor have we any other trustworthy evidence of the tenets of Protagoras, or of the sense in which his words are used. For later writers, including Aristotle in his Metaphysics, have mixed up the Protagoras of Plato, as they have the Socrates of Plato, with the real person.

Returning then to the Theaetetus, as the only possible source from which an answer to these questions can be obtained, we may remark, that Plato had 'The Truth' of Protagoras before him, and frequently refers to the book. He seems to say expressly, that in this work the doctrine of the Heraclitean flux was not to be found; 'he told the real truth' (not in the book, which is so entitled, but) 'privately to his disciples,'--words which imply that the connexion between the doctrines of Protagoras and Heracleitus was not generally recognized in Greece, but was really discovered or invented by Plato. On the other hand, the doctrine that 'Man is the measure of all things,' is expressly identified by Socrates with the other statement, that 'What appears to each man is to him;' and a reference is made to the books in which the statement occurs;--this Theaetetus, who has 'often read the books,' is supposed to acknowledge (so Cratylus). And Protagoras, in the speech attributed to him, never says that he has been misunderstood: he rather seems to imply that the absoluteness of sensation at each instant was to be found in his words. He is only indignant at the 'reductio ad absurdum' devised by Socrates for his 'homo mensura,' which Theodorus also considers to be 'really too bad.'

The question may be raised, how far Plato in the Theaetetus could have misrepresented Protagoras without violating the laws of dramatic probability. Could he have pretended to cite from a well-known writing what was not to be found there? But such a shadowy enquiry is not worth
pursuing further. We need only remember that in the criticism which
follows of the thesis of Protagoras, we are criticizing the Protagoras of
Plato, and not attempting to draw a precise line between his real
sentiments and those which Plato has attributed to him.

2. The other difficulty is a more subtle, and also a more important one,
because bearing on the general character of the Platonic dialogues. On a
first reading of them, we are apt to imagine that the truth is only spoken
by Socrates, who is never guilty of a fallacy himself, and is the great
detector of the errors and fallacies of others. But this natural
presumption is disturbed by the discovery that the Sophists are sometimes
in the right and Socrates in the wrong. Like the hero of a novel, he is
not to be supposed always to represent the sentiments of the author. There
are few modern readers who do not side with Protagoras, rather than with
Socrates, in the dialogue which is called by his name. The Cratylus
presents a similar difficulty: in his etymologies, as in the number of the
State, we cannot tell how far Socrates is serious; for the Socratic irony
will not allow him to distinguish between his real and his assumed wisdom.
No one is the superior of the invincible Socrates in argument (except in
the first part of the Parmenides, where he is introduced as a youth); but
he is by no means supposed to be in possession of the whole truth.
Arguments are often put into his mouth (compare Introduction to the
Gorgias) which must have seemed quite as untenable to Plato as to a modern
writer. In this dialogue a great part of the answer of Protagoras is just
and sound; remarks are made by him on verbal criticism, and on the
importance of understanding an opponent's meaning, which are conceived in
the true spirit of philosophy. And the distinction which he is supposed to
draw between Eristic and Dialectic, is really a criticism of Plato on
himself and his own criticism of Protagoras.

The difficulty seems to arise from not attending to the dramatic character
of the writings of Plato. There are two, or more, sides to questions; and
these are parted among the different speakers. Sometimes one view or
aspect of a question is made to predominate over the rest, as in the
Gorgias or Sophist; but in other dialogues truth is divided, as in the
Laches and Protagoras, and the interest of the piece consists in the
contrast of opinions. The confusion caused by the irony of Socrates, who,
if he is true to his character, cannot say anything of his own knowledge,
is increased by the circumstance that in the Theaetetus and some other
dialogues he is occasionally playing both parts himself, and even charging
his own arguments with unfairness. In the Theaetetus he is designedly held
back from arriving at a conclusion. For we cannot suppose that Plato
conceived a definition of knowledge to be impossible. But this is his
manner of approaching and surrounding a question. The lights which he
throws on his subject are indirect, but they are not the less real for
that. He has no intention of proving a thesis by a cut-and-dried argument;
nor does he imagine that a great philosophical problem can be tied up
within the limits of a definition. If he has analyzed a proposition or
notion, even with the severity of an impossible logic, if half-truths have
been compared by him with other half-truths, if he has cleared up or
advanced popular ideas, or illustrated a new method, his aim has been
sufficiently accomplished.

The writings of Plato belong to an age in which the power of analysis had
outrun the means of knowledge; and through a spurious use of dialectic, the
distinctions which had been already 'won from the void and formless
infinite,' seemed to be rapidly returning to their original chaos. The two
great speculative philosophies, which a century earlier had so deeply
impressed the mind of Hellas, were now degenerating into Eristic. The
contemporaries of Plato and Socrates were vainly trying to find new
combinations of them, or to transfer them from the object to the subject.
The Megarians, in their first attempts to attain a severer logic, were
making knowledge impossible (compare Theaet.). They were asserting 'the
one good under many names,' and, like the Cynics, seem to have denied
predication, while the Cynics themselves were depriving virtue of all which
made virtue desirable in the eyes of Socrates and Plato. And besides
these, we find mention in the later writings of Plato, especially in the
Theaetetus, Sophist, and Laws, of certain impenetrable godless persons, who
will not believe what they 'cannot hold in their hands'; and cannot be
approached in argument, because they cannot argue (Theat; Soph.). No
school of Greek philosophers exactly answers to these persons, in whom
Plato may perhaps have blended some features of the Atomists with the
vulgar materialistic tendencies of mankind in general (compare Introduction
to the Sophist).

And not only was there a conflict of opinions, but the stage which the mind
had reached presented other difficulties hardly intelligible to us, who
live in a different cycle of human thought. All times of mental progress
are times of confusion; we only see, or rather seem to see things clearly,
when they have been long fixed and defined. In the age of Plato, the
limits of the world of imagination and of pure abstraction, of the old
world and the new, were not yet fixed. The Greeks, in the fourth century
before Christ, had no words for 'subject' and 'object,' and no distinct
conception of them; yet they were always hovering about the question
involved in them. The analysis of sense, and the analysis of thought, were
equally difficult to them; and hopelessly confused by the attempt to solve
them, not through an appeal to facts, but by the help of general theories
respecting the nature of the universe.

Plato, in his Theaetetus, gathers up the sceptical tendencies of his age,
and compares them. But he does not seek to reconstruct out of them a
theory of knowledge. The time at which such a theory could be framed had
not yet arrived. For there was no measure of experience with which the
ideas swarming in men's minds could be compared; the meaning of the word
'science' could scarcely be explained to them, except from the mathematical sciences, which alone offered the type of universality and certainty. Philosophy was becoming more and more vacant and abstract, and not only the Platonic Ideas and the Eleatic Being, but all abstractions seemed to be at variance with sense and at war with one another.

The want of the Greek mind in the fourth century before Christ was not another theory of rest or motion, or Being or atoms, but rather a philosophy which could free the mind from the power of abstractions and alternatives, and show how far rest and how far motion, how far the universal principle of Being and the multitudinous principle of atoms, entered into the composition of the world; which could distinguish between the true and false analogy, and allow the negative as well as the positive a place in human thought. To such a philosophy Plato, in the Theaetetus, offers many contributions. He has followed philosophy into the region of mythology, and pointed out the similarities of opposing phases of thought. He has also shown that extreme abstractions are self-destructive, and, indeed, hardly distinguishable from one another. But his intention is not to unravel the whole subject of knowledge, if this had been possible; and several times in the course of the dialogue he rejects explanations of knowledge which have germs of truth in them; as, for example, 'the resolution of the compound into the simple;' or 'right opinion with a mark of difference.'

... Terpsion, who has come to Megara from the country, is described as having looked in vain for Euclides in the Agora; the latter explains that he has been down to the harbour, and on his way thither had met Theaetetus, who was being carried up from the army to Athens. He was scarcely alive, for he had been badly wounded at the battle of Corinth, and had taken the dysentery which prevailed in the camp. The mention of his condition suggests the reflection, 'What a loss he will be!' 'Yes, indeed,' replies Euclid; 'only just now I was hearing of his noble conduct in the battle.' 'That I should expect; but why did he not remain at Megara?' 'I wanted him to remain, but he would not; so I went with him as far as Erineum; and as I parted from him, I remembered that Socrates had seen him when he was a youth, and had a remarkable conversation with him, not long before his own death; and he then prophesied of him that he would be a great man if he lived.' 'How true that has been; how like all that Socrates said! And could you repeat the conversation?' 'Not from memory; but I took notes when I returned home, which I afterwards filled up at leisure, and got Socrates to correct them from time to time, when I came to Athens'... Terpsion had long intended to ask for a sight of this writing, of which he had already heard. They are both tired, and agree to rest and have the conversation read to them by a servant...'Here is the roll, Terpsion; I need only observe that I have omitted, for the sake of
convenience, the interlocutory words, "said I," "said he"; and that Theaetetus, and Theodorus, the geometrician of Cyrene, are the persons with whom Socrates is conversing.'

Socrates begins by asking Theodorus whether, in his visit to Athens, he has found any Athenian youth likely to attain distinction in science. 'Yes, Socrates, there is one very remarkable youth, with whom I have become acquainted. He is no beauty, and therefore you need not imagine that I am in love with him; and, to say the truth, he is very like you, for he has a snub nose, and projecting eyes, although these features are not so marked in him as in you. He combines the most various qualities, quickness, patience, courage; and he is gentle as well as wise, always silently flowing on, like a river of oil. Look! he is the middle one of those who are entering the palaestra.'

Socrates, who does not know his name, recognizes him as the son of Euphronius, who was himself a good man and a rich. He is informed by Theodorus that the youth is named Theaetetus, but the property of his father has disappeared in the hands of trustees; this does not, however, prevent him from adding liberality to his other virtues. At the desire of Socrates he invites Theaetetus to sit by them.

'Yes,' says Socrates, 'that I may see in you, Theaetetus, the image of my ugly self, as Theodorus declares. Not that his remark is of any importance; for though he is a philosopher, he is not a painter, and therefore he is no judge of our faces; but, as he is a man of science, he may be a judge of our intellects. And if he were to praise the mental endowments of either of us, in that case the hearer of the eulogy ought to examine into what he says, and the subject should not refuse to be examined.' Theaetetus consents, and is caught in a trap (compare the similar trap which is laid for Theodorus). 'Then, Theaetetus, you will have to be examined, for Theodorus has been praising you in a style of which I never heard the like.' 'He was only jesting.' 'Nay, that is not his way; and I cannot allow you, on that pretence, to retract the assent which you have already given, or I shall make Theodorus repeat your praises, and swear to them.' Theaetetus, in reply, professes that he is willing to be examined, and Socrates begins by asking him what he learns of Theodorus. He is himself anxious to learn anything of anybody; and now he has a little question to which he wants Theaetetus or Theodorus (or whichever of the company would not be 'donkey' to the rest) to find an answer. Without further preface, but at the same time apologizing for his eagerness, he asks, 'What is knowledge?' Theodorus is too old to answer questions, and begs him to interrogate Theaetetus, who has the advantage of youth.

Theaetetus replies, that knowledge is what he learns of Theodorus, i.e. geometry and arithmetic; and that there are other kinds of knowledge--
shoemaking, carpentering, and the like. But Socrates rejoins, that this answer contains too much and also too little. For although Theaetetus has enumerated several kinds of knowledge, he has not explained the common nature of them; as if he had been asked, 'What is clay?' and instead of saying 'Clay is moistened earth,' he had answered, 'There is one clay of image-makers, another of potters, another of oven-makers.' Theaetetus at once divines that Socrates means him to extend to all kinds of knowledge the same process of generalization which he has already learned to apply to arithmetic. For he has discovered a division of numbers into square numbers, 4, 9, 16, etc., which are composed of equal factors, and represent figures which have equal sides, and oblong numbers, 3, 5, 6, 7, etc., which are composed of unequal factors, and represent figures which have unequal sides. But he has never succeeded in attaining a similar conception of knowledge, though he has often tried; and, when this and similar questions were brought to him from Socrates, has been sorely distressed by them. Socrates explains to him that he is in labour. For men as well as women have pangs of labour; and both at times require the assistance of midwives. And he, Socrates, is a midwife, although this is a secret; he has inherited the art from his mother bold and bluff, and he ushers into light, not children, but the thoughts of men. Like the midwives, who are 'past bearing children,' he too can have no offspring--the God will not allow him to bring anything into the world of his own. He also reminds Theaetetus that the midwives are or ought to be the only matchmakers (this is the preparation for a biting jest); for those who reap the fruit are most likely to know on what soil the plants will grow. But respectable midwives avoid this department of practice--they do not want to be called procuresses. There are some other differences between the two sorts of pregnancy. For women do not bring into the world at one time real children and at another time idols which are with difficulty distinguished from them. 'At first,' says Socrates in his character of the man-midwife, 'my patients are barren and stolid, but after a while they "round apace," if the gods are propitious to them; and this is due not to me but to themselves; I and the god only assist in bringing their ideas to the birth. Many of them have left me too soon, and the result has been that they have produced abortions; or when I have delivered them of children they have lost them by an ill bringing up, and have ended by seeing themselves, as others see them, to be great fools. Aristides, the son of Lysimachus, is one of these, and there have been others. The truants often return to me and beg to be taken back; and then, if my familiar allows me, which is not always the case, I receive them, and they begin to grow again. There come to me also those who have nothing in them, and have no need of my art; and I am their matchmaker (see above), and marry them to Prodicus or some other inspired sage who is likely to suit them. I tell you this long story because I suspect that you are in labour. Come then to me, who am a midwife, and the son of a midwife, and I will deliver you. And do not bite me, as the women do, if I abstract your first-born; for I am acting out of good-will towards you; the God who is within me is the friend of man,
though he will not allow me to dissemble the truth. Once more then, Theaetetus, I repeat my old question--"What is knowledge?" Take courage, and by the help of God you will discover an answer.' 'My answer is, that knowledge is perception.' 'That is the theory of Protagoras, who has another way of expressing the same thing when he says, "Man is the measure of all things." He was a very wise man, and we should try to understand him. In order to illustrate his meaning let me suppose that there is the same wind blowing in our faces, and one of us may be hot and the other cold. How is this? Protagoras will reply that the wind is hot to him who is cold, cold to him who is hot. And "is" means "appears," and when you say "appears to him," that means "he feels." Thus feeling, appearance, perception, coincide with being. I suspect, however, that this was only a "facon de parler," by which he imposed on the common herd like you and me; he told "the truth" (in allusion to the title of his book, which was called "The Truth") in secret to his disciples. For he was really a votary of that famous philosophy in which all things are said to be relative; nothing is great or small, or heavy or light, or one, but all is in motion and mixture and transition and flux and generation, not "being," as we ignorantly affirm, but "becoming." This has been the doctrine, not of Protagoras only, but of all philosophers, with the single exception of Parmenides; Empedocles, Heracleitus, and others, and all the poets, with Epicharmus, the king of Comedy, and Homer, the king of Tragedy, at their head, have said the same; the latter has these words--

"Ocean, whence the gods sprang, and mother Tethys."

And many arguments are used to show, that motion is the source of life, and rest of death: fire and warmth are produced by friction, and living creatures owe their origin to a similar cause; the bodily frame is preserved by exercise and destroyed by indolence; and if the sun ceased to move, "chaos would come again." Now apply this doctrine of "All is motion" to the senses, and first of all to the sense of sight. The colour of white, or any other colour, is neither in the eyes nor out of them, but ever in motion between the object and the eye, and varying in the case of every percipient. All is relative, and, as the followers of Protagoras remark, endless contradictions arise when we deny this; e.g. here are six dice; they are more than four and less than twelve; "more and also less," would you not say? 'Yes.' 'But Protagoras will retort: "Can anything be more or less without addition or subtraction?"

'I should say "No" if I were not afraid of contradicting my former answer.'

'And if you say "Yes," the tongue will escape conviction but not the mind, as Euripides would say?' 'True.' 'The thoroughbred Sophists, who know all that can be known, would have a sparring match over this, but you and I, who have no professional pride, want only to discover whether our ideas are clear and consistent. And we cannot be wrong in saying, first, that
nothing can be greater or less while remaining equal; secondly, that there can be no becoming greater or less without addition or subtraction; thirdly, that what is and was not, cannot be without having become. But then how is this reconcilable with the case of the dice, and with similar examples?--that is the question.' 'I am often perplexed and amazed, Socrates, by these difficulties.' 'That is because you are a philosopher, for philosophy begins in wonder, and Iris is the child of Thaumas. Do you know the original principle on which the doctrine of Protagoras is based?' 'No.' 'Then I will tell you; but we must not let the uninitiated hear, and by the uninitiated I mean the obstinate people who believe in nothing which they cannot hold in their hands. The brethren whose mysteries I am about to unfold to you are far more ingenious. They maintain that all is motion; and that motion has two forms, action and passion, out of which endless phenomena are created, also in two forms--sense and the object of sense--which come to the birth together. There are two kinds of motions, a slow and a fast; the motions of the agent and the patient are slower, because they move and create in and about themselves, but the things which are born of them have a swifter motion, and pass rapidly from place to place. The eye and the appropriate object come together, and give birth to whiteness and the sensation of whiteness; the eye is filled with seeing, and becomes not sight but a seeing eye, and the object is filled with whiteness, and becomes not whiteness but white; and no other compound of either with another would have produced the same effect. All sensation is to be resolved into a similar combination of an agent and patient. Of either, taken separately, no idea can be formed; and the agent may become a patient, and the patient an agent. Hence there arises a general reflection that nothing is, but all things become; no name can detain or fix them. Are not these speculations charming, Theaetetus, and very good for a person in your interesting situation? I am offering you specimens of other men's wisdom, because I have no wisdom of my own, and I want to deliver you of something; and presently we will see whether you have brought forth wind or not. Tell me, then, what do you think of the notion that "All things are becoming"?"

'When I hear your arguments, I am marvellously ready to assent.'

'But I ought not to conceal from you that there is a serious objection which may be urged against this doctrine of Protagoras. For there are states, such as madness and dreaming, in which perception is false; and half our life is spent in dreaming; and who can say that at this instant we are not dreaming? Even the fancies of madmen are real at the time. But if knowledge is perception, how can we distinguish between the true and the false in such cases? Having stated the objection, I will now state the answer. Protagoras would deny the continuity of phenomena; he would say that what is different is entirely different, and whether active or passive has a different power. There are infinite agents and patients in the world, and these produce in every combination of them a different
perception. Take myself as an instance:--Socrates may be ill or he may be well,--and remember that Socrates, with all his accidents, is spoken of.
The wine which I drink when I am well is pleasant to me, but the same wine is unpleasant to me when I am ill. And there is nothing else from which I can receive the same impression, nor can another receive the same impression from the wine. Neither can I and the object of sense become separately what we become together. For the one in becoming is relative to the other, but they have no other relation; and the combination of them is absolute at each moment. (In modern language, the act of sensation is really indivisible, though capable of a mental analysis into subject and object.) My sensation alone is true, and true to me only. And therefore, as Protagoras says, "To myself I am the judge of what is and what is not." Thus the flux of Homer and Heracleitus, the great Protagorean saying that "Man is the measure of all things," the doctrine of Theaetetus that "Knowledge is perception," have all the same meaning. And this is thy newborn child, which by my art I have brought to light; and you must not be angry if instead of rearing your infant we expose him.'

'Theaetetus will not be angry,' says Theodorus; 'he is very good-natured. But I should like to know, Socrates, whether you mean to say that all this is untrue?'

'First reminding you that I am not the bag which contains the arguments, but that I extract them from Theaetetus, shall I tell you what amazes me in your friend Protagoras?'

'What may that be?'

'I like his doctrine that what appears is; but I wonder that he did not begin his great work on Truth with a declaration that a pig, or a dog-faced baboon, or any other monster which has sensation, is a measure of all things; then, while we were reverencing him as a god, he might have produced a magnificent effect by expounding to us that he was no wiser than a tadpole. For if sensations are always true, and one man's discernment is as good as another's, and every man is his own judge, and everything that he judges is right and true, then what need of Protagoras to be our instructor at a high figure; and why should we be less knowing than he is, or have to go to him, if every man is the measure of all things? My own art of midwifery, and all dialectic, is an enormous folly, if Protagoras' "Truth" be indeed truth, and the philosopher is not merely amusing himself by giving oracles out of his book.'

Theodorus thinks that Socrates is unjust to his master, Protagoras; but he is too old and stiff to try a fall with him, and therefore refers him to Theaetetus, who is already driven out of his former opinion by the arguments of Socrates.
Socrates then takes up the defence of Protagoras, who is supposed to reply in his own person--'Good people, you sit and declaim about the gods, of whose existence or non-existence I have nothing to say, or you discourse about man being reduced to the level of the brutes; but what proof have you of your statements? And yet surely you and Theodorus had better reflect whether probability is a safe guide. Theodorus would be a bad geometrician if he had nothing better to offer.'...Theaetetus is affected by the appeal to geometry, and Socrates is induced by him to put the question in a new form. He proceeds as follows:--'Should we say that we know what we see and hear,--e.g. the sound of words or the sight of letters in a foreign tongue?'

'We should say that the figures of the letters, and the pitch of the voice in uttering them, were known to us, but not the meaning of them.'

'Excellent; I want you to grow, and therefore I will leave that answer and ask another question: Is not seeing perceiving?' 'Very true.' 'And he who sees knows?' 'Yes.' 'And he who remembers, remembers that which he sees and knows?' 'Very true.' 'But if he closes his eyes, does he not remember?' 'He does.' 'Then he may remember and not see; and if seeing is knowing, he may remember and not know. Is not this a "reductio ad absurdum" of the hypothesis that knowledge is sensible perception? Yet perhaps we are crowing too soon; and if Protagoras, "the father of the myth," had been alive, the result might have been very different. But he is dead, and Theodorus, whom he left guardian of his "orphan," has not been very zealous in defending him.'

Theodorus objects that Callias is the true guardian, but he hopes that Socrates will come to the rescue. Socrates prefaces his defence by resuming the attack. He asks whether a man can know and not know at the same time? 'Impossible.' Quite possible, if you maintain that seeing is knowing. The confident adversary, suit the action to the word, shuts one of your eyes; and now, says he, you see and do not see, but do you know and not know? And a fresh opponent darts from his ambush, and transfers to knowledge the terms which are commonly applied to sight. He asks whether you can know near and not at a distance; whether you can have a sharp and also a dull knowledge. While you are wondering at his incomparable wisdom, he gets you into his power, and you will not escape until you have come to an understanding with him about the money which is to be paid for your release.

But Protagoras has not yet made his defence; and already he may be heard contemptuously replying that he is not responsible for the admissions which were made by a boy, who could not foresee the coming move, and therefore had answered in a manner which enabled Socrates to raise a laugh against himself. 'But I cannot be fairly charged,' he will say, 'with an answer which I should not have given; for I never maintained that the memory of a
feeling is the same as a feeling, or denied that a man might know and not
know the same thing at the same time. Or, if you will have extreme
precision, I say that man in different relations is many or rather infinite
in number. And I challenge you, either to show that his perceptions are
not individual, or that if they are, what appears to him is not what is.
As to your pigs and baboons, you are yourself a pig, and you make my
writings a sport of other swine. But I still affirm that man is the
measure of all things, although I admit that one man may be a thousand
times better than another, in proportion as he has better impressions.
Neither do I deny the existence of wisdom or of the wise man. But I
maintain that wisdom is a practical remedial power of turning evil into
good, the bitterness of disease into the sweetness of health, and does not
consist in any greater truth or superior knowledge. For the impressions of
the sick are as true as the impressions of the healthy; and the sick are as
wise as the healthy. Nor can any man be cured of a false opinion, for
there is no such thing; but he may be cured of the evil habit which
generates in him an evil opinion. This is effected in the body by the
drugs of the physician, and in the soul by the words of the Sophist; and
the new state or opinion is not truer, but only better than the old. And
philosophers are not tadpoles, but physicians and husbandmen, who till the
soil and infuse health into animals and plants, and make the good take the
place of the evil, both in individuals and states. Wise and good
rhetoricians make the good to appear just in states (for that is just which
appears just to a state), and in return, they deserve to be well paid. And
you, Socrates, whether you please or not, must continue to be a measure.
This is my defence, and I must request you to meet me fairly. We are
professing to reason, and not merely to dispute; and there is a great
difference between reasoning and disputation. For the disputer is always
seeking to trip up his opponent; and this is a mode of argument which
disgusts men with philosophy as they grow older. But the reasoner is
trying to understand him and to point out his errors to him, whether
arising from his own or from his companion's fault; he does not argue from
the customary use of names, which the vulgar pervert in all manner of ways.
If you are gentle to an adversary he will follow and love you; and if
defeated he will lay the blame on himself, and seek to escape from his own
prejudices into philosophy. I would recommend you, Socrates, to adopt this
humaner method, and to avoid captious and verbal criticisms.'

Such, Theodorus, is the very slight help which I am able to afford to your
friend; had he been alive, he would have helped himself in far better
style.

'You have made a most valorous defence.'

Yes; but did you observe that Protagoras bade me be serious, and complained
of our getting up a laugh against him with the aid of a boy? He meant to
intimate that you must take the place of Theaetetus, who may be wiser than
many bearded men, but not wiser than you, Theodorus.

'The rule of the Spartan Palaestra is, Strip or depart; but you are like the giant Antaeus, and will not let me depart unless I try a fall with you.'

Yes, that is the nature of my complaint. And many a Hercules, many a Theseus mighty in deeds and words has broken my head; but I am always at this rough game. Please, then, to favour me.

'On the condition of not exceeding a single fall, I consent.'

Socrates now resumes the argument. As he is very desirous of doing justice to Protagoras, he insists on citing his own words,--'What appears to each man is to him.' And how, asks Socrates, are these words reconcileable with the fact that all mankind are agreed in thinking themselves wiser than others in some respects, and inferior to them in others? In the hour of danger they are ready to fall down and worship any one who is their superior in wisdom as if he were a god. And the world is full of men who are asking to be taught and willing to be ruled, and of other men who are willing to rule and teach them. All which implies that men do judge of one another's impressions, and think some wise and others foolish. How will Protagoras answer this argument? For he cannot say that no one deems another ignorant or mistaken. If you form a judgment, thousands and tens of thousands are ready to maintain the opposite. The multitude may not and do not agree in Protagoras' own thesis that 'Man is the measure of all things;' and then who is to decide? Upon his own showing must not his 'truth' depend on the number of suffrages, and be more or less true in proportion as he has more or fewer of them? And he must acknowledge further, that they speak truly who deny him to speak truly, which is a famous jest. And if he admits that they speak truly who deny him to speak truly, he must admit that he himself does not speak truly. But his opponents will refuse to admit this of themselves, and he must allow that they are right in their refusal. The conclusion is, that all mankind, including Protagoras himself, will deny that he speaks truly; and his truth will be true neither to himself nor to anybody else.

Theodorus is inclined to think that this is going too far. Socrates ironically replies, that he is not going beyond the truth. But if the old Protagoras could only pop his head out of the world below, he would doubtless give them both a sound castigation and be off to the shades in an instant. Seeing that he is not within call, we must examine the question for ourselves. It is clear that there are great differences in the understandings of men. Admitting, with Protagoras, that immediate sensations of hot, cold, and the like, are to each one such as they appear, yet this hypothesis cannot be extended to judgments or opinions. And even if we were to admit further,--and this is the view of some who are not
thorough-going followers of Protagoras,—that right and wrong, holy and unholy, are to each state or individual such as they appear, still Protagoras will not venture to maintain that every man is equally the measure of expediency, or that the thing which seems is expedient to every one. But this begins a new question. ‘Well, Socrates, we have plenty of leisure. Yes, we have, and, after the manner of philosophers, we are digressing; I have often observed how ridiculous this habit of theirs makes them when they appear in court. ‘What do you mean?’ I mean to say that a philosopher is a gentleman, but a lawyer is a servant. The one can have his talk out, and wander at will from one subject to another, as the fancy takes him; like ourselves, he may be long or short, as he pleases. But the lawyer is always in a hurry; there is the clepsydra limiting his time, and the brief limiting his topics, and his adversary is standing over him and exacting his rights. He is a servant disputing about a fellow-servant before his master, who holds the cause in his hands; the path never diverges, and often the race is for his life. Such experiences render him keen and shrewd; he learns the arts of flattery, and is perfect in the practice of crooked ways; dangers have come upon him too soon, when the tenderness of youth was unable to meet them with truth and honesty, and he has resorted to counter-acts of dishonesty and falsehood, and become warped and distorted; without any health or freedom or sincerity in him he has grown up to manhood, and is or esteems himself to be a master of cunning. Such are the lawyers; will you have the companion picture of philosophers? or will this be too much of a digression?

‘Nay, Socrates, the argument is our servant, and not our master. Who is the judge or where is the spectator, having a right to control us?’

I will describe the leaders, then: for the inferior sort are not worth the trouble. The lords of philosophy have not learned the way to the dicastery or ecclesia; they neither see nor hear the laws and votes of the state, written or recited; societies, whether political or festive, clubs, and singing maidens do not enter even into their dreams. And the scandals of persons or their ancestors, male and female, they know no more than they can tell the number of pints in the ocean. Neither are they conscious of their own ignorance; for they do not practise singularity in order to gain reputation, but the truth is, that the outer form of them only is residing in the city; the inner man, as Pindar says, is going on a voyage of discovery, measuring as with line and rule the things which are under and in the earth, interrogating the whole of nature, only not condescending to notice what is near them.

‘What do you mean, Socrates?’

I will illustrate my meaning by the jest of the witty maid-servant, who saw Thales tumbling into a well, and said of him, that he was so eager to know what was going on in heaven, that he could not see what was before his
feet. This is applicable to all philosophers. The philosopher is unacquainted with the world; he hardly knows whether his neighbour is a man or an animal. For he is always searching into the essence of man, and enquiring what such a nature ought to do or suffer different from any other. Hence, on every occasion in private life and public, as I was saying, when he appears in a law-court or anywhere, he is the joke, not only of maid-servants, but of the general herd, falling into wells and every sort of disaster; he looks such an awkward, inexperienced creature, unable to say anything personal, when he is abused, in answer to his adversaries (for he knows no evil of any one); and when he hears the praises of others, he cannot help laughing from the bottom of his soul at their pretensions; and this also gives him a ridiculous appearance. A king or tyrant appears to him to be a kind of swine-herd or cow-herd, milking away at an animal who is much more troublesome and dangerous than cows or sheep; like the cow-herd, he has no time to be educated, and the pen in which he keeps his flock in the mountains is surrounded by a wall. When he hears of large landed properties of ten thousand acres or more, he thinks of the whole earth; or if he is told of the antiquity of a family, he remembers that every one has had myriads of progenitors, rich and poor, Greeks and barbarians, kings and slaves. And he who boasts of his descent from Amphitryon in the twenty-fifth generation, may, if he pleases, add as many more, and double that again, and our philosopher only laughs at his inability to do a larger sum. Such is the man at whom the vulgar scoff; he seems to them as if he could not mind his feet. 'That is very true, Socrates.' But when he tries to draw the quick-witted lawyer out of his pleas and rejoinders to the contemplation of absolute justice or injustice in their own nature, or from the popular praises of wealthy kings to the view of happiness and misery in themselves, or to the reasons why a man should seek after the one and avoid the other, then the situation is reversed; the little wretch turns giddy, and is ready to fall over the precipice; his utterance becomes thick, and he makes himself ridiculous, not to servant-maids, but to every man of liberal education. Such are the two pictures: the one of the philosopher and gentleman, who may be excused for not having learned how to make a bed, or cook up flatteries; the other, a serviceable knave, who hardly knows how to wear his cloak,—still less can he awaken harmonious thoughts or hymn virtue's praises.

'If the world, Socrates, were as ready to receive your words as I am, there would be greater peace and less evil among mankind.'

Evil, Theodorus, must ever remain in this world to be the antagonist of good, out of the way of the gods in heaven. Wherefore also we should fly away from ourselves to them; and to fly to them is to become like them; and to become like them is to become holy, just and true. But many live in the old wives' fable of appearances; they think that you should follow virtue in order that you may seem to be good. And yet the truth is, that God is righteous; and of men, he is most like him who is most righteous. To know
this is wisdom; and in comparison of this the wisdom of the arts or the seeming wisdom of politicians is mean and common. The unrighteous man is apt to pride himself on his cunning; when others call him rogue, he says to himself: 'They only mean that I am one who deserves to live, and not a mere burden of the earth.' But he should reflect that his ignorance makes his condition worse than if he knew. For the penalty of injustice is not death or stripes, but the fatal necessity of becoming more and more unjust. Two patterns of life are set before him; the one blessed and divine, the other godless and wretched; and he is growing more and more like the one and unlike the other. He does not see that if he continues in his cunning, the place of innocence will not receive him after death. And yet if such a man has the courage to hear the argument out, he often becomes dissatisfied with himself, and has no more strength in him than a child.--But we have digressed enough.

'For my part, Socrates, I like the digressions better than the argument, because I understand them better.'

To return. When we left off, the Protagoreans and Heracliteans were maintaining that the ordinances of the State were just, while they lasted. But no one would maintain that the laws of the State were always good or expedient, although this may be the intention of them. For the expedient has to do with the future, about which we are liable to mistake. Now, would Protagoras maintain that man is the measure not only of the present and past, but of the future; and that there is no difference in the judgments of men about the future? Would an untrained man, for example, be as likely to know when he is going to have a fever, as the physician who attended him? And if they differ in opinion, which of them is likely to be right; or are they both right? Is not a vine-grower a better judge of a vintage which is not yet gathered, or a cook of a dinner which is in preparation, or Protagoras of the probable effect of a speech than an ordinary person? The last example speaks 'ad hominen.' For Protagoras would never have amassed a fortune if every man could judge of the future for himself. He is, therefore, compelled to admit that he is a measure; but I, who know nothing, am not equally convinced that I am. This is one way of refuting him; and he is refuted also by the authority which he attributes to the opinions of others, who deny his opinions. I am not equally sure that we can disprove the truth of immediate states of feeling. But this leads us to the doctrine of the universal flux, about which a battle-royal is always going on in the cities of Ionia. 'Yes; the Ephesians are downright mad about the flux; they cannot stop to argue with you, but are in perpetual motion, obedient to their text-books. Their restlessness is beyond expression, and if you ask any of them a question, they will not answer, but dart at you some unintelligible saying, and another and another, making no way either with themselves or with others; for nothing is fixed in them or their ideas,--they are at war with fixed principles.' I suppose, Theodorus, that you have never seen them in time
of peace, when they discourse at leisure to their disciples? 'Disciples! they have none; they are a set of uneducated fanatics, and each of them says of the other that they have no knowledge. We must trust to ourselves, and not to them for the solution of the problem.' Well, the doctrine is old, being derived from the poets, who speak in a figure of Oceanus and Tethys; the truth was once concealed, but is now revealed by the superior wisdom of a later generation, and made intelligible to the cobbler, who, on hearing that all is in motion, and not some things only, as he ignorantly fancied, may be expected to fall down and worship his teachers. And the opposite doctrine must not be forgotten:--

'Alone being remains unmoved which is the name for all,'

as Parmenides affirms. Thus we are in the midst of the fray; both parties are dragging us to their side; and we are not certain which of them are in the right; and if neither, then we shall be in a ridiculous position, having to set up our own opinion against ancient and famous men.

Let us first approach the river-gods, or patrons of the flux.

When they speak of motion, must they not include two kinds of motion, change of place and change of nature?--And all things must be supposed to have both kinds of motion; for if not, the same things would be at rest and in motion, which is contrary to their theory. And did we not say, that all sensations arise thus: they move about between the agent and patient together with a perception, and the patient ceases to be a perceiving power and becomes a percipient, and the agent a quale instead of a quality; but neither has any absolute existence? But now we make the further discovery, that neither white or whiteness, nor any sense or sensation, can be predicated of anything, for they are in a perpetual flux. And therefore we must modify the doctrine of Theaetetus and Protagoras, by asserting further that knowledge is and is not sensation; and of everything we must say equally, that this is and is not, or becomes or becomes not. And still the word 'this' is not quite correct, for language fails in the attempt to express their meaning.

At the close of the discussion, Theodorus claims to be released from the argument, according to his agreement. But Theaetetus insists that they shall proceed to consider the doctrine of rest. This is declined by Socrates, who has too much reverence for the great Parmenides lightly to attack him. (We shall find that he returns to the doctrine of rest in the Sophist; but at present he does not wish to be diverted from his main purpose, which is, to deliver Theaetetus of his conception of knowledge.) He proceeds to interrogate him further. When he says that 'knowledge is in perception,' with what does he perceive? The first answer is, that he perceives sights with the eye, and sounds with the ear. This leads Socrates to make the reflection that nice distinctions of words are
sometimes pedantic, but sometimes necessary; and he proposes in this case
to substitute the word 'through' for 'with.' For the senses are not like
the Trojan warriors in the horse, but have a common centre of perception,
in which they all meet. This common principle is able to compare them with
one another, and must therefore be distinct from them (compare Republic).
And as there are facts of sense which are perceived through the organs of
the body, there are also mathematical and other abstractions, such as
sameness and difference, likeness and unlikeness, which the soul perceives
by herself. Being is the most universal of these abstractions. The good
and the beautiful are abstractions of another kind, which exist in relation
and which above all others the mind perceives in herself, comparing within
her past, present, and future. For example; we know a thing to be hard or
soft by the touch, of which the perception is given at birth to men and
animals. But the essence of hardness or softness, or the fact that this
hardness is, and is the opposite of softness, is slowly learned by
reflection and experience. Mere perception does not reach being, and
therefore fails of truth; and therefore has no share in knowledge. But if
so, knowledge is not perception. What then is knowledge? The mind, when
occupied by herself with being, is said to have opinion--shall we say that
'Knowledge is true opinion'? But still an old difficulty recurs; we ask
ourselves, 'How is false opinion possible?' This difficulty may be stated
as follows:--

Either we know or do not know a thing (for the intermediate processes of
learning and forgetting need not at present be considered); and in thinking
or having an opinion, we must either know or not know that which we think,
and we cannot know and be ignorant at the same time; we cannot confuse one
thing which we do not know, with another thing which we do not know; nor
can we think that which we do not know to be that which we know, or that
which we know to be that which we do not know. And what other case is
conceivable, upon the supposition that we either know or do not know all
things? Let us try another answer in the sphere of being: 'When a man
thinks, and thinks that which is not.' But would this hold in any parallel
case? Can a man see and see nothing? or hear and hear nothing? or touch
and touch nothing? Must he not see, hear, or touch some one existing
thing? For if he thinks about nothing he does not think, and not thinking
he cannot think falsely. And so the path of being is closed against us, as
well as the path of knowledge. But may there not be 'heterodoxy,' or
transference of opinion;--I mean, may not one thing be supposed to be
another? Theaetetus is confident that this must be 'the true falsehood,'
when a man puts good for evil or evil for good. Socrates will not
discourage him by attacking the paradoxical expression 'true falsehood,'
but passes on. The new notion involves a process of thinking about two
things, either together or alternately. And thinking is the conversing of
the mind with herself, which is carried on in question and answer, until
she no longer doubts, but determines and forms an opinion. And false
opinion consists in saying to yourself, that one thing is another. But did
you ever say to yourself, that good is evil, or evil good? Even in sleep, did you ever imagine that odd was even? Or did any man in his senses ever fancy that an ox was a horse, or that two are one? So that we can never think one thing to be another; for you must not meet me with the verbal quibble that one--eteron--is other--eteron (both 'one' and 'other' in Greek are called 'other'--eteron). He who has both the two things in his mind, cannot misplace them; and he who has only one of them in his mind, cannot misplace them--on either supposition transplacement is inconceivable.

But perhaps there may still be a sense in which we can think that which we do not know to be that which we know: e.g. Theaetetus may know Socrates, but at a distance he may mistake another person for him. This process may be conceived by the help of an image. Let us suppose that every man has in his mind a block of wax of various qualities, the gift of Memory, the mother of the Muses; and on this he receives the seal or stamp of those sensations and perceptions which he wishes to remember. That which he succeeds in stamping is remembered and known by him as long as the impression lasts; but that, of which the impression is rubbed out or imperfectly made, is forgotten, and not known. No one can think one thing to be another, when he has the memorial or seal of both of these in his soul, and a sensible impression of neither; or when he knows one and does not know the other, and has no memorial or seal of the other; or when he knows neither; or when he perceives both, or one and not the other, or neither; or when he perceives and knows both, and identifies what he perceives with what he knows (this is still more impossible); or when he does not know one, and does not know and does not perceive the other; or does not perceive one, and does not know and does not perceive the other; or has no perception or knowledge of either--all these cases must be excluded. But he may err when he confuses what he knows or perceives, or what he perceives and does not know, with what he knows, or what he knows and perceives with what he knows and perceives.

Theaetetus is unable to follow these distinctions; which Socrates proceeds to illustrate by examples, first of all remarking, that knowledge may exist without perception, and perception without knowledge. I may know Theodorus and Theaetetus and not see them; I may see them, and not know them. 'That I understand.' But I could not mistake one for the other if I knew you both, and had no perception of either; or if I knew one only, and perceived neither; or if I knew and perceived neither, or in any other of the excluded cases. The only possibility of error is: 1st, when knowing you and Theodorus, and having the impression of both of you on the waxy block, I, seeing you both imperfectly and at a distance, put the foot in the wrong shoe—that is to say, put the seal or stamp on the wrong object: or 2ndly, when knowing both of you I only see one; or when, seeing and knowing you both, I fail to identify the impression and the object. But there could be no error when perception and knowledge correspond.
The waxen block in the heart of a man's soul, as I may say in the words of Homer, who played upon the words ker and keros, may be smooth and deep, and large enough, and then the signs are clearly marked and lasting, and do not get confused. But in the 'hairy heart,' as the all-wise poet sings, when the wax is muddy or hard or moist, there is a corresponding confusion and want of retentiveness; in the muddy and impure there is indistinctness, and still more in the hard, for there the impressions have no depth of wax, and in the moist they are too soon effaced. Yet greater is the indistinctness when they are all jolted together in a little soul, which is narrow and has no room. These are the sort of natures which have false opinion; from stupidity they see and hear and think amiss; and this is falsehood and ignorance. Error, then, is a confusion of thought and sense.

Theaetetus is delighted with this explanation. But Socrates has no sooner found the new solution than he sinks into a fit of despondency. For an objection occurs to him:--May there not be errors where there is no confusion of mind and sense? e.g. in numbers. No one can confuse the man whom he has in his thoughts with the horse which he has in his thoughts, but he may err in the addition of five and seven. And observe that these are purely mental conceptions. Thus we are involved once more in the dilemma of saying, either that there is no such thing as false opinion, or that a man knows what he does not know.

We are at our wit's end, and may therefore be excused for making a bold diversion. All this time we have been repeating the words 'know,' 'understand,' yet we do not know what knowledge is. 'Why, Socrates, how can you argue at all without using them?' Nay, but the true hero of dialectic would have forbidden me to use them until I had explained them. And I must explain them now. The verb 'to know' has two senses, to have and to possess knowledge, and I distinguish 'having' from 'possessing.' A man may possess a garment which he does not wear; or he may have wild birds in an aviary; these in one sense he possesses, and in another he has none of them. Let this aviary be an image of the mind, as the waxen block was; when we are young, the aviary is empty; after a time the birds are put in; for under this figure we may describe different forms of knowledge;--there are some of them in groups, and some single, which are flying about everywhere; and let us suppose a hunt after the science of odd and even, or some other science. The possession of the birds is clearly not the same as the having them in the hand. And the original chase of them is not the same as taking them in the hand when they are already caged.

This distinction between use and possession saves us from the absurdity of supposing that we do not know what we know, because we may know in one sense, i.e. possess, what we do not know in another, i.e. use. But have we not escaped one difficulty only to encounter a greater? For how can the exchange of two kinds of knowledge ever become false opinion? As well might we suppose that ignorance could make a man know, or that blindness
could make him see. Theaetetus suggests that in the aviary there may be flying about mock birds, or forms of ignorance, and we put forth our hands and grasp ignorance, when we are intending to grasp knowledge. But how can he who knows the forms of knowledge and the forms of ignorance imagine one to be the other? Is there some other form of knowledge which distinguishes them? and another, and another? Thus we go round and round in a circle and make no progress.

All this confusion arises out of our attempt to explain false opinion without having explained knowledge. What then is knowledge? Theaetetus repeats that knowledge is true opinion. But this seems to be refuted by the instance of orators and judges. For surely the orator cannot convey a true knowledge of crimes at which the judges were not present; he can only persuade them, and the judge may form a true opinion and truly judge. But if true opinion were knowledge they could not have judged without knowledge.

Once more. Theaetetus offers a definition which he has heard: Knowledge is true opinion accompanied by definition or explanation. Socrates has had a similar dream, and has further heard that the first elements are names only, and that definition or explanation begins when they are combined; the letters are unknown, the syllables or combinations are known. But this new hypothesis when tested by the letters of the alphabet is found to break down. The first syllable of Socrates' name is SO. But what is SO? Two letters, S and O, a sibilant and a vowel, of which no further explanation can be given. And how can any one be ignorant of either of them, and yet know both of them? There is, however, another alternative:--We may suppose that the syllable has a separate form or idea distinct from the letters or parts. The all of the parts may not be the whole. Theaetetus is very much inclined to adopt this suggestion, but when interrogated by Socrates he is unable to draw any distinction between the whole and all the parts. And if the syllables have no parts, then they are those original elements of which there is no explanation. But how can the syllable be known if the letter remains unknown? In learning to read as children, we are first taught the letters and then the syllables. And in music, the notes, which are the letters, have a much more distinct meaning to us than the combination of them.

Once more, then, we must ask the meaning of the statement, that 'Knowledge is right opinion, accompanied by explanation or definition.' Explanation may mean, (1) the reflection or expression of a man's thoughts--but every man who is not deaf and dumb is able to express his thoughts--or (2) the enumeration of the elements of which anything is composed. A man may have a true opinion about a waggon, but then, and then only, has he knowledge of a waggon when he is able to enumerate the hundred planks of Hesiod. Or he may know the syllables of the name Theaetetus, but not the letters; yet not until he knows both can he be said to have knowledge as well as opinion.
But on the other hand he may know the syllable 'The' in the name Theaetetus, yet he may be mistaken about the same syllable in the name Theodorus, and in learning to read we often make such mistakes. And even if he could write out all the letters and syllables of your name in order, still he would only have right opinion. Yet there may be a third meaning of the definition, besides the image or expression of the mind, and the enumeration of the elements, viz. (3) perception of difference.

For example, I may see a man who has eyes, nose, and mouth;--that will not distinguish him from any other man. Or he may have a snub-nose and prominent eyes;--that will not distinguish him from myself and you and others who are like me. But when I see a certain kind of snub-nosedness, then I recognize Theaetetus. And having this sign of difference, I have knowledge. But have I knowledge or opinion of this difference; if I have only opinion I have not knowledge; if I have knowledge we assume a disputed term; for knowledge will have to be defined as right opinion with knowledge of difference.

And so, Theaetetus, knowledge is neither perception nor true opinion, nor yet definition accompanying true opinion. And I have shown that the children of your brain are not worth rearing. Are you still in labour, or have you brought all you have to say about knowledge to the birth? If you have any more thoughts, you will be the better for having got rid of these; or if you have none, you will be the better for not fancying that you know what you do not know. Observe the limits of my art, which, like my mother's, is an art of midwifery; I do not pretend to compare with the good and wise of this and other ages.

And now I go to meet Meletus at the porch of the King Archon; but to-morrow I shall hope to see you again, Theodorus, at this place.

...
The theory that 'Knowledge is sensible perception' is the antithesis of that which derives knowledge from the mind (Theaet.), or which assumes the existence of ideas independent of the mind (Parm.). Yet from their extreme abstraction these theories do not represent the opposite poles of thought in the same way that the corresponding differences would in modern philosophy. The most ideal and the most sensational have a tendency to pass into one another; Heracleitus, like his great successor Hegel, has both aspects. The Eleatic isolation of Being and the Megarian or Cynic isolation of individuals are placed in the same class by Plato (Soph.); and the same principle which is the symbol of motion to one mind is the symbol of rest to another. The Atomists, who are sometimes regarded as the Materialists of Plato, denied the reality of sensation. And in the ancient as well as the modern world there were reactions from theory to experience, from ideas to sense. This is a point of view from which the philosophy of sensation presented great attraction to the ancient thinker. Amid the conflict of ideas and the variety of opinions, the impression of sense remained certain and uniform. Hardness, softness, cold, heat, etc. are not absolutely the same to different persons, but the art of measuring could at any rate reduce them all to definite natures (Republic). Thus the doctrine that knowledge is perception supplies or seems to supply a firm standing ground. Like the other notions of the earlier Greek philosophy, it was held in a very simple way, without much basis of reasoning, and without suggesting the questions which naturally arise in our own minds on the same subject.

(b) The fixedness of impressions of sense furnishes a link of connexion between ancient and modern philosophy. The modern thinker often repeats the parallel axiom, 'All knowledge is experience.' He means to say that the outward and not the inward is both the original source and the final criterion of truth, because the outward can be observed and analyzed; the inward is only known by external results, and is dimly perceived by each man for himself. In what does this differ from the saying of Theaetetus? Chiefly in this--that the modern term 'experience,' while implying a point of departure in sense and a return to sense, also includes all the processes of reasoning and imagination which have intervened. The necessary connexion between them by no means affords a measure of the relative degree of importance which is to be ascribed to either element. For the inductive portion of any science may be small, as in mathematics or ethics, compared with that which the mind has attained by reasoning and reflection on a very few facts.

II. The saying that 'All knowledge is sensation' is identified by Plato with the Protagorean thesis that 'Man is the measure of all things.' The interpretation which Protagoras himself is supposed to give of these latter words is: 'Things are to me as they appear to me, and to you as they appear to you.' But there remains still an ambiguity both in the text and
in the explanation, which has to be cleared up. Did Protagoras merely mean to assert the relativity of knowledge to the human mind? Or did he mean to deny that there is an objective standard of truth?

These two questions have not been always clearly distinguished; the relativity of knowledge has been sometimes confounded with uncertainty. The untutored mind is apt to suppose that objects exist independently of the human faculties, because they really exist independently of the faculties of any individual. In the same way, knowledge appears to be a body of truths stored up in books, which when once ascertained are independent of the discoverer. Further consideration shows us that these truths are not really independent of the mind; there is an adaptation of one to the other, of the eye to the object of sense, of the mind to the conception. There would be no world, if there neither were nor ever had been any one to perceive the world. A slight effort of reflection enables us to understand this; but no effort of reflection will enable us to pass beyond the limits of our own faculties, or to imagine the relation or adaptation of objects to the mind to be different from that of which we have experience. There are certain laws of language and logic to which we are compelled to conform, and to which our ideas naturally adapt themselves; and we can no more get rid of them than we can cease to be ourselves. The absolute and infinite, whether explained as self-existence, or as the totality of human thought, or as the Divine nature, if known to us at all, cannot escape from the category of relation.

But because knowledge is subjective or relative to the mind, we are not to suppose that we are therefore deprived of any of the tests or criteria of truth. One man still remains wiser than another, a more accurate observer and relater of facts, a truer measure of the proportions of knowledge. The nature of testimony is not altered, nor the verification of causes by prescribed methods less certain. Again, the truth must often come to a man through others, according to the measure of his capacity and education. But neither does this affect the testimony, whether written or oral, which he knows by experience to be trustworthy. He cannot escape from the laws of his own mind; and he cannot escape from the further accident of being dependent for his knowledge on others. But still this is no reason why he should always be in doubt; of many personal, of many historical and scientific facts he may be absolutely assured. And having such a mass of acknowledged truth in the mathematical and physical, not to speak of the moral sciences, the moderns have certainly no reason to acquiesce in the statement that truth is appearance only, or that there is no difference between appearance and truth.

The relativity of knowledge is a truism to us, but was a great psychological discovery in the fifth century before Christ. Of this discovery, the first distinct assertion is contained in the thesis of Protagoras. Probably he had no intention either of denying or affirming an
objective standard of truth. He did not consider whether man in the higher
or man in the lower sense was a 'measure of all things.' Like other great
thinkers, he was absorbed with one idea, and that idea was the absoluteness
of perception. Like Socrates, he seemed to see that philosophy must be
brought back from 'nature' to 'truth,' from the world to man. But he did
not stop to analyze whether he meant 'man' in the concrete or man in the
abstract, any man or some men, 'quod semper quod ubique' or individual
private judgment. Such an analysis lay beyond his sphere of thought; the
age before Socrates had not arrived at these distinctions. Like the
Cynics, again, he discarded knowledge in any higher sense than perception.
For 'truer' or 'wiser' he substituted the word 'better,' and is not
unwilling to admit that both states and individuals are capable of
practical improvement. But this improvement does not arise from
intellectual enlightenment, nor yet from the exertion of the will, but from
a change of circumstances and impressions; and he who can effect this
change in himself or others may be deemed a philosopher. In the mode of
effecting it, while agreeing with Socrates and the Cynics in the importance
which he attaches to practical life, he is at variance with both of them.
To suppose that practice can be divorced from speculation, or that we may
do good without caring about truth, is by no means singular, either in
philosophy or life. The singularity of this, as of some other (so-called)
sophistical doctrines, is the frankness with which they are avowed, instead
of being veiled, as in modern times, under ambiguous and convenient
phrases.

Plato appears to treat Protagoras much as he himself is treated by
Aristotle; that is to say, he does not attempt to understand him from his
own point of view. But he entangles him in the meshes of a more advanced
logic. To which Protagoras is supposed to reply by Megarian quibbles,
which destroy logic, 'Not only man, but each man, and each man at each
moment.' In the arguments about sight and memory there is a palpable
unfairness which is worthy of the great 'brainless brothers,' Euthydemus
and Dionysodorus, and may be compared with the egkekalummenos ('obvelatus')
of Eubulides. For he who sees with one eye only cannot be truly said both
to see and not to see; nor is memory, which is liable to forget, the
immediate knowledge to which Protagoras applies the term. Theodorus justly
charges Socrates with going beyond the truth; and Protagoras has equally
right on his side when he protests against Socrates arguing from the common
use of words, which 'the vulgar pervert in all manner of ways.'

III. The theory of Protagoras is connected by Aristotle as well as Plato
with the flux of Heracleitus. But Aristotle is only following Plato, and
Plato, as we have already seen, did not mean to imply that such a connexion
was admitted by Protagoras himself. His metaphysical genius saw or seemed
to see a common tendency in them, just as the modern historian of ancient
philosophy might perceive a parallelism between two thinkers of which they
were probably unconscious themselves. We must remember throughout that
Plato is not speaking of Heracleitus, but of the Heracliteans, who succeeded him; nor of the great original ideas of the master, but of the Eristic into which they had degenerated a hundred years later. There is nothing in the fragments of Heracleitus which at all justifies Plato's account of him. His philosophy may be resolved into two elements--first, change, secondly, law or measure pervading the change: these he saw everywhere, and often expressed in strange mythological symbols. But he has no analysis of sensible perception such as Plato attributes to him; nor is there any reason to suppose that he pushed his philosophy into that absolute negation in which Heracliteanism was sunk in the age of Plato. He never said that 'change means every sort of change;' and he expressly distinguished between 'the general and particular understanding.' Like a poet, he surveyed the elements of mythology, nature, thought, which lay before him, and sometimes by the light of genius he saw or seemed to see a mysterious principle working behind them. But as has been the case with other great philosophers, and with Plato and Aristotle themselves, what was really permanent and original could not be understood by the next generation, while a perverted logic carried out his chance expressions with an illogical consistency. His simple and noble thoughts, like those of the great Eleatic, soon degenerated into a mere strife of words. And when thus reduced to mere words, they seem to have exercised a far wider influence in the cities of Ionia (where the people 'were mad about them') than in the life-time of Heracleitus--a phenomenon which, though at first sight singular, is not without a parallel in the history of philosophy and theology.

It is this perverted form of the Heraclitean philosophy which is supposed to effect the final overthrow of Protagorean sensationalism. For if all things are changing at every moment, in all sorts of ways, then there is nothing fixed or defined at all, and therefore no sensible perception, nor any true word by which that or anything else can be described. Of course Protagoras would not have admitted the justice of this argument any more than Heracleitus would have acknowledged the 'uneducated fanatics' who appealed to his writings. He might have said, 'The excellent Socrates has first confused me with Heracleitus, and Heracleitus with his Ephesian successors, and has then disproved the existence both of knowledge and sensation. But I am not responsible for what I never said, nor will I admit that my common-sense account of knowledge can be overthrown by unintelligible Heraclitean paradoxes.'

IV. Still at the bottom of the arguments there remains a truth, that knowledge is something more than sensible perception;--this alone would not distinguish man from a tadpole. The absoluteness of sensations at each moment destroys the very consciousness of sensations (compare Phileb.), or the power of comparing them. The senses are not mere holes in a 'Trojan horse,' but the organs of a presiding nature, in which they meet. A great advance has been made in psychology when the senses are recognized as
organs of sense, and we are admitted to see or feel 'through them' and not 'by them,' a distinction of words which, as Socrates observes, is by no means pedantic. A still further step has been made when the most abstract notions, such as Being and Not-being, sameness and difference, unity and plurality, are acknowledged to be the creations of the mind herself, working upon the feelings or impressions of sense. In this manner Plato describes the process of acquiring them, in the words 'Knowledge consists not in the feelings or affections (pathemasi), but in the process of reasoning about them (sullogismo).’ Here, in the Parmenides, he means something not really different from generalization. As in the Sophist, he is laying the foundation of a rational psychology, which is to supersede the Platonic reminiscence of Ideas as well as the Eleatic Being and the individualism of Megarians and Cynics.

V. Having rejected the doctrine that 'Knowledge is perception,' we now proceed to look for a definition of knowledge in the sphere of opinion. But here we are met by a singular difficulty: How is false opinion possible? For we must either know or not know that which is presented to the mind or to sense. We of course should answer at once: ‘No; the alternative is not necessary, for there may be degrees of knowledge; and we may know and have forgotten, or we may be learning, or we may have a general but not a particular knowledge, or we may know but not be able to explain;’ and many other ways may be imagined in which we know and do not know at the same time. But these answers belong to a later stage of metaphysical discussion; whereas the difficulty in question naturally arises owing to the childhood of the human mind, like the parallel difficulty respecting Not-being. Men had only recently arrived at the notion of opinion; they could not at once define the true and pass beyond into the false. The very word doxa was full of ambiguity, being sometimes, as in the Eleatic philosophy, applied to the sensible world, and again used in the more ordinary sense of opinion. There is no connexion between sensible appearance and probability, and yet both of them met in the word doxa, and could hardly be disengaged from one another in the mind of the Greek living in the fifth or fourth century B.C. To this was often added, as at the end of the fifth book of the Republic, the idea of relation, which is equally distinct from either of them; also a fourth notion, the conclusion of the dialectical process, the making up of the mind after she has been 'talking to herself' (Theat.).

We are not then surprised that the sphere of opinion and of Not-being should be a dusky, half-lighted place (Republic), belonging neither to the old world of sense and imagination, nor to the new world of reflection and reason. Plato attempts to clear up this darkness. In his accustomed manner he passes from the lower to the higher, without omitting the intermediate stages. This appears to be the reason why he seeks for the definition of knowledge first in the sphere of opinion. Hereafter we shall find that something more than opinion is required.
False opinion is explained by Plato at first as a confusion of mind and sense, which arises when the impression on the mind does not correspond to the impression made on the senses. It is obvious that this explanation (supposing the distinction between impressions on the mind and impressions on the senses to be admitted) does not account for all forms of error; and Plato has excluded himself from the consideration of the greater number, by designedly omitting the intermediate processes of learning and forgetting; nor does he include fallacies in the use of language or erroneous inferences. But he is struck by one possibility of error, which is not covered by his theory, viz. errors in arithmetic. For in numbers and calculation there is no combination of thought and sense, and yet errors may often happen. Hence he is led to discard the explanation which might nevertheless have been supposed to hold good (for anything which he says to the contrary) as a rationale of error, in the case of facts derived from sense.

Another attempt is made to explain false opinion by assigning to error a sort of positive existence. But error or ignorance is essentially negative—a not-knowing; if we knew an error, we should be no longer in error. We may veil our difficulty under figures of speech, but these, although telling arguments with the multitude, can never be the real foundation of a system of psychology. Only they lead us to dwell upon mental phenomena which if expressed in an abstract form would not be realized by us at all. The figure of the mind receiving impressions is one of those images which have rooted themselves for ever in language. It may or may not be a 'gracious aid' to thought; but it cannot be got rid of. The other figure of the enclosure is also remarkable as affording the first hint of universal all-pervading ideas,—a notion further carried out in the Sophist. This is implied in the birds, some in flocks, some solitary, which fly about anywhere and everywhere. Plato discards both figures, as not really solving the question which to us appears so simple: 'How do we make mistakes?' The failure of the enquiry seems to show that we should return to knowledge, and begin with that; and we may afterwards proceed, with a better hope of success, to the examination of opinion.

But is true opinion really distinct from knowledge? The difference between these he seeks to establish by an argument, which to us appears singular and unsatisfactory. The existence of true opinion is proved by the rhetoric of the law courts, which cannot give knowledge, but may give true opinion. The rhetorician cannot put the judge or juror in possession of all the facts which prove an act of violence, but he may truly persuade them of the commission of such an act. Here the idea of true opinion seems to be a right conclusion from imperfect knowledge. But the correctness of such an opinion will be purely accidental; and is really the effect of one man, who has the means of knowing, persuading another who has not. Plato would have done better if he had said that true opinion was a contradiction.
Assuming the distinction between knowledge and opinion, Theaetetus, in answer to Socrates, proceeds to define knowledge as true opinion, with definite or rational explanation. This Socrates identifies with another and different theory, of those who assert that knowledge first begins with a proposition.

The elements may be perceived by sense, but they are names, and cannot be defined. When we assign to them some predicate, they first begin to have a meaning (onomaton sumploke logou ousia). This seems equivalent to saying, that the individuals of sense become the subject of knowledge when they are regarded as they are in nature in relation to other individuals.

Yet we feel a difficulty in following this new hypothesis. For must not opinion be equally expressed in a proposition? The difference between true and false opinion is not the difference between the particular and the universal, but between the true universal and the false. Thought may be as much at fault as sight. When we place individuals under a class, or assign to them attributes, this is not knowledge, but a very rudimentary process of thought; the first generalization of all, without which language would be impossible. And has Plato kept altogether clear of a confusion, which the analogous word logos tends to create, of a proposition and a definition? And is not the confusion increased by the use of the analogous term 'elements,' or 'letters'? For there is no real resemblance between the relation of letters to a syllable, and of the terms to a proposition.

Plato, in the spirit of the Megarian philosophy, soon discovers a flaw in the explanation. For how can we know a compound of which the simple elements are unknown to us? Can two unknowns make a known? Can a whole be something different from the parts? The answer of experience is that they can; for we may know a compound, which we are unable to analyze into its elements; and all the parts, when united, may be more than all the parts separated: e.g. the number four, or any other number, is more than the units which are contained in it; any chemical compound is more than and different from the simple elements. But ancient philosophy in this, as in many other instances, proceeding by the path of mental analysis, was perplexed by doubts which warred against the plainest facts.

Three attempts to explain the new definition of knowledge still remain to be considered. They all of them turn on the explanation of logos. The first account of the meaning of the word is the reflection of thought in speech—a sort of nominalism 'La science est une langue bien faite.' But anybody who is not dumb can say what he thinks; therefore mere speech cannot be knowledge. And yet we may observe, that there is in this explanation an element of truth which is not recognized by Plato; viz. that truth and thought are inseparable from language, although mere expression
in words is not truth. The second explanation of logos is the enumeration of the elementary parts of the complex whole. But this is only definition accompanied with right opinion, and does not yet attain to the certainty of knowledge. Plato does not mention the greater objection, which is, that the enumeration of particulars is endless; such a definition would be based on no principle, and would not help us at all in gaining a common idea. The third is the best explanation,--the possession of a characteristic mark, which seems to answer to the logical definition by genus and difference. But this, again, is equally necessary for right opinion; and we have already determined, although not on very satisfactory grounds, that knowledge must be distinguished from opinion. A better distinction is drawn between them in the Timaeus. They might be opposed as philosophy and rhetoric, and as conversant respectively with necessary and contingent matter. But no true idea of the nature of either of them, or of their relation to one another, could be framed until science obtained a content. The ancient philosophers in the age of Plato thought of science only as pure abstraction, and to this opinion stood in no relation.

Like Theaetetus, we have attained to no definite result. But an interesting phase of ancient philosophy has passed before us. And the negative result is not to be despised. For on certain subjects, and in certain states of knowledge, the work of negation or clearing the ground must go on, perhaps for a generation, before the new structure can begin to rise. Plato saw the necessity of combating the illogical logic of the Megarians and Eristics. For the completion of the edifice, he makes preparation in the Theaetetus, and crowns the work in the Sophist.

Many (1) fine expressions, and (2) remarks full of wisdom, (3) also germs of a metaphysic of the future, are scattered up and down in the dialogue. Such, for example, as (1) the comparison of Theaetetus' progress in learning to the 'noiseless flow of a river of oil'; the satirical touch, 'flavouring a sauce or fawning speech'; or the remarkable expression, 'full of impure dialectic'; or the lively images under which the argument is described,--'the flood of arguments pouring in,' the fresh discussions 'bursting in like a band of revellers.' (2) As illustrations of the second head, may be cited the remark of Socrates, that 'distinctions of words, although sometimes pedantic, are also necessary'; or the fine touch in the character of the lawyer, that 'dangers came upon him when the tenderness of youth was unequal to them'; or the description of the manner in which the spirit is broken in a wicked man who listens to reproof until he becomes like a child; or the punishment of the wicked, which is not physical suffering, but the perpetual companionship of evil (compare Gorgias); or the saying, often repeated by Aristotle and others, that 'philosophy begins in wonder, for Iris is the child of Thaumas'; or the superb contempt with which the philosopher takes down the pride of wealthy landed proprietors by comparison of the whole earth. (3) Important metaphysical ideas are: a. the conception of thought, as the mind talking to herself; b. the notion of
a common sense, developed further by Aristotle, and the explicit declaration, that the mind gains her conceptions of Being, sameness, number, and the like, from reflection on herself; c. the excellent distinction of Theaetetus (which Socrates, speaking with emphasis, 'leaves to grow') between seeing the forms or hearing the sounds of words in a foreign language, and understanding the meaning of them; and d. the distinction of Socrates himself between 'having' and 'possessing' knowledge, in which the answer to the whole discussion appears to be contained.

There is a difference between ancient and modern psychology, and we have a difficulty in explaining one in the terms of the other. To us the inward and outward sense and the inward and outward worlds of which they are the organs are parted by a wall, and appear as if they could never be confounded. The mind is endued with faculties, habits, instincts, and a personality or consciousness in which they are bound together. Over against these are placed forms, colours, external bodies coming into contact with our own body. We speak of a subject which is ourselves, of an object which is all the rest. These are separable in thought, but united in any act of sensation, reflection, or volition. As there are various degrees in which the mind may enter into or be abstracted from the operations of sense, so there are various points at which this separation or union may be supposed to occur. And within the sphere of mind the analogy of sense reappears; and we distinguish not only external objects, but objects of will and of knowledge which we contrast with them. These again are comprehended in a higher object, which reunites with the subject. A multitude of abstractions are created by the efforts of successive thinkers which become logical determinations; and they have to be arranged in order, before the scheme of thought is complete. The framework of the human intellect is not the peculium of an individual, but the joint work of many who are of all ages and countries. What we are in mind is due, not merely to our physical, but to our mental antecedents which we trace in history, and more especially in the history of philosophy. Nor can mental phenomena be truly explained either by physiology or by the observation of consciousness apart from their history. They have a growth of their own, like the growth of a flower, a tree, a human being. They may be conceived as of themselves constituting a common mind, and having a sort of personal identity in which they coexist.

So comprehensive is modern psychology, seeming to aim at constructing anew the entire world of thought. And prior to or simultaneously with this construction a negative process has to be carried on, a clearing away of useless abstractions which we have inherited from the past. Many erroneous conceptions of the mind derived from former philosophies have found their way into language, and we with difficulty disengage ourselves from them.
Mere figures of speech have unconsciously influenced the minds of great thinkers. Also there are some distinctions, as, for example, that of the will and of the reason, and of the moral and intellectual faculties, which are carried further than is justified by experience. Any separation of things which we cannot see or exactly define, though it may be necessary, is a fertile source of error. The division of the mind into faculties or powers or virtues is too deeply rooted in language to be got rid of, but it gives a false impression. For if we reflect on ourselves we see that all our faculties easily pass into one another, and are bound together in a single mind or consciousness; but this mental unity is apt to be concealed from us by the distinctions of language.

A profusion of words and ideas has obscured rather than enlightened mental science. It is hard to say how many fallacies have arisen from the representation of the mind as a box, as a 'tabula rasa,' a book, a mirror, and the like. It is remarkable how Plato in the Theaetetus, after having indulged in the figure of the waxen tablet and the decoy, afterwards discards them. The mind is also represented by another class of images, as the spring of a watch, a motive power, a breath, a stream, a succession of points or moments. As Plato remarks in the Cratylus, words expressive of motion as well as of rest are employed to describe the faculties and operations of the mind; and in these there is contained another store of fallacies. Some shadow or reflection of the body seems always to adhere to our thoughts about ourselves, and mental processes are hardly distinguished in language from bodily ones. To see or perceive are used indifferently of both; the words intuition, moral sense, common sense, the mind's eye, are figures of speech transferred from one to the other. And many other words used in early poetry or in sacred writings to express the works of mind have a materialistic sound; for old mythology was allied to sense, and the distinction of matter and mind had not as yet arisen. Thus materialism receives an illusive aid from language; and both in philosophy and religion the imaginary figure or association easily takes the place of real knowledge.

Again, there is the illusion of looking into our own minds as if our thoughts or feelings were written down in a book. This is another figure of speech, which might be appropriately termed 'the fallacy of the looking-glass.' We cannot look at the mind unless we have the eye which sees, and we can only look, not into, but out of the mind at the thoughts, words, actions of ourselves and others. What we dimly recognize within us is not experience, but rather the suggestion of an experience, which we may gather, if we will, from the observation of the world. The memory has but a feeble recollection of what we were saying or doing a few weeks or a few months ago, and still less of what we were thinking or feeling. This is one among many reasons why there is so little self-knowledge among mankind; they do not carry with them the thought of what they are or have been. The so-called 'facts of consciousness' are equally evanescent; they are facts
which nobody ever saw, and which can neither be defined nor described. Of the three laws of thought the first (All A = A) is an identical proposition—that is to say, a mere word or symbol claiming to be a proposition: the two others (Nothing can be A and not A, and Everything is either A or not A) are untrue, because they exclude degrees and also the mixed modes and double aspects under which truth is so often presented to us. To assert that man is man is unmeaning; to say that he is free or necessary and cannot be both is a half-truth only. These are a few of the entanglements which impede the natural course of human thought. Lastly, there is the fallacy which lies still deeper, of regarding the individual mind apart from the universal, or either, as a self-existent entity apart from the ideas which are contained in them.

In ancient philosophies the analysis of the mind is still rudimentary and imperfect. It naturally began with an effort to disengage the universal from sense—this was the first lifting up of the mist. It wavered between object and subject, passing imperceptibly from one or Being to mind and thought. Appearance in the outward object was for a time indistinguishable from opinion in the subject. At length mankind spoke of knowing as well as of opining or perceiving. But when the word 'knowledge' was found how was it to be explained or defined? It was not an error, it was a step in the right direction, when Protagoras said that 'Man is the measure of all things,' and that 'All knowledge is perception.' This was the subjective which corresponded to the objective 'All is flux.' But the thoughts of men deepened, and soon they began to be aware that knowledge was neither sense, nor yet opinion—with or without explanation; nor the expression of thought, nor the enumeration of parts, nor the addition of characteristic marks. Motion and rest were equally ill adapted to express its nature, although both must in some sense be attributed to it; it might be described more truly as the mind conversing with herself; the discourse of reason; the hymn of dialectic, the science of relations, of ideas, of the so-called arts and sciences, of the one, of the good, of the all:—this is the way along which Plato is leading us in his later dialogues. In its higher signification it was the knowledge, not of men, but of gods, perfect and all sufficing:—like other ideals always passing out of sight, and nevertheless present to the mind of Aristotle as well as Plato, and the reality to which they were both tending. For Aristotle as well as Plato would in modern phraseology have been termed a mystic; and like him would have defined the higher philosophy to be 'Knowledge of being or essence,'—words to which in our own day we have a difficulty in attaching a meaning.

Yet, in spite of Plato and his followers, mankind have again and again returned to a sensational philosophy. As to some of the early thinkers, amid the fleeting of sensible objects, ideas alone seemed to be fixed, so to a later generation amid the fluctuation of philosophical opinions the only fixed points appeared to be outward objects. Any pretence of knowledge which went beyond them implied logical processes, of the
correctness of which they had no assurance and which at best were only probable. The mind, tired of wandering, sought to rest on firm ground; when the idols of philosophy and language were stripped off, the perception of outward objects alone remained. The ancient Epicureans never asked whether the comparison of these with one another did not involve principles of another kind which were above and beyond them. In like manner the modern inductive philosophy forgot to enquire into the meaning of experience, and did not attempt to form a conception of outward objects apart from the mind, or of the mind apart from them. Soon objects of sense were merged in sensations and feelings, but feelings and sensations were still unanalyzed. At last we return to the doctrine attributed by Plato to Protagoras, that the mind is only a succession of momentary perceptions. At this point the modern philosophy of experience forms an alliance with ancient scepticism.

The higher truths of philosophy and religion are very far removed from sense. Admitting that, like all other knowledge, they are derived from experience, and that experience is ultimately resolvable into facts which come to us through the eye and ear, still their origin is a mere accident which has nothing to do with their true nature. They are universal and unseen; they belong to all times—past, present, and future. Any worthy notion of mind or reason includes them. The proof of them is, 1st, their comprehensiveness and consistency with one another; 2ndly, their agreement with history and experience. But sensation is of the present only, is isolated, is and is not in successive moments. It takes the passing hour as it comes, following the lead of the eye or ear instead of the command of reason. It is a faculty which man has in common with the animals, and in which he is inferior to many of them. The importance of the senses in us is that they are the apertures of the mind, doors and windows through which we take in and make our own the materials of knowledge. Regarded in any other point of view sensation is of all mental acts the most trivial and superficial. Hence the term 'sensational' is rightly used to express what is shallow in thought and feeling.

We propose in what follows, first of all, like Plato in the Theaetetus, to analyse sensation, and secondly to trace the connexion between theories of sensation and a sensational or Epicurean philosophy.

Paragraph I. We, as well as the ancients, speak of the five senses, and of a sense, or common sense, which is the abstraction of them. The term 'sense' is also used metaphorically, both in ancient and modern philosophy, to express the operations of the mind which are immediate or intuitive. Of the five senses, two—the sight and the hearing—are of a more subtle and complex nature, while two others—the smell and the taste—seem to be only more refined varieties of touch. All of them are passive, and by this are distinguished from the active faculty of speech: they receive impressions, but do not produce them, except in so far as they are objects of sense
themselves.

Physiology speaks to us of the wonderful apparatus of nerves, muscles, tissues, by which the senses are enabled to fulfil their functions. It traces the connexion, though imperfectly, of the bodily organs with the operations of the mind. Of these latter, it seems rather to know the conditions than the causes. It can prove to us that without the brain we cannot think, and that without the eye we cannot see; and yet there is far more in thinking and seeing than is given by the brain and the eye. It observes the 'concomitant variations' of body and mind. Psychology, on the other hand, treats of the same subject regarded from another point of view. It speaks of the relation of the senses to one another; it shows how they meet the mind; it analyzes the transition from sense to thought. The one describes their nature as apparent to the outward eye; by the other they are regarded only as the instruments of the mind. It is in this latter point of view that we propose to consider them.

The simplest sensation involves an unconscious or nascent operation of the mind; it implies objects of sense, and objects of sense have differences of form, number, colour. But the conception of an object without us, or the power of discriminating numbers, forms, colours, is not given by the sense, but by the mind. A mere sensation does not attain to distinctness: it is a confused impression, sugkechumenon ti, as Plato says (Republic), until number introduces light and order into the confusion. At what point confusion becomes distinctness is a question of degree which cannot be precisely determined. The distant object, the undefined notion, come out into relief as we approach them or attend to them. Or we may assist the analysis by attempting to imagine the world first dawning upon the eye of the infant or of a person newly restored to sight. Yet even with them the mind as well as the eye opens or enlarges. For all three are inseparably bound together--the object would be nowhere and nothing, if not perceived by the sense, and the sense would have no power of distinguishing without the mind.

But prior to objects of sense there is a third nature in which they are contained--that is to say, space, which may be explained in various ways. It is the element which surrounds them; it is the vacuum or void which they leave or occupy when passing from one portion of space to another. It might be described in the language of ancient philosophy, as 'the Not-being' of objects. It is a negative idea which in the course of ages has become positive. It is originally derived from the contemplation of the world without us--the boundless earth or sea, the vacant heaven, and is therefore acquired chiefly through the sense of sight: to the blind the conception of space is feeble and inadequate, derived for the most part from touch or from the descriptions of others. At first it appears to be continuous; afterwards we perceive it to be capable of division by lines or points, real or imaginary. By the help of mathematics we form another idea
of space, which is altogether independent of experience. Geometry teaches us that the innumerable lines and figures by which space is or may be intersected are absolutely true in all their combinations and consequences. New and unchangeable properties of space are thus developed, which are proved to us in a thousand ways by mathematical reasoning as well as by common experience. Through quantity and measure we are conducted to our simplest and purest notion of matter, which is to the cube or solid what space is to the square or surface. And all our applications of mathematics are applications of our ideas of space to matter. No wonder then that they seem to have a necessary existence to us. Being the simplest of our ideas, space is also the one of which we have the most difficulty in ridding ourselves. Neither can we set a limit to it, for wherever we fix a limit, space is springing up beyond. Neither can we conceive a smallest or indivisible portion of it; for within the smallest there is a smaller still; and even these inconceivable qualities of space, whether the infinite or the infinitesimal, may be made the subject of reasoning and have a certain truth to us.

Whether space exists in the mind or out of it, is a question which has no meaning. We should rather say that without it the mind is incapable of conceiving the body, and therefore of conceiving itself. The mind may be indeed imagined to contain the body, in the same way that Aristotle (partly following Plato) supposes God to be the outer heaven or circle of the universe. But how can the individual mind carry about the universe of space packed up within, or how can separate minds have either a universe of their own or a common universe? In such conceptions there seems to be a confusion of the individual and the universal. To say that we can only have a true idea of ourselves when we deny the reality of that by which we have any idea of ourselves is an absurdity. The earth which is our habitation and 'the starry heaven above' and we ourselves are equally an illusion, if space is only a quality or condition of our minds.

Again, we may compare the truths of space with other truths derived from experience, which seem to have a necessity to us in proportion to the frequency of their recurrence or the truth of the consequences which may be inferred from them. We are thus led to remark that the necessity in our ideas of space on which much stress has been laid, differs in a slight degree only from the necessity which appears to belong to other of our ideas, e.g. weight, motion, and the like. And there is another way in which this necessity may be explained. We have been taught it, and the truth which we were taught or which we inherited has never been contradicted in all our experience and is therefore confirmed by it. Who can resist an idea which is presented to him in a general form in every moment of his life and of which he finds no instance to the contrary? The greater part of what is sometimes regarded as the a priori intuition of space is really the conception of the various geometrical figures of which the properties have been revealed by mathematical analysis. And the
certainty of these properties is immeasurably increased to us by our finding that they hold good not only in every instance, but in all the consequences which are supposed to flow from them.

Neither must we forget that our idea of space, like our other ideas, has a history. The Homeric poems contain no word for it; even the later Greek philosophy has not the Kantian notion of space, but only the definite 'place' or 'the infinite.' To Plato, in the Timaeus, it is known only as the 'nurse of generation.' When therefore we speak of the necessity of our ideas of space we must remember that this is a necessity which has grown up with the growth of the human mind, and has been made by ourselves. We can free ourselves from the perplexities which are involved in it by ascending to a time in which they did not as yet exist. And when space or time are described as 'a priori forms or intuitions added to the matter given in sensation,' we should consider that such expressions belong really to the 'pre-historic study' of philosophy, i.e. to the eighteenth century, when men sought to explain the human mind without regard to history or language or the social nature of man.

In every act of sense there is a latent perception of space, of which we only become conscious when objects are withdrawn from it. There are various ways in which we may trace the connexion between them. We may think of space as unresisting matter, and of matter as divided into objects; or of objects again as formed by abstraction into a collective notion of matter, and of matter as rarefied into space. And motion may be conceived as the union of there and not there in space, and force as the materializing or solidification of motion. Space again is the individual and universal in one; or, in other words, a perception and also a conception. So easily do what are sometimes called our simple ideas pass into one another, and differences of kind resolve themselves into differences of degree.

Within or behind space there is another abstraction in many respects similar to it--time, the form of the inward, as space is the form of the outward. As we cannot think of outward objects of sense or of outward sensations without space, so neither can we think of a succession of sensations without time. It is the vacancy of thoughts or sensations, as space is the void of outward objects, and we can no more imagine the mind without the one than the world without the other. It is to arithmetic what space is to geometry; or, more strictly, arithmetic may be said to be equally applicable to both. It is defined in our minds, partly by the analogy of space and partly by the recollection of events which have happened to us, or the consciousness of feelings which we are experiencing. Like space, it is without limit, for whatever beginning or end of time we fix, there is a beginning and end before them, and so on without end. We speak of a past, present, and future, and again the analogy of space assists us in conceiving of them as coexistent. When the limit of time is
removed there arises in our minds the idea of eternity, which at first, like time itself, is only negative, but gradually, when connected with the world and the divine nature, like the other negative infinity of space, becomes positive. Whether time is prior to the mind and to experience, or coeval with them, is (like the parallel question about space) unmeaning. Like space it has been realized gradually: in the Homeric poems, or even in the Hesiodic cosmogony, there is no more notion of time than of space. The conception of being is more general than either, and might therefore with greater plausibility be affirmed to be a condition or quality of the mind. The a priori intuitions of Kant would have been as unintelligible to Plato as his a priori synthetical propositions to Aristotle. The philosopher of Konigsberg supposed himself to be analyzing a necessary mode of thought: he was not aware that he was dealing with a mere abstraction. But now that we are able to trace the gradual development of ideas through religion, through language, through abstractions, why should we interpose the fiction of time between ourselves and realities? Why should we single out one of these abstractions to be the a priori condition of all the others? It comes last and not first in the order of our thoughts, and is not the condition precedent of them, but the last generalization of them. Nor can any principle be imagined more suicidal to philosophy than to assume that all the truth which we are capable of attaining is seen only through an unreal medium. If all that exists in time is illusion, we may well ask with Plato, 'What becomes of the mind?'

Leaving the a priori conditions of sensation we may proceed to consider acts of sense. These admit of various degrees of duration or intensity; they admit also of a greater or less extension from one object, which is perceived directly, to many which are perceived indirectly or in a less degree, and to the various associations of the object which are latent in the mind. In general the greater the intension the less the extension of them. The simplest sensation implies some relation of objects to one another, some position in space, some relation to a previous or subsequent sensation. The acts of seeing and hearing may be almost unconscious and may pass away unnoted; they may also leave an impression behind them or power of recalling them. If, after seeing an object we shut our eyes, the object remains dimly seen in the same or about the same place, but with form and lineaments half filled up. This is the simplest act of memory. And as we cannot see one thing without at the same time seeing another, different objects hang together in recollection, and when we call for one the other quickly follows. To think of the place in which we have last seen a thing is often the best way of recalling it to the mind. Hence memory is dependent on association. The act of recollection may be compared to the sight of an object at a great distance which we have previously seen near and seek to bring near to us in thought. Memory is to sense as dreaming is to waking; and like dreaming has a wayward and uncertain power of recalling impressions from the past.
Thus begins the passage from the outward to the inward sense. But as yet there is no conception of a universal--the mind only remembers the individual object or objects, and is always attaching to them some colour or association of sense. The power of recollection seems to depend on the intensity or largeness of the perception, or on the strength of some emotion with which it is inseparably connected. This is the natural memory which is allied to sense, such as children appear to have and barbarians and animals. It is necessarily limited in range, and its limitation is its strength. In later life, when the mind has become crowded with names, acts, feelings, images innumerable, we acquire by education another memory of system and arrangement which is both stronger and weaker than the first--weaker in the recollection of sensible impressions as they are represented to us by eye or ear--stronger by the natural connexion of ideas with objects or with one another. And many of the notions which form a part of the train of our thoughts are hardly realized by us at the time, but, like numbers or algebraical symbols, are used as signs only, thus lightening the labour of recollection.

And now we may suppose that numerous images present themselves to the mind, which begins to act upon them and to arrange them in various ways. Besides the impression of external objects present with us or just absent from us, we have a dimmer conception of other objects which have disappeared from our immediate recollection and yet continue to exist in us. The mind is full of fancies which are passing to and fro before it. Some feeling or association calls them up, and they are uttered by the lips. This is the first rudimentary imagination, which may be truly described in the language of Hobbes, as 'decaying sense,' an expression which may be applied with equal truth to memory as well. For memory and imagination, though we sometimes oppose them, are nearly allied; the difference between them seems chiefly to lie in the activity of the one compared with the passivity of the other. The sense decaying in memory receives a flash of light or life from imagination. Dreaming is a link of connexion between them; for in dreaming we feebly recollect and also feebly imagine at one and the same time. When reason is asleep the lower part of the mind wanders at will amid the images which have been received from without, the intelligent element retires, and the sensual or sensuous takes its place. And so in the first efforts of imagination reason is latent or set aside; and images, in part disorderly, but also having a unity (however imperfect) of their own, pour like a flood over the mind. And if we could penetrate into the heads of animals we should probably find that their intelligence, or the state of what in them is analogous to our intelligence, is of this nature.

Thus far we have been speaking of men, rather in the points in which they resemble animals than in the points in which they differ from them. The animal too has memory in various degrees, and the elements of imagination, if, as appears to be the case, he dreams. How far their powers or instincts are educated by the circumstances of their lives or by
intercourse with one another or with mankind, we cannot precisely tell. They, like ourselves, have the physical inheritance of form, scent, hearing, sight, and other qualities or instincts. But they have not the mental inheritance of thoughts and ideas handed down by tradition, 'the slow additions that build up the mind' of the human race. And language, which is the great educator of mankind, is wanting in them; whereas in us language is ever present--even in the infant the latent power of naming is almost immediately observable. And therefore the description which has been already given of the nascent power of the faculties is in reality an anticipation. For simultaneous with their growth in man a growth of language must be supposed. The child of two years old sees the fire once and again, and the feeble observation of the same recurring object is associated with the feeble utterance of the name by which he is taught to call it. Soon he learns to utter the name when the object is no longer there, but the desire or imagination of it is present to him. At first in every use of the word there is a colour of sense, an indistinct picture of the object which accompanies it. But in later years he sees in the name only the universal or class word, and the more abstract the notion becomes, the more vacant is the image which is presented to him. Henceforward all the operations of his mind, including the perceptions of sense, are a synthesis of sensations, words, conceptions. In seeing or hearing or looking or listening the sensible impression prevails over the conception and the word. In reflection the process is reversed--the outward object fades away into nothingness, the name or the conception or both together are everything. Language, like number, is intermediate between the two, partaking of the definiteness of the outer and of the universality of the inner world. For logic teaches us that every word is really a universal, and only condescends by the help of position or circumlocution to become the expression of individuals or particulars. And sometimes by using words as symbols we are able to give a 'local habitation and a name' to the infinite and inconceivable.

Thus we see that no line can be drawn between the powers of sense and of reflection--they pass imperceptibly into one another. We may indeed distinguish between the seeing and the closed eye--between the sensation and the recollection of it. But this distinction carries us a very little way, for recollection is present in sight as well as sight in recollection. There is no impression of sense which does not simultaneously recall differences of form, number, colour, and the like. Neither is such a distinction applicable at all to our internal bodily sensations, which give no sign of themselves when unaccompanied with pain, and even when we are most conscious of them, have often no assignable place in the human frame. Who can divide the nerves or great nervous centres from the mind which uses them? Who can separate the pains and pleasures of the mind from the pains and pleasures of the body? The words 'inward and outward,' 'active and passive,' 'mind and body,' are best conceived by us as differences of degree passing into differences of kind, and at one time and under one
aspect acting in harmony and then again opposed. They introduce a system and order into the knowledge of our being; and yet, like many other general terms, are often in advance of our actual analysis or observation.

According to some writers the inward sense is only the fading away or imperfect realization of the outward. But this leaves out of sight one half of the phenomenon. For the mind is not only withdrawn from the world of sense but introduced to a higher world of thought and reflection, in which, like the outward sense, she is trained and educated. By use the outward sense becomes keener and more intense, especially when confined within narrow limits. The savage with little or no thought has a quicker discernment of the track than the civilised man; in like manner the dog, having the help of scent as well as of sight, is superior to the savage. By use again the inward thought becomes more defined and distinct; what was at first an effort is made easy by the natural instrumentality of language, and the mind learns to grasp universals with no more exertion than is required for the sight of an outward object. There is a natural connexion and arrangement of them, like the association of objects in a landscape. Just as a note or two of music suffices to recall a whole piece to the musician's or composer's mind, so a great principle or leading thought suggests and arranges a world of particulars. The power of reflection is not feebler than the faculty of sense, but of a higher and more comprehensive nature. It not only receives the universals of sense, but gives them a new content by comparing and combining them with one another. It withdraws from the seen that it may dwell in the unseen. The sense only presents us with a flat and impenetrable surface: the mind takes the world to pieces and puts it together on a new pattern. The universals which are detached from sense are reconstructed in science. They and not the mere impressions of sense are the truth of the world in which we live; and (as an argument to those who will only believe 'what they can hold in their hands') we may further observe that they are the source of our power over it. To say that the outward sense is stronger than the inward is like saying that the arm of the workman is stronger than the constructing or directing mind.

Returning to the senses we may briefly consider two questions--first their relation to the mind, secondly, their relation to outward objects:--

1. The senses are not merely 'holes set in a wooden horse' (Theaet.), but instruments of the mind with which they are organically connected. There is no use of them without some use of words--some natural or latent logic--some previous experience or observation. Sensation, like all other mental processes, is complex and relative, though apparently simple. The senses mutually confirm and support one another; it is hard to say how much our impressions of hearing may be affected by those of sight, or how far our impressions of sight may be corrected by the touch, especially in infancy. The confirmation of them by one another cannot of course be given by any
one of them. Many intuitions which are inseparable from the act of sense are really the result of complicated reasonings. The most cursory glance at objects enables the experienced eye to judge approximately of their relations and distance, although nothing is impressed upon the retina except colour, including gradations of light and shade. From these delicate and almost imperceptible differences we seem chiefly to derive our ideas of distance and position. By comparison of what is near with what is distant we learn that the tree, house, river, etc. which are a long way off are objects of a like nature with those which are seen by us in our immediate neighbourhood, although the actual impression made on the eye is very different in one case and in the other. This is a language of 'large and small letters' (Republic), slightly differing in form and exquisitely graduated by distance, which we are learning all our life long, and which we attain in various degrees according to our powers of sight or observation. There is nor the consideration. The greater or less strain upon the nerves of the eye or ear is communicated to the mind and silently informs the judgment. We have also the use not of one eye only, but of two, which give us a wider range, and help us to discern, by the greater or less acuteness of the angle which the rays of sight form, the distance of an object and its relation to other objects. But we are already passing beyond the limits of our actual knowledge on a subject which has given rise to many conjectures. More important than the addition of another conjecture is the observation, whether in the case of sight or of any other sense, of the great complexity of the causes and the great simplicity of the effect.

The sympathy of the mind and the ear is no less striking than the sympathy of the mind and the eye. Do we not seem to perceive instinctively and as an act of sense the differences of articulate speech and of musical notes? Yet how small a part of speech or of music is produced by the impression of the ear compared with that which is furnished by the mind!

Again: the more refined faculty of sense, as in animals so also in man, seems often to be transmitted by inheritance. Neither must we forget that in the use of the senses, as in his whole nature, man is a social being, who is always being educated by language, habit, and the teaching of other men as well as by his own observation. He knows distance because he is taught it by a more experienced judgment than his own; he distinguishes sounds because he is told to remark them by a person of a more discerning ear. And as we inherit from our parents or other ancestors peculiar powers of sense or feeling, so we improve and strengthen them, not only by regular teaching, but also by sympathy and communion with other persons.

2. The second question, namely, that concerning the relation of the mind to external objects, is really a trifling one, though it has been made the subject of a famous philosophy. We may if we like, with Berkeley, resolve objects of sense into sensations; but the change is one of name only, and
nothing is gained and something is lost by such a resolution or confusion of them. For we have not really made a single step towards idealism, and any arbitrary inversion of our ordinary modes of speech is disturbing to the mind. The youthful metaphysician is delighted at his marvellous discovery that nothing is, and that what we see or feel is our sensation only: for a day or two the world has a new interest to him; he alone knows the secret which has been communicated to him by the philosopher, that mind is all—when in fact he is going out of his mind in the first intoxication of a great thought. But he soon finds that all things remain as they were—the laws of motion, the properties of matter, the qualities of substances. After having inflicted his theories on any one who is willing to receive them 'first on his father and mother, secondly on some other patient listener, thirdly on his dog,' he finds that he only differs from the rest of mankind in the use of a word. He had once hoped that by getting rid of the solidity of matter he might open a passage to worlds beyond. He liked to think of the world as the representation of the divine nature, and delighted to imagine angels and spirits wandering through space, present in the room in which he is sitting without coming through the door, nowhere and everywhere at the same instant. At length he finds that he has been the victim of his own fancies; he has neither more nor less evidence of the supernatural than he had before. He himself has become unsettled, but the laws of the world remain fixed as at the beginning. He has discovered that his appeal to the fallibility of sense was really an illusion. For whatever uncertainty there may be in the appearances of nature, arises only out of the imperfection or variation of the human senses, or possibly from the deficiency of certain branches of knowledge; when science is able to apply her tests, the uncertainty is at an end. We are apt sometimes to think that moral and metaphysical philosophy are lowered by the influence which is exercised over them by physical science. But any interpretation of nature by physical science is far in advance of such idealism. The philosophy of Berkeley, while giving unbounded license to the imagination, is still grovelling on the level of sense.

We may, if we please, carry this scepticism a step further, and deny, not only objects of sense, but the continuity of our sensations themselves. We may say with Protagoras and Hume that what is appears, and that what appears appears only to individuals, and to the same individual only at one instant. But then, as Plato asks,—and we must repeat the question,—What becomes of the mind? Experience tells us by a thousand proofs that our sensations of colour, taste, and the like, are the same as they were an instant ago—that the act which we are performing one minute is continued by us in the next—and also supplies abundant proof that the perceptions of other men are, speaking generally, the same or nearly the same with our own. After having slowly and laboriously in the course of ages gained a conception of a whole and parts, of the constitution of the mind, of the relation of man to God and nature, imperfect indeed, but the best we can,
we are asked to return again to the 'beggarly elements' of ancient scepticism, and acknowledge only atoms and sensations devoid of life or unity. Why should we not go a step further still and doubt the existence of the senses of all things? We are but 'such stuff as dreams are made of;' for we have left ourselves no instruments of thought by which we can distinguish man from the animals, or conceive of the existence even of a mollusc. And observe, this extreme scepticism has been allowed to spring up among us, not, like the ancient scepticism, in an age when nature and language really seemed to be full of illusions, but in the eighteenth and nineteenth centuries, when men walk in the daylight of inductive science.

The attractiveness of such speculations arises out of their true nature not being perceived. They are veiled in graceful language; they are not pushed to extremes; they stop where the human mind is disposed also to stop--short of a manifest absurdity. Their inconsistency is not observed by their authors or by mankind in general, who are equally inconsistent themselves. They leave on the mind a pleasing sense of wonder and novelty: in youth they seem to have a natural affinity to one class of persons as poetry has to another; but in later life either we drift back into common sense, or we make them the starting-points of a higher philosophy.

We are often told that we should enquire into all things before we accept them;--with what limitations is this true? For we cannot use our senses without admitting that we have them, or think without presupposing that there is in us a power of thought, or affirm that all knowledge is derived from experience without implying that this first principle of knowledge is prior to experience. The truth seems to be that we begin with the natural use of the mind as of the body, and we seek to describe this as well as we can. We eat before we know the nature of digestion; we think before we know the nature of reflection. As our knowledge increases, our perception of the mind enlarges also. We cannot indeed get beyond facts, but neither can we draw any line which separates facts from ideas. And the mind is not something separate from them but included in them, and they in the mind, both having a distinctness and individuality of their own. To reduce our conception of mind to a succession of feelings and sensations is like the attempt to view a wide prospect by inches through a microscope, or to calculate a period of chronology by minutes. The mind ceases to exist when it loses its continuity, which though far from being its highest determination, is yet necessary to any conception of it. Even an inanimate nature cannot be adequately represented as an endless succession of states or conditions.

Paragraph II. Another division of the subject has yet to be considered: Why should the doctrine that knowledge is sensation, in ancient times, or of sensationalism or materialism in modern times, be allied to the lower rather than to the higher view of ethical philosophy? At first sight the nature and origin of knowledge appear to be wholly disconnected from ethics
and religion, nor can we deny that the ancient Stoics were materialists, or that the materialist doctrines prevalent in modern times have been associated with great virtues, or that both religious and philosophical idealism have not unfrequently parted company with practice. Still upon the whole it must be admitted that the higher standard of duty has gone hand in hand with the higher conception of knowledge. It is Protagoras who is seeking to adapt himself to the opinions of the world; it is Plato who rises above them: the one maintaining that all knowledge is sensation; the other basing the virtues on the idea of good. The reason of this phenomenon has now to be examined.

By those who rest knowledge immediately upon sense, that explanation of human action is deemed to be the truest which is nearest to sense. As knowledge is reduced to sensation, so virtue is reduced to feeling, happiness or good to pleasure. The different virtues--the various characters which exist in the world--are the disguises of self-interest. Human nature is dried up; there is no place left for imagination, or in any higher sense for religion. Ideals of a whole, or of a state, or of a law of duty, or of a divine perfection, are out of place in an Epicurean philosophy. The very terms in which they are expressed are suspected of having no meaning. Man is to bring himself back as far as he is able to the condition of a rational beast. He is to limit himself to the pursuit of pleasure, but of this he is to make a far-sighted calculation;--he is to be rationalized, secularized, animalized: or he is to be an amiable sceptic, better than his own philosophy, and not falling below the opinions of the world.

Imagination has been called that 'busy faculty' which is always intruding upon us in the search after truth. But imagination is also that higher power by which we rise above ourselves and the commonplaces of thought and life. The philosophical imagination is another name for reason finding an expression of herself in the outward world. To deprive life of ideals is to deprive it of all higher and comprehensive aims and of the power of imparting and communicating them to others. For men are taught, not by those who are on a level with them, but by those who rise above them, who see the distant hills, who soar into the empyrean. Like a bird in a cage, the mind confined to sense is always being brought back from the higher to the lower, from the wider to the narrower view of human knowledge. It seeks to fly but cannot: instead of aspiring towards perfection, 'it hovers about this lower world and the earthly nature.' It loses the religious sense which more than any other seems to take a man out of himself. Weary of asking 'What is truth?' it accepts the 'blind witness of eyes and ears;' it draws around itself the curtain of the physical world and is satisfied. The strength of a sensational philosophy lies in the ready accommodation of it to the minds of men; many who have been metaphysicians in their youth, as they advance in years are prone to acquiesce in things as they are, or rather appear to be. They are
spectators, not thinkers, and the best philosophy is that which requires of them the least amount of mental effort.

As a lower philosophy is easier to apprehend than a higher, so a lower way of life is easier to follow; and therefore such a philosophy seems to derive a support from the general practice of mankind. It appeals to principles which they all know and recognize: it gives back to them in a generalized form the results of their own experience. To the man of the world they are the quintessence of his own reflections upon life. To follow custom, to have no new ideas or opinions, not to be straining after impossibilities, to enjoy to-day with just so much forethought as is necessary to provide for the morrow, this is regarded by the greater part of the world as the natural way of passing through existence. And many who have lived thus have attained to a lower kind of happiness or equanimity. They have possessed their souls in peace without ever allowing them to wander into the region of religious or political controversy, and without any care for the higher interests of man. But nearly all the good (as well as some of the evil) which has ever been done in this world has been the work of another spirit, the work of enthusiasts and idealists, of apostles and martyrs. The leaders of mankind have not been of the gentle Epicurean type; they have personified ideas; they have sometimes also been the victims of them. But they have always been seeking after a truth or ideal of which they fell short; and have died in a manner disappointed of their hopes that they might lift the human race out of the slough in which they found them. They have done little compared with their own visions and aspirations; but they have done that little, only because they sought to do, and once perhaps thought that they were doing, a great deal more.

The philosophies of Epicurus or Hume give no adequate or dignified conception of the mind. There is no organic unity in a succession of feeling or sensations; no comprehensiveness in an infinity of separate actions. The individual never reflects upon himself as a whole; he can hardly regard one act or part of his life as the cause or effect of any other act or part. Whether in practice or speculation, he is to himself only in successive instants. To such thinkers, whether in ancient or in modern times, the mind is only the poor recipient of impressions--not the heir of all the ages, or connected with all other minds. It begins again with its own modicum of experience having only such vague conceptions of the wisdom of the past as are inseparable from language and popular opinion. It seeks to explain from the experience of the individual what can only be learned from the history of the world. It has no conception of obligation, duty, conscience--these are to the Epicurean or Utilitarian philosopher only names which interfere with our natural perceptions of pleasure and pain.

There seem then to be several answers to the question, Why the theory that all knowledge is sensation is allied to the lower rather than to the higher
view of ethical philosophy:--1st, Because it is easier to understand and practise; 2ndly, Because it is fatal to the pursuit of ideals, moral, political, or religious; 3rdly, Because it deprives us of the means and instruments of higher thought, of any adequate conception of the mind, of knowledge, of conscience, of moral obligation.

ON THE NATURE AND LIMITS OF PSYCHOLOGY.

O gar arche men o me oide, teleute de kai ta metaxu ex ou me oide sumpeplektai, tis mechane ten toiauten omologian pote epistemen genesthai; Plato Republic.

Monon gar auto legeiv, osper gumnon kai aperemomenon apo ton onton apanton, adunaton. Soph.

Since the above essay first appeared, many books on Psychology have been given to the world, partly based upon the views of Herbart and other German philosophers, partly independent of them. The subject has gained in bulk and extent; whether it has had any true growth is more doubtful. It begins to assume the language and claim the authority of a science; but it is only an hypothesis or outline, which may be filled up in many ways according to the fancy of individual thinkers. The basis of it is a precarious one,--consciousness of ourselves and a somewhat uncertain observation of the rest of mankind. Its relations to other sciences are not yet determined: they seem to be almost too complicated to be ascertained. It may be compared to an irregular building, run up hastily and not likely to last, because its foundations are weak, and in many places rest only on the surface of the ground. It has sought rather to put together scattered observations and to make them into a system than to describe or prove them. It has never severely drawn the line between facts and opinions. It has substituted a technical phraseology for the common use of language, being neither able to win acceptance for the one nor to get rid of the other.

The system which has thus arisen appears to be a kind of metaphysic narrowed to the point of view of the individual mind, through which, as through some new optical instrument limiting the sphere of vision, the interior of thought and sensation is examined. But the individual mind in the abstract, as distinct from the mind of a particular individual and separated from the environment of circumstances, is a fiction only. Yet facts which are partly true gather around this fiction and are naturally described by the help of it. There is also a common type of the mind which is derived from the comparison of many minds with one another and with our own. The phenomena of which Psychology treats are familiar to us, but they are for the most part indefinite; they relate to a something inside the body, which seems also to overlap the limits of space. The operations of
this something, when isolated, cannot be analyzed by us or subjected to observation and experiment. And there is another point to be considered. The mind, when thinking, cannot survey that part of itself which is used in thought. It can only be contemplated in the past, that is to say, in the history of the individual or of the world. This is the scientific method of studying the mind. But Psychology has also some other supports, specious rather than real. It is partly sustained by the false analogy of Physical Science and has great expectations from its near relationship to Physiology. We truly remark that there is an infinite complexity of the body corresponding to the infinite subtlety of the mind; we are conscious that they are very nearly connected. But in endeavouring to trace the nature of the connexion we are baffled and disappointed. In our knowledge of them the gulf remains the same: no microscope has ever seen into thought; no reflection on ourselves has supplied the missing link between mind and matter...These are the conditions of this very inexact science, and we shall only know less of it by pretending to know more, or by assigning to it a form or style to which it has not yet attained and is not really entitled.

Experience shows that any system, however baseless and ineffectual, in our own or in any other age, may be accepted and continue to be studied, if it seeks to satisfy some unanswered question or is based upon some ancient tradition, especially if it takes the form and uses the language of inductive philosophy. The fact therefore that such a science exists and is popular, affords no evidence of its truth or value. Many who have pursued it far into detail have never examined the foundations on which it rests. The have been many imaginary subjects of knowledge of which enthusiastic persons have made a lifelong study, without ever asking themselves what is the evidence for them, what is the use of them, how long they will last? They may pass away, like the authors of them, and 'leave not a wrack behind;' or they may survive in fragments. Nor is it only in the Middle Ages, or in the literary desert of China or of India, that such systems have arisen; in our own enlightened age, growing up by the side of Physics, Ethics, and other really progressive sciences, there is a weary waste of knowledge, falsely so-called. There are sham sciences which no logic has ever put to the test, in which the desire for knowledge invents the materials of it.

And therefore it is expedient once more to review the bases of Psychology, lest we should be imposed upon by its pretensions. The study of it may have done good service by awakening us to the sense of inveterate errors familiarized by language, yet it may have fallen into still greater ones; under the pretence of new investigations it may be wasting the lives of those who are engaged in it. It may also be found that the discussion of it will throw light upon some points in the Theaetetus of Plato,—the oldest work on Psychology which has come down to us. The imaginary science may be called, in the language of ancient philosophy, 'a shadow of a part
of Dialectic or Metaphysic' (Gorg.).

In this postscript or appendix we propose to treat, first, of the true bases of Psychology; secondly, of the errors into which the students of it are most likely to fall; thirdly, of the principal subjects which are usually comprehended under it; fourthly, of the form which facts relating to the mind most naturally assume.

We may preface the enquiry by two or three remarks:--

(1) We do not claim for the popular Psychology the position of a science at all; it cannot, like the Physical Sciences, proceed by the Inductive Method: it has not the necessity of Mathematics: it does not, like Metaphysic, argue from abstract notions or from internal coherence. It is made up of scattered observations. A few of these, though they may sometimes appear to be truisms, are of the greatest value, and free from all doubt. We are conscious of them in ourselves; we observe them working in others; we are assured of them at all times. For example, we are absolutely certain, (a) of the influence exerted by the mind over the body or by the body over the mind: (b) of the power of association, by which the appearance of some person or the occurrence of some event recalls to mind, not always but often, other persons and events: (c) of the effect of habit, which is strongest when least disturbed by reflection, and is to the mind what the bones are to the body: (d) of the real, though not unlimited, freedom of the human will: (e) of the reference, more or less distinct, of our sensations, feelings, thoughts, actions, to ourselves, which is called consciousness, or, when in excess, self-consciousness: (f) of the distinction of the 'I' and 'Not I,' of ourselves and outward objects. But when we attempt to gather up these elements in a single system, we discover that the links by which we combine them are apt to be mere words. We are in a country which has never been cleared or surveyed; here and there only does a gleam of light come through the darkness of the forest.

(2) These fragments, although they can never become science in the ordinary sense of the word, are a real part of knowledge and may be of great value in education. We may be able to add a good deal to them from our own experience, and we may verify them by it. Self-examination is one of those studies which a man can pursue alone, by attention to himself and the processes of his individual mind. He may learn much about his own character and about the character of others, if he will 'make his mind sit down' and look at itself in the glass. The great, if not the only use of such a study is a practical one,--to know, first, human nature, and, secondly, our own nature, as it truly is.

(3) Hence it is important that we should conceive of the mind in the noblest and simplest manner. While acknowledging that language has been
the greatest factor in the formation of human thought, we must endeavour to
get rid of the disguises, oppositions, contradictions, which arise out of
it. We must disengage ourselves from the ideas which the customary use of
words has implanted in us. To avoid error as much as possible when we are
speaking of things unseen, the principal terms which we use should be few,
and we should not allow ourselves to be enslaved by them. Instead of
seeking to frame a technical language, we should vary our forms of speech,
lest they should degenerate into formulas. A difficult philosophical
problem is better understood when translated into the vernacular.

I.a. Psychology is inseparable from language, and early language contains
the first impressions or the oldest experience of man respecting himself.
These impressions are not accurate representations of the truth; they are
the reflections of a rudimentary age of philosophy. The first and simplest
forms of thought are rooted so deep in human nature that they can never be
got rid of; but they have been perpetually enlarged and elevated, and the
use of many words has been transferred from the body to the mind. The
spiritual and intellectual have thus become separated from the material--
there is a cleft between them; and the heart and the conscience of man rise
above the dominion of the appetites and create a new language in which they
too find expression. As the differences of actions begin to be perceived,
more and more names are needed. This is the first analysis of the human
mind; having a general foundation in popular experience, it is moulded to a
certain extent by hierophants and philosophers. (See Introd. to Cratylus.)

b. This primitive psychology is continually receiving additions from the
first thinkers, who in return take a colour from the popular language of
the time. The mind is regarded from new points of view, and becomes
adapted to new conditions of knowledge. It seeks to isolate itself from
matter and sense, and to assert its independence in thought. It recognizes
that it is independent of the external world. It has five or six natural
states or stages:--(1) sensation, in which it is almost latent or
quiescent: (2) feeling, or inner sense, when the mind is just awakening:
(3) memory, which is decaying sense, and from time to time, as with a spark
or flash, has the power of recollecting or reanimating the buried past:
(4) thought, in which images pass into abstract notions or are intermingled
with them: (5) action, in which the mind moves forward, of itself, or
under the impulse of want or desire or pain, to attain or avoid some end or
consequence: and (6) there is the composition of these or the admixture or
assimilation of them in various degrees. We never see these processes of
the mind, nor can we tell the causes of them. But we know them by their
results, and learn from other men that so far as we can describe to them or
they to us the workings of the mind, their experience is the same or nearly
the same with our own.

c. But the knowledge of the mind is not to any great extent derived from
the observation of the individual by himself. It is the growing
consciousness of the human race, embodied in language, acknowledged by experience, and corrected from time to time by the influence of literature and philosophy. A great, perhaps the most important, part of it is to be found in early Greek thought. In the Theaetetus of Plato it has not yet become fixed: we are still stumbling on the threshold. In Aristotle the process is more nearly completed, and has gained innumerable abstractions, of which many have had to be thrown away because relative only to the controversies of the time. In the interval between Thales and Aristotle were realized the distinctions of mind and body, of universal and particular, of infinite and infinitesimal, of idea and phenomenon; the class conceptions of faculties and virtues, the antagonism of the appetites and the reason; and connected with this, at a higher stage of development, the opposition of moral and intellectual virtue; also the primitive conceptions of unity, being, rest, motion, and the like. These divisions were not really scientific, but rather based on popular experience. They were not held with the precision of modern thinkers, but taken all together they gave a new existence to the mind in thought, and greatly enlarged and more accurately defined man's knowledge of himself and of the world. The majority of them have been accepted by Christian and Western nations. Yet in modern times we have also drifted so far away from Aristotle, that if we were to frame a system on his lines we should be at war with ordinary language and untrue to our own consciousness. And there have been a few both in mediaeval times and since the Reformation who have rebelled against the Aristotelian point of view. Of these eccentric thinkers there have been various types, but they have all a family likeness. According to them, there has been too much analysis and too little synthesis, too much division of the mind into parts and too little conception of it as a whole or in its relation to God and the laws of the universe. They have thought that the elements of plurality and unity have not been duly adjusted. The tendency of such writers has been to allow the personality of man to be absorbed in the universal, or in the divine nature, and to deny the distinction between matter and mind, or to substitute one for the other. They have broken some of the idols of Psychology: they have challenged the received meaning of words: they have regarded the mind under many points of view. But though they may have shaken the old, they have not established the new; their views of philosophy, which seem like the echo of some voice from the East, have been alien to the mind of Europe.

d. The Psychology which is found in common language is in some degree verified by experience, but not in such a manner as to give it the character of an exact science. We cannot say that words always correspond to facts. Common language represents the mind from different and even opposite points of view, which cannot be all of them equally true (compare Cratylus). Yet from diversity of statements and opinions may be obtained a nearer approach to the truth than is to be gained from any one of them. It also tends to correct itself, because it is gradually brought nearer to the common sense of mankind. There are some leading categories or
classifications of thought, which, though unverified, must always remain the elements from which the science or study of the mind proceeds. For example, we must assume ideas before we can analyze them, and also a continuing mind to which they belong; the resolution of it into successive moments, which would say, with Protagoras, that the man is not the same person which he was a minute ago, is, as Plato implies in the Theaetetus, an absurdity.

e. The growth of the mind, which may be traced in the histories of religions and philosophies and in the thoughts of nations, is one of the deepest and noblest modes of studying it. Here we are dealing with the reality, with the greater and, as it may be termed, the most sacred part of history. We study the mind of man as it begins to be inspired by a human or divine reason, as it is modified by circumstances, as it is distributed in nations, as it is renovated by great movements, which go beyond the limits of nations and affect human society on a scale still greater, as it is created or renewed by great minds, who, looking down from above, have a wider and more comprehensive vision. This is an ambitious study, of which most of us rather 'entertain conjecture' than arrive at any detailed or accurate knowledge. Later arises the reflection how these great ideas or movements of the world have been appropriated by the multitude and found a way to the minds of individuals. The real Psychology is that which shows how the increasing knowledge of nature and the increasing experience of life have always been slowly transforming the mind, how religions too have been modified in the course of ages 'that God may be all and in all.'

f. Lastly, though we speak of the study of mind in a special sense, it may also be said that there is no science which does not contribute to our knowledge of it. The methods of science and their analogies are new faculties, discovered by the few and imparted to the many. They are to the mind, what the senses are to the body; or better, they may be compared to instruments such as the telescope or microscope by which the discriminating power of the senses, or to other mechanical inventions, by which the strength and skill of the human body is so immeasurably increased.

II. The new Psychology, whatever may be its claim to the authority of a science, has called attention to many facts and corrected many errors, which without it would have been unexamined. Yet it is also itself very liable to illusion. The evidence on which it rests is vague and indefinite. The field of consciousness is never seen by us as a whole, but only at particular points, which are always changing. The veil of language intercepts facts. Hence it is desirable that in making an approach to the study we should consider at the outset what are the kinds of error which most easily affect it, and note the differences which separate it from other branches of knowledge.
a. First, we observe the mind by the mind. It would seem therefore that we are always in danger of leaving out the half of that which is the subject of our enquiry. We come at once upon the difficulty of what is the meaning of the word. Does it differ as subject and object in the same manner? Can we suppose one set of feelings or one part of the mind to interpret another? Is the introspecting thought the same with the thought which is introspected? Has the mind the power of surveying its whole domain at one and the same time?—No more than the eye can take in the whole human body at a glance. Yet there may be a glimpse round the corner, or a thought transferred in a moment from one point of view to another, which enables us to see nearly the whole, if not at once, at any rate in succession. Such glimpses will hardly enable us to contemplate from within the mind in its true proportions. Hence the firmer ground of Psychology is not the consciousness of inward feelings but the observation of external actions, being the actions not only of ourselves, but of the innumerable persons whom we come across in life.

b. The error of supposing partial or occasional explanation of mental phenomena to be the only or complete ones. For example, we are disinclined to admit of the spontaneity or discontinuity of the mind—it seems to us like an effect without a cause, and therefore we suppose the train of our thoughts to be always called up by association. Yet it is probable, or indeed certain, that of many mental phenomena there are no mental antecedents, but only bodily ones.

c. The false influence of language. We are apt to suppose that when there are two or more words describing faculties or processes of the mind, there are real differences corresponding to them. But this is not the case. Nor can we determine how far they do or do not exist, or by what degree or kind of difference they are distinguished. The same remark may be made about figures of speech. They fill up the vacancy of knowledge; they are to the mind what too much colour is to the eye; but the truth is rather concealed than revealed by them.

d. The uncertain meaning of terms, such as Consciousness, Conscience, Will, Law, Knowledge, Internal and External Sense; these, in the language of Plato, 'we shamelessly use, without ever having taken the pains to analyze them.'

e. A science such as Psychology is not merely an hypothesis, but an hypothesis which, unlike the hypotheses of Physics, can never be verified. It rests only on the general impressions of mankind, and there is little or no hope of adding in any considerable degree to our stock of mental facts.

f. The parallelism of the Physical Sciences, which leads us to analyze the mind on the analogy of the body, and so to reduce mental operations to the level of bodily ones, or to confound one with the other.
g. That the progress of Physiology may throw a new light on Psychology is a dream in which scientific men are always tempted to indulge. But however certain we may be of the connexion between mind and body, the explanation of the one by the other is a hidden place of nature which has hitherto been investigated with little or no success.

h. The impossibility of distinguishing between mind and body. Neither in thought nor in experience can we separate them. They seem to act together; yet we feel that we are sometimes under the dominion of the one, sometimes of the other, and sometimes, both in the common use of language and in fact, they transform themselves, the one into the good principle, the other into the evil principle; and then again the 'I' comes in and mediates between them. It is also difficult to distinguish outward facts from the ideas of them in the mind, or to separate the external stimulus to a sensation from the activity of the organ, or this from the invisible agencies by which it reaches the mind, or any process of sense from its mental antecedent, or any mental energy from its nervous expression.

i. The fact that mental divisions tend to run into one another, and that in speaking of the mind we cannot always distinguish differences of kind from differences of degree; nor have we any measure of the strength and intensity of our ideas or feelings.

j. Although heredity has been always known to the ancients as well as ourselves to exercise a considerable influence on human character, yet we are unable to calculate what proportion this birth-influence bears to nurture and education. But this is the real question. We cannot pursue the mind into embryology: we can only trace how, after birth, it begins to grow. But how much is due to the soil, how much to the original latent seed, it is impossible to distinguish. And because we are certain that heredity exercises a considerable, but undefined influence, we must not increase the wonder by exaggerating it.

k. The love of system is always tending to prevail over the historical investigation of the mind, which is our chief means of knowing it. It equally tends to hinder the other great source of our knowledge of the mind, the observation of its workings and processes which we can make for ourselves.

l. The mind, when studied through the individual, is apt to be isolated--this is due to the very form of the enquiry; whereas, in truth, it is indistinguishable from circumstances, the very language which it uses being the result of the instincts of long-forgotten generations, and every word which a man utters being the answer to some other word spoken or suggested by somebody else.
III. The tendency of the preceding remarks has been to show that Psychology is necessarily a fragment, and is not and cannot be a connected system. We cannot define or limit the mind, but we can describe it. We can collect information about it; we can enumerate the principal subjects which are included in the study of it. Thus we are able to rehabilitate Psychology to some extent, not as a branch of science, but as a collection of facts bearing on human life, as a part of the history of philosophy, as an aspect of Metaphysic. It is a fragment of a science only, which in all probability can never make any great progress or attain to much clearness or exactness. It is however a kind of knowledge which has a great interest for us and is always present to us, and of which we carry about the materials in our own bosoms. We can observe our minds and we can experiment upon them, and the knowledge thus acquired is not easily forgotten, and is a help to us in study as well as in conduct.

The principal subjects of Psychology may be summed up as follows:

a. The relation of man to the world around him,—in what sense and within what limits can he withdraw from its laws or assert himself against them (Freedom and Necessity), and what is that which we suppose to be thus independent and which we call ourselves? How does the inward differ from the outward and what is the relation between them, and where do we draw the line by which we separate mind from matter, the soul from the body? Is the mind active or passive, or partly both? Are its movements identical with those of the body, or only preconcerted and coincident with them, or is one simply an aspect of the other?

b. What are we to think of time and space? Time seems to have a nearer connexion with the mind, space with the body; yet time, as well as space, is necessary to our idea of either. We see also that they have an analogy with one another, and that in Mathematics they often interpenetrate. Space or place has been said by Kant to be the form of the outward, time of the inward sense. He regards them as parts or forms of the mind. But this is an unfortunate and inexpressive way of describing their relation to us. For of all the phenomena present to the human mind they seem to have most the character of objective existence. There is no use in asking what is beyond or behind them; we cannot get rid of them. And to throw the laws of external nature which to us are the type of the immutable into the subjective side of the antithesis seems to be equally inappropriate.

c. When in imagination we enter into the closet of the mind and withdraw ourselves from the external world, we seem to find there more or less distinct processes which may be described by the words, 'I perceive,' 'I feel,' 'I think,' 'I want,' 'I wish,' 'I like,' 'I dislike,' 'I fear,' 'I know,' 'I remember,' 'I imagine,' 'I dream,' 'I act,' 'I endeavour,' 'I hope.' These processes would seem to have the same notions attached to them in the minds of all educated persons. They are distinguished from one
another in thought, but they intermingle. It is possible to reflect upon
them or to become conscious of them in a greater or less degree, or with a
greater or less continuity or attention, and thus arise the intermittent
phenomena of consciousness or self-consciousness. The use of all of them
is possible to us at all times; and therefore in any operation of the mind
the whole are latent. But we are able to characterise them sufficiently by
that part of the complex action which is the most prominent. We have no
difficulty in distinguishing an act of sight or an act of will from an act
of thought, although thought is present in both of them. Hence the
conception of different faculties or different virtues is precarious,
because each of them is passing into the other, and they are all one in the
mind itself; they appear and reappear, and may all be regarded as the ever-
varying phases or aspects or differences of the same mind or person.

d. Nearest the sense in the scale of the intellectual faculties is memory,
which is a mode rather than a faculty of the mind, and accompanies all
mental operations. There are two principal kinds of it, recollection and
recognition,—recollection in which forgotten things are recalled or return
to the mind, recognition in which the mind finds itself again among things
once familiar. The simplest way in which we can represent the former to
ourselves is by shutting our eyes and trying to recall in what we term the
mind's eye the picture of the surrounding scene, or by laying down the book
which we are reading and recapitulating what we can remember of it. But
many times more powerful than recollection is recognition, perhaps because
it is more assisted by association. We have known and forgotten, and after
a long interval the thing which we have seen once is seen again by us, but
with a different feeling, and comes back to us, not as new knowledge, but
as a thing to which we ourselves impart a notion already present to us; in
Plato's words, we set the stamp upon the wax. Every one is aware of the
difference between the first and second sight of a place, between a scene
clothed with associations or bare and divested of them. We say to
ourselves on revisiting a spot after a long interval: How many things have
happened since I last saw this! There is probably no impression ever
received by us of which we can venture to say that the vestiges are
altogether lost, or that we might not, under some circumstances, recover
it. A long-forgotten knowledge may be easily renewed and therefore is very
different from ignorance. Of the language learnt in childhood not a word
may be remembered, and yet, when a new beginning is made, the old habit
soon returns, the neglected organs come back into use, and the river of
speech finds out the dried-up channel.

e. 'Consciousness' is the most treacherous word which is employed in the
study of the mind, for it is used in many senses, and has rarely, if ever,
been minutely analyzed. Like memory, it accompanies all mental operations,
but not always continuously, and it exists in various degrees. It may be
imperceptible or hardly perceptible: it may be the living sense that our
thoughts, actions, sufferings, are our own. It is a kind of attention
which we pay to ourselves, and is intermittent rather than continuous. Its sphere has been exaggerated. It is sometimes said to assure us of our freedom; but this is an illusion: as there may be a real freedom without consciousness of it, so there may be a consciousness of freedom without the reality. It may be regarded as a higher degree of knowledge when we not only know but know that we know. Consciousness is opposed to habit, inattention, sleep, death. It may be illustrated by its derivative conscience, which speaks to men, not only of right and wrong in the abstract, but of right and wrong actions in reference to themselves and their circumstances.

f. Association is another of the ever-present phenomena of the human mind. We speak of the laws of association, but this is an expression which is confusing, for the phenomenon itself is of the most capricious and uncertain sort. It may be briefly described as follows. The simplest case of association is that of sense. When we see or hear separately one of two things, which we have previously seen or heard together, the occurrence of the one has a tendency to suggest the other. So the sight or name of a house may recall to our minds the memory of those who once lived there. Like may recall like and everything its opposite. The parts of a whole, the terms of a series, objects lying near, words having a customary order stick together in the mind. A word may bring back a passage of poetry or a whole system of philosophy; from one end of the world or from one pole of knowledge we may travel to the other in an indivisible instant. The long train of association by which we pass from one point to the other, involving every sort of complex relation, so sudden, so accidental, is one of the greatest wonders of mind...This process however is not always continuous, but often intermittent: we can think of things in isolation as well as in association; we do not mean that they must all hang from one another. We can begin again after an interval of rest or vacancy, as a new train of thought suddenly arises, as, for example, when we wake of a morning or after violent exercise. Time, place, the same colour or sound or smell or taste, will often call up some thought or recollection either accidentally or naturally associated with them. But it is equally noticeable that the new thought may occur to us, we cannot tell how or why, by the spontaneous action of the mind itself or by the latent influence of the body. Both science and poetry are made up of associations or recollections, but we must observe also that the mind is not wholly dependent on them, having also the power of origination.

There are other processes of the mind which it is good for us to study when we are at home and by ourselves,—the manner in which thought passes into act, the conflict of passion and reason in many stages, the transition from sensuality to love or sentiment and from earthly love to heavenly, the slow and silent influence of habit, which little by little changes the nature of men, the sudden change of the old nature of man into a new one, wrought by shame or by some other overwhelming impulse. These are the greater
phenomena of mind, and he who has thought of them for himself will live and move in a better-ordered world, and will himself be a better-ordered man.

At the other end of the 'globus intellectualis,' nearest, not to earth and sense, but to heaven and God, is the personality of man, by which he holds communion with the unseen world. Somehow, he knows not how, somewhere, he knows not where, under this higher aspect of his being he grasps the ideas of God, freedom and immortality; he sees the forms of truth, holiness and love, and is satisfied with them. No account of the mind can be complete which does not admit the reality or the possibility of another life. Whether regarded as an ideal or as a fact, the highest part of man's nature and that in which it seems most nearly to approach the divine, is a phenomenon which exists, and must therefore be included within the domain of Psychology.

IV. We admit that there is no perfect or ideal Psychology. It is not a whole in the same sense in which Chemistry, Physiology, or Mathematics are wholes: that is to say, it is not a connected unity of knowledge. Compared with the wealth of other sciences, it rests upon a small number of facts; and when we go beyond these, we fall into conjectures and verbal discussions. The facts themselves are disjointed; the causes of them run up into other sciences, and we have no means of tracing them from one to the other. Yet it may be true of this, as of other beginnings of knowledge, that the attempt to put them together has tested the truth of them, and given a stimulus to the enquiry into them.

Psychology should be natural, not technical. It should take the form which is the most intelligible to the common understanding, because it has to do with common things, which are familiar to us all. It should aim at no more than every reflecting man knows or can easily verify for himself. When simple and unpretentious, it is least obscured by words, least liable to fall under the influence of Physiology or Metaphysic. It should argue, not from exceptional, but from ordinary phenomena. It should be careful to distinguish the higher and the lower elements of human nature, and not allow one to be veiled in the disguise of the other, lest through the slippery nature of language we should pass imperceptibly from good to evil, from nature in the higher to nature in the neutral or lower sense. It should assert consistently the unity of the human faculties, the unity of knowledge, the unity of God and law. The difference between the will and the affections and between the reason and the passions should also be recognized by it.

Its sphere is supposed to be narrowed to the individual soul; but it cannot be thus separated in fact. It goes back to the beginnings of things, to the first growth of language and philosophy, and to the whole science of man. There can be no truth or completeness in any study of the mind which is confined to the individual. The nature of language, though not the
whole, is perhaps at present the most important element in our knowledge of
it. It is not impossible that some numerical laws may be found to have a
place in the relations of mind and matter, as in the rest of nature. The
old Pythagorean fancy that the soul 'is or has in it harmony' may in some
degree be realized. But the indications of such numerical harmonies are
faint; either the secret of them lies deeper than we can discover, or
nature may have rebelled against the use of them in the composition of men
and animals. It is with qualitative rather than with quantitative
differences that we are concerned in Psychology. The facts relating to the
mind which we obtain from Physiology are negative rather than positive.
They show us, not the processes of mental action, but the conditions of
which when deprived the mind ceases to act. It would seem as if the time
had not yet arrived when we can hope to add anything of much importance to
our knowledge of the mind from the investigations of the microscope. The
elements of Psychology can still only be learnt from reflections on
ourselves, which interpret and are also interpreted by our experience of
others. The history of language, of philosophy, and religion, the great
thoughts or inventions or discoveries which move mankind, furnish the
larger moulds or outlines in which the human mind has been cast. From
these the individual derives so much as he is able to comprehend or has the
opportunity of learning.

THEAETETUS

by

Plato

Translated by Benjamin Jowett

PERSONS OF THE DIALOGUE: Socrates, Theodorus, Theaetetus.

Euclid and Terpsion meet in front of Euclid's house in Megara; they enter
the house, and the dialogue is read to them by a servant.

EUCLID: Have you only just arrived from the country, Terpsion?

TERPSION: No, I came some time ago: and I have been in the Agora looking
for you, and wondering that I could not find you.

EUCLID: But I was not in the city.

TERPSION: Where then?
EUCLID: As I was going down to the harbour, I met Theaetetus--he was being carried up to Athens from the army at Corinth.

TERPSION: Was he alive or dead?

EUCLID: He was scarcely alive, for he has been badly wounded; but he was suffering even more from the sickness which has broken out in the army.

TERPSION: The dysentery, you mean?

EUCLID: Yes.

TERPSION: Alas! what a loss he will be!

EUCLID: Yes, Terpsion, he is a noble fellow; only to-day I heard some people highly praising his behaviour in this very battle.

TERPSION: No wonder; I should rather be surprised at hearing anything else of him. But why did he go on, instead of stopping at Megara?

EUCLID: He wanted to get home: although I entreated and advised him to remain, he would not listen to me; so I set him on his way, and turned back, and then I remembered what Socrates had said of him, and thought how remarkably this, like all his predictions, had been fulfilled. I believe that he had seen him a little before his own death, when Theaetetus was a youth, and he had a memorable conversation with him, which he repeated to me when I came to Athens; he was full of admiration of his genius, and said that he would most certainly be a great man, if he lived.

TERPSION: The prophecy has certainly been fulfilled; but what was the conversation? can you tell me?

EUCLID: No, indeed, not offhand; but I took notes of it as soon as I got home; these I filled up from memory, writing them out at leisure; and whenever I went to Athens, I asked Socrates about any point which I had forgotten, and on my return I made corrections; thus I have nearly the whole conversation written down.

TERPSION: I remember--you told me; and I have always been intending to ask you to show me the writing, but have put off doing so; and now, why should we not read it through?--having just come from the country, I should greatly like to rest.

EUCLID: I too shall be very glad of a rest, for I went with Theaetetus as far as Erineum. Let us go in, then, and, while we are reposing, the servant shall read to us.
TERPSION: Very good.

EUCLID: Here is the roll, Terpsion; I may observe that I have introduced Socrates, not as narrating to me, but as actually conversing with the persons whom he mentioned—these were, Theodorus the geometrician (of Cyrene), and Theaetetus. I have omitted, for the sake of convenience, the interlocutory words 'I said,' 'I remarked,' which he used when he spoke of himself, and again, 'he agreed,' or 'disagreed,' in the answer, lest the repetition of them should be troublesome.

TERPSION: Quite right, Euclid.

EUCLID: And now, boy, you may take the roll and read.

EUCLID'S SERVANT READS.

SOCRATES: If I cared enough about the Cyrenians, Theodorus, I would ask you whether there are any rising geometricians or philosophers in that part of the world. But I am more interested in our own Athenian youth, and I would rather know who among them are likely to do well. I observe them as far as I can myself, and I enquire of any one whom they follow, and I see that a great many of them follow you, in which they are quite right, considering your eminence in geometry and in other ways. Tell me then, if you have met with any one who is good for anything.

THEODORUS: Yes, Socrates, I have become acquainted with one very remarkable Athenian youth, whom I commend to you as well worthy of your attention. If he had been a beauty I should have been afraid to praise him, lest you should suppose that I was in love with him; but he is no beauty, and you must not be offended if I say that he is very like you; for he has a snub nose and projecting eyes, although these features are less marked in him than in you. Seeing, then, that he has no personal attractions, I may freely say, that in all my acquaintance, which is very large, I never knew any one who was his equal in natural gifts: for he has a quickness of apprehension which is almost unrivalled, and he is exceedingly gentle, and also the most courageous of men; there is a union of qualities in him such as I have never seen in any other, and should scarcely have thought possible; for those who, like him, have quick and ready and retentive wits, have generally also quick tempers; they are ships without ballast, and go darting about, and are mad rather than courageous; and the steadier sort, when they have to face study, prove stupid and cannot remember. Whereas he moves surely and smoothly and successfully in the path of knowledge and enquiry; and he is full of gentleness, flowing on silently like a river of oil; at his age, it is wonderful.

SOCRATES: That is good news; whose son is he?
THEODORUS: The name of his father I have forgotten, but the youth himself is the middle one of those who are approaching us; he and his companions have been anointing themselves in the outer court, and now they seem to have finished, and are coming towards us. Look and see whether you know him.

SOCRATES: I know the youth, but I do not know his name; he is the son of Euphronius the Sunian, who was himself an eminent man, and such another as his son is, according to your account of him; I believe that he left a considerable fortune.

THEODORUS: Theaetetus, Socrates, is his name; but I rather think that the property disappeared in the hands of trustees; notwithstanding which he is wonderfully liberal.

SOCRATES: He must be a fine fellow; tell him to come and sit by me.

THEODORUS: I will. Come hither, Theaetetus, and sit by Socrates.

SOCRATES: By all means, Theaetetus, in order that I may see the reflection of myself in your face, for Theodorus says that we are alike; and yet if each of us held in his hands a lyre, and he said that they were tuned alike, should we at once take his word, or should we ask whether he who said so was or was not a musician?

THEAETETUS: We should ask.

SOCRATES: And if we found that he was, we should take his word; and if not, not?

THEAETETUS: True.

SOCRATES: And if this supposed likeness of our faces is a matter of any interest to us, we should enquire whether he who says that we are alike is a painter or not?

THEAETETUS: Certainly we should.

SOCRATES: And is Theodorus a painter?

THEAETETUS: I never heard that he was.

SOCRATES: Is he a geometrician?

THEAETETUS: Of course he is, Socrates.

SOCRATES: And is he an astronomer and calculator and musician, and in
general an educated man?

THEAETETUS: I think so.

SOCRATES: If, then, he remarks on a similarity in our persons, either by way of praise or blame, there is no particular reason why we should attend to him.

THEAETETUS: I should say not.

SOCRATES: But if he praises the virtue or wisdom which are the mental endowments of either of us, then he who hears the praises will naturally desire to examine him who is praised: and he again should be willing to exhibit himself.

THEAETETUS: Very true, Socrates.

SOCRATES: Then now is the time, my dear Theaetetus, for me to examine, and for you to exhibit; since although Theodorus has praised many a citizen and stranger in my hearing, never did I hear him praise any one as he has been praising you.

THEAETETUS: I am glad to hear it, Socrates; but what if he was only in jest?

SOCRATES: Nay, Theodorus is not given to jesting; and I cannot allow you to retract your consent on any such pretence as that. If you do, he will have to swear to his words; and we are perfectly sure that no one will be found to impugn him. Do not be shy then, but stand to your word.

THEAETETUS: I suppose I must, if you wish it.

SOCRATES: In the first place, I should like to ask what you learn of Theodorus: something of geometry, perhaps?

THEAETETUS: Yes.

SOCRATES: And astronomy and harmony and calculation?

THEAETETUS: I do my best.

SOCRATES: Yes, my boy, and so do I; and my desire is to learn of him, or of anybody who seems to understand these things. And I get on pretty well in general; but there is a little difficulty which I want you and the company to aid me in investigating. Will you answer me a question: 'Is not learning growing wiser about that which you learn?'
THEAETETUS: Of course.

SOCRATES: And by wisdom the wise are wise?

THEAETETUS: Yes.

SOCRATES: And is that different in any way from knowledge?

THEAETETUS: What?

SOCRATES: Wisdom; are not men wise in that which they know?

THEAETETUS: Certainly they are.

SOCRATES: Then wisdom and knowledge are the same?

THEAETETUS: Yes.

SOCRATES: Herein lies the difficulty which I can never solve to my satisfaction—What is knowledge? Can we answer that question? What say you? which of us will speak first? whoever misses shall sit down, as at a game of ball, and shall be donkey, as the boys say; he who lasts out his competitors in the game without missing, shall be our king, and shall have the right of putting to us any questions which he pleases...Why is there no reply? I hope, Theodorus, that I am not betrayed into rudeness by my love of conversation? I only want to make us talk and be friendly and sociable.

THEODORUS: The reverse of rudeness, Socrates: but I would rather that you would ask one of the young fellows; for the truth is, that I am unused to your game of question and answer, and I am too old to learn; the young will be more suitable, and they will improve more than I shall, for youth is always able to improve. And so having made a beginning with Theaetetus, I would advise you to go on with him and not let him off.

SOCRATES: Do you hear, Theaetetus, what Theodorus says? The philosopher, whom you would not like to disobey, and whose word ought to be a command to a young man, bids me interrogate you. Take courage, then, and nobly say what you think that knowledge is.

THEAETETUS: Well, Socrates, I will answer as you and he bid me; and if I make a mistake, you will doubtless correct me.

SOCRATES: We will, if we can.

THEAETETUS: Then, I think that the sciences which I learn from Theodorus—geometry, and those which you just now mentioned—are knowledge; and I would include the art of the cobbler and other craftsmen; these, each and
all of, them, are knowledge.

SOCRATES: Too much, Theaetetus, too much; the nobility and liberality of your nature make you give many and diverse things, when I am asking for one simple thing.

THEAETETUS: What do you mean, Socrates?

SOCRATES: Perhaps nothing. I will endeavour, however, to explain what I believe to be my meaning: When you speak of cobbling, you mean the art or science of making shoes?

THEAETETUS: Just so.

SOCRATES: And when you speak of carpentering, you mean the art of making wooden implements?

THEAETETUS: I do.

SOCRATES: In both cases you define the subject matter of each of the two arts?

THEAETETUS: True.

SOCRATES: But that, Theaetetus, was not the point of my question: we wanted to know not the subjects, nor yet the number of the arts or sciences, for we were not going to count them, but we wanted to know the nature of knowledge in the abstract. Am I not right?

THEAETETUS: Perfectly right.

SOCRATES: Let me offer an illustration: Suppose that a person were to ask about some very trivial and obvious thing--for example, What is clay? and we were to reply, that there is a clay of potters, there is a clay of oven-makers, there is a clay of brick-makers; would not the answer be ridiculous?

THEAETETUS: Truly.

SOCRATES: In the first place, there would be an absurdity in assuming that he who asked the question would understand from our answer the nature of 'clay,' merely because we added 'of the image-makers,' or of any other workers. How can a man understand the name of anything, when he does not know the nature of it?

THEAETETUS: He cannot.
SOCRATES: Then he who does not know what science or knowledge is, has no knowledge of the art or science of making shoes?

THEAETETUS: None.

SOCRATES: Nor of any other science?

THEAETETUS: No.

SOCRATES: And when a man is asked what science or knowledge is, to give in answer the name of some art or science is ridiculous; for the question is, 'What is knowledge?' and he replies, 'A knowledge of this or that.'

THEAETETUS: True.

SOCRATES: Moreover, he might answer shortly and simply, but he makes an enormous circuit. For example, when asked about the clay, he might have said simply, that clay is moistened earth--what sort of clay is not to the point.

THEAETETUS: Yes, Socrates, there is no difficulty as you put the question. You mean, if I am not mistaken, something like what occurred to me and to my friend here, your namesake Socrates, in a recent discussion.

SOCRATES: What was that, Theaetetus?

THEAETETUS: Theodorus was writing out for us something about roots, such as the roots of three or five, showing that they are incommensurable by the unit: he selected other examples up to seventeen --there he stopped. Now as there are innumerable roots, the notion occurred to us of attempting to include them all under one name or class.

SOCRATES: And did you find such a class?

THEAETETUS: I think that we did; but I should like to have your opinion.

SOCRATES: Let me hear.

THEAETETUS: We divided all numbers into two classes: those which are made up of equal factors multiplying into one another, which we compared to square figures and called square or equilateral numbers;--that was one class.

SOCRATES: Very good.

THEAETETUS: The intermediate numbers, such as three and five, and every other number which is made up of unequal factors, either of a greater
multiplied by a less, or of a less multiplied by a greater, and when regarded as a figure, is contained in unequal sides;--all these we compared to oblong figures, and called them oblong numbers.

SOCRATES: Capital; and what followed?

THEAETETUS: The lines, or sides, which have for their squares the equilateral plane numbers, were called by us lengths or magnitudes; and the lines which are the roots of (or whose squares are equal to) the oblong numbers, were called powers or roots; the reason of this latter name being, that they are commensurable with the former [i.e., with the so-called lengths or magnitudes] not in linear measurement, but in the value of the superficial content of their squares; and the same about solids.

SOCRATES: Excellent, my boys; I think that you fully justify the praises of Theodorus, and that he will not be found guilty of false witness.

THEAETETUS: But I am unable, Socrates, to give you a similar answer about knowledge, which is what you appear to want; and therefore Theodorus is a deceiver after all.

SOCRATES: Well, but if some one were to praise you for running, and to say that he never met your equal among boys, and afterwards you were beaten in a race by a grown-up man, who was a great runner--would the praise be any the less true?

THEAETETUS: Certainly not.

SOCRATES: And is the discovery of the nature of knowledge so small a matter, as just now said? Is it not one which would task the powers of men perfect in every way?

THEAETETUS: By heaven, they should be the top of all perfection!

SOCRATES: Well, then, be of good cheer; do not say that Theodorus was mistaken about you, but do your best to ascertain the true nature of knowledge, as well as of other things.

THEAETETUS: I am eager enough, Socrates, if that would bring to light the truth.

SOCRATES: Come, you made a good beginning just now; let your own answer about roots be your model, and as you comprehended them all in one class, try and bring the many sorts of knowledge under one definition.

THEAETETUS: I can assure you, Socrates, that I have tried very often, when the report of questions asked by you was brought to me; but I can neither
persuade myself that I have a satisfactory answer to give, nor hear of any one who answers as you would have him; and I cannot shake off a feeling of anxiety.

SOCRATES: These are the pangs of labour, my dear Theaetetus; you have something within you which you are bringing to the birth.

THEAETETUS: I do not know, Socrates; I only say what I feel.

SOCRATES: And have you never heard, simpleton, that I am the son of a midwife, brave and burly, whose name was Phaenarete?

THEAETETUS: Yes, I have.

SOCRATES: And that I myself practise midwifery?

THEAETETUS: No, never.

SOCRATES: Let me tell you that I do though, my friend: but you must not reveal the secret, as the world in general have not found me out; and therefore they only say of me, that I am the strangest of mortals and drive men to their wits' end. Did you ever hear that too?

THEAETETUS: Yes.

SOCRATES: Shall I tell you the reason?

THEAETETUS: By all means.

SOCRATES: Bear in mind the whole business of the midwives, and then you will see my meaning better:--No woman, as you are probably aware, who is still able to conceive and bear, attends other women, but only those who are past bearing.

THEAETETUS: Yes, I know.

SOCRATES: The reason of this is said to be that Artemis--the goddess of childbirth--is not a mother, and she honours those who are like herself; but she could not allow the barren to be midwives, because human nature cannot know the mystery of an art without experience; and therefore she assigned this office to those who are too old to bear.

THEAETETUS: I dare say.

SOCRATES: And I dare say too, or rather I am absolutely certain, that the midwives know better than others who is pregnant and who is not?
THEAETETUS: Very true.

SOCRATES: And by the use of potions and incantations they are able to arouse the pangs and to soothe them at will; they can make those bear who have a difficulty in bearing, and if they think fit they can smother the embryo in the womb.

THEAETETUS: They can.

SOCRATES: Did you ever remark that they are also most cunning matchmakers, and have a thorough knowledge of what unions are likely to produce a brave brood?

THEAETETUS: No, never.

SOCRATES: Then let me tell you that this is their greatest pride, more than cutting the umbilical cord. And if you reflect, you will see that the same art which cultivates and gathers in the fruits of the earth, will be most likely to know in what soils the several plants or seeds should be deposited.

THEAETETUS: Yes, the same art.

SOCRATES: And do you suppose that with women the case is otherwise?

THEAETETUS: I should think not.

SOCRATES: Certainly not; but midwives are respectable women who have a character to lose, and they avoid this department of their profession, because they are afraid of being called procuresses, which is a name given to those who join together man and woman in an unlawful and unscientific way; and yet the true midwife is also the true and only matchmaker.

THEAETETUS: Clearly.

SOCRATES: Such are the midwives, whose task is a very important one, but not so important as mine; for women do not bring into the world at one time real children, and at another time counterfeits which are with difficulty distinguished from them; if they did, then the discernment of the true and false birth would be the crowning achievement of the art of midwifery--you would think so?

THEAETETUS: Indeed I should.

SOCRATES: Well, my art of midwifery is in most respects like theirs; but differs, in that I attend men and not women; and look after their souls when they are in labour, and not after their bodies: and the triumph of my
art is in thoroughly examining whether the thought which the mind of the young man brings forth is a false idol or a noble and true birth. And like the midwives, I am barren, and the reproach which is often made against me, that I ask questions of others and have not the wit to answer them myself, is very just—the reason is, that the god compels me to be a midwife, but does not allow me to bring forth. And therefore I am not myself at all wise, nor have I anything to show which is the invention or birth of my own soul, but those who converse with me profit. Some of them appear dull enough at first, but afterwards, as our acquaintance ripens, if the god is gracious to them, they all make astonishing progress; and this in the opinion of others as well as in their own. It is quite dear that they never learned anything from me; the many fine discoveries to which they cling are of their own making. But to me and the god they owe their delivery. And the proof of my words is, that many of them in their ignorance, either in their self-conceit despising me, or falling under the influence of others, have gone away too soon; and have not only lost the children of whom I had previously delivered them by an ill bringing up, but have stifled whatever else they had in them by evil communications, being fonder of lies and shams than of the truth; and they have at last ended by seeing themselves, as others see them, to be great fools. Aristeides, the son of Lysimachus, is one of them, and there are many others. The truants often return to me, and beg that I would consort with them again—they are ready to go to me on their knees—and then, if my familiar allows, which is not always the case, I receive them, and they begin to grow again. Dire are the pangs which my art is able to arouse and to allay in those who consort with me, just like the pangs of women in childbirth; night and day they are full of perplexity and travail which is even worse than that of the women. So much for them. And there are others, Theaetetus, who come to me apparently having nothing in them; and as I know that they have no need of my art, I coax them into marrying some one, and by the grace of God I can generally tell who is likely to do them good. Many of them I have given away to Prodicus, and many to other inspired sages. I tell you this long story, friend Theaetetus, because I suspect, as indeed you seem to think yourself, that you are in labour—great with some conception. Come then to me, who am a midwife's son and myself a midwife, and do your best to answer the questions which I will ask you. And if I abstract and expose your first-born, because I discover upon inspection that the conception which you have formed is a vain shadow, do not quarrel with me on that account, as the manner of women is when their first children are taken from them. For I have actually known some who were ready to bite me when I deprived them of a darling folly; they did not perceive that I acted from goodwill, not knowing that no god is the enemy of man—that was not within the range of their ideas; neither am I their enemy in all this, but it would be wrong for me to admit falsehood, or to stifle the truth. Once more, then, Theaetetus, I repeat my old question, 'What is knowledge?'—and do not say that you cannot tell; but quit yourself like a man, and by the help of God you will be able to tell.
THEAETETUS: At any rate, Socrates, after such an exhortation I should be ashamed of not trying to do my best. Now he who knows perceives what he knows, and, as far as I can see at present, knowledge is perception.

SOCRATES: Bravely said, boy; that is the way in which you should express your opinion. And now, let us examine together this conception of yours, and see whether it is a true birth or a mere wind-egg:--You say that knowledge is perception?

THEAETETUS: Yes.

SOCRATES: Well, you have delivered yourself of a very important doctrine about knowledge; it is indeed the opinion of Protagoras, who has another way of expressing it. Man, he says, is the measure of all things, of the existence of things that are, and of the non-existence of things that are not:--You have read him?

THEAETETUS: O yes, again and again.

SOCRATES: Does he not say that things are to you such as they appear to you, and to me such as they appear to me, and that you and I are men?

THEAETETUS: Yes, he says so.

SOCRATES: A wise man is not likely to talk nonsense. Let us try to understand him: the same wind is blowing, and yet one of us may be cold and the other not, or one may be slightly and the other very cold?

THEAETETUS: Quite true.

SOCRATES: Now is the wind, regarded not in relation to us but absolutely, cold or not; or are we to say, with Protagoras, that the wind is cold to him who is cold, and not to him who is not?

THEAETETUS: I suppose the last.

SOCRATES: Then it must appear so to each of them?

THEAETETUS: Yes.

SOCRATES: And 'appears to him' means the same as 'he perceives.'

THEAETETUS: True.

SOCRATES: Then appearing and perceiving coincide in the case of hot and cold, and in similar instances; for things appear, or may be supposed to
be, to each one such as he perceives them?

THEAETETUS: Yes.

SOCRATES: Then perception is always of existence, and being the same as knowledge is unerring?

THEAETETUS: Clearly.

SOCRATES: In the name of the Graces, what an almighty wise man Protagoras must have been! He spoke these things in a parable to the common herd, like you and me, but told the truth, 'his Truth,' (In allusion to a book of Protagoras' which bore this title.) in secret to his own disciples.

THEAETETUS: What do you mean, Socrates?

SOCRATES: I am about to speak of a high argument, in which all things are said to be relative; you cannot rightly call anything by any name, such as great or small, heavy or light, for the great will be small and the heavy light--there is no single thing or quality, but out of motion and change and admixture all things are becoming relatively to one another, which 'becoming' is by us incorrectly called being, but is really becoming, for nothing ever is, but all things are becoming. Summon all philosophers--Protagoras, Heracleitus, Empedocles, and the rest of them, one after another, and with the exception of Parmenides they will agree with you in this. Summon the great masters of either kind of poetry--Epicharmus, the prince of Comedy, and Homer of Tragedy; when the latter sings of

'Ocean whence sprang the gods, and mother Tethys,'

does he not mean that all things are the offspring, of flux and motion?

THEAETETUS: I think so.

SOCRATES: And who could take up arms against such a great army having Homer for its general, and not appear ridiculous? (Compare Cratylus.)

THEAETETUS: Who indeed, Socrates?

SOCRATES: Yes, Theaetetus; and there are plenty of other proofs which will show that motion is the source of what is called being and becoming, and inactivity of not-being and destruction; for fire and warmth, which are supposed to be the parent and guardian of all other things, are born of movement and of friction, which is a kind of motion;--is not this the origin of fire?

THEAETETUS: It is.
SOCRATES: And the race of animals is generated in the same way?

THEAETETUS: Certainly.

SOCRATES: And is not the bodily habit spoiled by rest and idleness, but preserved for a long time by motion and exercise?

THEAETETUS: True.

SOCRATES: And what of the mental habit? Is not the soul informed, and improved, and preserved by study and attention, which are motions; but when at rest, which in the soul only means want of attention and study, is uninformed, and speedily forgets whatever she has learned?

THEAETETUS: True.

SOCRATES: Then motion is a good, and rest an evil, to the soul as well as to the body?

THEAETETUS: Clearly.

SOCRATES: I may add, that breathless calm, stillness and the like waste and impair, while wind and storm preserve; and the palmary argument of all, which I strongly urge, is the golden chain in Homer, by which he means the sun, thereby indicating that so long as the sun and the heavens go round in their orbits, all things human and divine are and are preserved, but if they were chained up and their motions ceased, then all things would be destroyed, and, as the saying is, turned upside down.

THEAETETUS: I believe, Socrates, that you have truly explained his meaning.

SOCRATES: Then now apply his doctrine to perception, my good friend, and first of all to vision; that which you call white colour is not in your eyes, and is not a distinct thing which exists out of them. And you must not assign any place to it: for if it had position it would be, and be at rest, and there would be no process of becoming.

THEAETETUS: Then what is colour?

SOCRATES: Let us carry the principle which has just been affirmed, that nothing is self-existent, and then we shall see that white, black, and every other colour, arises out of the eye meeting the appropriate motion, and that what we call a colour is in each case neither the active nor the passive element, but something which passes between them, and is peculiar to each percipient; are you quite certain that the several colours appear
to a dog or to any animal whatever as they appear to you?

THEAETETUS: Far from it.

SOCRATES: Or that anything appears the same to you as to another man? Are you so profoundly convinced of this? Rather would it not be true that it never appears exactly the same to you, because you are never exactly the same?

THEAETETUS: The latter.

SOCRATES: And if that with which I compare myself in size, or which I apprehend by touch, were great or white or hot, it could not become different by mere contact with another unless it actually changed; nor again, if the comparing or apprehending subject were great or white or hot, could this, when unchanged from within, become changed by any approximation or affection of any other thing. The fact is that in our ordinary way of speaking we allow ourselves to be driven into most ridiculous and wonderful contradictions, as Protagoras and all who take his line of argument would remark.

THEAETETUS: How? and of what sort do you mean?

SOCRATES: A little instance will sufficiently explain my meaning: Here are six dice, which are more by a half when compared with four, and fewer by a half than twelve--they are more and also fewer. How can you or any one maintain the contrary?

THEAETETUS: Very true.

SOCRATES: Well, then, suppose that Protagoras or some one asks whether anything can become greater or more if not by increasing, how would you answer him, Theaetetus?

THEAETETUS: I should say 'No,' Socrates, if I were to speak my mind in reference to this last question, and if I were not afraid of contradicting my former answer.

SOCRATES: Capital! excellent! spoken like an oracle, my boy! And if you reply 'Yes,' there will be a case for Euripides; for our tongue will be unconvinced, but not our mind. (In allusion to the well-known line of Euripides, Hippol.: e gloss omomoch e de thren anomotos.)

THEAETETUS: Very true.

SOCRATES: The thoroughbred Sophists, who know all that can be known about the mind, and argue only out of the superfluity of their wits, would have
had a regular sparring-match over this, and would have knocked their arguments together finely. But you and I, who have no professional aims, only desire to see what is the mutual relation of these principles,—whether they are consistent with each or not.

THEAETETUS: Yes, that would be my desire.

SOCRATES: And mine too. But since this is our feeling, and there is plenty of time, why should we not calmly and patiently review our own thoughts, and thoroughly examine and see what these appearances in us really are? If I am not mistaken, they will be described by us as follows:—first, that nothing can become greater or less, either in number or magnitude, while remaining equal to itself—you would agree?

THEAETETUS: Yes.

SOCRATES: Secondly, that without addition or subtraction there is no increase or diminution of anything, but only equality.

THEAETETUS: Quite true.

SOCRATES: Thirdly, that what was not before cannot be afterwards, without becoming and having become.

THEAETETUS: Yes, truly.

SOCRATES: These three axioms, if I am not mistaken, are fighting with one another in our minds in the case of the dice, or, again, in such a case as this— if I were to say that I, who am of a certain height and taller than you, may within a year, without gaining or losing in height, be not so tall—not that I should have lost, but that you would have increased. In such a case, I am afterwards what I once was not, and yet I have not become; for I could not have become without becoming, neither could I have become less without losing somewhat of my height; and I could give you ten thousand examples of similar contradictions, if we admit them at all. I believe that you follow me, Theaetetus; for I suspect that you have thought of these questions before now.

THEAETETUS: Yes, Socrates, and I am amazed when I think of them; by the Gods I am! and I want to know what on earth they mean; and there are times when my head quite swims with the contemplation of them.

SOCRATES: I see, my dear Theaetetus, that Theodorus had a true insight into your nature when he said that you were a philosopher, for wonder is the feeling of a philosopher, and philosophy begins in wonder. He was not a bad genealogist who said that Iris (the messenger of heaven) is the child of Thaumas (wonder). But do you begin to see what is the explanation of
this perplexity on the hypothesis which we attribute to Protagoras?

THEAETETUS: Not as yet.

SOCRATES: Then you will be obliged to me if I help you to unearth the hidden 'truth' of a famous man or school.

THEAETETUS: To be sure, I shall be very much obliged.

SOCRATES: Take a look round, then, and see that none of the uninitiated are listening. Now by the uninitiated I mean the people who believe in nothing but what they can grasp in their hands, and who will not allow that action or generation or anything invisible can have real existence.

THEAETETUS: Yes, indeed, Socrates, they are very hard and impenetrable mortals.

SOCRATES: Yes, my boy, outer barbarians. Far more ingenious are the brethren whose mysteries I am about to reveal to you. Their first principle is, that all is motion, and upon this all the affections of which we were just now speaking are supposed to depend: there is nothing but motion, which has two forms, one active and the other passive, both in endless number; and out of the union and friction of them there is generated a progeny endless in number, having two forms, sense and the object of sense, which are ever breaking forth and coming to the birth at the same moment. The senses are variously named hearing, seeing, smelling; there is the sense of heat, cold, pleasure, pain, desire, fear, and many more which have names, as well as innumerable others which are without them; each has its kindred object,—each variety of colour has a corresponding variety of sight, and so with sound and hearing, and with the rest of the senses and the objects akin to them. Do you see, Theaetetus, the bearings of this tale on the preceding argument?

THEAETETUS: Indeed I do not.

SOCRATES: Then attend, and I will try to finish the story. The purport is that all these things are in motion, as I was saying, and that this motion is of two kinds, a slower and a quicker; and the slower elements have their motions in the same place and with reference to things near them, and so they beget; but what is begotten is swifter, for it is carried to fro, and moves from place to place. Apply this to sense:—When the eye and the appropriate object meet together and give birth to whiteness and the sensation connatural with it, which could not have been given by either of them going elsewhere, then, while the sight is flowing from the eye, whiteness proceeds from the object which combines in producing the colour; and so the eye is fulfilled with sight, and really sees, and becomes, not sight, but a seeing eye; and the object which combined to form the colour
is fulfilled with whiteness, and becomes not whiteness but a white thing, whether wood or stone or whatever the object may be which happens to be coloured white. And this is true of all sensible objects, hard, warm, and the like, which are similarly to be regarded, as I was saying before, not as having any absolute existence, but as being all of them of whatever kind generated by motion in their intercourse with one another; for of the agent and patient, as existing in separation, no trustworthy conception, as they say, can be formed, for the agent has no existence until united with the patient, and the patient has no existence until united with the agent; and that which by uniting with something becomes an agent, by meeting with some other thing is converted into a patient. And from all these considerations, as I said at first, there arises a general reflection, that there is no one self-existent thing, but everything is becoming and in relation; and being must be altogether abolished, although from habit and ignorance we are compelled even in this discussion to retain the use of the term. But great philosophers tell us that we are not to allow either the word 'something,' or 'belonging to something,' or 'to me,' or 'this,' or 'that,' or any other detaining name to be used, in the language of nature all things are being created and destroyed, coming into being and passing into new forms; nor can any name fix or detain them; he who attempts to fix them is easily refuted. And this should be the way of speaking, not only of particulars but of aggregates; such aggregates as are expressed in the word 'man,' or 'stone,' or any name of an animal or of a class. O Theaetetus, are not these speculations sweet as honey? And do you not like the taste of them in the mouth?

THEAETETUS: I do not know what to say, Socrates; for, indeed, I cannot make out whether you are giving your own opinion or only wanting to draw me out.

SOCRATES: You forget, my friend, that I neither know, nor profess to know, anything of these matters; you are the person who is in labour, I am the barren midwife; and this is why I soothe you, and offer you one good thing after another, that you may taste them. And I hope that I may at last help to bring your own opinion into the light of day: when this has been accomplished, then we will determine whether what you have brought forth is only a wind-egg or a real and genuine birth. Therefore, keep up your spirits, and answer like a man what you think.

THEAETETUS: Ask me.

SOCRATES: Then once more: Is it your opinion that nothing is but what becomes?--the good and the noble, as well as all the other things which we were just now mentioning?

THEAETETUS: When I hear you discoursing in this style, I think that there is a great deal in what you say, and I am very ready to assent.
SOCRATES: Let us not leave the argument unfinished, then; for there still remains to be considered an objection which may be raised about dreams and diseases, in particular about madness, and the various illusions of hearing and sight, or of other senses. For you know that in all these cases the esse-percipi theory appears to be unmistakably refuted, since in dreams and illusions we certainly have false perceptions; and far from saying that everything is which appears, we should rather say that nothing is which appears.

THEAETETUS: Very true, Socrates.

SOCRATES: But then, my boy, how can any one contend that knowledge is perception, or that to every man what appears is?

THEAETETUS: I am afraid to say, Socrates, that I have nothing to answer, because you rebuked me just now for making this excuse; but I certainly cannot undertake to argue that madmen or dreamers think truly, when they imagine, some of them that they are gods, and others that they can fly, and are flying in their sleep.

SOCRATES: Do you see another question which can be raised about these phenomena, notably about dreaming and waking?

THEAETETUS: What question?

SOCRATES: A question which I think that you must often have heard persons ask:--How can you determine whether at this moment we are sleeping, and all our thoughts are a dream; or whether we are awake, and talking to one another in the waking state?

THEAETETUS: Indeed, Socrates, I do not know how to prove the one any more than the other, for in both cases the facts precisely correspond;--and there is no difficulty in supposing that during all this discussion we have been talking to one another in a dream; and when in a dream we seem to be narrating dreams, the resemblance of the two states is quite astonishing.

SOCRATES: You see, then, that a doubt about the reality of sense is easily raised, since there may even be a doubt whether we are awake or in a dream. And as our time is equally divided between sleeping and waking, in either sphere of existence the soul contends that the thoughts which are present to our minds at the time are true; and during one half of our lives we affirm the truth of the one, and, during the other half, of the other; and are equally confident of both.

THEAETETUS: Most true.
SOCRATES: And may not the same be said of madness and other disorders? the
difference is only that the times are not equal.

THEAETETUS: Certainly.

SOCRATES: And is truth or falsehood to be determined by duration of time?

THEAETETUS: That would be in many ways ridiculous.

SOCRATES: But can you certainly determine by any other means which of
these opinions is true?

THEAETETUS: I do not think that I can.

SOCRATES: Listen, then, to a statement of the other side of the argument,
which is made by the champions of appearance. They would say, as I
imagine--Can that which is wholly other than something, have the same
quality as that from which it differs? and observe, Theaetetus, that the
word 'other' means not 'partially,' but 'wholly other.'

THEAETETUS: Certainly, putting the question as you do, that which is
wholly other cannot either potentially or in any other way be the same.

SOCRATES: And must therefore be admitted to be unlike?

THEAETETUS: True.

SOCRATES: If, then, anything happens to become like or unlike itself or
another, when it becomes like we call it the same--when unlike, other?

THEAETETUS: Certainly.

SOCRATES: Were we not saying that there are agents many and infinite, and
patients many and infinite?

THEAETETUS: Yes.

SOCRATES: And also that different combinations will produce results which
are not the same, but different?

THEAETETUS: Certainly.

SOCRATES: Let us take you and me, or anything as an example:--There is
Socrates in health, and Socrates sick--Are they like or unlike?

THEAETETUS: You mean to compare Socrates in health as a whole, and
Socrates in sickness as a whole?
SOCRATES: Exactly; that is my meaning.

THEAETETUS: I answer, they are unlike.

SOCRATES: And if unlike, they are other?

THEAETETUS: Certainly.

SOCRATES: And would you not say the same of Socrates sleeping and waking, or in any of the states which we were mentioning?

THEAETETUS: I should.

SOCRATES: All agents have a different patient in Socrates, accordingly as he is well or ill.

THEAETETUS: Of course.

SOCRATES: And I who am the patient, and that which is the agent, will produce something different in each of the two cases?

THEAETETUS: Certainly.

SOCRATES: The wine which I drink when I am in health, appears sweet and pleasant to me?

THEAETETUS: True.

SOCRATES: For, as has been already acknowledged, the patient and agent meet together and produce sweetness and a perception of sweetness, which are in simultaneous motion, and the perception which comes from the patient makes the tongue percipient, and the quality of sweetness which arises out of and is moving about the wine, makes the wine both to be and to appear sweet to the healthy tongue.

THEAETETUS: Certainly; that has been already acknowledged.

SOCRATES: But when I am sick, the wine really acts upon another and a different person?

THEAETETUS: Yes.

SOCRATES: The combination of the draught of wine, and the Socrates who is sick, produces quite another result; which is the sensation of bitterness in the tongue, and the motion and creation of bitterness in and about the wine, which becomes not bitterness but something bitter; as I myself become
not perception but percipient?

THEAETETUS: True.

SOCRATES: There is no other object of which I shall ever have the same perception, for another object would give another perception, and would make the percipient other and different; nor can that object which affects me, meeting another subject, produce the same, or become similar, for that too would produce another result from another subject, and become different.

THEAETETUS: True.

SOCRATES: Neither can I by myself, have this sensation, nor the object by itself, this quality.

THEAETETUS: Certainly not.

SOCRATES: When I perceive I must become percipient of something--there can be no such thing as perceiving and perceiving nothing; the object, whether it become sweet, bitter, or of any other quality, must have relation to a percipient; nothing can become sweet which is sweet to no one.

THEAETETUS: Certainly not.

SOCRATES: Then the inference is, that we (the agent and patient) are or become in relation to one another; there is a law which binds us one to the other, but not to any other existence, nor each of us to himself; and therefore we can only be bound to one another; so that whether a person says that a thing is or becomes, he must say that it is or becomes to or of or in relation to something else; but he must not say or allow any one else to say that anything is or becomes absolutely:--such is our conclusion.

THEAETETUS: Very true, Socrates.

SOCRATES: Then, if that which acts upon me has relation to me and to no other, I and no other am the percipient of it?

THEAETETUS: Of course.

SOCRATES: Then my perception is true to me, being inseparable from my own being; and, as Protagoras says, to myself I am judge of what is and what is not to me.

THEAETETUS: I suppose so.

SOCRATES: How then, if I never err, and if my mind never trips in the
conception of being or becoming, can I fail of knowing that which I perceive?

THEAETETUS: You cannot.

SOCRATES: Then you were quite right in affirming that knowledge is only perception; and the meaning turns out to be the same, whether with Homer and Heracleitus, and all that company, you say that all is motion and flux, or with the great sage Protagoras, that man is the measure of all things; or with Theaetetus, that, given these premises, perception is knowledge. Am I not right, Theaetetus, and is not this your new-born child, of which I have delivered you? What say you?

THEAETETUS: I cannot but agree, Socrates.

SOCRATES: Then this is the child, however he may turn out, which you and I have with difficulty brought into the world. And now that he is born, we must run round the hearth with him, and see whether he is worth rearing, or is only a wind-egg and a sham. Is he to be reared in any case, and not exposed? or will you bear to see him rejected, and not get into a passion if I take away your first-born?

THEODORUS: Theaetetus will not be angry, for he is very good-natured. But tell me, Socrates, in heaven's name, is this, after all, not the truth?

SOCRATES: You, Theodorus, are a lover of theories, and now you innocently fancy that I am a bag full of them, and can easily pull one out which will overthrow its predecessor. But you do not see that in reality none of these theories come from me; they all come from him who talks with me. I only know just enough to extract them from the wisdom of another, and to receive them in a spirit of fairness. And now I shall say nothing myself, but shall endeavour to elicit something from our young friend.

THEODORUS: Do as you say, Socrates; you are quite right.

SOCRATES: Shall I tell you, Theodorus, what amazes me in your acquaintance Protagoras?

THEODORUS: What is it?

SOCRATES: I am charmed with his doctrine, that what appears is to each one, but I wonder that he did not begin his book on Truth with a declaration that a pig or a dog-faced baboon, or some other yet stranger monster which has sensation, is the measure of all things; then he might have shown a magnificent contempt for our opinion of him by informing us at the outset that while we were reverencing him like a God for his wisdom he was no better than a tadpole, not to speak of his fellow-men--would not
this have produced an overpowering effect? For if truth is only sensation, and no man can discern another's feelings better than he, or has any superior right to determine whether his opinion is true or false, but each, as we have several times repeated, is to himself the sole judge, and everything that he judges is true and right, why, my friend, should Protagoras be preferred to the place of wisdom and instruction, and deserve to be well paid, and we poor ignoramuses have to go to him, if each one is the measure of his own wisdom? Must he not be talking 'ad captandum' in all this? I say nothing of the ridiculous predicament in which my own midwifery and the whole art of dialectic is placed; for the attempt to supervise or refute the notions or opinions of others would be a tedious and enormous piece of folly, if to each man his own are right; and this must be the case if Protagoras' Truth is the real truth, and the philosopher is not merely amusing himself by giving oracles out of the shrine of his book.

THEODORUS: He was a friend of mine, Socrates, as you were saying, and therefore I cannot have him refuted by my lips, nor can I oppose you when I agree with you; please, then, to take Theaetetus again; he seemed to answer very nicely.

SOCRATES: If you were to go into a Lacedaemonian palestra, Theodorus, would you have a right to look on at the naked wrestlers, some of them making a poor figure, if you did not strip and give them an opportunity of judging of your own person?

THEODORUS: Why not, Socrates, if they would allow me, as I think you will, in consideration of my age and stiffness; let some more supple youth try a fall with you, and do not drag me into the gymnasium.

SOCRATES: Your will is my will, Theodorus, as the proverbial philosophers say, and therefore I will return to the sage Theaetetus: Tell me, Theaetetus, in reference to what I was saying, are you not lost in wonder, like myself, when you find that all of a sudden you are raised to the level of the wisest of men, or indeed of the gods?--for you would assume the measure of Protagoras to apply to the gods as well as men?

THEAETETUS: Certainly I should, and I confess to you that I am lost in wonder. At first hearing, I was quite satisfied with the doctrine, that whatever appears is to each one, but now the face of things has changed.

SOCRATES: Why, my dear boy, you are young, and therefore your ear is quickly caught and your mind influenced by popular arguments. Protagoras, or some one speaking on his behalf, will doubtless say in reply,--Good people, young and old, you meet and harangue, and bring in the gods, whose existence or non-existence I banish from writing and speech, or you talk about the reason of man being degraded to the level of the brutes, which is
a telling argument with the multitude, but not one word of proof or
demonstration do you offer. All is probability with you, and yet surely
you and Theodorus had better reflect whether you are disposed to admit of
probability and figures of speech in matters of such importance. He or any
other mathematician who argued from probabilities and likelihoods in
geometry, would not be worth an ace.

THEAETETUS: But neither you nor we, Socrates, would be satisfied with such
arguments.

SOCRATES: Then you and Theodorus mean to say that we must look at the
matter in some other way?

THEAETETUS: Yes, in quite another way.

SOCRATES: And the way will be to ask whether perception is or is not the
same as knowledge; for this was the real point of our argument, and with a
view to this we raised (did we not?) those many strange questions.

THEAETETUS: Certainly.

SOCRATES: Shall we say that we know every thing which we see and hear? for
example, shall we say that not having learned, we do not hear the language
of foreigners when they speak to us? or shall we say that we not only hear,
but know what they are saying? Or again, if we see letters which we do not
understand, shall we say that we do not see them? or shall we aver that,
seeing them, we must know them?

THEAETETUS: We shall say, Socrates, that we know what we actually see and
hear of them--that is to say, we see and know the figure and colour of the
letters, and we hear and know the elevation or depression of the sound of
them; but we do not perceive by sight and hearing, or know, that which
grammarians and interpreters teach about them.

SOCRATES: Capital, Theaetetus; and about this there shall be no dispute,
because I want you to grow; but there is another difficulty coming, which
you will also have to repulse.

THEAETETUS: What is it?

SOCRATES: Some one will say, Can a man who has ever known anything, and
still has and preserves a memory of that which he knows, not know that
which he remembers at the time when he remembers? I have, I fear, a
tedious way of putting a simple question, which is only, whether a man who
has learned, and remembers, can fail to know?

THEAETETUS: Impossible, Socrates; the supposition is monstrous.
SOCRATES: Am I talking nonsense, then? Think: is not seeing perceiving, and is not sight perception?

THEAETETUS: True.

SOCRATES: And if our recent definition holds, every man knows that which he has seen?

THEAETETUS: Yes.

SOCRATES: And you would admit that there is such a thing as memory?

THEAETETUS: Yes.

SOCRATES: And is memory of something or of nothing?

THEAETETUS: Of something, surely.

SOCRATES: Of things learned and perceived, that is?

THEAETETUS: Certainly.

SOCRATES: Often a man remembers that which he has seen?

THEAETETUS: True.

SOCRATES: And if he closed his eyes, would he forget?

THEAETETUS: Who, Socrates, would dare to say so?

SOCRATES: But we must say so, if the previous argument is to be maintained.

THEAETETUS: What do you mean? I am not quite sure that I understand you, though I have a strong suspicion that you are right.

SOCRATES: As thus: he who sees knows, as we say, that which he sees; for perception and sight and knowledge are admitted to be the same.

THEAETETUS: Certainly.

SOCRATES: But he who saw, and has knowledge of that which he saw, remembers, when he closes his eyes, that which he no longer sees.

THEAETETUS: True.
SOCRATES: And seeing is knowing, and therefore not-seeing is not-knowing?

THEAETETUS: Very true.

SOCRATES: Then the inference is, that a man may have attained the knowledge of something, which he may remember and yet not know, because he does not see; and this has been affirmed by us to be a monstrous supposition.

THEAETETUS: Most true.

SOCRATES: Thus, then, the assertion that knowledge and perception are one, involves a manifest impossibility?

THEAETETUS: Yes.

SOCRATES: Then they must be distinguished?

THEAETETUS: I suppose that they must.

SOCRATES: Once more we shall have to begin, and ask 'What is knowledge?' and yet, Theaetetus, what are we going to do?

THEAETETUS: About what?

SOCRATES: Like a good-for-nothing cock, without having won the victory, we walk away from the argument and crow.

THEAETETUS: How do you mean?

SOCRATES: After the manner of disputers (Lys.; Phaedo; Republic), we were satisfied with mere verbal consistency, and were well pleased if in this way we could gain an advantage. Although professing not to be mere Eristics, but philosophers, I suspect that we have unconsciously fallen into the error of that ingenious class of persons.

THEAETETUS: I do not as yet understand you.

SOCRATES: Then I will try to explain myself: just now we asked the question, whether a man who had learned and remembered could fail to know, and we showed that a person who had seen might remember when he had his eyes shut and could not see, and then he would at the same time remember and not know. But this was an impossibility. And so the Protagorean fable came to nought, and yours also, who maintained that knowledge is the same as perception.

THEAETETUS: True.
SOCRATES: And yet, my friend, I rather suspect that the result would have been different if Protagoras, who was the father of the first of the two brats, had been alive; he would have had a great deal to say on their behalf. But he is dead, and we insult over his orphan child; and even the guardians whom he left, and of whom our friend Theodorus is one, are unwilling to give any help, and therefore I suppose that I must take up his cause myself, and see justice done?

THEODORUS: Not I, Socrates, but rather Callias, the son of Hipponicus, is guardian of his orphans. I was too soon diverted from the abstractions of dialectic to geometry. Nevertheless, I shall be grateful to you if you assist him.

SOCRATES: Very good, Theodorus; you shall see how I will come to the rescue. If a person does not attend to the meaning of terms as they are commonly used in argument, he may be involved even in greater paradoxes than these. Shall I explain this matter to you or to Theaetetus?

THEODORUS: To both of us, and let the younger answer; he will incur less disgrace if he is discomfited.

SOCRATES: Then now let me ask the awful question, which is this:--Can a man know and also not know that which he knows?

THEODORUS: How shall we answer, Theaetetus?

THEAETETUS: He cannot, I should say.

SOCRATES: He can, if you maintain that seeing is knowing. When you are imprisoned in a well, as the saying is, and the self-assured adversary closes one of your eyes with his hand, and asks whether you can see his cloak with the eye which he has closed, how will you answer the inevitable man?

THEAETETUS: I should answer, 'Not with that eye but with the other.'

SOCRATES: Then you see and do not see the same thing at the same time.

THEAETETUS: Yes, in a certain sense.

SOCRATES: None of that, he will reply; I do not ask or bid you answer in what sense you know, but only whether you know that which you do not know. You have been proved to see that which you do not see; and you have already admitted that seeing is knowing, and that not-seeing is not-knowing: I leave you to draw the inference.
THEAETETUS: Yes; the inference is the contradictory of my assertion.

SOCRATES: Yes, my marvel, and there might have been yet worse things in store for you, if an opponent had gone on to ask whether you can have a sharp and also a dull knowledge, and whether you can know near, but not at a distance, or know the same thing with more or less intensity, and so on without end. Such questions might have been put to you by a light-armed mercenary, who argued for pay. He would have lain in wait for you, and when you took up the position, that sense is knowledge, he would have made an assault upon hearing, smelling, and the other senses;--he would have shown you no mercy; and while you were lost in envy and admiration of his wisdom, he would have got you into his net, out of which you would not have escaped until you had come to an understanding about the sum to be paid for your release. Well, you ask, and how will Protagoras reinforce his position? Shall I answer for him?

THEAETETUS: By all means.

SOCRATES: He will repeat all those things which we have been urging on his behalf, and then he will close with us in disdain, and say:--The worthy Socrates asked a little boy, whether the same man could remember and not know the same thing, and the boy said No, because he was frightened, and could not see what was coming, and then Socrates made fun of poor me. The truth is, O slatternly Socrates, that when you ask questions about any assertion of mine, and the person asked is found tripping, if he has answered as I should have answered, then I am refuted, but if he answers something else, then he is refuted and not I. For do you really suppose that any one would admit the memory which a man has of an impression which has passed away to be the same with that which he experienced at the time? Assuredly not. Or would he hesitate to acknowledge that the same man may know and not know the same thing? Or, if he is afraid of making this admission, would he ever grant that one who has become unlike is the same as before he became unlike? Or would he admit that a man is one at all, and not rather many and infinite as the changes which take place in him? I speak by the card in order to avoid entanglements of words. But, O my good sir, he will say, come to the argument in a more generous spirit; and either show, if you can, that our sensations are not relative and individual, or, if you admit them to be so, prove that this does not involve the consequence that the appearance becomes, or, if you will have the word, is, to the individual only. As to your talk about pigs and baboons, you are yourself behaving like a pig, and you teach your hearers to make sport of my writings in the same ignorant manner; but this is not to your credit. For I declare that the truth is as I have written, and that each of us is a measure of existence and of non-existence. Yet one man may be a thousand times better than another in proportion as different things are and appear to him. And I am far from saying that wisdom and the wise man have no existence; but I say that the wise man is he who makes the
evils which appear and are to a man, into goods which are and appear to him. And I would beg you not to press my words in the letter, but to take the meaning of them as I will explain them. Remember what has been already said,—that to the sick man his food appears to be and is bitter, and to the man in health the opposite of bitter. Now I cannot conceive that one of these men can be or ought to be made wiser than the other: nor can you assert that the sick man because he has one impression is foolish, and the healthy man because he has another is wise; but the one state requires to be changed into the other, the worse into the better. As in education, a change of state has to be effected, and the sophist accomplishes by words the change which the physician works by the aid of drugs. Not that any one ever made another think truly, who previously thought falsely. For no one can think what is not, or, think anything different from that which he feels; and this is always true. But as the inferior habit of mind has thoughts of kindred nature, so I conceive that a good mind causes men to have good thoughts; and these which the inexperienced call true, I maintain to be only better, and not truer than others. And, O my dear Socrates, I do not call wise men tadpoles: far from it; I say that they are the physicians of the human body, and the husbandmen of plants—for the husbandmen also take away the evil and disordered sensations of plants, and infuse into them good and healthy sensations—aye and true ones; and the wise and good rhetoricians make the good instead of the evil to seem just to states; for whatever appears to a state to be just and fair, so long as it is regarded as such, is just and fair to it; but the teacher of wisdom causes the good to take the place of the evil, both in appearance and in reality. And in like manner the Sophist who is able to train his pupils in this spirit is a wise man, and deserves to be well paid by them. And so one man is wiser than another; and no one thinks falsely, and you, whether you will or not, must endure to be a measure. On these foundations the argument stands firm, which you, Socrates, may, if you please, overthrow by an opposite argument, or if you like you may put questions to me—a method to which no intelligent person will object, quite the reverse. But I must beg you to put fair questions: for there is great inconsistency in saying that you have a zeal for virtue, and then always behaving unfairly in argument. The unfairness of which I complain is that you do not distinguish between mere disputation and dialectic: the disputer may trip up his opponent as often as he likes, and make fun; but the dialectician will be in earnest, and only correct his adversary when necessary, telling him the errors into which he has fallen through his own fault, or that of the company which he has previously kept. If you do so, your adversary will lay the blame of his own confusion and perplexity on himself, and not on you. He will follow and love you, and will hate himself, and escape from himself into philosophy, in order that he may become different from what he was. But the other mode of arguing, which is practised by the many, will have just the opposite effect upon him; and as he grows older, instead of turning philosopher, he will come to hate philosophy. I would recommend you, therefore, as I said before, not to encourage yourself in
this polemical and controversial temper, but to find out, in a friendly and congenial spirit, what we really mean when we say that all things are in motion, and that to every individual and state what appears, is. In this manner you will consider whether knowledge and sensation are the same or different, but you will not argue, as you were just now doing, from the customary use of names and words, which the vulgar pervert in all sorts of ways, causing infinite perplexity to one another. Such, Theodorus, is the very slight help which I am able to offer to your old friend; had he been living, he would have helped himself in a far more gloriose style.

THEODORUS: You are jesting, Socrates; indeed, your defence of him has been most valorous.

SOCRATES: Thank you, friend; and I hope that you observed Protagoras bidding us be serious, as the text, 'Man is the measure of all things,' was a solemn one; and he reproached us with making a boy the medium of discourse, and said that the boy's timidity was made to tell against his argument; he also declared that we made a joke of him.

THEODORUS: How could I fail to observe all that, Socrates?

SOCRATES: Well, and shall we do as he says?

THEODORUS: By all means.

SOCRATES: But if his wishes are to be regarded, you and I must take up the argument, and in all seriousness, and ask and answer one another, for you see that the rest of us are nothing but boys. In no other way can we escape the imputation, that in our fresh analysis of his thesis we are making fun with boys.

THEODORUS: Well, but is not Theaetetus better able to follow a philosophical enquiry than a great many men who have long beards?

SOCRATES: Yes, Theodorus, but not better than you; and therefore please not to imagine that I am to defend by every means in my power your departed friend; and that you are to defend nothing and nobody. At any rate, my good man, do not sheer off until we know whether you are a true measure of diagrams, or whether all men are equally measures and sufficient for themselves in astronomy and geometry, and the other branches of knowledge in which you are supposed to excel them.

THEODORUS: He who is sitting by you, Socrates, will not easily avoid being drawn into an argument; and when I said just now that you would excuse me, and not, like the Lacedaemonians, compel me to strip and fight, I was talking nonsense--I should rather compare you to Scirrhon, who threw travellers from the rocks; for the Lacedaemonian rule is 'strip or depart,'
but you seem to go about your work more after the fashion of Antaeus: you
will not allow any one who approaches you to depart until you have stripped
him, and he has been compelled to try a fall with you in argument.

SOCRATES: There, Theodorus, you have hit off precisely the nature of my
complaint; but I am even more pugnacious than the giants of old, for I have
met with no end of heroes; many a Heracles, many a Theseus, mighty in
words, has broken my head; nevertheless I am always at this rough exercise,
which inspires me like a passion. Please, then, to try a fall with me,
whereby you will do yourself good as well as me.

THEODORUS: I consent; lead me whither you will, for I know that you are
like destiny; no man can escape from any argument which you may weave for
him. But I am not disposed to go further than you suggest.

SOCRATES: Once will be enough; and now take particular care that we do not
again unwittingly expose ourselves to the reproach of talking childishly.

THEODORUS: I will do my best to avoid that error.

SOCRATES: In the first place, let us return to our old objection, and see
whether we were right in blaming and taking offence at Protagoras on the
ground that he assumed all to be equal and sufficient in wisdom; although
he admitted that there was a better and worse, and that in respect of this,
some who as he said were the wise excelled others.

THEODORUS: Very true.

SOCRATES: Had Protagoras been living and answered for himself, instead of
our answering for him, there would have been no need of our reviewing or
reinforcing the argument. But as he is not here, and some one may accuse
us of speaking without authority on his behalf, had we not better come to a
clearer agreement about his meaning, for a great deal may be at stake?

THEODORUS: True.

SOCRATES: Then let us obtain, not through any third person, but from his
own statement and in the fewest words possible, the basis of agreement.

THEODORUS: In what way?

SOCRATES: In this way:--His words are, 'What seems to a man, is to him.'

THEODORUS: Yes, so he says.

SOCRATES: And are not we, Protagoras, uttering the opinion of man, or
rather of all mankind, when we say that every one thinks himself wiser than
other men in some things, and their inferior in others? In the hour of
danger, when they are in perils of war, or of the sea, or of sickness, do
they not look up to their commanders as if they were gods, and expect
salvation from them, only because they excel them in knowledge? Is not the
world full of men in their several employments, who are looking for
teachers and rulers of themselves and of the animals? and there are plenty
who think that they are able to teach and able to rule. Now, in all this
is implied that ignorance and wisdom exist among them, at least in their
own opinion.

THEODORUS: Certainly.

SOCRATES: And wisdom is assumed by them to be true thought, and ignorance
to be false opinion.

THEODORUS: Exactly.

SOCRATES: How then, Protagoras, would you have us treat the argument?
Shall we say that the opinions of men are always true, or sometimes true
and sometimes false? In either case, the result is the same, and their
opinions are not always true, but sometimes true and sometimes false. For
tell me, Theodorus, do you suppose that you yourself, or any other follower
of Protagoras, would contend that no one deems another ignorant or mistaken
in his opinion?

THEODORUS: The thing is incredible, Socrates.

SOCRATES: And yet that absurdity is necessarily involved in the thesis
which declares man to be the measure of all things.

THEODORUS: How so?

SOCRATES: Why, suppose that you determine in your own mind something to be
true, and declare your opinion to me; let us assume, as he argues, that
this is true to you. Now, if so, you must either say that the rest of us
are not the judges of this opinion or judgment of yours, or that we judge
you always to have a true opinion? But are there not thousands upon
thousands who, whenever you form a judgment, take up arms against you and
are of an opposite judgment and opinion, deeming that you judge falsely?

THEODORUS: Yes, indeed, Socrates, thousands and tens of thousands, as
Homer says, who give me a world of trouble.

SOCRATES: Well, but are we to assert that what you think is true to you
and false to the ten thousand others?

THEODORUS: No other inference seems to be possible.
SOCRATES: And how about Protagoras himself? If neither he nor the multitude thought, as indeed they do not think, that man is the measure of all things, must it not follow that the truth of which Protagoras wrote would be true to no one? But if you suppose that he himself thought this, and that the multitude does not agree with him, you must begin by allowing that in whatever proportion the many are more than one, in that proportion his truth is more untrue than true.

THEODORUS: That would follow if the truth is supposed to vary with individual opinion.

SOCRATES: And the best of the joke is, that he acknowledges the truth of their opinion who believe his own opinion to be false; for he admits that the opinions of all men are true.

THEODORUS: Certainly.

SOCRATES: And does he not allow that his own opinion is false, if he admits that the opinion of those who think him false is true?

THEODORUS: Of course.

SOCRATES: Whereas the other side do not admit that they speak falsely?

THEODORUS: They do not.

SOCRATES: And he, as may be inferred from his writings, agrees that this opinion is also true.

THEODORUS: Clearly.

SOCRATES: Then all mankind, beginning with Protagoras, will contend, or rather, I should say that he will allow, when he concedes that his adversary has a true opinion--Protagoras, I say, will himself allow that neither a dog nor any ordinary man is the measure of anything which he has not learned--am I not right?

THEODORUS: Yes.

SOCRATES: And the truth of Protagoras being doubted by all, will be true neither to himself to any one else?

THEODORUS: I think, Socrates, that we are running my old friend too hard.

SOCRATES: But I do not know that we are going beyond the truth. Doubtless, as he is older, he may be expected to be wiser than we are. And
if he could only just get his head out of the world below, he would have 
overthrown both of us again and again, me for talking nonsense and you for 
assenting to me, and have been off and underground in a trice. But as he 
is not within call, we must make the best use of our own faculties, such as 
they are, and speak out what appears to us to be true. And one thing which 
no one will deny is, that there are great differences in the understandings 
of men.

THEODORUS: In that opinion I quite agree.

SOCRATES: And is there not most likely to be firm ground in the 
distinction which we were indicating on behalf of Protagoras, viz. that 
most things, and all immediate sensations, such as hot, dry, sweet, are 
only such as they appear; if however difference of opinion is to be allowed 
at all, surely we must allow it in respect of health or disease? for every 
woman, child, or living creature has not such a knowledge of what conduces 
to health as to enable them to cure themselves.

THEODORUS: I quite agree.

SOCRATES: Or again, in politics, while affirming that just and unjust, 
honourable and disgraceful, holy and unholy, are in reality to each state 
such as the state thinks and makes lawful, and that in determining these 
matters no individual or state is wiser than another, still the followers 
of Protagoras will not deny that in determining what is or is not expedient 
for the community one state is wiser and one counsellor better than 
another--they will scarcely venture to maintain, that what a city enacts in 
the belief that it is expedient will always be really expedient. But in 
the other case, I mean when they speak of justice and injustice, piety and 
impious, they are confident that in nature these have no existence or 
 essence of their own--the truth is that which is agreed on at the time of 
the agreement, and as long as the agreement lasts; and this is the 
philosophy of many who do not altogether go along with Protagoras. Here 
arises a new question, Theodorus, which threatens to be more serious than 
the last.

THEODORUS: Well, Socrates, we have plenty of leisure.

SOCRATES: That is true, and your remark recalls to my mind an observation 
which I have often made, that those who have passed their days in the 
pursuit of philosophy are ridiculously at fault when they have to appear 
and speak in court. How natural is this!

THEODORUS: What do you mean?

SOCRATES: I mean to say, that those who have been trained in philosophy 
and liberal pursuits are as unlike those who from their youth upwards have
been knocking about in the courts and such places, as a freeman is in breeding unlike a slave.

THEODORUS: In what is the difference seen?

SOCRATES: In the leisure spoken of by you, which a freeman can always command: he has his talk out in peace, and, like ourselves, he wanders at will from one subject to another, and from a second to a third,—if the fancy takes him, he begins again, as we are doing now, caring not whether his words are many or few; his only aim is to attain the truth. But the lawyer is always in a hurry; there is the water of the clepsydra driving him on, and not allowing him to expatiate at will: and there is his adversary standing over him, enforcing his rights; the indictment, which in their phraseology is termed the affidavit, is recited at the time: and from this he must not deviate. He is a servant, and is continually disputing about a fellow-servant before his master, who is seated, and has the cause in his hands; the trial is never about some indifferent matter, but always concerns himself; and often the race is for his life. The consequence has been, that he has become keen and shrewd; he has learned how to flatter his master in word and indulge him in deed; but his soul is small and unrighteous. His condition, which has been that of a slave from his youth upwards, has deprived him of growth and uprightness and independence; dangers and fears, which were too much for his truth and honesty, came upon him in early years, when the tenderness of youth was unequal to them, and he has been driven into crooked ways; from the first he has practised deception and retaliation, and has become stunted and warped. And so he has passed out of youth into manhood, having no soundness in him; and is now, as he thinks, a master in wisdom. Such is the lawyer, Theodorus. Will you have the companion picture of the philosopher, who is of our brotherhood; or shall we return to the argument? Do not let us abuse the freedom of digression which we claim.

THEODORUS: Nay, Socrates, not until we have finished what we are about; for you truly said that we belong to a brotherhood which is free, and are not the servants of the argument; but the argument is our servant, and must wait our leisure. Who is our judge? Or where is the spectator having any right to censure or control us, as he might the poets?

SOCRATES: Then, as this is your wish, I will describe the leaders; for there is no use in talking about the inferior sort. In the first place, the lords of philosophy have never, from their youth upwards, known their way to the Agora, or the dicastery, or the council, or any other political assembly; they neither see nor hear the laws or decrees, as they are called, of the state written or recited; the eagerness of political societies in the attainment of offices--clubs, and banquets, and revels, and singing-maidens,--do not enter even into their dreams. Whether any event has turned out well or ill in the city, what disgrace may have
descended to any one from his ancestors, male or female, are matters of
which the philosopher no more knows than he can tell, as they say, how many
pints are contained in the ocean. Neither is he conscious of his
ignorance. For he does not hold aloof in order that he may gain a
reputation; but the truth is, that the outer form of him only is in the
city: his mind, disdaining the littlenesses and nothingnesses of human
things, is 'flying all abroad' as Pindar says, measuring earth and heaven
and the things which are under and on the earth and above the heaven,
interrogating the whole nature of each and all in their entirety, but not
condescending to anything which is within reach.

THEODORUS: What do you mean, Socrates?

SOCRATES: I will illustrate my meaning, Theodorus, by the jest which the
clever witty Thracian handmaid is said to have made about Thales, when he
fell into a well as he was looking up at the stars. She said, that he was
so eager to know what was going on in heaven, that he could not see what
was before his feet. This is a jest which is equally applicable to all
philosophers. For the philosopher is wholly unacquainted with his next-
door neighbour; he is ignorant, not only of what he is doing, but he hardly
knows whether he is a man or an animal; he is searching into the essence of
man, and busy in enquiring what belongs to such a nature to do or suffer
different from any other;--I think that you understand me, Theodorus?

THEODORUS: I do, and what you say is true.

SOCRATES: And thus, my friend, on every occasion, private as well as
public, as I said at first, when he appears in a law-court, or in any place
in which he has to speak of things which are at his feet and before his
eyes, he is the jest, not only of Thracian handmaids but of the general
herd, tumbling into wells and every sort of disaster through his
inexperience. His awkwardness is fearful, and gives the impression of
imbecility. When he is reviled, he has nothing personal to say in answer
to the civilities of his adversaries, for he knows no scandals of any one,
and they do not interest him; and therefore he is laughed at for his
sheepishness; and when others are being praised and glorified, in the
simplicity of his heart he cannot help going into fits of laughter, so that
he seems to be a downright idiot. When he hears a tyrant or king
eulogized, he fancies that he is listening to the praises of some keeper of
cattle--a swineherd, or shepherd, or perhaps a cowherd, who is
congratulated on the quantity of milk which he squeezes from them; and he
remarks that the creature whom they tend, and out of whom they squeeze the
wealth, is of a less tractable and more insidious nature. Then, again, he
observes that the great man is of necessity as ill-mannered and uneducated
as any shepherd--for he has no leisure, and he is surrounded by a wall,
which is his mountain-pen. Hearing of enormous landed proprietors of ten
thousand acres and more, our philosopher deems this to be a trifle, because
he has been accustomed to think of the whole earth; and when they sing the praises of family, and say that some one is a gentleman because he can show seven generations of wealthy ancestors, he thinks that their sentiments only betray a dull and narrow vision in those who utter them, and who are not educated enough to look at the whole, nor to consider that every man has had thousands and ten thousands of progenitors, and among them have been rich and poor, kings and slaves, Hellenes and barbarians, innumerable. And when people pride themselves on having a pedigree of twenty-five ancestors, which goes back to Heracles, the son of Amphitryon, he cannot understand their poverty of ideas. Why are they unable to calculate that Amphitryon had a twenty-fifth ancestor, who might have been anybody, and was such as fortune made him, and he had a fiftieth, and so on? He amuses himself with the notion that they cannot count, and thinks that a little arithmetic would have got rid of their senseless vanity. Now, in all these cases our philosopher is derided by the vulgar, partly because he is thought to despise them, and also because he is ignorant of what is before him, and always at a loss.

THEODORUS: That is very true, Socrates.

SOCRATES: But, O my friend, when he draws the other into upper air, and gets him out of his pleas and rejoinders into the contemplation of justice and injustice in their own nature and in their difference from one another and from all other things; or from the commonplaces about the happiness of a king or of a rich man to the consideration of government, and of human happiness and misery in general—what they are, and how a man is to attain the one and avoid the other—when that narrow, keen, little legal mind is called to account about all this, he gives the philosopher his revenge; for dizzied by the height at which he is hanging, whence he looks down into space, which is a strange experience to him, he being dismayed, and lost, and stammering broken words, is laughed at, not by Thracian handmaidens or any other uneducated persons, for they have no eye for the situation, but by every man who has not been brought up a slave. Such are the two characters, Theodorus: the one of the freeman, who has been trained in liberty and leisure, whom you call the philosopher,—him we cannot blame because he appears simple and of no account when he has to perform some menial task, such as packing up bed-clothes, or flavouring a sauce or fawning speech; the other character is that of the man who is able to do all this kind of service smartly and neatly, but knows not how to wear his cloak like a gentleman; still less with the music of discourse can he hymn the true life aright which is lived by immortals or men blessed of heaven.

THEODORUS: If you could only persuade everybody, Socrates, as you do me, of the truth of your words, there would be more peace and fewer evils among men.

SOCRATES: Evils, Theodorus, can never pass away; for there must always
remain something which is antagonistic to good. Having no place among the
gods in heaven, of necessity they hover around the mortal nature, and this
earthly sphere. Wherefore we ought to fly away from earth to heaven as
quickly as we can; and to fly away is to become like God, as far as this is
possible; and to become like him, is to become holy, just, and wise. But,
O my friend, you cannot easily convince mankind that they should pursue
virtue or avoid vice, not merely in order that a man may seem to be good,
which is the reason given by the world, and in my judgment is only a
repetition of an old wives’ fable. Whereas, the truth is that God is never
in any way unrighteous--he is perfect righteousness; and he of us who is
the most righteous is most like him. Herein is seen the true cleverness of
a man, and also his nothingness and want of manhood. For to know this is
true wisdom and virtue, and ignorance of this is manifest folly and vice.
All other kinds of wisdom or cleverness, which seem only, such as the
wisdom of politicians, or the wisdom of the arts, are coarse and vulgar.
The unrighteous man, or the sayer and doer of unholy things, had far better
not be encouraged in the illusion that his roguery is clever; for men glory
in their shame--they fancy that they hear others saying of them, 'These are
not mere good-for-nothing persons, mere burdens of the earth, but such as
men should be who mean to dwell safely in a state.' Let us tell them that
they are all the more truly what they do not think they are because they do
not know it; for they do not know the penalty of injustice, which above all
things they ought to know--not stripes and death, as they suppose, which
evil-doers often escape, but a penalty which cannot be escaped.

THEODORUS: What is that?

SOCRATES: There are two patterns eternally set before them; the one
blessed and divine, the other godless and wretched: but they do not see
them, or perceive that in their utter folly and infatuation they are
growing like the one and unlike the other, by reason of their evil deeds;
and the penalty is, that they lead a life answering to the pattern which
they are growing like. And if we tell them, that unless they depart from
their cunning, the place of innocence will not receive them after death;
and that here on earth, they will live ever in the likeness of their own
evil selves, and with evil friends--when they hear this they in their
superior cunning will seem to be listening to the talk of idiots.

THEODORUS: Very true, Socrates.

SOCRATES: Too true, my friend, as I well know; there is, however, one
peculiarity in their case: when they begin to reason in private about
their dislike of philosophy, if they have the courage to hear the argument
out, and do not run away, they grow at last strangely discontented with
themselves; their rhetoric fades away, and they become helpless as
children. These however are digressions from which we must now desist, or
they will overflow, and drown the original argument; to which, if you
please, we will now return.

THEODORUS: For my part, Socrates, I would rather have the digressions, for at my age I find them easier to follow; but if you wish, let us go back to the argument.

SOCRATES: Had we not reached the point at which the partisans of the perpetual flux, who say that things are as they seem to each one, were confidently maintaining that the ordinances which the state commanded and thought just, were just to the state which imposed them, while they were in force; this was especially asserted of justice; but as to the good, no one had any longer the hardihood to contend of any ordinances which the state thought and enacted to be good that these, while they were in force, were really good;--he who said so would be playing with the name 'good,' and would not touch the real question--it would be a mockery, would it not?

THEODORUS: Certainly it would.

SOCRATES: He ought not to speak of the name, but of the thing which is contemplated under the name.

THEODORUS: Right.

SOCRATES: Whatever be the term used, the good or expedient is the aim of legislation, and as far as she has an opinion, the state imposes all laws with a view to the greatest expediency; can legislation have any other aim?

THEODORUS: Certainly not.

SOCRATES: But is the aim attained always? do not mistakes often happen?

THEODORUS: Yes, I think that there are mistakes.

SOCRATES: The possibility of error will be more distinctly recognised, if we put the question in reference to the whole class under which the good or expedient falls. That whole class has to do with the future, and laws are passed under the idea that they will be useful in after-time; which, in other words, is the future.

THEODORUS: Very true.

SOCRATES: Suppose now, that we ask Protagoras, or one of his disciples, a question:--O, Protagoras, we will say to him, Man is, as you declare, the measure of all things--white, heavy, light: of all such things he is the judge; for he has the criterion of them in himself, and when he thinks that things are such as he experiences them to be, he thinks what is and is true to himself. Is it not so?
THEODORUS: Yes.

SOCRATES: And do you extend your doctrine, Protagoras (as we shall further say), to the future as well as to the present; and has he the criterion not only of what in his opinion is but of what will be, and do things always happen to him as he expected? For example, take the case of heat:—When an ordinary man thinks that he is going to have a fever, and that this kind of heat is coming on, and another person, who is a physician, thinks the contrary, whose opinion is likely to prove right? Or are they both right?—he will have a heat and fever in his own judgment, and not have a fever in the physician's judgment?

THEODORUS: How ludicrous!

SOCRATES: And the vinegrower, if I am not mistaken, is a better judge of the sweetness or dryness of the vintage which is not yet gathered than the harp-player?

THEODORUS: Certainly.

SOCRATES: And in musical composition the musician will know better than the training master what the training master himself will hereafter think harmonious or the reverse?

THEODORUS: Of course.

SOCRATES: And the cook will be a better judge than the guest, who is not a cook, of the pleasure to be derived from the dinner which is in preparation; for of present or past pleasure we are not as yet arguing; but can we say that every one will be to himself the best judge of the pleasure which will seem to be and will be to him in the future?—nay, would not you, Protagoras, better guess which arguments in a court would convince any one of us than the ordinary man?

THEODORUS: Certainly, Socrates, he used to profess in the strongest manner that he was the superior of all men in this respect.

SOCRATES: To be sure, friend: who would have paid a large sum for the privilege of talking to him, if he had really persuaded his visitors that neither a prophet nor any other man was better able to judge what will be and seem to be in the future than every one could for himself?

THEODORUS: Who indeed?

SOCRATES: And legislation and expediency are all concerned with the future; and every one will admit that states, in passing laws, must often
fail of their highest interests?

THEODORUS: Quite true.

SOCRATES: Then we may fairly argue against your master, that he must admit one man to be wiser than another, and that the wiser is a measure: but I, who know nothing, am not at all obliged to accept the honour which the advocate of Protagoras was just now forcing upon me, whether I would or not, of being a measure of anything.

THEODORUS: That is the best refutation of him, Socrates; although he is also caught when he ascribes truth to the opinions of others, who give the lie direct to his own opinion.

SOCRATES: There are many ways, Theodorus, in which the doctrine that every opinion of every man is true may be refuted; but there is more difficulty in proving that states of feeling, which are present to a man, and out of which arise sensations and opinions in accordance with them, are also untrue. And very likely I have been talking nonsense about them; for they may be unassailable, and those who say that there is clear evidence of them, and that they are matters of knowledge, may probably be right; in which case our friend Theaetetus was not so far from the mark when he identified perception and knowledge. And therefore let us draw nearer, as the advocate of Protagoras desires; and give the truth of the universal flux a ring: is the theory sound or not? at any rate, no small war is raging about it, and there are combination not a few.

THEODORUS: No small, war, indeed, for in Ionia the sect makes rapid strides; the disciples of Heracleitus are most energetic upholders of the doctrine.

SOCRATES: Then we are the more bound, my dear Theodorus, to examine the question from the foundation as it is set forth by themselves.

THEODORUS: Certainly we are. About these speculations of Heracleitus, which, as you say, are as old as Homer, or even older still, the Ephesians themselves, who profess to know them, are downright mad, and you cannot talk with them on the subject. For, in accordance with their text-books, they are always in motion; but as for dwelling upon an argument or a question, and quietly asking and answering in turn, they can no more do so than they can fly; or rather, the determination of these fellows not to have a particle of rest in them is more than the utmost powers of negation can express. If you ask any of them a question, he will produce, as from a quiver, sayings brief and dark, and shoot them at you; and if you inquire the reason of what he has said, you will be hit by some other new-fangled word, and will make no way with any of them, nor they with one another; their great care is, not to allow of any settled principle either in their
arguments or in their minds, conceiving, as I imagine, that any such principle would be stationary; for they are at war with the stationary, and do what they can to drive it out everywhere.

SOCRATES: I suppose, Theodorus, that you have only seen them when they were fighting, and have never stayed with them in time of peace, for they are no friends of yours; and their peace doctrines are only communicated by them at leisure, as I imagine, to those disciples of theirs whom they want to make like themselves.

THEODORUS: Disciples! my good sir, they have none; men of their sort are not one another's disciples, but they grow up at their own sweet will, and get their inspiration anywhere, each of them saying of his neighbour that he knows nothing. From these men, then, as I was going to remark, you will never get a reason, whether with their will or without their will; we must take the question out of their hands, and make the analysis ourselves, as if we were doing geometrical problem.

SOCRATES: Quite right too; but as touching the aforesaid problem, have we not heard from the ancients, who concealed their wisdom from the many in poetical figures, that Oceanus and Tethys, the origin of all things, are streams, and that nothing is at rest? And now the moderns, in their superior wisdom, have declared the same openly, that the cobbler too may hear and learn of them, and no longer foolishly imagine that some things are at rest and others in motion--having learned that all is motion, he will duly honour his teachers. I had almost forgotten the opposite doctrine, Theodorus,

'Alone Being remains unmoved, which is the name for the all.'

This is the language of Parmenides, Melissus, and their followers, who stoutly maintain that all being is one and self-contained, and has no place in which to move. What shall we do, friend, with all these people; for, advancing step by step, we have imperceptibly got between the combatants, and, unless we can protect our retreat, we shall pay the penalty of our rashness--like the players in the palaestra who are caught upon the line, and are dragged different ways by the two parties. Therefore I think that we had better begin by considering those whom we first accosted, 'the river-gods,' and, if we find any truth in them, we will help them to pull us over, and try to get away from the others. But if the partisans of 'the whole' appear to speak more truly, we will fly off from the party which would move the immovable, to them. And if I find that neither of them have anything reasonable to say, we shall be in a ridiculous position, having so great a conceit of our own poor opinion and rejecting that of ancient and famous men. O Theodorus, do you think that there is any use in proceeding when the danger is so great?
THEODORUS: Nay, Socrates, not to examine thoroughly what the two parties have to say would be quite intolerable.

SOCRATES: Then examine we must, since you, who were so reluctant to begin, are so eager to proceed. The nature of motion appears to be the question with which we begin. What do they mean when they say that all things are in motion? Is there only one kind of motion, or, as I rather incline to think, two? I should like to have your opinion upon this point in addition to my own, that I may err, if I must err, in your company; tell me, then, when a thing changes from one place to another, or goes round in the same place, is not that what is called motion?

THEODORUS: Yes.

SOCRATES: Here then we have one kind of motion. But when a thing, remaining on the same spot, grows old, or becomes black from being white, or hard from being soft, or undergoes any other change, may not this be properly called motion of another kind?

THEODORUS: I think so.

SOCRATES: Say rather that it must be so. Of motion then there are these two kinds, 'change,' and 'motion in place.'

THEODORUS: You are right.

SOCRATES: And now, having made this distinction, let us address ourselves to those who say that all is motion, and ask them whether all things according to them have the two kinds of motion, and are changed as well as move in place, or is one thing moved in both ways, and another in one only?

THEODORUS: Indeed, I do not know what to answer; but I think they would say that all things are moved in both ways.

SOCRATES: Yes, comrade; for, if not, they would have to say that the same things are in motion and at rest, and there would be no more truth in saying that all things are in motion, than that all things are at rest.

THEODORUS: To be sure.

SOCRATES: And if they are to be in motion, and nothing is to be devoid of motion, all things must always have every sort of motion?

THEODORUS: Most true.

SOCRATES: Consider a further point: did we not understand them to explain the generation of heat, whiteness, or anything else, in some such manner as
the following:—were they not saying that each of them is moving between
the agent and the patient, together with a perception, and that the patient
ceases to be a perceiving power and becomes a percipient, and the agent a
quale instead of a quality? I suspect that quality may appear a strange
and uncouth term to you, and that you do not understand the abstract
expression. Then I will take concrete instances: I mean to say that the
producing power or agent becomes neither heat nor whiteness but hot and
white, and the like of other things. For I must repeat what I said before,
that neither the agent nor patient have any absolute existence, but when
they come together and generate sensations and their objects, the one
becomes a thing of a certain quality, and the other a percipient. You
remember?

THEODORUS: Of course.

SOCRATES: We may leave the details of their theory unexamined, but we must
not forget to ask them the only question with which we are concerned: Are
all things in motion and flux?

THEODORUS: Yes, they will reply.

SOCRATES: And they are moved in both those ways which we distinguished,
that is to say, they move in place and are also changed?

THEODORUS: Of course, if the motion is to be perfect.

SOCRATES: If they only moved in place and were not changed, we should be
able to say what is the nature of the things which are in motion and flux?

THEODORUS: Exactly.

SOCRATES: But now, since not even white continues to flow white, and
whiteness itself is a flux or change which is passing into another colour,
and is never to be caught standing still, can the name of any colour be
rightly used at all?

THEODORUS: How is that possible, Socrates, either in the case of this or
of any other quality—if while we are using the word the object is escaping
in the flux?

SOCRATES: And what would you say of perceptions, such as sight and
hearing, or any other kind of perception? Is there any stopping in the act
of seeing and hearing?

THEODORUS: Certainly not, if all things are in motion.

SOCRATES: Then we must not speak of seeing any more than of not-seeing,
nor of any other perception more than of any non-perception, if all things partake of every kind of motion?

THEODORUS: Certainly not.

SOCRATES: Yet perception is knowledge: so at least Theaetetus and I were saying.

THEODORUS: Very true.

SOCRATES: Then when we were asked what is knowledge, we no more answered what is knowledge than what is not knowledge?

THEODORUS: I suppose not.

SOCRATES: Here, then, is a fine result: we corrected our first answer in our eagerness to prove that nothing is at rest. But if nothing is at rest, every answer upon whatever subject is equally right: you may say that a thing is or is not thus; or, if you prefer, 'becomes' thus; and if we say 'becomes,' we shall not then hamper them with words expressive of rest.

THEODORUS: Quite true.

SOCRATES: Yes, Theodorus, except in saying 'thus' and 'not thus.' But you ought not to use the word 'thus,' for there is no motion in 'thus' or in 'not thus.' The maintainers of the doctrine have as yet no words in which to express themselves, and must get a new language. I know of no word that will suit them, except perhaps 'no how,' which is perfectly indefinite.

THEODORUS: Yes, that is a manner of speaking in which they will be quite at home.

SOCRATES: And so, Theodorus, we have got rid of your friend without assenting to his doctrine, that every man is the measure of all things—a wise man only is a measure; neither can we allow that knowledge is perception, certainly not on the hypothesis of a perpetual flux, unless perchance our friend Theaetetus is able to convince us that it is.

THEODORUS: Very good, Socrates; and now that the argument about the doctrine of Protagoras has been completed, I am absolved from answering; for this was the agreement.

THEAETETUS: Not, Theodorus, until you and Socrates have discussed the doctrine of those who say that all things are at rest, as you were proposing.

THEODORUS: You, Theaetetus, who are a young rogue, must not instigate your
elders to a breach of faith, but should prepare to answer Socrates in the remainder of the argument.

THEAETETUS: Yes, if he wishes; but I would rather have heard about the doctrine of rest.

THEODORUS: Invite Socrates to an argument--invite horsemen to the open plain; do but ask him, and he will answer.

SOCRATES: Nevertheless, Theodorus, I am afraid that I shall not be able to comply with the request of Theaetetus.

THEODORUS: Not comply! for what reason?

SOCRATES: My reason is that I have a kind of reverence; not so much for Melissus and the others, who say that 'All is one and at rest,' as for the great leader himself, Parmenides, venerable and awful, as in Homeric language he may be called;--him I should be ashamed to approach in a spirit unworthy of him. I met him when he was an old man, and I was a mere youth, and he appeared to me to have a glorious depth of mind. And I am afraid that we may not understand his words, and may be still further from understanding his meaning; above all I fear that the nature of knowledge, which is the main subject of our discussion, may be thrust out of sight by the unbidden guests who will come pouring in upon our feast of discourse, if we let them in--besides, the question which is now stirring is of immense extent, and will be treated unfairly if only considered by the way; or if treated adequately and at length, will put into the shade the other question of knowledge. Neither the one nor the other can be allowed; but I must try by my art of midwifery to deliver Theaetetus of his conceptions about knowledge.

THEAETETUS: Very well; do so if you will.

SOCRATES: Then now, Theaetetus, take another view of the subject: you answered that knowledge is perception?

THEAETETUS: I did.

SOCRATES: And if any one were to ask you: With what does a man see black and white colours? and with what does he hear high and low sounds?--you would say, if I am not mistaken, 'With the eyes and with the ears.'

THEAETETUS: I should.

SOCRATES: The free use of words and phrases, rather than minute precision, is generally characteristic of a liberal education, and the opposite is pedantic; but sometimes precision is necessary, and I believe that the
answer which you have just given is open to the charge of incorrectness; for which is more correct, to say that we see or hear with the eyes and with the ears, or through the eyes and through the ears.

THEAETETUS: I should say 'through,' Socrates, rather than 'with.'

SOCRATES: Yes, my boy, for no one can suppose that in each of us, as in a sort of Trojan horse, there are perched a number of unconnected senses, which do not all meet in some one nature, the mind, or whatever we please to call it, of which they are the instruments, and with which through them we perceive objects of sense.

THEAETETUS: I agree with you in that opinion.

SOCRATES: The reason why I am thus precise is, because I want to know whether, when we perceive black and white through the eyes, and again, other qualities through other organs, we do not perceive them with one and the same part of ourselves, and, if you were asked, you might refer all such perceptions to the body. Perhaps, however, I had better allow you to answer for yourself and not interfere. Tell me, then, are not the organs through which you perceive warm and hard and light and sweet, organs of the body?

THEAETETUS: Of the body, certainly.

SOCRATES: And you would admit that what you perceive through one faculty you cannot perceive through another; the objects of hearing, for example, cannot be perceived through sight, or the objects of sight through hearing?

THEAETETUS: Of course not.

SOCRATES: If you have any thought about both of them, this common perception cannot come to you, either through the one or the other organ?

THEAETETUS: It cannot.

SOCRATES: How about sounds and colours: in the first place you would admit that they both exist?

THEAETETUS: Yes.

SOCRATES: And that either of them is different from the other, and the same with itself?

THEAETETUS: Certainly.

SOCRATES: And that both are two and each of them one?
THEAETETUS: Yes.

SOCRATES: You can further observe whether they are like or unlike one another?

THEAETETUS: I dare say.

SOCRATES: But through what do you perceive all this about them? for neither through hearing nor yet through seeing can you apprehend that which they have in common. Let me give you an illustration of the point at issue:--If there were any meaning in asking whether sounds and colours are saline or not, you would be able to tell me what faculty would consider the question. It would not be sight or hearing, but some other.

THEAETETUS: Certainly; the faculty of taste.

SOCRATES: Very good; and now tell me what is the power which discerns, not only in sensible objects, but in all things, universal notions, such as those which are called being and not-being, and those others about which we were just asking--what organs will you assign for the perception of these notions?

THEAETETUS: You are thinking of being and not being, likeness and unlikeness, sameness and difference, and also of unity and other numbers which are applied to objects of sense; and you mean to ask, through what bodily organ the soul perceives odd and even numbers and other arithmetical conceptions.

SOCRATES: You follow me excellently, Theaetetus; that is precisely what I am asking.

THEAETETUS: Indeed, Socrates, I cannot answer; my only notion is, that these, unlike objects of sense, have no separate organ, but that the mind, by a power of her own, contemplates the universals in all things.

SOCRATES: You are a beauty, Theaetetus, and not ugly, as Theodorus was saying; for he who utters the beautiful is himself beautiful and good. And besides being beautiful, you have done me a kindness in releasing me from a very long discussion, if you are clear that the soul views some things by herself and others through the bodily organs. For that was my own opinion, and I wanted you to agree with me.

THEAETETUS: I am quite clear.

SOCRATES: And to which class would you refer being or essence; for this, of all our notions, is the most universal?
THEAETETUS: I should say, to that class which the soul aspires to know of herself.

SOCRATES: And would you say this also of like and unlike, same and other?

THEAETETUS: Yes.

SOCRATES: And would you say the same of the noble and base, and of good and evil?

THEAETETUS: These I conceive to be notions which are essentially relative, and which the soul also perceives by comparing in herself things past and present with the future.

SOCRATES: And does she not perceive the hardness of that which is hard by the touch, and the softness of that which is soft equally by the touch?

THEAETETUS: Yes.

SOCRATES: But their essence and what they are, and their opposition to one another, and the essential nature of this opposition, the soul herself endeavours to decide for us by the review and comparison of them?

THEAETETUS: Certainly.

SOCRATES: The simple sensations which reach the soul through the body are given at birth to men and animals by nature, but their reflections on the being and use of them are slowly and hardly gained, if they are ever gained, by education and long experience.

THEAETETUS: Assuredly.

SOCRATES: And can a man attain truth who fails of attaining being?

THEAETETUS: Impossible.

SOCRATES: And can he who misses the truth of anything, have a knowledge of that thing?

THEAETETUS: He cannot.

SOCRATES: Then knowledge does not consist in impressions of sense, but in reasoning about them; in that only, and not in the mere impression, truth and being can be attained?

THEAETETUS: Clearly.
SOCRATES: And would you call the two processes by the same name, when there is so great a difference between them?

THEAETETUS: That would certainly not be right.

SOCRATES: And what name would you give to seeing, hearing, smelling, being cold and being hot?

THEAETETUS: I should call all of them perceiving--what other name could be given to them?

SOCRATES: Perception would be the collective name of them?

THEAETETUS: Certainly.

SOCRATES: Which, as we say, has no part in the attainment of truth any more than of being?

THEAETETUS: Certainly not.

SOCRATES: And therefore not in science or knowledge?

THEAETETUS: No.

SOCRATES: Then perception, Theaetetus, can never be the same as knowledge or science?

THEAETETUS: Clearly not, Socrates; and knowledge has now been most distinctly proved to be different from perception.

SOCRATES: But the original aim of our discussion was to find out rather what knowledge is than what it is not; at the same time we have made some progress, for we no longer seek for knowledge in perception at all, but in that other process, however called, in which the mind is alone and engaged with being.

THEAETETUS: You mean, Socrates, if I am not mistaken, what is called thinking or opining.

SOCRATES: You conceive truly. And now, my friend, please to begin again at this point; and having wiped out of your memory all that has preceded, see if you have arrived at any clearer view, and once more say what is knowledge.

THEAETETUS: I cannot say, Socrates, that all opinion is knowledge, because there may be a false opinion; but I will venture to assert, that knowledge
is true opinion: let this then be my reply; and if this is hereafter disproved, I must try to find another.

SOCRATES: That is the way in which you ought to answer, Theaetetus, and not in your former hesitating strain, for if we are bold we shall gain one of two advantages; either we shall find what we seek, or we shall be less likely to think that we know what we do not know—in either case we shall be richly rewarded. And now, what are you saying?—Are there two sorts of opinion, one true and the other false; and do you define knowledge to be the true?

THEAETETUS: Yes, according to my present view.

SOCRATES: Is it still worth our while to resume the discussion touching opinion?

THEAETETUS: To what are you alluding?

SOCRATES: There is a point which often troubles me, and is a great perplexity to me, both in regard to myself and others. I cannot make out the nature or origin of the mental experience to which I refer.

THEAETETUS: Pray what is it?

SOCRATES: How there can be false opinion—that difficulty still troubles the eye of my mind; and I am uncertain whether I shall leave the question, or begin over again in a new way.

THEAETETUS: Begin again, Socrates,—at least if you think that there is the slightest necessity for doing so. Were not you and Theodorus just now remarking very truly, that in discussions of this kind we may take our own time?

SOCRATES: You are quite right, and perhaps there will be no harm in retracing our steps and beginning again. Better a little which is well done, than a great deal imperfectly.

THEAETETUS: Certainly.

SOCRATES: Well, and what is the difficulty? Do we not speak of false opinion, and say that one man holds a false and another a true opinion, as though there were some natural distinction between them?

THEAETETUS: We certainly say so.

SOCRATES: All things and everything are either known or not known. I leave out of view the intermediate conceptions of learning and forgetting,
because they have nothing to do with our present question.

THEAETETUS: There can be no doubt, Socrates, if you exclude these, that there is no other alternative but knowing or not knowing a thing.

SOCRATES: That point being now determined, must we not say that he who has an opinion, must have an opinion about something which he knows or does not know?

THEAETETUS: He must.

SOCRATES: He who knows, cannot but know; and he who does not know, cannot know?

THEAETETUS: Of course.

SOCRATES: What shall we say then? When a man has a false opinion does he think that which he knows to be some other thing which he knows, and knowing both, is he at the same time ignorant of both?

THEAETETUS: That, Socrates, is impossible.

SOCRATES: But perhaps he thinks of something which he does not know as some other thing which he does not know; for example, he knows neither Theaetetus nor Socrates, and yet he fancies that Theaetetus is Socrates, or Socrates Theaetetus?

THEAETETUS: How can he?

SOCRATES: But surely he cannot suppose what he knows to be what he does not know, or what he does not know to be what he knows?

THEAETETUS: That would be monstrous.

SOCRATES: Where, then, is false opinion? For if all things are either known or unknown, there can be no opinion which is not comprehended under this alternative, and so false opinion is excluded.

THEAETETUS: Most true.

SOCRATES: Suppose that we remove the question out of the sphere of knowing or not knowing, into that of being and not-being.

THEAETETUS: What do you mean?

SOCRATES: May we not suspect the simple truth to be that he who thinks about anything, that which is not, will necessarily think what is false,
whatever in other respects may be the state of his mind?

THEAETETUS: That, again, is not unlikely, Socrates.

SOCRATES: Then suppose some one to say to us, Theaetetus:--Is it possible for any man to think that which is not, either as a self-existent substance or as a predicate of something else? And suppose that we answer, 'Yes, he can, when he thinks what is not true.'--That will be our answer?

THEAETETUS: Yes.

SOCRATES: But is there any parallel to this?

THEAETETUS: What do you mean?

SOCRATES: Can a man see something and yet see nothing?

THEAETETUS: Impossible.

SOCRATES: But if he sees any one thing, he sees something that exists. Do you suppose that what is one is ever to be found among non-existing things?

THEAETETUS: I do not.

SOCRATES: He then who sees some one thing, sees something which is?

THEAETETUS: Clearly.

SOCRATES: And he who hears anything, hears some one thing, and hears that which is?

THEAETETUS: Yes.

SOCRATES: And he who touches anything, touches something which is one and therefore is?

THEAETETUS: That again is true.

SOCRATES: And does not he who thinks, think some one thing?

THEAETETUS: Certainly.

SOCRATES: And does not he who thinks some one thing, think something which is?

THEAETETUS: I agree.
SOCRATES: Then he who thinks of that which is not, thinks of nothing?

THEAETETUS: Clearly.

SOCRATES: And he who thinks of nothing, does not think at all?

THEAETETUS: Obviously.

SOCRATES: Then no one can think that which is not, either as a self-existent substance or as a predicate of something else?

THEAETETUS: Clearly not.

SOCRATES: Then to think falsely is different from thinking that which is not?

THEAETETUS: It would seem so.

SOCRATES: Then false opinion has no existence in us, either in the sphere of being or of knowledge?

THEAETETUS: Certainly not.

SOCRATES: But may not the following be the description of what we express by this name?

THEAETETUS: What?

SOCRATES: May we not suppose that false opinion or thought is a sort of heterodoxy; a person may make an exchange in his mind, and say that one real object is another real object. For thus he always thinks that which is, but he puts one thing in place of another; and missing the aim of his thoughts, he may be truly said to have false opinion.

THEAETETUS: Now you appear to me to have spoken the exact truth: when a man puts the base in the place of the noble, or the noble in the place of the base, then he has truly false opinion.

SOCRATES: I see, Theaetetus, that your fear has disappeared, and that you are beginning to despise me.

THEAETETUS: What makes you say so?

SOCRATES: You think, if I am not mistaken, that your 'truly false' is safe from censure, and that I shall never ask whether there can be a swift which is slow, or a heavy which is light, or any other self-contradictory thing, which works, not according to its own nature, but according to that of its
opposite. But I will not insist upon this, for I do not wish needlessly to
discourage you. And so you are satisfied that false opinion is heterodoxy,
or the thought of something else?

THEAETETUS: I am.

SOCRATES: It is possible then upon your view for the mind to conceive of
one thing as another?

THEAETETUS: True.

SOCRATES: But must not the mind, or thinking power, which misplaces them,
have a conception either of both objects or of one of them?

THEAETETUS: Certainly.

SOCRATES: Either together or in succession?

THEAETETUS: Very good.

SOCRATES: And do you mean by conceiving, the same which I mean?

THEAETETUS: What is that?

SOCRATES: I mean the conversation which the soul holds with herself in
considering of anything. I speak of what I scarcely understand; but the
soul when thinking appears to me to be just talking--asking questions of
herself and answering them, affirming and denying. And when she has
arrived at a decision, either gradually or by a sudden impulse, and has at
last agreed, and does not doubt, this is called her opinion. I say, then,
that to form an opinion is to speak, and opinion is a word spoken.--I mean,
to oneself and in silence, not aloud or to another: What think you?

THEAETETUS: I agree.

SOCRATES: Then when any one thinks of one thing as another, he is saying
to himself that one thing is another?

THEAETETUS: Yes.

SOCRATES: But do you ever remember saying to yourself that the noble is
certainly base, or the unjust just; or, best of all--have you ever
attempted to convince yourself that one thing is another? Nay, not even in
sleep, did you ever venture to say to yourself that odd is even, or
anything of the kind?

THEAETETUS: Never.
SOCRATES: And do you suppose that any other man, either in his senses or out of them, ever seriously tried to persuade himself that an ox is a horse, or that two are one?

THEAETETUS: Certainly not.

SOCRATES: But if thinking is talking to oneself, no one speaking and thinking of two objects, and apprehending them both in his soul, will say and think that the one is the other of them, and I must add, that even you, lover of dispute as you are, had better let the word 'other' alone (i.e. not insist that 'one' and 'other' are the same (Both words in Greek are called eteron: compare Parmen.; Euthyd.)). I mean to say, that no one thinks the noble to be base, or anything of the kind.

THEAETETUS: I will give up the word 'other,' Socrates; and I agree to what you say.

SOCRATES: If a man has both of them in his thoughts, he cannot think that the one of them is the other?

THEAETETUS: True.

SOCRATES: Neither, if he has one of them only in his mind and not the other, can he think that one is the other?

THEAETETUS: True; for we should have to suppose that he apprehends that which is not in his thoughts at all.

SOCRATES: Then no one who has either both or only one of the two objects in his mind can think that the one is the other. And therefore, he who maintains that false opinion is heterodoxy is talking nonsense; for neither in this, any more than in the previous way, can false opinion exist in us.

THEAETETUS: No.

SOCRATES: But if, Theaetetus, this is not admitted, we shall be driven into many absurdities.

THEAETETUS: What are they?

SOCRATES: I will not tell you until I have endeavoured to consider the matter from every point of view. For I should be ashamed of us if we were driven in our perplexity to admit the absurd consequences of which I speak. But if we find the solution, and get away from them, we may regard them only as the difficulties of others, and the ridicule will not attach to us. On the other hand, if we utterly fail, I suppose that we must be humble,
and allow the argument to trample us under foot, as the sea-sick passenger is trampled upon by the sailor, and to do anything to us. Listen, then, while I tell you how I hope to find a way out of our difficulty.

THEAETETUS: Let me hear.

SOCRATES: I think that we were wrong in denying that a man could think what he knew to be what he did not know; and that there is a way in which such a deception is possible.

THEAETETUS: You mean to say, as I suspected at the time, that I may know Socrates, and at a distance see some one who is unknown to me, and whom I mistake for him--then the deception will occur?

SOCRATES: But has not that position been relinquished by us, because involving the absurdity that we should know and not know the things which we know?

THEAETETUS: True.

SOCRATES: Let us make the assertion in another form, which may or may not have a favourable issue; but as we are in a great strait, every argument should be turned over and tested. Tell me, then, whether I am right in saying that you may learn a thing which at one time you did not know?

THEAETETUS: Certainly you may.

SOCRATES: And another and another?

THEAETETUS: Yes.

SOCRATES: I would have you imagine, then, that there exists in the mind of man a block of wax, which is of different sizes in different men; harder, moister, and having more or less of purity in one than another, and in some of an intermediate quality.

THEAETETUS: I see.

SOCRATES: Let us say that this tablet is a gift of Memory, the mother of the Muses; and that when we wish to remember anything which we have seen, or heard, or thought in our own minds, we hold the wax to the perceptions and thoughts, and in that material receive the impression of them as from the seal of a ring; and that we remember and know what is imprinted as long as the image lasts; but when the image is effaced, or cannot be taken, then we forget and do not know.

THEAETETUS: Very good.
SOCRATES: Now, when a person has this knowledge, and is considering something which he sees or hears, may not false opinion arise in the following manner?

THEAETETUS: In what manner?

SOCRATES: When he thinks what he knows, sometimes to be what he knows, and sometimes to be what he does not know. We were wrong before in denying the possibility of this.

THEAETETUS: And how would you amend the former statement?

SOCRATES: I should begin by making a list of the impossible cases which must be excluded. (1) No one can think one thing to be another when he does not perceive either of them, but has the memorial or seal of both of them in his mind; nor can any mistaking of one thing for another occur, when he only knows one, and does not know, and has no impression of the other; nor can he think that one thing which he does not know is another thing which he does not know, or that what he does not know is what he knows; nor (2) that one thing which he perceives is another thing which he perceives, or that something which he perceives is something which he does not perceive; or that something which he does not perceive is something else which he does not perceive; or that something which he does not perceive is something which he perceives; nor again (3) can he think that something which he knows and perceives, and of which he has the impression coinciding with sense, is something else which he knows and perceives, and of which he has the impression coinciding with sense;--this last case, if possible, is still more inconceivable than the others; nor (4) can he think that something which he knows and perceives, and of which he has the memorial coinciding with sense, is something else which he knows; nor so long as these agree, can he think that a thing which he knows and perceives is another thing which he perceives; or that a thing which he does not know and does not perceive, is the same as another thing which he does not know and does not perceive;--nor again, can he suppose that a thing which he does not know and does not perceive is the same as another thing which he does not know; or that a thing which he does not know and does not perceive is another thing which he does not perceive:--All these utterly and absolutely exclude the possibility of false opinion. The only cases, if any, which remain, are the following.

THEAETETUS: What are they? If you tell me, I may perhaps understand you better; but at present I am unable to follow you.

SOCRATES: A person may think that some things which he knows, or which he perceives and does not know, are some other things which he knows and perceives; or that some things which he knows and perceives, are other
things which he knows and perceives.

THEAETETUS: I understand you less than ever now.

SOCRATES: Hear me once more, then:--I, knowing Theodorus, and remembering in my own mind what sort of person he is, and also what sort of person Theaetetus is, at one time see them, and at another time do not see them, and sometimes I touch them, and at another time not, or at one time I may hear them or perceive them in some other way, and at another time not perceive them, but still I remember them, and know them in my own mind.

THEAETETUS: Very true.

SOCRATES: Then, first of all, I want you to understand that a man may or may not perceive sensibly that which he knows.

THEAETETUS: True.

SOCRATES: And that which he does not know will sometimes not be perceived by him and sometimes will be perceived and only perceived?

THEAETETUS: That is also true.

SOCRATES: See whether you can follow me better now: Socrates can recognize Theodorus and Theaetetus, but he sees neither of them, nor does he perceive them in any other way; he cannot then by any possibility imagine in his own mind that Theaetetus is Theodorus. Am I not right?

THEAETETUS: You are quite right.

SOCRATES: Then that was the first case of which I spoke.

THEAETETUS: Yes.

SOCRATES: The second case was, that I, knowing one of you and not knowing the other, and perceiving neither, can never think him whom I know to be him whom I do not know.

THEAETETUS: True.

SOCRATES: In the third case, not knowing and not perceiving either of you, I cannot think that one of you whom I do not know is the other whom I do not know. I need not again go over the catalogue of excluded cases, in which I cannot form a false opinion about you and Theodorus, either when I know both or when I am in ignorance of both, or when I know one and not the other. And the same of perceiving: do you understand me?
THEAETETUS: I do.

SOCRATES: The only possibility of erroneous opinion is, when knowing you and Theodorus, and having on the waxen block the impression of both of you given as by a seal, but seeing you imperfectly and at a distance, I try to assign the right impression of memory to the right visual impression, and to fit this into its own print: if I succeed, recognition will take place; but if I fail and transpose them, putting the foot into the wrong shoe—that is to say, putting the vision of either of you on to the wrong impression, or if my mind, like the sight in a mirror, which is transferred from right to left, err by reason of some similar affection, then 'heterodoxy' and false opinion ensues.

THEAETETUS: Yes, Socrates, you have described the nature of opinion with wonderful exactness.

SOCRATES: Or again, when I know both of you, and perceive as well as know one of you, but not the other, and my knowledge of him does not accord with perception—that was the case put by me just now which you did not understand.

THEAETETUS: No, I did not.

SOCRATES: I meant to say, that when a person knows and perceives one of you, his knowledge coincides with his perception, he will never think him to be some other person, whom he knows and perceives, and the knowledge of whom coincides with his perception—for that also was a case supposed.

THEAETETUS: True.

SOCRATES: But there was an omission of the further case, in which, as we now say, false opinion may arise, when knowing both, and seeing, or having some other sensible perception of both, I fail in holding the seal over against the corresponding sensation; like a bad archer, I miss and fall wide of the mark—and this is called falsehood.

THEAETETUS: Yes; it is rightly so called.

SOCRATES: When, therefore, perception is present to one of the seals or impressions but not to the other, and the mind fits the seal of the absent perception on the one which is present, in any case of this sort the mind is deceived; in a word, if our view is sound, there can be no error or deception about things which a man does not know and has never perceived, but only in things which are known and perceived; in these alone opinion turns and twists about, and becomes alternately true and false;—true when the seals and impressions of sense meet straight and opposite—false when they go awry and crooked.
THEAETETUS: And is not that, Socrates, nobly said?

SOCRATES: Nobly! yes; but wait a little and hear the explanation, and then you will say so with more reason; for to think truly is noble and to be deceived is base.

THEAETETUS: Undoubtedly.

SOCRATES: And the origin of truth and error is as follows:--When the wax in the soul of any one is deep and abundant, and smooth and perfectly tempered, then the impressions which pass through the senses and sink into the heart of the soul, as Homer says in a parable, meaning to indicate the likeness of the soul to wax (Kerh Kerhos); these, I say, being pure and clear, and having a sufficient depth of wax, are also lasting, and minds, such as these, easily learn and easily retain, and are not liable to confusion, but have true thoughts, for they have plenty of room, and having clear impressions of things, as we term them, quickly distribute them into their proper places on the block. And such men are called wise. Do you agree?

THEAETETUS: Entirely.

SOCRATES: But when the heart of any one is shaggy--a quality which the all-wise poet commends, or muddy and of impure wax, or very soft, or very hard, then there is a corresponding defect in the mind--the soft are good at learning, but apt to forget; and the hard are the reverse; the shaggy and rugged and gritty, or those who have an admixture of earth or dung in their composition, have the impressions indistinct, as also the hard, for there is no depth in them; and the soft too are indistinct, for their impressions are easily confused and effaced. Yet greater is the indistinctness when they are all jostled together in a little soul, which has no room. These are the natures which have false opinion; for when they see or hear or think of anything, they are slow in assigning the right objects to the right impressions--in their stupidity they confuse them, and are apt to see and hear and think amiss--and such men are said to be deceived in their knowledge of objects, and ignorant.

THEAETETUS: No man, Socrates, can say anything truer than that.

SOCRATES: Then now we may admit the existence of false opinion in us?

THEAETETUS: Certainly.

SOCRATES: And of true opinion also?

THEAETETUS: Yes.
SOCRATES: We have at length satisfactorily proven beyond a doubt there are
these two sorts of opinion?

THEAETETUS: Undoubtedly.

SOCRATES: Alas, Theaetetus, what a tiresome creature is a man who is fond
of talking!

THEAETETUS: What makes you say so?

SOCRATES: Because I am disheartened at my own stupidity and tiresome
garrulity; for what other term will describe the habit of a man who is
always arguing on all sides of a question; whose dulness cannot be
convinced, and who will never leave off?

THEAETETUS: But what puts you out of heart?

SOCRATES: I am not only out of heart, but in positive despair; for I do
not know what to answer if any one were to ask me:—O Socrates, have you
indeed discovered that false opinion arises neither in the comparison of
perceptions with one another nor yet in thought, but in union of thought
and perception? Yes, I shall say, with the complacence of one who thinks
that he has made a noble discovery.

THEAETETUS: I see no reason why we should be ashamed of our demonstration,
Socrates.

SOCRATES: He will say: You mean to argue that the man whom we only think
of and do not see, cannot be confused with the horse which we do not see or
touch, but only think of and do not perceive? That I believe to be my
meaning, I shall reply.

THEAETETUS: Quite right.

SOCRATES: Well, then, he will say, according to that argument, the number
eleven, which is only thought, can never be mistaken for twelve, which is
only thought: How would you answer him?

THEAETETUS: I should say that a mistake may very likely arise between the
eleven or twelve which are seen or handled, but that no similar mistake can
arise between the eleven and twelve which are in the mind.

SOCRATES: Well, but do you think that no one ever put before his own mind
five and seven,—I do not mean five or seven men or horses, but five or
seven in the abstract, which, as we say, are recorded on the waxen block,
and in which false opinion is held to be impossible; did no man ever ask
himself how many these numbers make when added together, and answer that they are eleven, while another thinks that they are twelve, or would all agree in thinking and saying that they are twelve?

THEAETETUS: Certainly not; many would think that they are eleven, and in the higher numbers the chance of error is greater still; for I assume you to be speaking of numbers in general.

SOCRATES: Exactly; and I want you to consider whether this does not imply that the twelve in the waxen block are supposed to be eleven?

THEAETETUS: Yes, that seems to be the case.

SOCRATES: Then do we not come back to the old difficulty? For he who makes such a mistake does think one thing which he knows to be another thing which he knows; but this, as we said, was impossible, and afforded an irresistible proof of the non-existence of false opinion, because otherwise the same person would inevitably know and not know the same thing at the same time.

THEAETETUS: Most true.

SOCRATES: Then false opinion cannot be explained as a confusion of thought and sense, for in that case we could not have been mistaken about pure conceptions of thought; and thus we are obliged to say, either that false opinion does not exist, or that a man may not know that which he knows;--which alternative do you prefer?

THEAETETUS: It is hard to determine, Socrates.

SOCRATES: And yet the argument will scarcely admit of both. But, as we are at our wits' end, suppose that we do a shameless thing?

THEAETETUS: What is it?

SOCRATES: Let us attempt to explain the verb 'to know.'

THEAETETUS: And why should that be shameless?

SOCRATES: You seem not to be aware that the whole of our discussion from the very beginning has been a search after knowledge, of which we are assumed not to know the nature.

THEAETETUS: Nay, but I am well aware.

SOCRATES: And is it not shameless when we do not know what knowledge is, to be explaining the verb 'to know'? The truth is, Theaetetus, that we
have long been infected with logical impurity. Thousands of times have we
repeated the words 'we know,' and 'do not know,' and 'we have or have not
science or knowledge,' as if we could understand what we are saying to one
another, so long as we remain ignorant about knowledge; and at this moment
we are using the words 'we understand,' 'we are ignorant,' as though we
could still employ them when deprived of knowledge or science.

THEAETETUS: But if you avoid these expressions, Socrates, how will you
ever argue at all?

SOCRATES: I could not, being the man I am. The case would be different if
I were a true hero of dialectic: and O that such an one were present! for
he would have told us to avoid the use of these terms; at the same time he
would not have spared in you and me the faults which I have noted. But,
seeing that we are no great wits, shall I venture to say what knowing is?
for I think that the attempt may be worth making.

THEAETETUS: Then by all means venture, and no one shall find fault with
you for using the forbidden terms.

SOCRATES: You have heard the common explanation of the verb 'to know'?

THEAETETUS: I think so, but I do not remember it at the moment.

SOCRATES: They explain the word 'to know' as meaning 'to have knowledge.'

THEAETETUS: True.

SOCRATES: I should like to make a slight change, and say 'to possess'
knowledge.

THEAETETUS: How do the two expressions differ?

SOCRATES: Perhaps there may be no difference; but still I should like you
to hear my view, that you may help me to test it.

THEAETETUS: I will, if I can.

SOCRATES: I should distinguish 'having' from 'possessing': for example, a
man may buy and keep under his control a garment which he does not wear;
and then we should say, not that he has, but that he possesses the garment.

THEAETETUS: It would be the correct expression.

SOCRATES: Well, may not a man 'possess' and yet not 'have' knowledge in
the sense of which I am speaking? As you may suppose a man to have caught
wild birds--doves or any other birds--and to be keeping them in an aviary
which he has constructed at home; we might say of him in one sense, that he always has them because he possesses them, might we not?

THEAETETUS: Yes.

SOCRATES: And yet, in another sense, he has none of them; but they are in his power, and he has got them under his hand in an enclosure of his own, and can take and have them whenever he likes;—he can catch any which he likes, and let the bird go again, and he may do so as often as he pleases.

THEAETETUS: True.

SOCRATES: Once more, then, as in what preceded we made a sort of waxen figment in the mind, so let us now suppose that in the mind of each man there is an aviary of all sorts of birds—some flocking together apart from the rest, others in small groups, others solitary, flying anywhere and everywhere.

THEAETETUS: Let us imagine such an aviary—and what is to follow?

SOCRATES: We may suppose that the birds are kinds of knowledge, and that when we were children, this receptacle was empty; whenever a man has gotten and detained in the enclosure a kind of knowledge, he may be said to have learned or discovered the thing which is the subject of the knowledge: and this is to know.

THEAETETUS: Granted.

SOCRATES: And further, when any one wishes to catch any of these knowledges or sciences, and having taken, to hold it, and again to let them go, how will he express himself?—will he describe the 'catching' of them and the original 'possession' in the same words? I will make my meaning clearer by an example:—You admit that there is an art of arithmetic?

THEAETETUS: To be sure.

SOCRATES: Conceive this under the form of a hunt after the science of odd and even in general.

THEAETETUS: I follow.

SOCRATES: Having the use of the art, the arithmetician, if I am not mistaken, has the conceptions of number under his hand, and can transmit them to another.

THEAETETUS: Yes.
SOCRATES: And when transmitting them he may be said to teach them, and when receiving to learn them, and when receiving to learn them, and when having them in possession in the aforesaid aviary he may be said to know them.

THEAETETUS: Exactly.

SOCRATES: Attend to what follows: must not the perfect arithmetician know all numbers, for he has the science of all numbers in his mind?

THEAETETUS: True.

SOCRATES: And he can reckon abstract numbers in his head, or things about him which are numerable?

THEAETETUS: Of course he can.

SOCRATES: And to reckon is simply to consider how much such and such a number amounts to?

THEAETETUS: Very true.

SOCRATES: And so he appears to be searching into something which he knows, as if he did not know it, for we have already admitted that he knows all numbers;--you have heard these perplexing questions raised?

THEAETETUS: I have.

SOCRATES: May we not pursue the image of the doves, and say that the chase after knowledge is of two kinds? one kind is prior to possession and for the sake of possession, and the other for the sake of taking and holding in the hands that which is possessed already. And thus, when a man has learned and known something long ago, he may resume and get hold of the knowledge which he has long possessed, but has not at hand in his mind.

THEAETETUS: True.

SOCRATES: That was my reason for asking how we ought to speak when an arithmetician sets about numbering, or a grammarian about reading? Shall we say, that although he knows, he comes back to himself to learn what he already knows?

THEAETETUS: It would be too absurd, Socrates.

SOCRATES: Shall we say then that he is going to read or number what he does not know, although we have admitted that he knows all letters and all numbers?
THEAETETUS: That, again, would be an absurdity.

SOCRATES: Then shall we say that about names we care nothing?—any one may twist and turn the words 'knowing' and 'learning' in any way which he likes, but since we have determined that the possession of knowledge is not the having or using it, we do assert that a man cannot not possess that which he possesses; and, therefore, in no case can a man not know that which he knows, but he may get a false opinion about it; for he may have the knowledge, not of this particular thing, but of some other;—when the various numbers and forms of knowledge are flying about in the aviary, and wishing to capture a certain sort of knowledge out of the general store, he takes the wrong one by mistake, that is to say, when he thought eleven to be twelve, he got hold of the ring-dove which he had in his mind, when he wanted the pigeon.

THEAETETUS: A very rational explanation.

SOCRATES: But when he catches the one which he wants, then he is not deceived, and has an opinion of what is, and thus false and true opinion may exist, and the difficulties which were previously raised disappear. I dare say that you agree with me, do you not?

THEAETETUS: Yes.

SOCRATES: And so we are rid of the difficulty of a man's not knowing what he knows, for we are not driven to the inference that he does not possess what he possesses, whether he be or be not deceived. And yet I fear that a greater difficulty is looking in at the window.

THEAETETUS: What is it?

SOCRATES: How can the exchange of one knowledge for another ever become false opinion?

THEAETETUS: What do you mean?

SOCRATES: In the first place, how can a man who has the knowledge of anything be ignorant of that which he knows, not by reason of ignorance, but by reason of his own knowledge? And, again, is it not an extreme absurdity that he should suppose another thing to be this, and this to be another thing;—that, having knowledge present with him in his mind, he should still know nothing and be ignorant of all things?—you might as well argue that ignorance may make a man know, and blindness make him see, as that knowledge can make him ignorant.

THEAETETUS: Perhaps, Socrates, we may have been wrong in making only forms
of knowledge our birds: whereas there ought to have been forms of ignorance as well, flying about together in the mind, and then he who sought to take one of them might sometimes catch a form of knowledge, and sometimes a form of ignorance; and thus he would have a false opinion from ignorance, but a true one from knowledge, about the same thing.

SOCRATES: I cannot help praising you, Theaetetus, and yet I must beg you to reconsider your words. Let us grant what you say--then, according to you, he who takes ignorance will have a false opinion--am I right?

THEAETETUS: Yes.

SOCRATES: He will certainly not think that he has a false opinion?

THEAETETUS: Of course not.

SOCRATES: He will think that his opinion is true, and he will fancy that he knows the things about which he has been deceived?

THEAETETUS: Certainly.

SOCRATES: Then he will think that he has captured knowledge and not ignorance?

THEAETETUS: Clearly.

SOCRATES: And thus, after going a long way round, we are once more face to face with our original difficulty. The hero of dialectic will retort upon us:--'O my excellent friends, he will say, laughing, if a man knows the form of ignorance and the form of knowledge, can he think that one of them which he knows is the other which he knows? or, if he knows neither of them, can he think that the one which he knows not is another which he knows not? or, if he knows one and not the other, can he think the one which he knows to be the one which he does not know? or the one which he does not know to be the one which he knows? or will you tell me that there are other forms of knowledge which distinguish the right and wrong birds, and which the owner keeps in some other aviaries or graven on waxen blocks according to your foolish images, and which he may be said to know while he possesses them, even though he have them not at hand in his mind? And thus, in a perpetual circle, you will be compelled to go round and round, and you will make no progress.' What are we to say in reply, Theaetetus?

THEAETETUS: Indeed, Socrates, I do not know what we are to say.

SOCRATES: Are not his reproaches just, and does not the argument truly show that we are wrong in seeking for false opinion until we know what knowledge is; that must be first ascertained; then, the nature of false
opinion?

THEAETETUS: I cannot but agree with you, Socrates, so far as we have yet gone.

SOCRATES: Then, once more, what shall we say that knowledge is?--for we are not going to lose heart as yet.

THEAETETUS: Certainly, I shall not lose heart, if you do not.

SOCRATES: What definition will be most consistent with our former views?

THEAETETUS: I cannot think of any but our old one, Socrates.

SOCRATES: What was it?

THEAETETUS: Knowledge was said by us to be true opinion; and true opinion is surely unerring, and the results which follow from it are all noble and good.

SOCRATES: He who led the way into the river, Theaetetus, said 'The experiment will show;' and perhaps if we go forward in the search, we may stumble upon the thing which we are looking for; but if we stay where we are, nothing will come to light.

THEAETETUS: Very true; let us go forward and try.

SOCRATES: The trail soon comes to an end, for a whole profession is against us.

THEAETETUS: How is that, and what profession do you mean?

SOCRATES: The profession of the great wise ones who are called orators and lawyers; for these persuade men by their art and make them think whatever they like, but they do not teach them. Do you imagine that there are any teachers in the world so clever as to be able to convince others of the truth about acts of robbery or violence, of which they were not eye-witnesses, while a little water is flowing in the clepsydra?

THEAETETUS: Certainly not, they can only persuade them.

SOCRATES: And would you not say that persuading them is making them have an opinion?

THEAETETUS: To be sure.

SOCRATES: When, therefore, judges are justly persuaded about matters which
you can know only by seeing them, and not in any other way, and when thus
judging of them from report they attain a true opinion about them, they
judge without knowledge, and yet are rightly persuaded, if they have judged
well.

THEAETETUS: Certainly.

SOCRATES: And yet, O my friend, if true opinion in law courts and
knowledge are the same, the perfect judge could not have judged rightly
without knowledge; and therefore I must infer that they are not the same.

THEAETETUS: That is a distinction, Socrates, which I have heard made by
some one else, but I had forgotten it. He said that true opinion, combined
with reason, was knowledge, but that the opinion which had no reason was
out of the sphere of knowledge; and that things of which there is no
rational account are not knowable--such was the singular expression which
he used--and that things which have a reason or explanation are knowable.

SOCRATES: Excellent; but then, how did he distinguish between things which
are and are not 'knowable'? I wish that you would repeat to me what he
said, and then I shall know whether you and I have heard the same tale.

THEAETETUS: I do not know whether I can recall it; but if another person
would tell me, I think that I could follow him.

SOCRATES: Let me give you, then, a dream in return for a dream:--Methought
that I too had a dream, and I heard in my dream that the primeval letters
or elements out of which you and I and all other things are compounded,
have no reason or explanation; you can only name them, but no predicate can
be either affirmed or denied of them, for in the one case existence, in the
other non-existence is already implied, neither of which must be added, if
you mean to speak of this or that thing by itself alone. It should not be
called itself, or that, or each, or alone, or this, or the like; for these
go about everywhere and are applied to all things, but are distinct from
them; whereas, if the first elements could be described, and had a
definition of their own, they would be spoken of apart from all else. But
none of these primeval elements can be defined; they can only be named, for
they have nothing but a name, and the things which are compounded of them,
as they are complex, are expressed by a combination of names, for the
combination of names is the essence of a definition. Thus, then, the
elements or letters are only objects of perception, and cannot be defined
or known; but the syllables or combinations of them are known and
expressed, and are apprehended by true opinion. When, therefore, any one
forms the true opinion of anything without rational explanation, you may
say that his mind is truly exercised, but has no knowledge; for he who
cannot give and receive a reason for a thing, has no knowledge of that
thing; but when he adds rational explanation, then, he is perfected in
knowledge and may be all that I have been denying of him. Was that the
tform in which the dream appeared to you?

THEAETETUS: Precisely.

SOCRATES: And you allow and maintain that true opinion, combined with
definition or rational explanation, is knowledge?

THEAETETUS: Exactly.

SOCRATES: Then may we assume, Theaetetus, that to-day, and in this casual
manner, we have found a truth which in former times many wise men have
grown old and have not found?

THEAETETUS: At any rate, Socrates, I am satisfied with the present
statement.

SOCRATES: Which is probably correct—for how can there be knowledge apart
from definition and true opinion? And yet there is one point in what has
been said which does not quite satisfy me.

THEAETETUS: What was it?

SOCRATES: What might seem to be the most ingenious notion of all:—That
the elements or letters are unknown, but the combination or syllables
known.

THEAETETUS: And was that wrong?

SOCRATES: We shall soon know; for we have as hostages the instances which
the author of the argument himself used.

THEAETETUS: What hostages?

SOCRATES: The letters, which are the elements; and the syllables, which
are the combinations;—he reasoned, did he not, from the letters of the
alphabet?

THEAETETUS: Yes; he did.

SOCRATES: Let us take them and put them to the test, or rather, test
ourselves:—What was the way in which we learned letters? and, first of
all, are we right in saying that syllables have a definition, but that
letters have no definition?

THEAETETUS: I think so.
SOCRATES: I think so too; for, suppose that some one asks you to spell the first syllable of my name:--Theaetetus, he says, what is SO?

THEAETETUS: I should reply S and O.

SOCRATES: That is the definition which you would give of the syllable?

THEAETETUS: I should.

SOCRATES: I wish that you would give me a similar definition of the S.

THEAETETUS: But how can any one, Socrates, tell the elements of an element? I can only reply, that S is a consonant, a mere noise, as of the tongue hissing; B, and most other letters, again, are neither vowel-sounds nor noises. Thus letters may be most truly said to be undefined; for even the most distinct of them, which are the seven vowels, have a sound only, but no definition at all.

SOCRATES: Then, I suppose, my friend, that we have been so far right in our idea about knowledge?

THEAETETUS: Yes; I think that we have.

SOCRATES: Well, but have we been right in maintaining that the syllables can be known, but not the letters?

THEAETETUS: I think so.

SOCRATES: And do we mean by a syllable two letters, or if there are more, all of them, or a single idea which arises out of the combination of them?

THEAETETUS: I should say that we mean all the letters.

SOCRATES: Take the case of the two letters S and O, which form the first syllable of my own name; must not he who knows the syllable, know both of them?

THEAETETUS: Certainly.

SOCRATES: He knows, that is, the S and O?

THEAETETUS: Yes.

SOCRATES: But can he be ignorant of either singly and yet know both together?

THEAETETUS: Such a supposition, Socrates, is monstrous and unmeaning.
SOCRATES: But if he cannot know both without knowing each, then if he is ever to know the syllable, he must know the letters first; and thus the fine theory has again taken wings and departed.

THEAETETUS: Yes, with wonderful celerity.

SOCRATES: Yes, we did not keep watch properly. Perhaps we ought to have maintained that a syllable is not the letters, but rather one single idea framed out of them, having a separate form distinct from them.

THEAETETUS: Very true; and a more likely notion than the other.

SOCRATES: Take care; let us not be cowards and betray a great and imposing theory.

THEAETETUS: No, indeed.

SOCRATES: Let us assume then, as we now say, that the syllable is a simple form arising out of the several combinations of harmonious elements--of letters or of any other elements.

THEAETETUS: Very good.

SOCRATES: And it must have no parts.

THEAETETUS: Why?

SOCRATES: Because that which has parts must be a whole of all the parts. Or would you say that a whole, although formed out of the parts, is a single notion different from all the parts?

THEAETETUS: I should.

SOCRATES: And would you say that all and the whole are the same, or different?

THEAETETUS: I am not certain; but, as you like me to answer at once, I shall hazard the reply, that they are different.

SOCRATES: I approve of your readiness, Theaetetus, but I must take time to think whether I equally approve of your answer.

THEAETETUS: Yes; the answer is the point.

SOCRATES: According to this new view, the whole is supposed to differ from all?
THEAETETUS: Yes.

SOCRATES: Well, but is there any difference between all (in the plural) and the all (in the singular)? Take the case of number:--When we say one, two, three, four, five, six; or when we say twice three, or three times two, or four and two, or three and two and one, are we speaking of the same or of different numbers?

THEAETETUS: Of the same.

SOCRATES: That is of six?

THEAETETUS: Yes.

SOCRATES: And in each form of expression we spoke of all the six?

THEAETETUS: True.

SOCRATES: Again, in speaking of all (in the plural) is there not one thing which we express?

THEAETETUS: Of course there is.

SOCRATES: And that is six?

THEAETETUS: Yes.

SOCRATES: Then in predicating the word 'all' of things measured by number, we predicate at the same time a singular and a plural?

THEAETETUS: Clearly we do.

SOCRATES: Again, the number of the acre and the acre are the same; are they not?

THEAETETUS: Yes.

SOCRATES: And the number of the stadium in like manner is the stadium?

THEAETETUS: Yes.

SOCRATES: And the army is the number of the army; and in all similar cases, the entire number of anything is the entire thing?

THEAETETUS: True.
SOCRATES: And the number of each is the parts of each?

THEAETETUS: Exactly.

SOCRATES: Then as many things as have parts are made up of parts?

THEAETETUS: Clearly.

SOCRATES: But all the parts are admitted to be the all, if the entire number is the all?

THEAETETUS: True.

SOCRATES: Then the whole is not made up of parts, for it would be the all, if consisting of all the parts?

THEAETETUS: That is the inference.

SOCRATES: But is a part a part of anything but the whole?

THEAETETUS: Yes, of the all.

SOCRATES: You make a valiant defence, Theaetetus. And yet is not the all that of which nothing is wanting?

THEAETETUS: Certainly.

SOCRATES: And is not a whole likewise that from which nothing is absent? but that from which anything is absent is neither a whole nor all;--if wanting in anything, both equally lose their entirety of nature.

THEAETETUS: I now think that there is no difference between a whole and all.

SOCRATES: But were we not saying that when a thing has parts, all the parts will be a whole and all?

THEAETETUS: Certainly.

SOCRATES: Then, as I was saying before, must not the alternative be that either the syllable is not the letters, and then the letters are not parts of the syllable, or that the syllable will be the same with the letters, and will therefore be equally known with them?

THEAETETUS: You are right.

SOCRATES: And, in order to avoid this, we suppose it to be different from
them?

THEAETETUS: Yes.

SOCRATES: But if letters are not parts of syllables, can you tell me of any other parts of syllables, which are not letters?

THEAETETUS: No, indeed, Socrates; for if I admit the existence of parts in a syllable, it would be ridiculous in me to give up letters and seek for other parts.

SOCRATES: Quite true, Theaetetus, and therefore, according to our present view, a syllable must surely be some indivisible form?

THEAETETUS: True.

SOCRATES: But do you remember, my friend, that only a little while ago we admitted and approved the statement, that of the first elements out of which all other things are compounded there could be no definition, because each of them when taken by itself is uncompounded; nor can one rightly attribute to them the words 'being' or 'this,' because they are alien and inappropriate words, and for this reason the letters or elements were indefinable and unknown?

THEAETETUS: I remember.

SOCRATES: And is not this also the reason why they are simple and indivisible? I can see no other.

THEAETETUS: No other reason can be given.

SOCRATES: Then is not the syllable in the same case as the elements or letters, if it has no parts and is one form?

THEAETETUS: To be sure.

SOCRATES: If, then, a syllable is a whole, and has many parts or letters, the letters as well as the syllable must be intelligible and expressible, since all the parts are acknowledged to be the same as the whole?

THEAETETUS: True.

SOCRATES: But if it be one and indivisible, then the syllables and the letters are alike undefined and unknown, and for the same reason?

THEAETETUS: I cannot deny that.
SOCRATES: We cannot, therefore, agree in the opinion of him who says that the syllable can be known and expressed, but not the letters.

THEAETETUS: Certainly not; if we may trust the argument.

SOCRATES: Well, but will you not be equally inclined to disagree with him, when you remember your own experience in learning to read?

THEAETETUS: What experience?

SOCRATES: Why, that in learning you were kept trying to distinguish the separate letters both by the eye and by the ear, in order that, when you heard them spoken or saw them written, you might not be confused by their position.

THEAETETUS: Very true.

SOCRATES: And is the education of the harp-player complete unless he can tell what string answers to a particular note; the notes, as every one would allow, are the elements or letters of music?

THEAETETUS: Exactly.

SOCRATES: Then, if we argue from the letters and syllables which we know to other simples and compounds, we shall say that the letters or simple elements as a class are much more certainly known than the syllables, and much more indispensable to a perfect knowledge of any subject; and if some one says that the syllable is known and the letter unknown, we shall consider that either intentionally or unintentionally he is talking nonsense?

THEAETETUS: Exactly.

SOCRATES: And there might be given other proofs of this belief, if I am not mistaken. But do not let us in looking for them lose sight of the question before us, which is the meaning of the statement, that right opinion with rational definition or explanation is the most perfect form of knowledge.

THEAETETUS: We must not.

SOCRATES: Well, and what is the meaning of the term 'explanation'? I think that we have a choice of three meanings.

THEAETETUS: What are they?

SOCRATES: In the first place, the meaning may be, manifesting one's
thought by the voice with verbs and nouns, imaging an opinion in the stream which flows from the lips, as in a mirror or water. Does not explanation appear to be of this nature?

THEAETETUS: Certainly; he who so manifests his thought, is said to explain himself.

SOCRATES: And every one who is not born deaf or dumb is able sooner or later to manifest what he thinks of anything; and if so, all those who have a right opinion about anything will also have right explanation; nor will right opinion be anywhere found to exist apart from knowledge.

THEAETETUS: True.

SOCRATES: Let us not, therefore, hastily charge him who gave this account of knowledge with uttering an unmeaning word; for perhaps he only intended to say, that when a person was asked what was the nature of anything, he should be able to answer his questioner by giving the elements of the thing.

THEAETETUS: As for example, Socrates...?

SOCRATES: As, for example, when Hesiod says that a waggon is made up of a hundred planks. Now, neither you nor I could describe all of them individually; but if any one asked what is a waggon, we should be content to answer, that a waggon consists of wheels, axle, body, rims, yoke.

THEAETETUS: Certainly.

SOCRATES: And our opponent will probably laugh at us, just as he would if we professed to be grammarians and to give a grammatical account of the name of Theaetetus, and yet could only tell the syllables and not the letters of your name—that would be true opinion, and not knowledge; for knowledge, as has been already remarked, is not attained until, combined with true opinion, there is an enumeration of the elements out of which anything is composed.

THEAETETUS: Yes.

SOCRATES: In the same general way, we might also have true opinion about a waggon; but he who can describe its essence by an enumeration of the hundred planks, adds rational explanation to true opinion, and instead of opinion has art and knowledge of the nature of a waggon, in that he attains to the whole through the elements.

THEAETETUS: And do you not agree in that view, Socrates?
SOCRATES: If you do, my friend; but I want to know first, whether you admit the resolution of all things into their elements to be a rational explanation of them, and the consideration of them in syllables or larger combinations of them to be irrational--is this your view?

THEAETETUS: Precisely.

SOCRATES: Well, and do you conceive that a man has knowledge of any element who at one time affirms and at another time denies that element of something, or thinks that the same thing is composed of different elements at different times?

THEAETETUS: Assuredly not.

SOCRATES: And do you not remember that in your case and in that of others this often occurred in the process of learning to read?

THEAETETUS: You mean that I mistook the letters and misspelt the syllables?

SOCRATES: Yes.

THEAETETUS: To be sure; I perfectly remember, and I am very far from supposing that they who are in this condition have knowledge.

SOCRATES: When a person at the time of learning writes the name of Theaetetus, and thinks that he ought to write and does write Th and e; but, again, meaning to write the name of Theodorus, thinks that he ought to write and does write T and e--can we suppose that he knows the first syllables of your two names?

THEAETETUS: We have already admitted that such a one has not yet attained knowledge.

SOCRATES: And in like manner be may enumerate without knowing them the second and third and fourth syllables of your name?

THEAETETUS: He may.

SOCRATES: And in that case, when he knows the order of the letters and can write them out correctly, he has right opinion?

THEAETETUS: Clearly.

SOCRATES: But although we admit that he has right opinion, he will still be without knowledge?
THEAETETUS: Yes.

SOCRATES: And yet he will have explanation, as well as right opinion, for he knew the order of the letters when he wrote; and this we admit to be explanation.

THEAETETUS: True.

SOCRATES: Then, my friend, there is such a thing as right opinion united with definition or explanation, which does not as yet attain to the exactness of knowledge.

THEAETETUS: It would seem so.

SOCRATES: And what we fancied to be a perfect definition of knowledge is a dream only. But perhaps we had better not say so as yet, for were there not three explanations of knowledge, one of which must, as we said, be adopted by him who maintains knowledge to be true opinion combined with rational explanation? And very likely there may be found some one who will not prefer this but the third.

THEAETETUS: You are quite right; there is still one remaining. The first was the image or expression of the mind in speech; the second, which has just been mentioned, is a way of reaching the whole by an enumeration of the elements. But what is the third definition?

SOCRATES: There is, further, the popular notion of telling the mark or sign of difference which distinguishes the thing in question from all others.

THEAETETUS: Can you give me any example of such a definition?

SOCRATES: As, for example, in the case of the sun, I think that you would be contented with the statement that the sun is the brightest of the heavenly bodies which revolve about the earth.

THEAETETUS: Certainly.

SOCRATES: Understand why:—the reason is, as I was just now saying, that if you get at the difference and distinguishing characteristic of each thing, then, as many persons affirm, you will get at the definition or explanation of it; but while you lay hold only of the common and not of the characteristic notion, you will only have the definition of those things to which this common quality belongs.

THEAETETUS: I understand you, and your account of definition is in my judgment correct.
SOCRATES: But he, who having right opinion about anything, can find out the difference which distinguishes it from other things will know that of which before he had only an opinion.

THEAETETUS: Yes; that is what we are maintaining.

SOCRATES: Nevertheless, Theaetetus, on a nearer view, I find myself quite disappointed; the picture, which at a distance was not so bad, has now become altogether unintelligible.

THEAETETUS: What do you mean?

SOCRATES: I will endeavour to explain: I will suppose myself to have true opinion of you, and if to this I add your definition, then I have knowledge, but if not, opinion only.

THEAETETUS: Yes.

SOCRATES: The definition was assumed to be the interpretation of your difference.

THEAETETUS: True.

SOCRATES: But when I had only opinion, I had no conception of your distinguishing characteristics.

THEAETETUS: I suppose not.

SOCRATES: Then I must have conceived of some general or common nature which no more belonged to you than to another.

THEAETETUS: True.

SOCRATES: Tell me, now--How in that case could I have formed a judgment of you any more than of any one else? Suppose that I imagine Theaetetus to be a man who has nose, eyes, and mouth, and every other member complete; how would that enable me to distinguish Theaetetus from Theodorus, or from some outer barbarian?

THEAETETUS: How could it?

SOCRATES: Or if I had further conceived of you, not only as having nose and eyes, but as having a snub nose and prominent eyes, should I have any more notion of you than of myself and others who resemble me?

THEAETETUS: Certainly not.
SOCRATES: Surely I can have no conception of Theaetetus until your snub-nosedness has left an impression on my mind different from the snub-nosedness of all others whom I have ever seen, and until your other peculiarities have a like distinctness; and so when I meet you to-morrow the right opinion will be re-called?

THEAETETUS: Most true.

SOCRATES: Then right opinion implies the perception of differences?

THEAETETUS: Clearly.

SOCRATES: What, then, shall we say of adding reason or explanation to right opinion? If the meaning is, that we should form an opinion of the way in which something differs from another thing, the proposal is ridiculous.

THEAETETUS: How so?

SOCRATES: We are supposed to acquire a right opinion of the differences which distinguish one thing from another when we have already a right opinion of them, and so we go round and round:—the revolution of the scytal, or pestle, or any other rotatory machine, in the same circles, is as nothing compared with such a requirement; and we may be truly described as the blind directing the blind; for to add those things which we already have, in order that we may learn what we already think, is like a soul utterly benighted.

THEAETETUS: Tell me; what were you going to say just now, when you asked the question?

SOCRATES: If, my boy, the argument, in speaking of adding the definition, had used the word to 'know,' and not merely 'have an opinion' of the difference, this which is the most promising of all the definitions of knowledge would have come to a pretty end, for to know is surely to acquire knowledge.

THEAETETUS: True.

SOCRATES: And so, when the question is asked, What is knowledge? this fair argument will answer 'Right opinion with knowledge,'—knowledge, that is, of difference, for this, as the said argument maintains, is adding the definition.

THEAETETUS: That seems to be true.
SOCRATES: But how utterly foolish, when we are asking what is knowledge, that the reply should only be, right opinion with knowledge of difference or of anything! And so, Theaetetus, knowledge is neither sensation nor true opinion, nor yet definition and explanation accompanying and added to true opinion?

THEAETETUS: I suppose not.

SOCRATES: And are you still in labour and travail, my dear friend, or have you brought all that you have to say about knowledge to the birth?

THEAETETUS: I am sure, Socrates, that you have elicited from me a good deal more than ever was in me.

SOCRATES: And does not my art show that you have brought forth wind, and that the offspring of your brain are not worth bringing up?

THEAETETUS: Very true.

SOCRATES: But if, Theaetetus, you should ever conceive afresh, you will be all the better for the present investigation, and if not, you will be soberer and humbler and gentler to other men, and will be too modest to fancy that you know what you do not know. These are the limits of my art; I can no further go, nor do I know aught of the things which great and famous men know or have known in this or former ages. The office of a midwife I, like my mother, have received from God; she delivered women, I deliver men; but they must be young and noble and fair.

And now I have to go to the porch of the King Archon, where I am to meet Meletus and his indictment. To-morrow morning, Theodorus, I shall hope to see you again at this place.

End of this Project Gutenberg Etext of Theaetetus, by Plato
INTRODUCTION AND ANALYSIS.

Of all the writings of Plato the Timaeus is the most obscure and repulsive to the modern reader, and has nevertheless had the greatest influence over the ancient and mediaeval world. The obscurity arises in the infancy of physical science, out of the confusion of theological, mathematical, and physiological notions, out of the desire to conceive the whole of nature without any adequate knowledge of the parts, and from a greater perception of similarities which lie on the surface than of differences which are hidden from view. To bring sense under the control of reason; to find some way through the mist or labyrinth of appearances, either the highway of mathematics, or more devious paths suggested by the analogy of man with the world, and of the world with man; to see that all things have a cause and are tending towards an end--this is the spirit of the ancient physical philosopher. He has no notion of trying an experiment and is hardly capable of observing the curiosities of nature which are 'tumbling out at his feet,' or of interpreting even the most obvious of them. He is driven back from the nearer to the more distant, from particulars to generalities, from the earth to the stars. He lifts up his eyes to the heavens and seeks to guide by their motions his erring footsteps. But we neither appreciate the conditions of knowledge to which he was subjected, nor have the ideas which fastened upon his imagination the same hold upon us. For he is hanging between matter and mind; he is under the dominion at the same time both of sense and of abstractions; his impressions are taken almost at random from the outside of nature; he sees the light, but not the objects which are revealed by the light; and he brings into juxtaposition things which to us appear wide as the poles asunder, because he finds nothing between them. He passes abruptly from persons to ideas and numbers, and from ideas and numbers to persons,--from the heavens to man, from astronomy to physiology; he confuses, or rather does not distinguish, subject and object, first and final causes, and is dreaming of geometrical figures lost in a flux of sense. He contrasts the perfect movements of the heavenly bodies with the imperfect representation of them (Rep.), and he does not always require strict accuracy even in applications of number and figure (Rep.). His mind lingers around the forms of mythology, which he uses as
symbols or translates into figures of speech. He has no implements of observation, such as the telescope or microscope; the great science of chemistry is a blank to him. It is only by an effort that the modern thinker can breathe the atmosphere of the ancient philosopher, or understand how, under such unequal conditions, he seems in many instances, by a sort of inspiration, to have anticipated the truth.

The influence with the Timaeus has exercised upon posterity is due partly to a misunderstanding. In the supposed depths of this dialogue the Neo-Platonists found hidden meanings and connections with the Jewish and Christian Scriptures, and out of them they elicited doctrines quite at variance with the spirit of Plato. Believing that he was inspired by the Holy Ghost, or had received his wisdom from Moses, they seemed to find in his writings the Christian Trinity, the Word, the Church, the creation of the world in a Jewish sense, as they really found the personality of God or of mind, and the immortality of the soul. All religions and philosophies met and mingled in the schools of Alexandria, and the Neo-Platonists had a method of interpretation which could elicit any meaning out of any words. They were really incapable of distinguishing between the opinions of one philosopher and another--between Aristotle and Plato, or between the serious thoughts of Plato and his passing fancies. They were absorbed in his theology and were under the dominion of his name, while that which was truly great and truly characteristic in him, his effort to realize and connect abstractions, was not understood by them at all. Yet the genius of Plato and Greek philosophy reacted upon the East, and a Greek element of thought and language overlaid and partly reduced to order the chaos of Orientalism. And kindred spirits, like St. Augustine, even though they were acquainted with his writings only through the medium of a Latin translation, were profoundly affected by them, seeming to find 'God and his word everywhere insinuated' in them (August. Confess.)

There is no danger of the modern commentators on the Timaeus falling into the absurdities of the Neo-Platonists. In the present day we are well aware that an ancient philosopher is to be interpreted from himself and by the contemporary history of thought. We know that mysticism is not criticism. The fancies of the Neo-Platonists are only interesting to us because they exhibit a phase of the human mind which prevailed widely in the first centuries of the Christian era, and is not wholly extinct in our own day. But they have nothing to do with the interpretation of Plato, and in spirit they are opposed to him. They are the feeble expression of an age which has lost the power not only of creating great works, but of understanding them. They are the spurious birth of a marriage between philosophy and tradition, between Hellas and the East--(Greek) (Rep.). Whereas the so-called mysticism of Plato is purely Greek, arising out of his imperfect knowledge and high aspirations, and is the growth of an age in which philosophy is not wholly separated from poetry and mythology.
A greater danger with modern interpreters of Plato is the tendency to regard the Timaeus as the centre of his system. We do not know how Plato would have arranged his own dialogues, or whether the thought of arranging any of them, besides the two 'Trilogies' which he has expressly connected; was ever present to his mind. But, if he had arranged them, there are many indications that this is not the place which he would have assigned to the Timaeus. We observe, first of all, that the dialogue is put into the mouth of a Pythagorean philosopher, and not of Socrates. And this is required by dramatic propriety; for the investigation of nature was expressly renounced by Socrates in the Phaedo. Nor does Plato himself attribute any importance to his guesses at science. He is not at all absorbed by them, as he is by the IDEA of good. He is modest and hesitating, and confesses that his words partake of the uncertainty of the subject (Tim.). The dialogue is primarily concerned with the animal creation, including under this term the heavenly bodies, and with man only as one among the animals. But we can hardly suppose that Plato would have preferred the study of nature to man, or that he would have deemed the formation of the world and the human frame to have the same interest which he ascribes to the mystery of being and not-being, or to the great political problems which he discusses in the Republic and the Laws. There are no speculations on physics in the other dialogues of Plato, and he himself regards the consideration of them as a rational pastime only. He is beginning to feel the need of further divisions of knowledge; and is becoming aware that besides dialectic, mathematics, and the arts, there is another field which has been hitherto unexplored by him. But he has not as yet defined this intermediate territory which lies somewhere between medicine and mathematics, and he would have felt that there was as great an impiety in ranking theories of physics first in the order of knowledge, as in placing the body before the soul.

It is true, however, that the Timaeus is by no means confined to speculations on physics. The deeper foundations of the Platonic philosophy, such as the nature of God, the distinction of the sensible and intellectual, the great original conceptions of time and space, also appear in it. They are found principally in the first half of the dialogue. The construction of the heavens is for the most part ideal; the cyclic year serves as the connection between the world of absolute being and of generation, just as the number of population in the Republic is the expression or symbol of the transition from the ideal to the actual state. In some passages we are uncertain whether we are reading a description of astronomical facts or contemplating processes of the human mind, or of that divine mind (Phil.) which in Plato is hardly separable from it. The characteristics of man are transferred to the world-animal, as for example when intelligence and knowledge are said to be perfected by the circle of the Same, and true opinion by the circle of the Other; and conversely the motions of the world-animal reappear in man; its amorphous state continues in the child, and in both disorder and chaos are gradually succeeded by
stability and order. It is not however to passages like these that Plato is referring when he speaks of the uncertainty of his subject, but rather to the composition of bodies, to the relations of colours, the nature of diseases, and the like, about which he truly feels the lamentable ignorance prevailing in his own age.

We are led by Plato himself to regard the Timaeus, not as the centre or inmost shrine of the edifice, but as a detached building in a different style, framed, not after the Socratic, but after some Pythagorean model. As in the Cratylus and Parmenides, we are uncertain whether Plato is expressing his own opinions, or appropriating and perhaps improving the philosophical speculations of others. In all three dialogues he is exerting his dramatic and imitative power; in the Cratylus mingling a satirical and humorous purpose with true principles of language; in the Parmenides overthrowing Megarianism by a sort of ultra-Megarianism, which discovers contradictions in the one as great as those which have been previously shown to exist in the ideas. There is a similar uncertainty about the Timaeus; in the first part he scales the heights of transcendentalism, in the latter part he treats in a bald and superficial manner of the functions and diseases of the human frame. He uses the thoughts and almost the words of Parmenides when he discourses of being and of essence, adopting from old religion into philosophy the conception of God, and from the Megarians the IDEA of good. He agrees with Empedocles and the Atomists in attributing the greater differences of kinds to the figures of the elements and their movements into and out of one another. With Heracleitus, he acknowledges the perpetual flux; like Anaxagoras, he asserts the predominance of mind, although admitting an element of necessity which reason is incapable of subduing; like the Pythagoreans he supposes the mystery of the world to be contained in number. Many, if not all the elements of the Pre-Socratic philosophy are included in the Timaeus. It is a composite or eclectic work of imagination, in which Plato, without naming them, gathers up into a kind of system the various elements of philosophy which preceded him.

If we allow for the difference of subject, and for some growth in Plato's own mind, the discrepancy between the Timaeus and the other dialogues will not appear to be great. It is probable that the relation of the ideas to God or of God to the world was differently conceived by him at different times of his life. In all his later dialogues we observe a tendency in him to personify mind or God, and he therefore naturally inclines to view creation as the work of design. The creator is like a human artist who frames in his mind a plan which he executes by the help of his servants. Thus the language of philosophy which speaks of first and second causes is crossed by another sort of phraseology: 'God made the world because he was good, and the demons ministered to him.’ The Timaeus is cast in a more theological and less philosophical mould than the other dialogues, but the same general spirit is apparent; there is the same dualism or opposition
between the ideal and actual--the soul is prior to the body, the intelligible and unseen to the visible and corporeal. There is the same distinction between knowledge and opinion which occurs in the Theaetetus and Republic, the same enmity to the poets, the same combination of music and gymnastics. The doctrine of transmigration is still held by him, as in the Phaedrus and Republic; and the soul has a view of the heavens in a prior state of being. The ideas also remain, but they have become types in nature, forms of men, animals, birds, fishes. And the attribution of evil to physical causes accords with the doctrine which he maintains in the Laws respecting the involuntariness of vice.

The style and plan of the Timaeus differ greatly from that of any other of the Platonic dialogues. The language is weighty, abrupt, and in some passages sublime. But Plato has not the same mastery over his instrument which he exhibits in the Phaedrus or Symposium. Nothing can exceed the beauty or art of the introduction, in which he is using words after his accustomed manner. But in the rest of the work the power of language seems to fail him, and the dramatic form is wholly given up. He could write in one style, but not in another, and the Greek language had not as yet been fashioned by any poet or philosopher to describe physical phenomena. The early physiologists had generally written in verse; the prose writers, like Democritus and Anaxagoras, as far as we can judge from their fragments, never attained to a periodic style. And hence we find the same sort of clumsiness in the Timaeus of Plato which characterizes the philosophical poem of Lucretius. There is a want of flow and often a defect of rhythm; the meaning is sometimes obscure, and there is a greater use of apposition and more of repetition than occurs in Plato's earlier writings. The sentences are less closely connected and also more involved; the antecedents of demonstrative and relative pronouns are in some cases remote and perplexing. The greater frequency of participles and of absolute constructions gives the effect of heaviness. The descriptive portion of the Timaeus retains traces of the first Greek prose composition; for the great master of language was speaking on a theme with which he was imperfectly acquainted, and had no words in which to express his meaning. The rugged grandeur of the opening discourse of Timaeus may be compared with the more harmonious beauty of a similar passage in the Phaedrus.

To the same cause we may attribute the want of plan. Plato had not the command of his materials which would have enabled him to produce a perfect work of art. Hence there are several new beginnings and resumptions and formal or artificial connections; we miss the 'callida juncta' of the earlier dialogues. His speculations about the Eternal, his theories of creation, his mathematical anticipations, are supplemented by desultory remarks on the one immortal and the two mortal souls of man, on the functions of the bodily organs in health and disease, on sight, hearing, smell, taste, and touch. He soars into the heavens, and then, as if his wings were suddenly clipped, he walks ungracefully and with difficulty upon
the earth. The greatest things in the world, and the least things in man, are brought within the compass of a short treatise. But the intermediate links are missing, and we cannot be surprised that there should be a want of unity in a work which embraces astronomy, theology, physiology, and natural philosophy in a few pages.

It is not easy to determine how Plato's cosmos may be presented to the reader in a clearer and shorter form; or how we may supply a thread of connexion to his ideas without giving greater consistency to them than they possessed in his mind, or adding on consequences which would never have occurred to him. For he has glimpses of the truth, but no comprehensive or perfect vision. There are isolated expressions about the nature of God which have a wonderful depth and power; but we are not justified in assuming that these had any greater significance to the mind of Plato than language of a neutral and impersonal character . . . With a view to the illustration of the Timaeus I propose to divide this Introduction into sections, of which the first will contain an outline of the dialogue: (2) I shall consider the aspects of nature which presented themselves to Plato and his age, and the elements of philosophy which entered into the conception of them: (3) the theology and physics of the Timaeus, including the soul of the world, the conception of time and space, and the composition of the elements: (4) in the fourth section I shall consider the Platonic astronomy, and the position of the earth. There will remain, (5) the psychology, (6) the physiology of Plato, and (7) his analysis of the senses to be briefly commented upon: (8) lastly, we may examine in what points Plato approaches or anticipates the discoveries of modern science.

Section 1.

Socrates begins the Timaeus with a summary of the Republic. He lightly touches upon a few points,—the division of labour and distribution of the citizens into classes, the double nature and training of the guardians, the community of property and of women and children. But he makes no mention of the second education, or of the government of philosophers.

And now he desires to see the ideal State set in motion; he would like to know how she behaved in some great struggle. But he is unable to invent such a narrative himself; and he is afraid that the poets are equally incapable; for, although he pretends to have nothing to say against them, he remarks that they are a tribe of imitators, who can only describe what they have seen. And he fears that the Sophists, who are plentifully supplied with graces of speech, in their erratic way of life having never had a city or house of their own, may through want of experience err in their conception of philosophers and statesmen. 'And therefore to you I turn, Timaeus, citizen of Locris, who are at once a philosopher and a statesman, and to you, Critias, whom all Athenians know to be similarly
accomplished, and to Hermocrates, who is also fitted by nature and education to share in our discourse.'

HERMOCRATES: 'We will do our best, and have been already preparing; for on our way home, Critias told us of an ancient tradition, which I wish, Critias, that you would repeat to Socrates.' 'I will, if Timeaus approves.' 'I approve.' Listen then, Socrates, to a tale of Solon's, who, being the friend of Dropidas my great-grandfather, told it to my grandfather Critias, and he told me. The narrative related to ancient famous actions of the Athenian people, and to one especially, which I will rehearse in honour of you and of the goddess. Critias when he told this tale of the olden time, was ninety years old, I being not more than ten. The occasion of the rehearsal was the day of the Apaturia called the Registration of Youth, at which our parents gave prizes for recitation. Some poems of Solon were recited by the boys. They had not at that time gone out of fashion, and the recital of them led some one to say, perhaps in compliment to Critias, that Solon was not only the wisest of men but also the best of poets. The old man brightened up at hearing this, and said: Had Solon only had the leisure which was required to complete the famous legend which he brought with him from Egypt he would have been as distinguished as Homer and Hesiod. 'And what was the subject of the poem?' said the person who made the remark. The subject was a very noble one; he described the most famous action in which the Athenian people were ever engaged. But the memory of their exploits has passed away owing to the lapse of time and the extinction of the actors. 'Tell us,' said the other, 'the whole story, and where Solon heard the story.' He replied-- There is at the head of the Egyptian Delta, where the river Nile divides, a city and district called Sais; the city was the birthplace of King Amasis, and is under the protection of the goddess Neith or Athene. The citizens have a friendly feeling towards the Athenians, believing themselves to be related to them. Hither came Solon, and was received with honour; and here he first learnt, by conversing with the Egyptian priests, how ignorant he and his countrymen were of antiquity. Perceiving this, and with the view of eliciting information from them, he told them the tales of Phoroneus and Niobe, and also of Deucalion and Pyrrha, and he endeavoured to count the generations which had since passed. Thereupon an aged priest said to him: 'O Solon, Solon, you Hellenes are ever young, and there is no old man who is a Hellene.' 'What do you mean?' he asked. 'In mind,' replied the priest, 'I mean to say that you are children; there is no opinion or tradition of knowledge among you which is white with age; and I will tell you why. Like the rest of mankind you have suffered from convulsions of nature, which are chiefly brought about by the two great agencies of fire and water. The former is symbolized in the Hellenic tale of young Phaethon who drove his father's horses the wrong way, and having burnt up the earth was himself burnt up by a thunderbolt. For there occurs at long intervals a derangement of the heavenly bodies, and then the earth is destroyed by fire. At such times, and when fire is the agent, those who dwell by rivers
or on the seashore are safer than those who dwell upon high and dry places, who in their turn are safer when the danger is from water. Now the Nile is our saviour from fire, and as there is little rain in Egypt, we are not harmed by water; whereas in other countries, when a deluge comes, the inhabitants are swept by the rivers into the sea. The memorials which your own and other nations have once had of the famous actions of mankind perish in the waters at certain periods; and the rude survivors in the mountains begin again, knowing nothing of the world before the flood. But in Egypt the traditions of our own and other lands are by us registered for ever in our temples. The genealogies which you have recited to us out of your own annals, Solon, are a mere children's story. For in the first place, you remember one deluge only, and there were many of them, and you know nothing of that fairest and noblest race of which you are a seed or remnant. The memory of them was lost, because there was no written voice among you. For in the times before the great flood Athens was the greatest and best of cities and did the noblest deeds and had the best constitution of any under the face of heaven.' Solon marvelled, and desired to be informed of the particulars. 'You are welcome to hear them,' said the priest, 'both for your own sake and for that of the city, and above all for the sake of the goddess who is the common foundress of both our cities. Nine thousand years have elapsed since she founded yours, and eight thousand since she founded ours, as our annals record. Many laws exist among us which are the counterpart of yours as they were in the olden time. I will briefly describe them to you, and you shall read the account of them at your leisure in the sacred registers. In the first place, there was a caste of priests among the ancient Athenians, and another of artisans; also castes of shepherds, hunters, and husbandmen, and lastly of warriors, who, like the warriors of Egypt, were separated from the rest, and carried shields and spears, a custom which the goddess first taught you, and then the Asiatics, and we among Asiatics first received from her. Observe again, what care the law took in the pursuit of wisdom, searching out the deep things of the world, and applying them to the use of man. The spot of earth which the goddess chose had the best of climates, and produced the wisest men; in no other was she herself, the philosopher and warrior goddess, so likely to have votaries. And there you dwelt as became the children of the gods, excelling all men in virtue, and many famous actions are recorded of you. The most famous of them all was the overthrow of the island of Atlantis. This great island lay over against the Pillars of Heracles, in extent greater than Libya and Asia put together, and was the passage to other islands and to a great ocean of which the Mediterranean sea was only the harbour; and within the Pillars the empire of Atlantis reached in Europe to Tyrrhenia and in Libya to Egypt. This mighty power was arrayed against Egypt and Hellas and all the countries bordering on the Mediterranean. Then your city did bravely, and won renown over the whole earth. For at the peril of her own existence, and when the other Hellenes had deserted her, she repelled the invader, and of her own accord gave liberty to all the nations within the Pillars. A little while afterwards
there were great earthquakes and floods, and your warrior race all sank into the earth; and the great island of Atlantis also disappeared in the sea. This is the explanation of the shallows which are found in that part of the Atlantic ocean.'

Such was the tale, Socrates, which Critias heard from Solon; and I noticed when listening to you yesterday, how close the resemblance was between your city and citizens and the ancient Athenian State. But I would not speak at the time, because I wanted to refresh my memory. I had heard the old man when I was a child, and though I could not remember the whole of our yesterday's discourse, I was able to recall every word of this, which is branded into my mind; and I am prepared, Socrates, to rehearse to you the entire narrative. The imaginary State which you were describing may be identified with the reality of Solon, and our antediluvian ancestors may be your citizens. 'That is excellent, Critias, and very appropriate to a Panathenaic festival; the truth of the story is a great advantage.' Then now let me explain to you the order of our entertainment; first, Timaeus, who is a natural philosopher, will speak of the origin of the world, going down to the creation of man, and then I shall receive the men whom he has created, and some of whom will have been educated by you, and introduce them to you as the lost Athenian citizens of whom the Egyptian record spoke. As the law of Solon prescribes, we will bring them into court and acknowledge their claims to citizenship. 'I see,' replied Socrates, 'that I shall be well entertained; and do you, Timaeus, offer up a prayer and begin.'

TIMAEUS: All men who have any right feeling, at the beginning of any enterprise, call upon the Gods; and he who is about to speak of the origin of the universe has a special need of their aid. May my words be acceptable to them, and may I speak in the manner which will be most intelligible to you and will best express my own meaning!

First, I must distinguish between that which always is and never becomes and which is apprehended by reason and reflection, and that which always becomes and never is and is conceived by opinion with the help of sense. All that becomes and is created is the work of a cause, and that is fair which the artificer makes after an eternal pattern, but whatever is fashioned after a created pattern is not fair. Is the world created or uncreated?—that is the first question. Created, I reply, being visible and tangible and having a body, and therefore sensible; and if sensible, then created; and if created, made by a cause, and the cause is the ineffable father of all things, who had before him an eternal archetype. For to imagine that the archetype was created would be blasphemy, seeing that the world is the noblest of creations, and God is the best of causes. And the world being thus created according to the eternal pattern is the copy of something; and we may assume that words are akin to the matter of which they speak. What is spoken of the unchanging or intelligible must be
certain and true; but what is spoken of the created image can only be probable; being is to becoming what truth is to belief. And amid the variety of opinions which have arisen about God and the nature of the world we must be content to take probability for our rule, considering that I, who am the speaker, and you, who are the judges, are only men; to probability we may attain but no further.

SOCRATES: Excellent, Timaeus, I like your manner of approaching the subject—proceed.

TIMAEUS: Why did the Creator make the world?...He was good, and therefore not jealous, and being free from jealousy he desired that all things should be like himself. Wherefore he set in order the visible world, which he found in disorder. Now he who is the best could only create the fairest; and reflecting that of visible things the intelligent is superior to the unintelligent, he put intelligence in soul and soul in body, and framed the universe to be the best and fairest work in the order of nature, and the world became a living soul through the providence of God.

In the likeness of what animal was the world made?—that is the third question...The form of the perfect animal was a whole, and contained all intelligible beings, and the visible animal, made after the pattern of this, included all visible creatures.

Are there many worlds or one only?—that is the fourth question...One only. For if in the original there had been more than one they would have been the parts of a third, which would have been the true pattern of the world; and therefore there is, and will ever be, but one created world. Now that which is created is of necessity corporeal and visible and tangible,—visible and therefore made of fire,—tangible and therefore solid and made of earth. But two terms must be united by a third, which is a mean between them; and had the earth been a surface only, one mean would have sufficed, but two means are required to unite solid bodies. And as the world was composed of solids, between the elements of fire and earth God placed two other elements of air and water, and arranged them in a continuous proportion—

fire:air::air:water, and air:water::water:earth,

and so put together a visible and palpable heaven, having harmony and friendship in the union of the four elements; and being at unity with itself it was indissoluble except by the hand of the framer. Each of the elements was taken into the universe whole and entire; for he considered that the animal should be perfect and one, leaving no remnants out of which another animal could be created, and should also be free from old age and disease, which are produced by the action of external forces. And as he was to contain all things, he was made in the all-containing form of a
sphere, round as from a lathe and every way equidistant from the centre, as was natural and suitable to him. He was finished and smooth, having neither eyes nor ears, for there was nothing without him which he could see or hear; and he had no need to carry food to his mouth, nor was there air for him to breathe; and he did not require hands, for there was nothing of which he could take hold, nor feet, with which to walk. All that he did was done rationally in and by himself, and he moved in a circle turning within himself, which is the most intellectual of motions; but the other six motions were wanting to him; wherefore the universe had no feet or legs.

And so the thought of God made a God in the image of a perfect body, having intercourse with himself and needing no other, but in every part harmonious and self-contained and truly blessed. The soul was first made by him—the elder to rule the younger; not in the order in which our wayward fancy has led us to describe them, but the soul first and afterwards the body. God took of the unchangeable and indivisible and also of the divisible and corporeal, and out of the two he made a third nature, essence, which was in a mean between them, and partook of the same and the other, the intractable nature of the other being compressed into the same. Having made a compound of all the three, he proceeded to divide the entire mass into portions related to one another in the ratios of 1, 2, 3, 4, 9, 8, 27, and proceeded to fill up the double and triple intervals thus—

- over 1, 4/3, 3/2, - over 2, 8/3, 3, - over 4, 16/3, 6, - over 8:
- over 1, 3/2, 2, - over 3, 9/2, 6, - over 9, 27/2, 18, - over 27;

in which double series of numbers are two kinds of means; the one exceeds and is exceeded by equal parts of the extremes, e.g. 1, 4/3, 2; the other kind of mean is one which is equidistant from the extremes—2, 4, 6. In this manner there were formed intervals of thirds, 3:2, of fourths, 4:3, and of ninths, 9:8. And next he filled up the intervals of a fourth with ninths, leaving a remnant which is in the ratio of 256:243. The entire compound was divided by him lengthways into two parts, which he united at the centre like the letter X, and bent into an inner and outer circle or sphere, cutting one another again at a point over against the point at which they cross. The outer circle or sphere was named the sphere of the same—the inner, the sphere of the other or diverse; and the one revolved horizontally to the right, the other diagonally to the left. To the sphere of the same which was undivided he gave dominion, but the sphere of the other or diverse was distributed into seven unequal orbits, having intervals in ratios of twos and threes, three of either sort, and he bade the orbits move in opposite directions to one another--three of them, the Sun, Mercury, Venus, with equal swiftness, and the remaining four--the Moon, Saturn, Mars, Jupiter, with unequal swiftness to the three and to one another, but all in due proportion.
When the Creator had made the soul he made the body within her; and the soul interfused everywhere from the centre to the circumference of heaven, herself turning in herself, began a divine life of rational and everlasting motion. The body of heaven is visible, but the soul is invisible, and partakes of reason and harmony, and is the best of creations, being the work of the best. And being composed of the same, the other, and the essence, these three, and also divided and bound in harmonical proportion, and revolving within herself--the soul when touching anything which has essence, whether divided or undivided, is stirred to utter the sameness or diversity of that and some other thing, and to tell how and when and where individuals are affected or related, whether in the world of change or of essence. When reason is in the neighbourhood of sense, and the circle of the other or diverse is moving truly, then arise true opinions and beliefs; when reason is in the sphere of thought, and the circle of the same runs smoothly, then intelligence is perfected.

When the Father who begat the world saw the image which he had made of the Eternal Gods moving and living, he rejoiced; and in his joy resolved, since the archetype was eternal, to make the creature eternal as far as this was possible. Wherefore he made an image of eternity which is time, having an uniform motion according to number, parted into months and days and years, and also having greater divisions of past, present, and future. These all apply to becoming in time, and have no meaning in relation to the eternal nature, which ever is and never was or will be; for the unchangeable is never older or younger, and when we say that he 'was' or 'will be,' we are mistaken, for these words are applicable only to becoming, and not to true being; and equally wrong are we in saying that what has become IS become and that what becomes IS becoming, and that the non-existent IS non-existent...These are the forms of time which imitate eternity and move in a circle measured by number.

Thus was time made in the image of the eternal nature; and it was created together with the heavens, in order that if they were dissolved, it might perish with them. And God made the sun and moon and five other wanderers, as they are called, seven in all, and to each of them he gave a body moving in an orbit, being one of the seven orbits into which the circle of the other was divided. He put the moon in the orbit which was nearest to the earth, the sun in that next, the morning star and Mercury in the orbits which move opposite to the sun but with equal swiftness--this being the reason why they overtake and are overtaken by one another. All these bodies became living creatures, and learnt their appointed tasks, and began to move, the nearer more swiftly, the remoter more slowly, according to the diagonal movement of the other. And since this was controlled by the movement of the same, the seven planets in their courses appeared to describe spirals; and that appeared fastest which was slowest, and that which overtook others appeared to be overtaken by them. And God lighted a fire in the second orbit from the earth which is called the sun, to give
light over the whole heaven, and to teach intelligent beings that knowledge of number which is derived from the revolution of the same. Thus arose day and night, which are the periods of the most intelligent nature; a month is created by the revolution of the moon, a year by that of the sun. Other periods of wonderful length and complexity are not observed by men in general; there is moreover a cycle or perfect year at the completion of which they all meet and coincide...To this end the stars came into being, that the created heaven might imitate the eternal nature.

Thus far the universal animal was made in the divine image, but the other animals were not as yet included in him. And God created them according to the patterns or species of them which existed in the divine original. There are four of them: one of gods, another of birds, a third of fishes, and a fourth of animals. The gods were made in the form of a circle, which is the most perfect figure and the figure of the universe. They were created chiefly of fire, that they might be bright, and were made to know and follow the best, and to be scattered over the heavens, of which they were to be the glory. Two kinds of motion were assigned to them--first, the revolution in the same and around the same, in peaceful unchanging thought of the same; and to this was added a forward motion which was under the control of the same. Thus then the fixed stars were created, being divine and eternal animals, revolving on the same spot, and the wandering stars, in their courses, were created in the manner already described. The earth, which is our nurse, clinging around the pole extended through the universe, he made to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven. Vain would be the labour of telling all the figures of them, moving as in dance, and their juxta-positions and approximations, and when and where and behind what other stars they appear to disappear--to tell of all this without looking at a plan of them would be labour in vain.

The knowledge of the other gods is beyond us, and we can only accept the traditions of the ancients, who were the children of the gods, as they said; for surely they must have known their own ancestors. Although they give no proof, we must believe them as is customary. They tell us that Oceanus and Tethys were the children of Earth and Heaven; that Phoreys, Cronos, and Rhea came in the next generation, and were followed by Zeus and Here, whose brothers and children are known to everybody.

When all of them, both those who show themselves in the sky, and those who retire from view, had come into being, the Creator addressed them thus:--'Gods, sons of gods, my works, if I will, are indissoluble. That which is bound may be dissolved, but only an evil being would dissolve that which is harmonious and happy. And although you are not immortal you shall not die, for I will hold you together. Hear me, then:--Three tribes of mortal beings have still to be created, but if created by me they would be like gods. Do ye therefore make them; I will implant in them the seed of
immortality, and you shall weave together the mortal and immortal, and provide food for them, and receive them again in death.' Thus he spake, and poured the remains of the elements into the cup in which he had mingled the soul of the universe. They were no longer pure as before, but diluted; and the mixture he distributed into souls equal in number to the stars, and assigned each to a star—then having mounted them, as in a chariot, he showed them the nature of the universe, and told them of their future birth and human lot. They were to be sown in the planets, and out of them was to come forth the most religious of animals, which would hereafter be called man. The souls were to be implanted in bodies, which were in a perpetual flux, whence, he said, would arise, first, sensation; secondly, love, which is a mixture of pleasure and pain; thirdly, fear and anger, and the opposite affections: and if they conquered these, they would live righteously, but if they were conquered by them, unrighteously. He who lived well would return to his native star, and would there have a blessed existence; but, if he lived ill, he would pass into the nature of a woman, and if he did not then alter his evil ways, into the likeness of some animal, until the reason which was in him reasserted her sway over the elements of fire, air, earth, water, which had engrossed her, and he regained his first and better nature. Having given this law to his creatures, that he might be guiltless of their future evil, he sowed them, some in the earth, some in the moon, and some in the other planets; and he ordered the younger gods to frame human bodies for them and to make the necessary additions to them, and to avert from them all but self-inflicted evil.

Having given these commands, the Creator remained in his own nature. And his children, receiving from him the immortal principle, borrowed from the world portions of earth, air, fire, water, hereafter to be returned, which they fastened together, not with the adamantine bonds which bound themselves, but by little invisible pegs, making each separate body out of all the elements, subject to influx and efflux, and containing the courses of the soul. These swelling and surging as in a river moved irregularly and irrationally in all the six possible ways, forwards, backwards, right, left, up and down. But violent as were the internal and alimentary fluids, the tide became still more violent when the body came into contact with flaming fire, or the solid earth, or gliding waters, or the stormy wind; the motions produced by these impulses pass through the body to the soul and have the name of sensations. Uniting with the ever-flowing current, they shake the courses of the soul, stopping the revolution of the same and twisting in all sorts of ways the nature of the other, and the harmonical ratios of twos and threes and the mean terms which connect them, until the circles are bent and disordered and their motion becomes irregular. You may imagine a position of the body in which the head is resting upon the ground, and the legs are in the air, and the top is bottom and the left right. And something similar happens when the disordered motions of the soul come into contact with any external thing; they say the same or the
other in a manner which is the very opposite of the truth, and they are false and foolish, and have no guiding principle in them. And when external impressions enter in, they are really conquered, though they seem to conquer.

By reason of these affections the soul is at first without intelligence, but as time goes on the stream of nutriment abates, and the courses of the soul regain their proper motion, and apprehend the same and the other rightly, and become rational. The soul of him who has education is whole and perfect and escapes the worst disease, but, if a man's education be neglected, he walks lamely through life and returns good for nothing to the world below. This, however, is an after-stage--at present, we are only concerned with the creation of the body and soul.

The two divine courses were encased by the gods in a sphere which is called the head, and is the god and lord of us. And to this they gave the body to be a vehicle, and the members to be instruments, having the power of flexion and extension. Such was the origin of legs and arms. In the next place, the gods gave a forward motion to the human body, because the front part of man was the more honourable and had authority. And they put in a face in which they inserted organs to minister in all things to the providence of the soul. They first contrived the eyes, into which they conveyed a light akin to the light of day, making it flow through the pupils. When the light of the eye is surrounded by the light of day, then like falls upon like, and they unite and form one body which conveys to the soul the motions of visible objects. But when the visual ray goes forth into the darkness, then unlike falls upon unlike--the eye no longer sees, and we go to sleep. The fire or light, when kept in by the eyelids, equalizes the inward motions, and there is rest accompanied by few dreams; only when the greater motions remain they engender in us corresponding visions of the night. And now we shall be able to understand the nature of reflections in mirrors. The fires from within and from without meet about the smooth and bright surface of the mirror; and because they meet in a manner contrary to the usual mode, the right and left sides of the object are transposed. In a concave mirror the top and bottom are inverted, but this is no transposition.

These are the second causes which God used as his ministers in fashioning the world. They are thought by many to be the prime causes, but they are not so; for they are destitute of mind and reason, and the lover of mind will not allow that there are any prime causes other than the rational and invisible ones--these he investigates first, and afterwards the causes of things which are moved by others, and which work by chance and without order. Of the second or concurrent causes of sight I have already spoken, and I will now speak of the higher purpose of God in giving us eyes. Sight is the source of the greatest benefits to us; for if our eyes had never seen the sun, stars, and heavens, the words which we have spoken would not
have been uttered. The sight of them and their revolutions has given us the knowledge of number and time, the power of enquiry, and philosophy, which is the great blessing of human life; not to speak of the lesser benefits which even the vulgar can appreciate. God gave us the faculty of sight that we might behold the order of the heavens and create a corresponding order in our own erring minds. To the like end the gifts of speech and hearing were bestowed upon us; not for the sake of irrational pleasure, but in order that we might harmonize the courses of the soul by sympathy with the harmony of sound, and cure ourselves of our irregular and graceless ways.

Thus far we have spoken of the works of mind; and there are other works done from necessity, which we must now place beside them; for the creation is made up of both, mind persuading necessity as far as possible to work out good. Before the heavens there existed fire, air, water, earth, which we suppose men to know, though no one has explained their nature, and we erroneously maintain them to be the letters or elements of the whole, although they cannot reasonably be compared even to syllables or first compounds. I am not now speaking of the first principles of things, because I cannot discover them by our present mode of enquiry. But as I observed the rule of probability at first, I will begin anew, seeking by the grace of God to observe it still.

In our former discussion I distinguished two kinds of being--the unchanging or invisible, and the visible or changing. But now a third kind is required, which I shall call the receptacle or nurse of generation. There is a difficulty in arriving at an exact notion of this third kind, because the four elements themselves are of inexact natures and easily pass into one another, and are too transient to be detained by any one name; wherefore we are compelled to speak of water or fire, not as substances, but as qualities. They may be compared to images made of gold, which are continually assuming new forms. Somebody asks what they are; if you do not know, the safest answer is to reply that they are gold. In like manner there is a universal nature out of which all things are made, and which is like none of them; but they enter into and pass out of her, and are made after patterns of the true in a wonderful and inexplicable manner. The containing principle may be likened to a mother, the source or spring to a father, the intermediate nature to a child; and we may also remark that the matter which receives every variety of form must be formless, like the inodorous liquids which are prepared to receive scents, or the smooth and soft materials on which figures are impressed. In the same way space or matter is neither earth nor fire nor air nor water, but an invisible and formless being which receives all things, and in an incomprehensible manner partakes of the intelligible. But we may say, speaking generally, that fire is that part of this nature which is inflamed, water that which is moistened, and the like.
Let me ask a question in which a great principle is involved: Is there an essence of fire and the other elements, or are there only fires visible to sense? I answer in a word: If mind is one thing and true opinion another, then there are self-existent essences; but if mind is the same with opinion, then the visible and corporeal is most real. But they are not the same, and they have a different origin and nature. The one comes to us by instruction, the other by persuasion, the one is rational, the other is irrational; the one is movable by persuasion, the other immovable; the one is possessed by every man, the other by the gods and by very few men. And we must acknowledge that as there are two kinds of knowledge, so there are two kinds of being corresponding to them; the one uncreated, indestructible, immovable, which is seen by intelligence only; the other created, which is always becoming in place and vanishing out of place, and is apprehended by opinion and sense. There is also a third nature--that of space, which is indestructible, and is perceived by a kind of spurious reason without the help of sense. This is presented to us in a dreamy manner, and yet is said to be necessary, for we say that all things must be somewhere in space. For they are the images of other things and must therefore have a separate existence and exist in something (i.e. in space). But true reason assures us that while two things (i.e. the idea and the image) are different they cannot inhere in one another, so as to be one and two at the same time.

To sum up: Being and generation and space, these three, existed before the heavens, and the nurse or vessel of generation, moistened by water and inflamed by fire, and taking the forms of air and earth, assumed various shapes. By the motion of the vessel, the elements were divided, and like grain winnowed by fans, the close and heavy particles settled in one place, the light and airy ones in another. At first they were without reason and measure, and had only certain faint traces of themselves, until God fashioned them by figure and number. In this, as in every other part of creation, I suppose God to have made things, as far as was possible, fair and good, out of things not fair and good.

And now I will explain to you the generation of the world by a method with which your scientific training will have made you familiar. Fire, air, earth, and water are bodies and therefore solids, and solids are contained in planes, and plane rectilinear figures are made up of triangles. Of triangles there are two kinds; one having the opposite sides equal (isosceles), the other with unequal sides (scalene). These we may fairly assume to be the original elements of fire and the other bodies; what principles are prior to these God only knows, and he of men whom God loves. Next, we must determine what are the four most beautiful figures which are unlike one another and yet sometimes capable of resolution into one another...Of the two kinds of triangles the equal-sided has but one form, the unequal-sided has an infinite variety of forms; and there is none more beautiful than that which forms the half of an equilateral triangle. Let
us then choose two triangles; one, the isosceles, the other, that form of scalene which has the square of the longer side three times as great as the square of the lesser side; and affirm that, out of these, fire and the other elements have been constructed.

I was wrong in imagining that all the four elements could be generated into and out of one another. For as they are formed, three of them from the triangle which has the sides unequal, the fourth from the triangle which has equal sides, three can be resolved into one another, but the fourth cannot be resolved into them nor they into it. So much for their passage into one another. I must now speak of their construction. From the triangle of which the hypotenuse is twice the lesser side the three first regular solids are formed--first, the equilateral pyramid or tetrahedron; secondly, the octahedron; thirdly, the icosahedron; and from the isosceles triangle is formed the cube. And there is a fifth figure (which is made out of twelve pentagons), the dodecahedron--this God used as a model for the twelvefold division of the Zodiac.

Let us now assign the geometrical forms to their respective elements. The cube is the most stable of them because resting on a quadrangular plane surface, and composed of isosceles triangles. To the earth then, which is the most stable of bodies and the most easily modelled of them, may be assigned the form of a cube; and the remaining forms to the other elements,--to fire the pyramid, to air the octahedron, and to water the icosahedron,--according to their degrees of lightness or heaviness or power, or want of power, of penetration. The single particles of any of the elements are not seen by reason of their smallness; they only become visible when collected. The ratios of their motions, numbers, and other properties, are ordered by the God, who harmonized them as far as necessity permitted.

The probable conclusion is as follows:--Earth, when dissolved by the more penetrating element of fire, whether acting immediately or through the medium of air or water, is decomposed but not transformed. Water, when divided by fire or air, becomes one part fire, and two parts air. A volume of air divided becomes two of fire. On the other hand, when condensed, two volumes of fire make a volume of air; and two and a half parts of air condense into one of water. Any element which is fastened upon by fire is cut by the sharpness of the triangles, until at length, coalescing with the fire, it is at rest; for similars are not affected by similars. When two kinds of bodies quarrel with one another, then the tendency to decomposition continues until the smaller either escapes to its kindred element or becomes one with its conqueror. And this tendency in bodies to condense or escape is a source of motion...Where there is motion there must be a mover, and where there is a mover there must be something to move. These cannot exist in what is uniform, and therefore motion is due to want of uniformity. But then why, when things are divided after their kinds, do
they not cease from motion? The answer is, that the circular motion of all things compresses them, and as 'nature abhors a vacuum,' the finer and more subtle particles of the lighter elements, such as fire and air, are thrust into the interstices of the larger, each of them penetrating according to their rarity, and thus all the elements are on their way up and down everywhere and always into their own places. Hence there is a principle of inequality, and therefore of motion, in all time.

In the next place, we may observe that there are different kinds of fire--(1) flame, (2) light that burns not, (3) the red heat of the embers of fire. And there are varieties of air, as for example, the pure aether, the opaque mist, and other nameless forms. Water, again, is of two kinds, liquid and fusile. The liquid is composed of small and unequal particles, the fusile of large and uniform particles and is more solid, but nevertheless melts at the approach of fire, and then spreads upon the earth. When the substance cools, the fire passes into the air, which is displaced, and forces together and condenses the liquid mass. This process is called cooling and congealment. Of the fusile kinds the fairest and heaviest is gold; this is hardened by filtration through rock, and is of a bright yellow colour. A shoot of gold which is darker and denser than the rest is called adamant. Another kind is called copper, which is harder and yet lighter because the interstices are larger than in gold. There is mingled with it a fine and small portion of earth which comes out in the form of rust. These are a few of the conjectures which philosophy forms, when, leaving the eternal nature, she turns for innocent recreation to consider the truths of generation.

Water which is mingled with fire is called liquid because it rolls upon the earth, and soft because its bases give way. This becomes more equable when separated from fire and air, and then congeals into hail or ice, or the looser forms of hoar frost or snow. There are other waters which are called juices and are distilled through plants. Of these we may mention, first, wine, which warms the soul as well as the body; secondly, oily substances, as for example, oil or pitch; thirdly, honey, which relaxes the contracted parts of the mouth and so produces sweetness; fourthly, vegetable acid, which is frothy and has a burning quality and dissolves the flesh. Of the kinds of earth, that which is filtered through water passes into stone; the water is broken up by the earth and escapes in the form of air--this in turn presses upon the mass of earth, and the earth, compressed into an indissoluble union with the remaining water, becomes rock. Rock, when it is made up of equal particles, is fair and transparent, but the reverse when of unequal. Earth is converted into pottery when the watery part is suddenly drawn away; or if moisture remains, the earth, when fused by fire, becomes, on cooling, a stone of a black colour. When the earth is finer and of a briny nature then two half-solid bodies are formed by separating the water,--soda and salt. The strong compounds of earth and water are not soluble by water, but only by fire. Earth itself, when not
consolidated, is dissolved by water; when consolidated, by fire only. The cohesion of water, when strong, is dissolved by fire only; when weak, either by air or fire, the former entering the interstices, the latter penetrating even the triangles. Air when strongly condensed is indissoluble by any power which does not reach the triangles, and even when not strongly condensed is only resolved by fire. Compounds of earth and water are unaffected by water while the water occupies the interstices in them, but begin to liquefy when fire enters into the interstices of the water. They are of two kinds, some of them, like glass, having more earth, others, like wax, having more water in them.

Having considered objects of sense, we now pass on to sensation. But we cannot explain sensation without explaining the nature of flesh and of the mortal soul; and as we cannot treat of both together, in order that we may proceed at once to the sensations we must assume the existence of body and soul.

What makes fire burn? The fineness of the sides, the sharpness of the angles, the smallness of the particles, the quickness of the motion. Moreover, the pyramid, which is the figure of fire, is more cutting than any other. The feeling of cold is produced by the larger particles of moisture outside the body trying to eject the smaller ones in the body which they compress. The struggle which arises between elements thus unnaturally brought together causes shivering. That is hard to which the flesh yields, and soft which yields to the flesh, and these two terms are also relative to one another. The yielding matter is that which has the slenderest base, whereas that which has a rectangular base is compact and repellent. Light and heavy are wrongly explained with reference to a lower and higher in place. For in the universe, which is a sphere, there is no opposition of above or below, and that which is to us above would be below to a man standing at the antipodes. The greater or less difficulty in detaching any element from its like is the real cause of heaviness or of lightness. If you draw the earth into the dissimilar air, the particles of earth cling to their native element, and you more easily detach a small portion than a large. There would be the same difficulty in moving any of the upper elements towards the lower. The smooth and the rough are severally produced by the union of evenness with compactness, and of hardness with inequality.

Pleasure and pain are the most important of the affections common to the whole body. According to our general doctrine of sensation, parts of the body which are easily moved readily transmit the motion to the mind; but parts which are not easily moved have no effect upon the patient. The bones and hair are of the latter kind, sight and hearing of the former. Ordinary affections are neither pleasant nor painful. The impressions of sight afford an example of these, and are neither violent nor sudden. But sudden replenishments of the body cause pleasure, and sudden disturbances,
as for example cuttings and burnings, have the opposite effect.

>From sensations common to the whole body, we proceed to those of particular parts. The affections of the tongue appear to be caused by contraction and dilation, but they have more of roughness or smoothness than is found in other affections. Earthy particles, entering into the small veins of the tongue which reach to the heart, when they melt into and dry up the little veins are astringent if they are rough; or if not so rough, they are only harsh, and if excessively abstergent, like potash and soda, bitter. Purgatives of a weaker sort are called salt and, having no bitterness, are rather agreeable. Inflammatory bodies, which by their lightness are carried up into the head, cutting all that comes in their way, are termed pungent. But when these are refined by putrefaction, and enter the narrow veins of the tongue, and meet there particles of earth and air, two kinds of globules are formed—one of earthy and impure liquid, which boils and ferments, the other of pure and transparent water, which are called bubbles; of all these affections the cause is termed acid. When, on the other hand, the composition of the deliquescent particles is congenial to the tongue, and disposes the parts according to their nature, this remedial power in them is called sweet.

Smells are not divided into kinds; all of them are transitional, and arise out of the decomposition of one element into another, for the simple air or water is without smell. They are vapours or mists, thinner than water and thicker than air: and hence in drawing in the breath, when there is an obstruction, the air passes, but there is no smell. They have no names, but are distinguished as pleasant and unpleasant, and their influence extends over the whole region from the head to the navel.

Hearing is the effect of a stroke which is transmitted through the ears by means of the air, brain, and blood to the soul, beginning at the head and extending to the liver. The sound which moves swiftly is acute; that which moves slowly is grave; that which is uniform is smooth, and the opposite is harsh. Loudness depends on the quantity of the sound. Of the harmony of sounds I will hereafter speak.

Colours are flames which emanate from all bodies, having particles corresponding to the sense of sight. Some of the particles are less and some larger, and some are equal to the parts of the sight. The equal particles appear transparent; the larger contract, and the lesser dilate the sight. White is produced by the dilation, black by the contraction, of the particles of sight. There is also a swifter motion of another sort of fire which forces a way through the passages of the eyes, and elicits from them a union of fire and water which we call tears. The inner fire flashes forth, and the outer finds a way in and is extinguished in the moisture, and all sorts of colours are generated by the mixture. This affection is termed by us dazzling, and the object which produces it is called bright.
There is yet another sort of fire which mingles with the moisture of the
eye without flashing, and produces a colour like blood—to this we give the
name of red. A bright element mingling with red and white produces a
colour which we call auburn. The law of proportion, however, according to
which compound colours are formed, cannot be determined scientifically or
even probably. Red, when mingled with black and white, gives a purple hue,
which becomes umber when the colours are burnt and there is a larger
admixture of black. Flame-colour is a mixture of auburn and dun; dun of
white and black; yellow of white and auburn. White and bright meeting, and
falling upon a full black, become dark blue; dark blue mingling with white
becomes a light blue; the union of flame-colour and black makes leek-green.
There is no difficulty in seeing how other colours are probably composed.
But he who should attempt to test the truth of this by experiment, would
forget the difference of the human and divine nature. God only is able to
compound and resolve substances; such experiments are impossible to man.

These are the elements of necessity which the Creator received in the world
of generation when he made the all-sufficient and perfect creature, using
the secondary causes as his ministers, but himself fashioning the good in
all things. For there are two sorts of causes, the one divine, the other
necessary; and we should seek to discover the divine above all, and, for
their sake, the necessary, because without them the higher cannot be
attained by us.

Having now before us the causes out of which the rest of our discourse is
to be framed, let us go back to the point at which we began, and add a fair
ending to our tale. As I said at first, all things were originally a chaos
in which there was no order or proportion. The elements of this chaos were
arranged by the Creator, and out of them he made the world. Of the divine
he himself was the author, but he committed to his offspring the creation
of the mortal. From him they received the immortal soul, but themselves
made the body to be its vehicle, and constructed within another soul which
was mortal, and subject to terrible affections—pleasure, the inciter of
evil; pain, which deters from good; rashness and fear, foolish counsellors;
anger hard to be appeased; hope easily led astray. These they mingled with
irrational sense and all-daring love according to necessary laws and so
framed man. And, fearing to pollute the divine element, they gave the
mortal soul a separate habitation in the breast, parted off from the head
by a narrow isthmus. And as in a house the women's apartments are divided
from the men's, the cavity of the thorax was divided into two parts, a
higher and a lower. The higher of the two, which is the seat of courage
and anger, lies nearer to the head, between the midriff and the neck, and
assists reason in restraining the desires. The heart is the house of guard
in which all the veins meet, and through them reason sends her commands to
the extremity of her kingdom. When the passions are in revolt, or danger
approaches from without, then the heart beats and swells; and the creating
powers, knowing this, implanted in the body the soft and bloodless
The truth concerning the soul can only be established by the word of God. Still, we may venture to assert what is probable both concerning soul and body.

The creative powers were aware of our tendency to excess. And so when they made the belly to be a receptacle for food, in order that men might not perish by insatiable gluttony, they formed the convolutions of the intestines, in this way retarding the passage of food through the body, lest mankind should be absorbed in eating and drinking, and the whole race become impervious to divine philosophy.

The creation of bones and flesh was on this wise. The foundation of these is the marrow which binds together body and soul, and the marrow is made out of such of the primary triangles as are adapted by their perfection to produce all the four elements. These God took and mingled them in due proportion, making as many kinds of marrow as there were hereafter to be

substance of the lung, having a porous and springy nature like a sponge, and being kept cool by drink and air which enters through the trachea.

The part of the soul which desires meat and drink was placed between the midriff and navel, where they made a sort of manger; and here they bound it down, like a wild animal, away from the council-chamber, and leaving the better principle undisturbed to advise quietly for the good of the whole. For the Creator knew that the belly would not listen to reason, and was under the power of idols and fancies. Wherefore he framed the liver to connect with the lower nature, contriving that it should be compact, and bright, and sweet, and also bitter and smooth, in order that the power of thought which originates in the mind might there be reflected, terrifying the belly with the elements of bitterness and gall, and a suffusion of bilious colours when the liver is contracted, and causing pain and misery by twisting out of its place the lobe and closing up the vessels and gates. And the converse happens when some gentle inspiration coming from intelligence mirrors the opposite fancies, giving rest and sweetness and freedom, and at night, moderation and peace accompanied with prophetic insight, when reason and sense are asleep. For the authors of our being, in obedience to their Father's will and in order to make men as good as they could, gave to the liver the power of divination, which is never active when men are awake or in health; but when they are under the influence of some disorder or enthusiasm then they receive intimations, which have to be interpreted by others who are called prophets, but should rather be called interpreters of prophecy; after death these intimations become unintelligible. The spleen which is situated in the neighbourhood, on the left side, keeps the liver bright and clean, as a napkin does a mirror, and the evacuations of the liver are received into it; and being a hollow tissue it is for a time swollen with these impurities, but when the body is purged it returns to its natural size.
kinds of souls. The receptacle of the divine soul he made round, and called that portion of the marrow brain, intending that the vessel containing this substance should be the head. The remaining part he divided into long and round figures, and to these as to anchors, fastening the mortal soul, he proceeded to make the rest of the body, first forming for both parts a covering of bone. The bone was formed by sifting pure smooth earth and wetting it with marrow. It was then thrust alternately into fire and water, and thus rendered insoluble by either. Of bone he made a globe which he placed around the brain, leaving a narrow opening, and around the marrow of the neck and spine he formed the vertebrae, like hinges, which extended from the head through the whole of the trunk. And as the bone was brittle and liable to mortify and destroy the marrow by too great rigidity and susceptibility to heat and cold, he contrived sinews and flesh—the first to give flexibility, the second to guard against heat and cold, and to be a protection against falls, containing a warm moisture, which in summer exudes and cools the body, and in winter is a defence against cold. Having this in view, the Creator mingled earth with fire and water and mixed with them a ferment of acid and salt, so as to form pulpy flesh. But the sinews he made of a mixture of bone and unfermented flesh, giving them a mean nature between the two, and a yellow colour. Hence they were more glutinous than flesh, but softer than bone. The bones which have most of the living soul within them he covered with the thinnest film of flesh, those which have least of it, he lodged deeper. At the joints he diminished the flesh in order not to impede the flexure of the limbs, and also to avoid clogging the perceptions of the mind. About the thighs and arms, which have no sense because there is little soul in the marrow, and about the inner bones, he laid the flesh thicker. For where the flesh is thicker there is less feeling, except in certain parts which the Creator has made solely of flesh, as for example, the tongue. Had the combination of solid bone and thick flesh been consistent with acute perceptions, the Creator would have given man a sinewy and fleshy head, and then he would have lived twice as long. But our creators were of opinion that a shorter life which was better was preferable to a longer which was worse, and therefore they covered the head with thin bone, and placed the sinews at the extremity of the head round the neck, and fastened the jawbones to them below the face. And they framed the mouth, having teeth and tongue and lips, with a view to the necessary and the good; for food is a necessity, and the river of speech is the best of rivers. Still, the head could not be left a bare globe of bone on account of the extremes of heat and cold, nor be allowed to become dull and senseless by an overgrowth of flesh. Wherefore it was covered by a peel or skin which met and grew by the help of the cerebral humour. The diversity of the sutures was caused by the struggle of the food against the courses of the soul. The skin of the head was pierced by fire, and out of the punctures came forth a moisture, part liquid, and part of a skinny nature, which was hardened by the pressure of the external cold and became hair. And God gave hair to the head of man to be a light covering, so that it might not interfere with his perceptions.
Nails were formed by combining sinew, skin, and bone, and were made by the creators with a view to the future when, as they knew, women and other animals who would require them would be framed out of man.

The gods also mingled natures akin to that of man with other forms and perceptions. Thus trees and plants were created, which were originally wild and have been adapted by cultivation to our use. They partake of that third kind of life which is seated between the midriff and the navel, and is altogether passive and incapable of reflection.

When the creators had furnished all these natures for our sustenance, they cut channels through our bodies as in a garden, watering them with a perennial stream. Two were cut down the back, along the back bone, where the skin and flesh meet, one on the right and the other on the left, having the marrow of generation between them. In the next place, they divided the veins about the head and interlaced them with each other in order that they might form an additional link between the head and the body, and that the sensations from both sides might be diffused throughout the body. In the third place, they contrived the passage of liquids, which may be explained in this way:--Finer bodies retain coarser, but not the coarser the finer, and the belly is capable of retaining food, but not fire and air. God therefore formed a network of fire and air to irrigate the veins, having within it two lesser nets, and stretched cords reaching from both the lesser nets to the extremity of the outer net. The inner parts of the net were made by him of fire, the lesser nets and their cavities of air. The two latter he made to pass into the mouth: the one ascending by the air-pipes from the lungs, the other by the side of the air-pipes from the belly. The entrance to the first he divided into two parts, both of which he made to meet at the channels of the nose, that when the mouth was closed the passage connected with it might still be fed with air. The cavity of the network he spread around the hollows of the body, making the entire receptacle to flow into and out of the lesser nets and the lesser nets into and out of it, while the outer net found a way into and out of the pores of the body, and the internal heat followed the air to and fro. These, as we affirm, are the phenomena of respiration. And all this process takes place in order that the body may be watered and cooled and nourished, and the meat and drink digested and liquefied and carried into the veins.

The causes of respiration have now to be considered. The exhalation of the breath through the mouth and nostrils displaces the external air, and at the same time leaves a vacuum into which through the pores the air which is displaced enters. Also the vacuum which is made when the air is exhaled through the pores is filled up by the inhalation of breath through the mouth and nostrils. The explanation of this double phenomenon is as follows:--Elements move towards their natural places. Now as every animal has within him a fountain of fire, the air which is inhaled through the mouth and nostrils, on coming into contact with this, is heated; and when
heated, in accordance with the law of attraction, it escapes by the way it entered toward the place of fire. On leaving the body it is cooled and drives round the air which it displaces through the pores into the empty lungs. This again is in turn heated by the internal fire and escapes, as it entered, through the pores.

The phenomena of medical cupping-glasses, of swallowing, and of the hurling of bodies, are to be explained on a similar principle; as also sounds, which are sometimes discordant on account of the inequality of them, and again harmonious by reason of equality. The slower sounds reaching the swifter, when they begin to pause, by degrees assimilate with them: whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sense of delight, being an imitation of divine harmony in mortal motions. Streams flow, lightnings play, amber and the magnet attract, not by reason of attraction, but because 'nature abhors a vacuum,' and because things, when compounded or dissolved, move different ways, each to its own place.

I will now return to the phenomena of respiration. The fire, entering the belly, minces the food, and as it escapes, fills the veins by drawing after it the divided portions, and thus the streams of nutriment are diffused through the body. The fruits or herbs which are our daily sustenance take all sorts of colours when intermixed, but the colour of red or fire predominates, and hence the liquid which we call blood is red, being the nurturing principle of the body, whence all parts are watered and empty places filled.

The process of repletion and depletion is produced by the attraction of like to like, after the manner of the universal motion. The external elements by their attraction are always diminishing the substance of the body: the particles of blood, too, formed out of the newly digested food, are attracted towards kindred elements within the body and so fill up the void. When more is taken away than flows in, then we decay; and when less, we grow and increase.

The young of every animal has the triangles new and closely locked together, and yet the entire frame is soft and delicate, being newly made of marrow and nurtured on milk. These triangles are sharper than those which enter the body from without in the shape of food, and therefore they cut them up. But as life advances, the triangles wear out and are no longer able to assimilate food; and at length, when the bonds which unite the triangles of the marrow become undone, they in turn unloose the bonds of the soul; and if the release be according to nature, she then flies away with joy. For the death which is natural is pleasant, but that which is caused by violence is painful.

Every one may understand the origin of diseases. They may be occasioned by
the disarrangement or disproportion of the elements out of which the body is framed. This is the origin of many of them, but the worst of all owe their severity to the following causes: There is a natural order in the human frame according to which the flesh and sinews are made of blood, the sinews out of the fibres, and the flesh out of the congealed substance which is formed by separation from the fibres. The glutinous matter which comes away from the sinews and the flesh, not only binds the flesh to the bones, but nourishes the bones and waters the marrow. When these processes take place in regular order the body is in health.

But when the flesh wastes and returns into the veins there is discoloured blood as well as air in the veins, having acid and salt qualities, from which is generated every sort of phlegm and bile. All things go the wrong way and cease to give nourishment to the body, no longer preserving their natural courses, but at war with themselves and destructive to the constitution of the body. The oldest part of the flesh which is hard to decompose blackens from long burning, and from being corroded grows bitter, and as the bitter element refines away, becomes acid. When tinged with blood the bitter substance has a red colour, and this when mixed with black takes the hue of grass; or again, the bitter substance has an auburn colour, when new flesh is decomposed by the internal flame. To all which phenomena some physician or philosopher who was able to see the one in many has given the name of bile. The various kinds of bile have names answering to their colours. Lymph or serum is of two kinds: first, the whey of blood, which is gentle; secondly, the secretion of dark and bitter bile, which, when mingled under the influence of heat with salt, is malignant and is called acid phlegm. There is also white phlegm, formed by the decomposition of young and tender flesh, and covered with little bubbles, separately invisible, but becoming visible when collected. The water of tears and perspiration and similar substances is also the watery part of fresh phlegm. All these humours become sources of disease when the blood is replenished in irregular ways and not by food or drink. The danger, however, is not so great when the foundation remains, for then there is a possibility of recovery. But when the substance which unites the flesh and bones is diseased, and is no longer renewed from the muscles and sinews, and instead of being oily and smooth and glutinous becomes rough and salt and dry, then the fleshy parts fall away and leave the sinews bare and full of brine, and the flesh gets back again into the circulation of the blood, and makes the previously mentioned disorders still greater. There are other and worse diseases which are prior to these; as when the bone through the density of the flesh does not receive sufficient air, and becomes stagnant and gangrened, and crumbling away passes into the food, and the food into the flesh, and the flesh returns again into the blood. Worst of all and most fatal is the disease of the marrow, by which the whole course of the body is reversed. There is a third class of diseases which are produced, some by wind and some by phlegm and some by bile. When the lung, which is the steward of the air, is obstructed, by rheums, and in one part
no air, and in another too much, enters in, then the parts which are unrefreshed by air corrode, and other parts are distorted by the excess of air; and in this manner painful diseases are produced. The most painful are caused by wind generated within the body, which gets about the great sinews of the shoulders--these are termed tetanus. The cure of them is difficult, and in most cases they are relieved only by fever. White phlegm, which is dangerous if kept in, by reason of the air bubbles, is not equally dangerous if able to escape through the pores, although it variegates the body, generating diverse kinds of leprosies. If, when mingled with black bile, it disturbs the courses of the head in sleep, there is not so much danger; but if it assails those who are awake, then the attack is far more dangerous, and is called epilepsy or the sacred disease. Acid and salt phlegm is the source of catarrh.

Inflammations originate in bile, which is sometimes relieved by boils and swellings, but when detained, and above all when mingled with pure blood, generates many inflammatory disorders, disturbing the position of the fibres which are scattered about in the blood in order to maintain the balance of rare and dense which is necessary to its regular circulation. If the bile, which is only stale blood, or liquefied flesh, comes in little by little, it is congealed by the fibres and produces internal cold and shuddering. But when it enters with more of a flood it overcomes the fibres by its heat and reaches the spinal marrow, and burning up the cables of the soul sets her free from the body. When on the other hand the body, though wasted, still holds out, then the bile is expelled, like an exile from a factious state, causing associating diarrhoeas and dysenteries and similar disorders. The body which is diseased from the effects of fire is in a continual fever; when air is the agent, the fever is quotidian; when water, the fever intermits a day; when earth, which is the most sluggish element, the fever intermits three days and is with difficulty shaken off.

Of mental disorders there are two sorts, one madness, the other ignorance, and they may be justly attributed to disease. Excessive pleasures or pains are among the greatest diseases, and deprive men of their senses. When the seed about the spinal marrow is too abundant, the body has too great pleasures and pains; and during a great part of his life he who is the subject of them is more or less mad. He is often thought bad, but this is a mistake; for the truth is that the intemperance of lust is due to the fluidity of the marrow produced by the loose consistency of the bones. And this is true of vice in general, which is commonly regarded as disgraceful, whereas it is really involuntary and arises from a bad habit of the body and evil education. In like manner the soul is often made vicious by the influence of bodily pain; the briny phlegm and other bitter and bilious humours wander over the body and find no exit, but are compressed within, and mingle their own vapours with the motions of the soul, and are carried to the three places of the soul, creating infinite varieties of trouble and melancholy, of rashness and cowardice, of forgetfulness and stupidity.
When men are in this evil plight of body, and evil forms of government and evil discourses are superadded, and there is no education to save them, they are corrupted through two causes; but of neither of them are they really the authors. For the planters are to blame rather than the plants, the educators and not the educated. Still, we should endeavour to attain virtue and avoid vice; but this is part of another subject.

Enough of disease--I have now to speak of the means by which the mind and body are to be preserved, a higher theme than the other. The good is the beautiful, and the beautiful is the symmetrical, and there is no greater or fairer symmetry than that of body and soul, as the contrary is the greatest of deformities. A leg or an arm too long or too short is at once ugly and unserviceable, and the same is true if body and soul are disproportionate. For a strong and impassioned soul may 'fret the pigmy body to decay;' and so produce convulsions and other evils. The violence of controversy, or the earnestness of enquiry, will often generate inflammations and rheums which are not understood, or assigned to their true cause by the professors of medicine. And in like manner the body may be too much for the soul, darkening the reason, and quickening the animal desires. The only security is to preserve the balance of the two, and to this end the mathematician or philosopher must practise gymnastics, and the gymnast must cultivate music. The parts of the body too must be treated in the same way--they should receive their appropriate exercise. For the body is set in motion when it is heated and cooled by the elements which enter in, or is dried up and moistened by external things; and, if given up to these processes when at rest, it is liable to destruction. But the natural motion, as in the world, so also in the human frame, produces harmony and divides hostile powers. The best exercise is the spontaneous motion of the body, as in gymnastics, because most akin to the motion of mind; not so good is the motion of which the source is in another, as in sailing or riding; least good when the body is at rest and the motion is in parts only, which is a species of motion imparted by physic. This should only be resorted to by men of sense in extreme cases; lesser diseases are not to be irritated by medicine. For every disease is akin to the living being and has an appointed term, just as life has, which depends on the form of the triangles, and cannot be protracted when they are worn out. And he who, instead of accepting his destiny, endeavours to prolong his life by medicine, is likely to multiply and magnify his diseases. Regimen and not medicine is the true cure, when a man has time at his disposal.

Enough of the nature of man and of the body, and of training and education. The subject is a great one and cannot be adequately treated as an appendage to another. To sum up all in a word: there are three kinds of soul located within us, and any one of them, if remaining inactive, becomes very weak; if exercised, very strong. Wherefore we should duly train and exercise all three kinds.
The divine soul God lodged in the head, to raise us, like plants which are not of earthly origin, to our kindred; for the head is nearest to heaven. He who is intent upon the gratification of his desires and cherishes the mortal soul, has all his ideas mortal, and is himself mortal in the truest sense. But he who seeks after knowledge and exercises the divine part of himself in godly and immortal thoughts, attains to truth and immortality, as far as is possible to man, and also to happiness, while he is training up within him the divine principle and indwelling power of order. There is only one way in which one person can benefit another; and that is by assigning to him his proper nurture and motion. To the motions of the soul answer the motions of the universe, and by the study of these the individual is restored to his original nature.

Thus we have finished the discussion of the universe, which, according to our original intention, has now been brought down to the creation of man. Completeness seems to require that something should be briefly said about other animals: first of women, who are probably degenerate and cowardly men. And when they degenerated, the gods implanted in men the desire of union with them, creating in man one animate substance and in woman another in the following manner:--The outlet for liquids they connected with the living principle of the spinal marrow, which the man has the desire to emit into the fruitful womb of the woman; this is like a fertile field in which the seed is quickened and matured, and at last brought to light. When this desire is unsatisfied the man is over-mastered by the power of the generative organs, and the woman is subjected to disorders from the obstruction of the passages of the breath, until the two meet and pluck the fruit of the tree.

The race of birds was created out of innocent, light-minded men, who thought to pursue the study of the heavens by sight; these were transformed into birds, and grew feathers instead of hair. The race of wild animals were men who had no philosophy, and never looked up to heaven or used the courses of the head, but followed only the influences of passion. Naturally they turned to their kindred earth, and put their forelegs to the ground, and their heads were crushed into strange oblong forms. Some of them have four feet, and some of them more than four,--the latter, who are the more senseless, drawing closer to their native element; the most senseless of all have no limbs and trail their whole body on the ground. The fourth kind are the inhabitants of the waters; these are made out of the most senseless and ignorant and impure of men, whom God placed in the uttermost parts of the world in return for their utter ignorance, and caused them to respire water instead of the pure element of air. Such are the laws by which animals pass into one another.

And so the world received animals, mortal and immortal, and was fulfilled with them, and became a visible God, comprehending the visible, made in the image of the Intellectual, being the one perfect only-begotten heaven.
Section 2.

Nature in the aspect which she presented to a Greek philosopher of the fourth century before Christ is not easily reproduced to modern eyes. The associations of mythology and poetry have to be added, and the unconscious influence of science has to be subtracted, before we can behold the heavens or the earth as they appeared to the Greek. The philosopher himself was a child and also a man—a child in the range of his attainments, but also a great intelligence having an insight into nature, and often anticipations of the truth. He was full of original thoughts, and yet liable to be imposed upon by the most obvious fallacies. He occasionally confused numbers with ideas, and atoms with numbers; his a priori notions were out of all proportion to his experience. He was ready to explain the phenomena of the heavens by the most trivial analogies of earth. The experiments which nature worked for him he sometimes accepted, but he never tried experiments for himself which would either prove or disprove his theories. His knowledge was unequal; while in some branches, such as medicine and astronomy, he had made considerable proficiency, there were others, such as chemistry, electricity, mechanics, of which the very names were unknown to him. He was the natural enemy of mythology, and yet mythological ideas still retained their hold over him. He was endeavouring to form a conception of principles, but these principles or ideas were regarded by him as real powers or entities, to which the world had been subjected. He was always tending to argue from what was near to what was remote, from what was known to what was unknown, from man to the universe, and back again from the universe to man. While he was arranging the world, he was arranging the forms of thought in his own mind; and the light from within and the light from without often crossed and helped to confuse one another. He might be compared to a builder engaged in some great design, who could only dig with his hands because he was unprovided with common tools; or to some poet or musician, like Tynnichus (Ion), obliged to accommodate his lyric raptures to the limits of the tetrachord or of the flute.

The Hesiodic and Orphic cosmogonies were a phase of thought intermediate between mythology and philosophy and had a great influence on the beginnings of knowledge. There was nothing behind them; they were to physical science what the poems of Homer were to early Greek history. They made men think of the world as a whole; they carried the mind back into the infinity of past time; they suggested the first observation of the effects of fire and water on the earth's surface. To the ancient physics they stood much in the same relation which geology does to modern science. But the Greek was not, like the enquirer of the last generation, confined to a period of six thousand years; he was able to speculate freely on the effects of infinite ages in the production of physical phenomena. He could imagine cities which had existed time out of mind (States.; Laws), laws or forms of art and music which had lasted, 'not in word only, but in very
truth, for ten thousand years' (Laws); he was aware that natural phenomena like the Delta of the Nile might have slowly accumulated in long periods of time (Hdt.). But he seems to have supposed that the course of events was recurring rather than progressive. To this he was probably led by the fixedness of Egyptian customs and the general observation that there were other civilisations in the world more ancient than that of Hellas.

The ancient philosophers found in mythology many ideas which, if not originally derived from nature, were easily transferred to her--such, for example, as love or hate, corresponding to attraction or repulsion; or the conception of necessity allied both to the regularity and irregularity of nature; or of chance, the nameless or unknown cause; or of justice, symbolizing the law of compensation; are of the Fates and Furies, typifying the fixed order or the extraordinary convulsions of nature. Their own interpretations of Homer and the poets were supposed by them to be the original meaning. Musing in themselves on the phenomena of nature, they were relieved at being able to utter the thoughts of their hearts in figures of speech which to them were not figures, and were already consecrated by tradition. Hesiod and the Orphic poets moved in a region of half-personification in which the meaning or principle appeared through the person. In their vaster conceptions of Chaos, Erebus, Aether, Night, and the like, the first rude attempts at generalization are dimly seen. The Gods themselves, especially the greater Gods, such as Zeus, Poseidon, Apollo, Athene, are universals as well as individuals. They were gradually becoming lost in a common conception of mind or God. They continued to exist for the purposes of ritual or of art; but from the sixth century onwards or even earlier there arose and gained strength in the minds of men the notion of 'one God, greatest among Gods and men, who was all sight, all hearing, all knowing' (Xenophanes).

Under the influence of such ideas, perhaps also deriving from the traditions of their own or of other nations scraps of medicine and astronomy, men came to the observation of nature. The Greek philosopher looked at the blue circle of the heavens and it flashed upon him that all things were one; the tumult of sense abated, and the mind found repose in the thought which former generations had been striving to realize. The first expression of this was some element, rarefied by degrees into a pure abstraction, and purged from any tincture of sense. Soon an inner world of ideas began to be unfolded, more absorbing, more overpowering, more abiding than the brightest of visible objects, which to the eye of the philosopher looking inward, seemed to pale before them, retaining only a faint and precarious existence. At the same time, the minds of men parted into the two great divisions of those who saw only a principle of motion, and of those who saw only a principle of rest, in nature and in themselves; there were born Heracliteans or Eleatics, as there have been in later ages born Aristotelians or Platonists. Like some philosophers in modern times, who are accused of making a theory first and finding their facts afterwards,
the advocates of either opinion never thought of applying either to
themselves or to their adversaries the criterion of fact. They were
mastered by their ideas and not masters of them. Like the Heraclitean
fanatics whom Plato has ridiculed in the Theaetetus, they were incapable of
giving a reason of the faith that was in them, and had all the animosities
of a religious sect. Yet, doubtless, there was some first impression
derived from external nature, which, as in mythology, so also in
philosophy, worked upon the minds of the first thinkers. Though incapable
of induction or generalization in the modern sense, they caught an
inspiration from the external world. The most general facts or appearances
of nature, the circle of the universe, the nutritive power of water, the
air which is the breath of life, the destructive force of fire, the seeming
regularity of the greater part of nature and the irregularity of a remnant,
the recurrence of day and night and of the seasons, the solid earth and the
impalpable aether, were always present to them.

The great source of error and also the beginning of truth to them was
reasoning from analogy; they could see resemblances, but not differences;
and they were incapable of distinguishing illustration from argument.
Analogy in modern times only points the way, and is immediately verified by
experiment. The dreams and visions, which pass through the philosopher's
mind, of resemblances between different classes of substances, or between
the animal and vegetable world, are put into the refiner's fire, and the
dross and other elements which adhere to them are purged away. But the
contemporary of Plato and Socrates was incapable of resisting the power of
any analogy which occurred to him, and was drawn into any consequences
which seemed to follow. He had no methods of difference or of concomitant
variations, by the use of which he could distinguish the accidental from
the essential. He could not isolate phenomena, and he was helpless against
the influence of any word which had an equivocal or double sense.

Yet without this crude use of analogy the ancient physical philosopher
would have stood still; he could not have made even 'one guess among many'
without comparison. The course of natural phenomena would have passed
unheeded before his eyes, like fair sights or musical sounds before the
eyes and ears of an animal. Even the fetishism of the savage is the
beginning of reasoning; the assumption of the most fanciful of causes
indicates a higher mental state than the absence of all enquiry about them.
The tendency to argue from the higher to the lower, from man to the world,
has led to many errors, but has also had an elevating influence on
philosophy. The conception of the world as a whole, a person, an animal,
has been the source of hasty generalizations; yet this general grasp of
nature led also to a spirit of comprehensiveness in early philosophy, which
has not increased, but rather diminished, as the fields of knowledge have
become more divided. The modern physicist confines himself to one or
perhaps two branches of science. But he comparatively seldom rises above
his own department, and often falls under the narrowing influence which any
single branch, when pursued to the exclusion of every other, has over the mind. Language, two, exercised a spell over the beginnings of physical philosophy, leading to error and sometimes to truth; for many thoughts were suggested by the double meanings of words (Greek), and the accidental distinctions of words sometimes led the ancient philosopher to make corresponding differences in things (Greek). 'If they are the same, why have they different names; or if they are different, why have they the same name?'--is an argument not easily answered in the infancy of knowledge. The modern philosopher has always been taught the lesson which he still imperfectly learns, that he must disengage himself from the influence of words. Nor are there wanting in Plato, who was himself too often the victim of them, impressive admonitions that we should regard not words but things (States.). But upon the whole, the ancients, though not entirely dominated by them, were much more subject to the influence of words than the moderns. They had no clear divisions of colours or substances; even the four elements were undefined; the fields of knowledge were not parted off. They were bringing order out of disorder, having a small grain of experience mingled in a confused heap of a priori notions. And yet, probably, their first impressions, the illusions and mirages of their fancy, created a greater intellectual activity and made a nearer approach to the truth than any patient investigation of isolated facts, for which the time had not yet come, could have accomplished.

There was one more illusion to which the ancient philosophers were subject, and against which Plato in his later dialogues seems to be struggling--the tendency to mere abstractions; not perceiving that pure abstraction is only negation, they thought that the greater the abstraction the greater the truth. Behind any pair of ideas a new idea which comprehended them--the (Greek), as it was technically termed--began at once to appear. Two are truer than three, one than two. The words 'being,' or 'unity,' or 'essence,' or 'good,' became sacred to them. They did not see that they had a word only, and in one sense the most unmeaning of words. They did not understand that the content of notions is in inverse proportion to their universality--the element which is the most widely diffused is also the thinnest; or, in the language of the common logic, the greater the extension the less the comprehension. But this vacant idea of a whole without parts, of a subject without predicates, a rest without motion, has been also the most fruitful of all ideas. It is the beginning of a priori thought, and indeed of thinking at all. Men were led to conceive it, not by a love of hasty generalization, but by a divine instinct, a dialectical enthusiasm, in which the human faculties seemed to yearn for enlargement. We know that 'being' is only the verb of existence, the copula, the most general symbol of relation, the first and most meagre of abstractions; but to some of the ancient philosophers this little word appeared to attain divine proportions, and to comprehend all truth. Being or essence, and similar words, represented to them a supreme or divine being, in which they thought that they found the containing and continuing principle of the
universe. In a few years the human mind was peopled with abstractions; a new world was called into existence to give law and order to the old. But between them there was still a gulf, and no one could pass from the one to the other.

Number and figure were the greatest instruments of thought which were possessed by the Greek philosopher; having the same power over the mind which was exerted by abstract ideas, they were also capable of practical application. Many curious and, to the early thinker, mysterious properties of them came to light when they were compared with one another. They admitted of infinite multiplication and construction; in Pythagorean triangles or in proportions of 1:2:4:8 and 1:3:9:27, or compounds of them, the laws of the world seemed to be more than half revealed. They were also capable of infinite subdivision—a wonder and also a puzzle to the ancient thinker (Rep.). They were not, like being or essence, mere vacant abstractions, but admitted of progress and growth, while at the same time they confirmed a higher sentiment of the mind, that there was order in the universe. And so there began to be a real sympathy between the world within and the world without. The numbers and figures which were present to the mind's eye became visible to the eye of sense; the truth of nature was mathematics; the other properties of objects seemed to reappear only in the light of number. Law and morality also found a natural expression in number and figure. Instruments of such power and elasticity could not fail to be 'a most gracious assistance' to the first efforts of human intelligence.

There was another reason why numbers had so great an influence over the minds of early thinkers—they were verified by experience. Every use of them, even the most trivial, assured men of their truth; they were everywhere to be found, in the least things and the greatest alike. One, two, three, counted on the fingers was a 'trivial matter (Rep.), a little instrument out of which to create a world; but from these and by the help of these all our knowledge of nature has been developed. They were the measure of all things, and seemed to give law to all things; nature was rescued from chaos and confusion by their power; the notes of music, the motions of the stars, the forms of atoms, the evolution and recurrence of days, months, years, the military divisions of an army, the civil divisions of a state, seemed to afford a 'present witness' of them—what would have become of man or of the world if deprived of number (Rep.)? The mystery of number and the mystery of music were akin. There was a music of rhythm and of harmonious motion everywhere; and to the real connexion which existed between music and number, a fanciful or imaginary relation was superadded. There was a music of the spheres as well as of the notes of the lyre. If in all things seen there was number and figure, why should they not also pervade the unseen world, with which by their wonderful and unchangeable nature they seemed to hold communion?
Two other points strike us in the use which the ancient philosophers made of numbers. First, they applied to external nature the relations of them which they found in their own minds; and where nature seemed to be at variance with number, as for example in the case of fractions, they protested against her (Rep.; Arist. Metaph.). Having long meditated on the properties of 1:2:4:8, or 1:3:9:27, or of 3, 4, 5, they discovered in them many curious correspondences and were disposed to find in them the secret of the universe. Secondly, they applied number and figure equally to those parts of physics, such as astronomy or mechanics, in which the modern philosopher expects to find them, and to those in which he would never think of looking for them, such as physiology and psychology. For the sciences were not yet divided, and there was nothing really irrational in arguing that the same laws which regulated the heavenly bodies were partially applied to the erring limbs or brain of man. Astrology was the form which the lively fancy of ancient thinkers almost necessarily gave to astronomy. The observation that the lower principle, e.g. mechanics, is always seen in the higher, e.g. in the phenomena of life, further tended to perplex them. Plato's doctrine of the same and the other ruling the courses of the heavens and of the human body is not a mere vagary, but is a natural result of the state of knowledge and thought at which he had arrived.

When in modern times we contemplate the heavens, a certain amount of scientific truth imperceptibly blends, even with the cursory glance of an unscientific person. He knows that the earth is revolving round the sun, and not the sun around the earth. He does not imagine the earth to be the centre of the universe, and he has some conception of chemistry and the cognate sciences. A very different aspect of nature would have been present to the mind of the early Greek philosopher. He would have beheld the earth a surface only, not mirrored, however faintly, in the glass of science, but indissolubly connected with some theory of one, two, or more elements. He would have seen the world pervaded by number and figure, animated by a principle of motion, immanent in a principle of rest. He would have tried to construct the universe on a quantitative principle, seeming to find in endless combinations of geometrical figures or in the infinite variety of their sizes a sufficient account of the multiplicity of phenomena. To these a priori speculations he would add a rude conception of matter and his own immediate experience of health and disease. His cosmos would necessarily be imperfect and unequal, being the first attempt to impress form and order on the primaeval chaos of human knowledge. He would see all things as in a dream.

The ancient physical philosophers have been charged by Dr. Whewell and others with wasting their fine intelligences in wrong methods of enquiry; and their progress in moral and political philosophy has been sometimes contrasted with their supposed failure in physical investigations. 'They had plenty of ideas,' says Dr. Whewell, 'and plenty of facts; but their
ideas did not accurately represent the facts with which they were acquainted.' This is a very crude and misleading way of describing ancient science. It is the mistake of an uneducated person—uneducated, that is, in the higher sense of the word—who imagines every one else to be like himself and explains every other age by his own. No doubt the ancients often fell into strange and fanciful errors: the time had not yet arrived for the slower and surer path of the modern inductive philosophy. But it remains to be shown that they could have done more in their age and country; or that the contributions which they made to the sciences with which they were acquainted are not as great upon the whole as those made by their successors. There is no single step in astronomy as great as that of the nameless Pythagorean who first conceived the world to be a body moving round the sun in space: there is no truer or more comprehensive principle than the application of mathematics alike to the heavenly bodies, and to the particles of matter. The ancients had not the instruments which would have enabled them to correct or verify their anticipations, and their opportunities of observation were limited. Plato probably did more for physical science by asserting the supremacy of mathematics than Aristotle or his disciples by their collections of facts. When the thinkers of modern times, following Bacon, undervalue or disparage the speculations of ancient philosophers, they seem wholly to forget the conditions of the world and of the human mind, under which they carried on their investigations. When we accuse them of being under the influence of words, do we suppose that we are altogether free from this illusion? When we remark that Greek physics soon became stationary or extinct, may we not observe also that there have been and may be again periods in the history of modern philosophy which have been barren and unproductive? We might as well maintain that Greek art was not real or great, because it had nihil simile aut secundum, as say that Greek physics were a failure because they admire no subsequent progress.

The charge of premature generalization which is often urged against ancient philosophers is really an anachronism. For they can hardly be said to have generalized at all. They may be said more truly to have cleared up and defined by the help of experience ideas which they already possessed. The beginnings of thought about nature must always have this character. A true method is the result of many ages of experiment and observation, and is ever going on and enlarging with the progress of science and knowledge. At first men personify nature, then they form impressions of nature, at last they conceive 'measure' or laws of nature. They pass out of mythology into philosophy. Early science is not a process of discovery in the modern sense; but rather a process of correcting by observation, and to a certain extent only, the first impressions of nature, which mankind, when they began to think, had received from poetry or language or unintelligent sense. Of all scientific truths the greatest and simplest is the uniformity of nature; this was expressed by the ancients in many ways, as fate, or necessity, or measure, or limit. Unexpected events, of which the
cause was unknown to them, they attributed to chance (Thucyd.). But their conception of nature was never that of law interrupted by exceptions,—a somewhat unfortunate metaphysical invention of modern times, which is at variance with facts and has failed to satisfy the requirements of thought.

Section 3.

Plato's account of the soul is partly mythical or figurative, and partly literal. Not that either he or we can draw a line between them, or say, 'This is poetry, this is philosophy'; for the transition from the one to the other is imperceptible. Neither must we expect to find in him absolute consistency. He is apt to pass from one level or stage of thought to another without always making it apparent that he is changing his ground. In such passages we have to interpret his meaning by the general spirit of his writings. To reconcile his inconsistencies would be contrary to the first principles of criticism and fatal to any true understanding of him.

There is a further difficulty in explaining this part of the Timaeus—the natural order of thought is inverted. We begin with the most abstract, and proceed from the abstract to the concrete. We are searching into things which are upon the utmost limit of human intelligence, and then of a sudden we fall rather heavily to the earth. There are no intermediate steps which lead from one to the other. But the abstract is a vacant form to us until brought into relation with man and nature. God and the world are mere names, like the Being of the Eleatics, unless some human qualities are added on to them. Yet the negation has a kind of unknown meaning to us. The priority of God and of the world, which he is imagined to have created, to all other existences, gives a solemn awe to them. And as in other systems of theology and philosophy, that of which we know least has the greatest interest to us.

There is no use in attempting to define or explain the first God in the Platonic system, who has sometimes been thought to answer to God the Father; or the world, in whom the Fathers of the Church seemed to recognize 'the firstborn of every creature.' Nor need we discuss at length how far Plato agrees in the later Jewish idea of creation, according to which God made the world out of nothing. For his original conception of matter as something which has no qualities is really a negation. Moreover in the Hebrew Scriptures the creation of the world is described, even more explicitly than in the Timaeus, not as a single act, but as a work or process which occupied six days. There is a chaos in both, and it would be untrue to say that the Greek, any more than the Hebrew, had any definite belief in the eternal existence of matter. The beginning of things vanished into the distance. The real creation began, not with matter, but with ideas. According to Plato in the Timaeus, God took of the same and the other, of the divided and undivided, of the finite and infinite, and made essence, and out of the three combined created the soul of the world.
To the soul he added a body formed out of the four elements. The general meaning of these words is that God imparted determinations of thought, or, as we might say, gave law and variety to the material universe. The elements are moving in a disorderly manner before the work of creation begins; and there is an eternal pattern of the world, which, like the 'idea of good,' is not the Creator himself, but not separable from him. The pattern too, though eternal, is a creation, a world of thought prior to the world of sense, which may be compared to the wisdom of God in the book of Ecclesiasticus, or to the 'God in the form of a globe' of the old Eleatic philosophers. The visible, which already exists, is fashioned in the likeness of this eternal pattern. On the other hand, there is no truth of which Plato is more firmly convinced than of the priority of the soul to the body, both in the universe and in man. So inconsistent are the forms in which he describes the works which no tongue can utter--his language, as he himself says, partaking of his own uncertainty about the things of which he is speaking.

We may remark in passing, that the Platonic compared with the Jewish description of the process of creation has less of freedom or spontaneity. The Creator in Plato is still subject to a remnant of necessity which he cannot wholly overcome. When his work is accomplished he remains in his own nature. Plato is more sensible than the Hebrew prophet of the existence of evil, which he seeks to put as far as possible out of the way of God. And he can only suppose this to be accomplished by God retiring into himself and committing the lesser works of creation to inferior powers. (Compare, however, Laws for another solution of the difficulty.)

Nor can we attach any intelligible meaning to his words when he speaks of the visible being in the image of the invisible. For how can that which is divided be like that which is undivided? Or that which is changing be the copy of that which is unchanging? All the old difficulties about the ideas come back upon us in an altered form. We can imagine two worlds, one of which is the mere double of the other, or one of which is an imperfect copy of the other, or one of which is the vanishing ideal of the other; but we cannot imagine an intellectual world which has no qualities--a thing in itself--a point which has no parts or magnitude, which is nowhere, and nothing. This cannot be the archetype according to which God made the world, and is in reality, whether in Plato or in Kant, a mere negative residuum of human thought.

There is another aspect of the same difficulty which appears to have no satisfactory solution. In what relation does the archetype stand to the Creator himself? For the idea or pattern of the world is not the thought of God, but a separate, self-existent nature, of which creation is the copy. We can only reply, (1) that to the mind of Plato subject and object were not yet distinguished; (2) that he supposes the process of creation to take place in accordance with his own theory of ideas; and as we cannot
give a consistent account of the one, neither can we of the other. He means (3) to say that the creation of the world is not a material process of working with legs and arms, but ideal and intellectual; according to his own fine expression, 'the thought of God made the God that was to be.' He means (4) to draw an absolute distinction between the invisible or unchangeable which is or is the place of mind or being, and the world of sense or becoming which is visible and changing. He means (5) that the idea of the world is prior to the world, just as the other ideas are prior to sensible objects; and like them may be regarded as eternal and self-existent, and also, like the IDEA of good, may be viewed apart from the divine mind.

There are several other questions which we might ask and which can receive no answer, or at least only an answer of the same kind as the preceding. How can matter be conceived to exist without form? Or, how can the essences or forms of things be distinguished from the eternal ideas, or essence itself from the soul? Or, how could there have been motion in the chaos when as yet time was not? Or, how did chaos come into existence, if not by the will of the Creator? Or, how could there have been a time when the world was not, if time was not? Or, how could the Creator have taken portions of an indivisible same? Or, how could space or anything else have been eternal when time is only created? Or, how could the surfaces of geometrical figures have formed solids? We must reply again that we cannot follow Plato in all his inconsistencies, but that the gaps of thought are probably more apparent to us than to him. He would, perhaps, have said that 'the first things are known only to God and to him of men whom God loves.' How often have the gaps in Theology been concealed from the eye of faith! And we may say that only by an effort of metaphysical imagination can we hope to understand Plato from his own point of view; we must not ask for consistency. Everywhere we find traces of the Platonic theory of knowledge expressed in an objective form, which by us has to be translated into the subjective, before we can attach any meaning to it. And this theory is exhibited in so many different points of view, that we cannot with any certainty interpret one dialogue by another; e.g. the Timaeus by the Parmenides or Phaedrus or Philebus.

The soul of the world may also be conceived as the personification of the numbers and figures in which the heavenly bodies move. Imagine these as in a Pythagorean dream, stripped of qualitative difference and reduced to mathematical abstractions. They too conform to the principle of the same, and may be compared with the modern conception of laws of nature. They are in space, but not in time, and they are the makers of time. They are represented as constantly thinking of the same; for thought in the view of Plato is equivalent to truth or law, and need not imply a human consciousness, a conception which is familiar enough to us, but has no place, hardly even a name, in ancient Greek philosophy. To this principle of the same is opposed the principle of the other--the principle of
irregularity and disorder, of necessity and chance, which is only partially impressed by mathematical laws and figures. (We may observe by the way, that the principle of the other, which is the principle of plurality and variation in the Timaeus, has nothing in common with the 'other' of the Sophist, which is the principle of determination.) The element of the same dominates to a certain extent over the other--the fixed stars keep the 'wanderers' of the inner circle in their courses, and a similar principle of fixedness or order appears to regulate the bodily constitution of man. But there still remains a rebellious seed of evil derived from the original chaos, which is the source of disorder in the world, and of vice and disease in man.

But what did Plato mean by essence, (Greek), which is the intermediate nature compounded of the Same and the Other, and out of which, together with these two, the soul of the world is created? It is difficult to explain a process of thought so strange and unaccustomed to us, in which modern distinctions run into one another and are lost sight of. First, let us consider once more the meaning of the Same and the Other. The Same is the unchanging and indivisible, the heaven of the fixed stars, partaking of the divine nature, which, having law in itself, gives law to all besides and is the element of order and permanence in man and on the earth. It is the rational principle, mind regarded as a work, as creation--not as the creator. The old tradition of Parmenides and of the Eleatic Being, the foundation of so much in the philosophy of Greece and of the world, was lingering in Plato's mind. The Other is the variable or changing element, the residuum of disorder or chaos, which cannot be reduced to order, nor altogether banished, the source of evil, seen in the errors of man and also in the wanderings of the planets, a necessity which protrudes through nature. Of this too there was a shadow in the Eleatic philosophy in the realm of opinion, which, like a mist, seemed to darken the purity of truth in itself.--So far the words of Plato may perhaps find an intelligible meaning. But when he goes on to speak of the Essence which is compounded out of both, the track becomes fainter and we can only follow him with hesitating steps. But still we find a trace reappearing of the teaching of Anaxagoras: 'All was confusion, and then mind came and arranged things.' We have already remarked that Plato was not acquainted with the modern distinction of subject and object, and therefore he sometimes confuses mind and the things of mind--(Greek) and (Greek). By (Greek) he clearly means some conception of the intelligible and the intelligent; it belongs to the class of (Greek). Matter, being, the Same, the eternal,--for any of these terms, being almost vacant of meaning, is equally suitable to express indefinite existence,--are compared or united with the Other or Diverse, and out of the union or comparison is elicited the idea of intelligence, the 'One in many,' brighter than any Promethean fire (Phil.), which co-existing with them and so forming a new existence, is or becomes the intelligible world...So we may perhaps venture to paraphrase or interpret or put into other words the parable in which Plato has wrapped up his
conception of the creation of the world. The explanation may help to fill up with figures of speech the void of knowledge.

The entire compound was divided by the Creator in certain proportions and reunited; it was then cut into two strips, which were bent into an inner circle and an outer, both moving with an uniform motion around a centre, the outer circle containing the fixed, the inner the wandering stars. The soul of the world was diffused everywhere from the centre to the circumference. To this God gave a body, consisting at first of fire and earth, and afterwards receiving an addition of air and water; because solid bodies, like the world, are always connected by two middle terms and not by one. The world was made in the form of a globe, and all the material elements were exhausted in the work of creation.

The proportions in which the soul of the world as well as the human soul is divided answer to a series of numbers 1, 2, 3, 4, 9, 8, 27, composed of the two Pythagorean progressions 1, 2, 4, 8 and 1, 3, 9, 27, of which the number 1 represents a point, 2 and 3 lines, 4 and 8, 9 and 27 the squares and cubes respectively of 2 and 3. This series, of which the intervals are afterwards filled up, probably represents (1) the diatonic scale according to the Pythagoreans and Plato; (2) the order and distances of the heavenly bodies; and (3) may possibly contain an allusion to the music of the spheres, which is referred to in the myth at the end of the Republic. The meaning of the words that 'solid bodies are always connected by two middle terms' or mean proportionals has been much disputed. The most received explanation is that of Martin, who supposes that Plato is only speaking of surfaces and solids compounded of prime numbers (i.e. of numbers not made up of two factors, or, in other words, only measurable by unity). The square of any such number represents a surface, the cube a solid. The squares of any two such numbers (e.g. 2 squared, 3 squared = 4, 9), have always a single mean proportional (e.g. 4 and 9 have the single mean 6), whereas the cubes of primes (e.g. 3 cubed and 5 cubed) have always two mean proportionals (e.g. 27:45:75:125). But to this explanation of Martin's it may be objected, (1) that Plato nowhere says that his proportion is to be limited to prime numbers; (2) that the limitation of surfaces to squares is also not to be found in his words; nor (3) is there any evidence to show that the distinction of prime from other numbers was known to him. What Plato chiefly intends to express is that a solid requires a stronger bond than a surface; and that the double bond which is given by two means is stronger than the single bond given by one. Having reflected on the singular numerical phenomena of the existence of one mean proportional between two square numbers are rather perhaps only between the two lowest squares; and of two mean proportionals between two cubes, perhaps again confining his attention to the two lowest cubes, he finds in the latter symbol an expression of the relation of the elements, as in the former an image of the combination of two surfaces. Between fire and earth, the two extremes, he remarks that there are introduced, not one, but two elements,
air and water, which are compared to the two mean proportionals between two cube numbers. The vagueness of his language does not allow us to determine whether anything more than this was intended by him.

Leaving the further explanation of details, which the reader will find discussed at length in Boeckh and Martin, we may now return to the main argument: Why did God make the world? Like man, he must have a purpose; and his purpose is the diffusion of that goodness or good which he himself is. The term 'goodness' is not to be understood in this passage as meaning benevolence or love, in the Christian sense of the term, but rather law, order, harmony, like the idea of good in the Republic. The ancient mythologers, and even the Hebrew prophets, had spoken of the jealousy of God; and the Greek had imagined that there was a Nemesis always attending the prosperity of mortals. But Plato delights to think of God as the author of order in his works, who, like a father, lives over again in his children, and can never have too much of good or friendship among his creatures. Only, as there is a certain remnant of evil inherent in matter which he cannot get rid of, he detaches himself from them and leaves them to themselves, that he may be guiltless of their faults and sufferings.

Between the ideal and the sensible Plato interposes the two natures of time and space. Time is conceived by him to be only the shadow or image of eternity which ever is and never has been or will be, but is described in a figure only as past or future. This is one of the great thoughts of early philosophy, which are still as difficult to our minds as they were to the early thinkers; or perhaps more difficult, because we more distinctly see the consequences which are involved in such an hypothesis. All the objections which may be urged against Kant's doctrine of the ideality of space and time at once press upon us. If time is unreal, then all which is contained in time is unreal--the succession of human thoughts as well as the flux of sensations; there is no connecting link between (Greek) and (Greek). Yet, on the other hand, we are conscious that knowledge is independent of time, that truth is not a thing of yesterday or tomorrow, but an 'eternal now.' To the 'spectator of all time and all existence' the universe remains at rest. The truths of geometry and arithmetic in all their combinations are always the same. The generations of men, like the leaves of the forest, come and go, but the mathematical laws by which the world is governed remain, and seem as if they could never change. The ever-present image of space is transferred to time--succession is conceived as extension. (We remark that Plato does away with the above and below in space, as he has done away with the absolute existence of past and future.) The course of time, unless regularly marked by divisions of number, partakes of the indefiniteness of the Heraclitean flux. By such reflections we may conceive the Greek to have attained the metaphysical conception of eternity, which to the Hebrew was gained by meditation on the Divine Being. No one saw that this objective was really a subjective, and involved the subjectivity of all knowledge. 'Non in tempore sed cum
tempore finxit Deus mundum,' says St. Augustine, repeating a thought derived from the Timaeus, but apparently unconscious of the results to which his doctrine would have led.

The contradictions involved in the conception of time or motion, like the infinitesimal in space, were a source of perplexity to the mind of the Greek, who was driven to find a point of view above or beyond them. They had sprung up in the decline of the Eleatic philosophy and were very familiar to Plato, as we gather from the Parmenides. The consciousness of them had led the great Eleatic philosopher to describe the nature of God or Being under negatives. He sings of 'Being unbegotten and imperishable, unmoved and never-ending, which never was nor will be, but always is, one and continuous, which cannot spring from any other; for it cannot be said or imagined not to be.' The idea of eternity was for a great part a negation. There are regions of speculation in which the negative is hardly separable from the positive, and even seems to pass into it. Not only Buddhism, but Greek as well as Christian philosophy, show that it is quite possible that the human mind should retain an enthusiasm for mere negations. In different ages and countries there have been forms of light in which nothing could be discerned and which have nevertheless exercised a life-giving and illumining power. For the higher intelligence of man seems to require, not only something above sense, but above knowledge, which can only be described as Mind or Being or Truth or God or the unchangeable and eternal element, in the expression of which all predicates fail and fall short. Eternity or the eternal is not merely the unlimited in time but the truest of all Being, the most real of all realities, the most certain of all knowledge, which we nevertheless only see through a glass darkly. The passionate earnestness of Parmenides contrasts with the vacuity of the thought which he is revolving in his mind.

Space is said by Plato to be the 'containing vessel or nurse of generation.' Reflecting on the simplest kinds of external objects, which to the ancients were the four elements, he was led to a more general notion of a substance, more or less like themselves, out of which they were fashioned. He would not have them too precisely distinguished. Thus seems to have arisen the first dim perception of (Greek) or matter, which has played so great a part in the metaphysical philosophy of Aristotle and his followers. But besides the material out of which the elements are made, there is also a space in which they are contained. There arises thus a second nature which the senses are incapable of discerning and which can hardly be referred to the intelligible class. For it is and it is not, it is nowhere when filled, it is nothing when empty. Hence it is said to be discerned by a kind of spurious or analogous reason, partaking so feebly of existence as to be hardly perceivable, yet always reappearing as the containing mother or nurse of all things. It had not that sort of consistency to Plato which has been given to it in modern times by geometry and metaphysics. Neither of the Greek words by which it is described are
so purely abstract as the English word 'space' or the Latin 'spatium.'
Neither Plato nor any other Greek would have spoken of (Greek) or (Greek)
in the same manner as we speak of 'time' and 'space.'

Yet space is also of a very permanent or even eternal nature; and Plato
seems more willing to admit of the unreality of time than of the unreality
of space; because, as he says, all things must necessarily exist in space.
We, on the other hand, are disposed to fancy that even if space were
annihilated time might still survive. He admits indeed that our knowledge
of space is of a dreamy kind, and is given by a spurious reason without the
help of sense. (Compare the hypotheses and images of Rep.) It is true
that it does not attain to the clearness of ideas. But like them it seems
to remain, even if all the objects contained in it are supposed to have
vanished away. Hence it was natural for Plato to conceive of it as
eternal. We must remember further that in his attempt to realize either
space or matter the two abstract ideas of weight and extension, which are
familiar to us, had never passed before his mind.

Thus far God, working according to an eternal pattern, out of his goodness
has created the same, the other, and the essence (compare the three
principles of the Philebus--the finite, the infinite, and the union of the
two), and out of them has formed the outer circle of the fixed stars and
the inner circle of the planets, divided according to certain musical
intervals; he has also created time, the moving image of eternity, and
space, existing by a sort of necessity and hardly distinguishable from
matter. The matter out of which the world is formed is not absolutely
void, but retains in the chaos certain germs or traces of the elements.
These Plato, like Empedocles, supposed to be four in number--fire, air,
earth, and water. They were at first mixed together; but already in the
chaos, before God fashioned them by form and number, the greater masses of
the elements had an appointed place. Into the confusion (Greek) which
preceded Plato does not attempt further to penetrate. They are called
elements, but they are so far from being elements (Greek) or letters in the
higher sense that they are not even syllables or first compounds. The real
elements are two triangles, the rectangular isosceles which has but one
form, and the most beautiful of the many forms of scalene, which is half of
an equilateral triangle. By the combination of these triangles which exist
in an infinite variety of sizes, the surfaces of the four elements are
constructed.

That there were only five regular solids was already known to the ancients,
and out of the surfaces which he has formed Plato proceeds to generate the
four first of the five. He perhaps forgets that he is only putting
together surfaces and has not provided for their transformation into
solids. The first solid is a regular pyramid, of which the base and sides
are formed by four equilateral or twenty-four scalene triangles. Each of
the four solid angles in this figure is a little larger than the largest of
obtuse angles. The second solid is composed of the same triangles, which unite as eight equilateral triangles, and make one solid angle out of four plane angles—six of these angles form a regular octahedron. The third solid is a regular icosahedron, having twenty triangular equilateral bases, and therefore 120 rectangular scalene triangles. The fourth regular solid, or cube, is formed by the combination of four isosceles triangles into one square and of six squares into a cube. The fifth regular solid, or dodecahedron, cannot be formed by a combination of either of these triangles, but each of its faces may be regarded as composed of thirty triangles of another kind. Probably Plato notices this as the only remaining regular polyhedron, which from its approximation to a globe, and possibly because, as Plutarch remarks, it is composed of $12 \times 30 = 360$ scalene triangles (Platon. Quaest.), representing thus the signs and degrees of the Zodiac, as well as the months and days of the year, God may be said to have 'used in the delineation of the universe.' According to Plato earth was composed of cubes, fire of regular pyramids, air of regular octahedrons, water of regular icosahedrons. The stability of the last three increases with the number of their sides.

The elements are supposed to pass into one another, but we must remember that these transformations are not the transformations of real solids, but of imaginary geometrical figures; in other words, we are composing and decomposing the faces of substances and not the substances themselves—-it is a house of cards which we are pulling to pieces and putting together again (compare however Laws). Yet perhaps Plato may regard these sides or faces as only the forms which are impressed on pre-existent matter. It is remarkable that he should speak of each of these solids as a possible world in itself, though upon the whole he inclines to the opinion that they form one world and not five. To suppose that there is an infinite number of worlds, as Democritus (Hippolyt. Ref. Haer. I.) had said, would be, as he satirically observes, 'the characteristic of a very indefinite and ignorant mind.'

The twenty triangular faces of an icosahedron form the faces or sides of two regular octahedrons and of a regular pyramid ($20 = 8 \times 2 + 4$); and therefore, according to Plato, a particle of water when decomposed is supposed to give two particles of air and one of fire. So because an octahedron gives the sides of two pyramids ($8 = 4 \times 2$), a particle of air is resolved into two particles of fire.

The transformation is effected by the superior power or number of the conquering elements. The manner of the change is (1) a separation of portions of the elements from the masses in which they are collected; (2) a resolution of them into their original triangles; and (3) a reunion of them in new forms. Plato himself proposes the question, Why does motion continue at all when the elements are settled in their places? He answers that although the force of attraction is continually drawing similar
elements to the same spot, still the revolution of the universe exercises a condensing power, and thrusts them again out of their natural places. Thus want of uniformity, the condition of motion, is produced. In all such disturbances of matter there is an alternative for the weaker element: it may escape to its kindred, or take the form of the stronger--becoming denser, if it be denser, or rarer if rarer. This is true of fire, air, and water, which, being composed of similar triangles, are interchangeable; earth, however, which has triangles peculiar to itself, is capable of dissolution, but not of change. Of the interchangeable elements, fire, the rarest, can only become a denser, and water, the densest, only a rarer: but air may become a denser or a rarer. No single particle of the elements is visible, but only the aggregates of them are seen. The subordinate species depend, not upon differences of form in the original triangles, but upon differences of size. The obvious physical phenomena from which Plato has gathered his views of the relations of the elements seem to be the effect of fire upon air, water, and earth, and the effect of water upon earth. The particles are supposed by him to be in a perpetual process of circulation caused by inequality. This process of circulation does not admit of a vacuum, as he tells us in his strange account of respiration.

Of the phenomena of light and heavy he speaks afterwards, when treating of sensation, but they may be more conveniently considered by us in this place. They are not, he says, to be explained by 'above' and 'below,' which in the universal globe have no existence, but by the attraction of similars towards the great masses of similar substances; fire to fire, air to air, water to water, earth to earth. Plato's doctrine of attraction implies not only (1) the attraction of similar elements to one another, but also (2) of smaller bodies to larger ones. Had he confined himself to the latter he would have arrived, though, perhaps, without any further result or any sense of the greatness of the discovery, at the modern doctrine of gravitation. He does not observe that water has an equal tendency towards both water and earth. So easily did the most obvious facts which were inconsistent with his theories escape him.

The general physical doctrines of the Timaeus may be summed up as follows: (1) Plato supposes the greater masses of the elements to have been already settled in their places at the creation: (2) they are four in number, and are formed of rectangular triangles variously combined into regular solid figures: (3) three of them, fire, air, and water, admit of transformation into one another; the fourth, earth, cannot be similarly transformed: (4) different sizes of the same triangles form the lesser species of each element: (5) there is an attraction of like to like--smaller masses of the same kind being drawn towards greater: (6) there is no void, but the particles of matter are ever pushing one another round and round (Greek). Like the atomists, Plato attributes the differences between the elements to differences in geometrical figures. But he does not explain the process by which surfaces become solids; and he characteristically ridicules
Democritus for not seeing that the worlds are finite and not infinite.

Section 4.

The astronomy of Plato is based on the two principles of the same and the other, which God combined in the creation of the world. The soul, which is compounded of the same, the other, and the essence, is diffused from the centre to the circumference of the heavens. We speak of a soul of the universe; but more truly regarded, the universe of the Timaeus is a soul, governed by mind, and holding in solution a residuum of matter or evil, which the author of the world is unable to expel, and of which Plato cannot tell us the origin. The creation, in Plato's sense, is really the creation of order; and the first step in giving order is the division of the heavens into an inner and outer circle of the other and the same, of the divisible and the indivisible, answering to the two spheres, of the planets and of the world beyond them, all together moving around the earth, which is their centre. To us there is a difficulty in apprehending how that which is at rest can also be in motion, or that which is indivisible exist in space. But the whole description is so ideal and imaginative, that we can hardly venture to attribute to many of Plato's words in the Timaeus any more meaning than to his mythical account of the heavens in the Republic and in the Phaedrus. (Compare his denial of the 'blasphemous opinion' that there are planets or wandering stars; all alike move in circles--Laws.) The stars are the habitations of the souls of men, from which they come and to which they return. In attributing to the fixed stars only the most perfect motion--that which is on the same spot or circulating around the same--he might perhaps have said that to 'the spectator of all time and all existence,' to borrow once more his own grand expression, or viewed, in the language of Spinoza, 'sub specie aeternitatis,' they were still at rest, but appeared to move in order to teach men the periods of time. Although absolutely in motion, they are relatively at rest; or we may conceive of them as resting, while the space in which they are contained, or the whole anima mundi, revolves.

The universe revolves around a centre once in twenty-four hours, but the orbits of the fixed stars take a different direction from those of the planets. The outer and the inner sphere cross one another and meet again at a point opposite to that of their first contact; the first moving in a circle from left to right along the side of a parallelogram which is supposed to be inscribed in it, the second also moving in a circle along the diagonal of the same parallelogram from right to left; or, in other words, the first describing the path of the equator, the second, the path of the ecliptic. The motion of the second is controlled by the first, and hence the oblique line in which the planets are supposed to move becomes a spiral. The motion of the same is said to be undivided, whereas the inner motion is split into seven unequal orbits--the intervals between them being in the ratio of two and three, three of either:--the Sun, moving in the
opposite direction to Mercury and Venus, but with equal swiftness; the remaining four, Moon, Saturn, Mars, Jupiter, with unequal swiftness to the former three and to one another. Thus arises the following progression:--Moon 1, Sun 2, Venus 3, Mercury 4, Mars 8, Jupiter 9, Saturn 27. This series of numbers is the compound of the two Pythagorean ratios, having the same intervals, though not in the same order, as the mixture which was originally divided in forming the soul of the world.

Plato was struck by the phenomenon of Mercury, Venus, and the Sun appearing to overtake and be overtaken by one another. The true reason of this, namely, that they lie within the circle of the Earth's orbit, was unknown to him, and the reason which he gives—that the two former move in an opposite direction to the latter—is far from explaining the appearance of them in the heavens. All the planets, including the sun, are carried round in the daily motion of the circle of the fixed stars, and they have a second or oblique motion which gives the explanation of the different lengths of the sun's course in different parts of the earth. The fixed stars have also two movements—a forward movement in their orbit which is common to the whole circle; and a movement on the same spot around an axis, which Plato calls the movement of thought about the same. In this latter respect they are more perfect than the wandering stars, as Plato himself terms them in the Timaeus, although in the Laws he condemns the appellation as blasphemous.

The revolution of the world around earth, which is accomplished in a single day and night, is described as being the most perfect or intelligent. Yet Plato also speaks of an 'annus magnus' or cyclical year, in which periods wonderful for their complexity are found to coincide in a perfect number, i.e. a number which equals the sum of its factors, as $6 = 1 + 2 + 3$. This, although not literally contradictory, is in spirit irreconcilable with the perfect revolution of twenty-four hours. The same remark may be applied to the complexity of the appearances and occultations of the stars, which, if the outer heaven is supposed to be moving around the centre once in twenty-four hours, must be confined to the effects produced by the seven planets. Plato seems to confuse the actual observation of the heavens with his desire to find in them mathematical perfection. The same spirit is carried yet further by him in the passage already quoted from the Laws, in which he affirms their wanderings to be an appearance only, which a little knowledge of mathematics would enable men to correct.

We have now to consider the much discussed question of the rotation or immobility of the earth. Plato's doctrine on this subject is contained in the following words:--"The earth, which is our nurse, compacted (or revolving) around the pole which is extended through the universe, he made to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven'. There is an unfortunate doubt in this passage (1) about the meaning of the word (Greek), which is translated

---

(1)
either 'compacted' or 'revolving,' and is equally capable of both explanations. A doubt (2) may also be raised as to whether the words 'artificer of day and night' are consistent with the mere passive causation of them, produced by the immobility of the earth in the midst of the circling universe. We must admit, further, (3) that Aristotle attributed to Plato the doctrine of the rotation of the earth on its axis. On the other hand it has been urged that if the earth goes round with the outer heaven and sun in twenty-four hours, there is no way of accounting for the alternation of day and night; since the equal motion of the earth and sun would have the effect of absolute immobility. To which it may be replied that Plato never says that the earth goes round with the outer heaven and sun; although the whole question depends on the relation of earth and sun, their movements are nowhere precisely described. But if we suppose, with Mr. Grote, that the diurnal rotation of the earth on its axis and the revolution of the sun and outer heaven precisely coincide, it would be difficult to imagine that Plato was unaware of the consequence. For though he was ignorant of many things which are familiar to us, and often confused in his ideas where we have become clear, we have no right to attribute to him a childish want of reasoning about very simple facts, or an inability to understand the necessary and obvious deductions from geometrical figures or movements. Of the causes of day and night the pre-Socratic philosophers, and especially the Pythagoreans, gave various accounts, and therefore the question can hardly be imagined to have escaped him. On the other hand it may be urged that the further step, however simple and obvious, is just what Plato often seems to be ignorant of, and that as there is no limit to his insight, there is also no limit to the blindness which sometimes obscures his intelligence (compare the construction of solids out of surfaces in his account of the creation of the world, or the attraction of similars to similars). Further, Mr. Grote supposes, not that (Greek) means 'revolving,' or that this is the sense in which Aristotle understood the word, but that the rotation of the earth on its axis and of the sun and outer heavens around the earth in equal times was inconsistent with the alternation of day and night, neither need we suppose that he would have seen the immobility of the earth to be inconsistent with the rotation of the axis. And (b) what proof is there that the axis of the world revolves at all? (c) The comparison of the two passages quoted by Mr Grote (see his pamphlet on 'The Rotation of the Earth') from Aristotle De Coelo, Book II (Greek) clearly shows, although this is a matter of minor importance, that Aristotle, as Proclus and Simplicius supposed, understood (Greek) in the Timaeus to mean 'revolving.' For the second passage, in which motion on an axis is expressly mentioned, refers to the first, but this would be unmeaning unless (Greek) in the first passage meant rotation on an axis. (4) The immobility of the earth is more in accordance with Plato's other writings than the opposite hypothesis. For in the Phaedo the earth is described as the centre of the world, and is not said to be in
motion. In the Republic the pilgrims appear to be looking out from the earth upon the motions of the heavenly bodies; in the Phaedrus, Hestia, who remains immovable in the house of Zeus while the other gods go in procession, is called the first and eldest of the gods, and is probably the symbol of the earth. The silence of Plato in these and in some other passages (Laws) in which he might be expected to speak of the rotation of the earth, is more favourable to the doctrine of its immobility than to the opposite. If he had meant to say that the earth revolves on its axis, he would have said so in distinct words, and have explained the relation of its movements to those of the other heavenly bodies. (5) The meaning of the words 'artificer of day and night' is literally true according to Plato's view. For the alternation of day and night is not produced by the motion of the heavens alone, or by the immobility of the earth alone, but by both together; and that which has the inherent force or energy to remain at rest when all other bodies are moving, may be truly said to act, equally with them. (6) We should not lay too much stress on Aristotle or the writer De Caelo having adopted the other interpretation of the words, although Alexander of Aphrodisias thinks that he could not have been ignorant either of the doctrine of Plato or of the sense which he intended to give to the word (Greek). For the citations of Plato in Aristotle are frequently misinterpreted by him; and he seems hardly ever to have had in his mind the connection in which they occur. In this instance the allusion is very slight, and there is no reason to suppose that the diurnal revolution of the heavens was present to his mind. Hence we need not attribute to him the error from which we are defending Plato.

After weighing one against the other all these complicated probabilities, the final conclusion at which we arrive is that there is nearly as much to be said on the one side of the question as on the other, and that we are not perfectly certain, whether, as Bockh and the majority of commentators, ancient as well as modern, are inclined to believe, Plato thought that the earth was at rest in the centre of the universe, or, as Aristotle and Mr. Grote suppose, that it revolved on its axis. Whether we assume the earth to be stationary in the centre of the universe, or to revolve with the heavens, no explanation is given of the variation in the length of days and nights at different times of the year. The relations of the earth and heavens are so indistinct in the Timaeus and so figurative in the Phaedo, Phaedrus and Republic, that we must give up the hope of ascertaining how they were imagined by Plato, if he had any fixed or scientific conception of them at all.

Section 5.

The soul of the world is framed on the analogy of the soul of man, and many traces of anthropomorphism blend with Plato's highest flights of idealism. The heavenly bodies are endowed with thought; the principles of the same and other exist in the universe as well as in the human mind. The soul of
man is made out of the remains of the elements which had been used in creating the soul of the world; these remains, however, are diluted to the third degree; by this Plato expresses the measure of the difference between the soul human and divine. The human soul, like the cosmical, is framed before the body, as the mind is before the soul of either--this is the order of the divine work--and the finer parts of the body, which are more akin to the soul, such as the spinal marrow, are prior to the bones and flesh. The brain, the containing vessel of the divine part of the soul, is (nearly) in the form of a globe, which is the image of the gods, who are the stars, and of the universe.

There is, however, an inconsistency in Plato's manner of conceiving the soul of man; he cannot get rid of the element of necessity which is allowed to enter. He does not, like Kant, attempt to vindicate for men a freedom out of space and time; but he acknowledges him to be subject to the influence of external causes, and leaves hardly any place for freedom of the will. The lusts of men are caused by their bodily constitution, though they may be increased by bad education and bad laws, which implies that they may be decreased by good education and good laws. He appears to have an inkling of the truth that to the higher nature of man evil is involuntary. This is mixed up with the view which, while apparently agreeing with it, is in reality the opposite of it, that vice is due to physical causes. In the Timaeus, as well as in the Laws, he also regards vices and crimes as simply involuntary; they are diseases analogous to the diseases of the body, and arising out of the same causes. If we draw together the opposite poles of Plato's system, we find that, like Spinoza, he combines idealism with fatalism.

The soul of man is divided by him into three parts, answering roughly to the charioteer and steeds of the Phaedrus, and to the (Greek) of the Republic and Nicomachean Ethics. First, there is the immortal nature of which the brain is the seat, and which is akin to the soul of the universe. This alone thinks and knows and is the ruler of the whole. Secondly, there is the higher mortal soul which, though liable to perturbations of her own, takes the side of reason against the lower appetites. The seat of this is the heart, in which courage, anger, and all the nobler affections are supposed to reside. There the veins all meet; it is their centre or house of guard whence they carry the orders of the thinking being to the extremities of his kingdom. There is also a third or appetitive soul, which receives the commands of the immortal part, not immediately but mediately, through the liver, which reflects on its surface the admonitions and threats of the reason.

The liver is imagined by Plato to be a smooth and bright substance, having a store of sweetness and also of bitterness, which reason freely uses in the execution of her mandates. In this region, as ancient superstition told, were to be found intimations of the future. But Plato is careful to
observe that although such knowledge is given to the inferior parts of man, it requires to be interpreted by the superior. Reason, and not enthusiasm, is the true guide of man; he is only inspired when he is demented by some distemper or possession. The ancient saying, that 'only a man in his senses can judge of his own actions,' is approved by modern philosophy too. The same irony which appears in Plato's remark, that 'the men of old time must surely have known the gods who were their ancestors, and we should believe them as custom requires,' is also manifest in his account of divination.

The appetitive soul is seated in the belly, and there imprisoned like a wild beast, far away from the council chamber, as Plato graphically calls the head, in order that the animal passions may not interfere with the deliberations of reason. Though the soul is said by him to be prior to the body, yet we cannot help seeing that it is constructed on the model of the body—the threefold division into the rational, passionate, and appetitive corresponding to the head, heart and belly. The human soul differs from the soul of the world in this respect, that it is enveloped and finds its expression in matter, whereas the soul of the world is not only enveloped or diffused in matter, but is the element in which matter moves. The breath of man is within him, but the air or aether of heaven is the element which surrounds him and all things.

Pleasure and pain are attributed in the Timaeus to the suddenness of our sensations—the first being a sudden restoration, the second a sudden violation, of nature (Phileb.). The sensations become conscious to us when they are exceptional. Sight is not attended either by pleasure or pain, but hunger and the appeasing of hunger are pleasant and painful because they are extraordinary.

Section 6.

I shall not attempt to connect the physiological speculations of Plato either with ancient or modern medicine. What light I can throw upon them will be derived from the comparison of them with his general system.

There is no principle so apparent in the physics of the Timaeus, or in ancient physics generally, as that of continuity. The world is conceived of as a whole, and the elements are formed into and out of one another; the varieties of substances and processes are hardly known or noticed. And in a similar manner the human body is conceived of as a whole, and the different substances of which, to a superficial observer, it appears to be composed—the blood, flesh, sinews—like the elements out of which they are formed, are supposed to pass into one another in regular order, while the infinite complexity of the human frame remains unobserved. And diseases arise from the opposite process—when the natural proportions of the four elements are disturbed, and the secondary substances which are formed out
of them, namely, blood, flesh, sinews, are generated in an inverse order.

Plato found heat and air within the human frame, and the blood circulating in every part. He assumes in language almost unintelligible to us that a network of fire and air envelopes the greater part of the body. This outer net contains two lesser nets, one corresponding to the stomach, the other to the lungs; and the entrance to the latter is forked or divided into two passages which lead to the nostrils and to the mouth. In the process of respiration the external net is said to find a way in and out of the pores of the skin: while the interior of it and the lesser nets move alternately into each other. The whole description is figurative, as Plato himself implies when he speaks of a 'fountain of fire which we compare to the network of a creel.' He really means by this what we should describe as a state of heat or temperature in the interior of the body. The 'fountain of fire' or heat is also in a figure the circulation of the blood. The passage is partly imagination, partly fact.

He has a singular theory of respiration for which he accounts solely by the movement of the air in and out of the body; he does not attribute any part of the process to the action of the body itself. The air has a double ingress and a double exit, through the mouth or nostrils, and through the skin. When exhaled through the mouth or nostrils, it leaves a vacuum which is filled up by other air finding a way in through the pores, this air being thrust out of its place by the exhalation from the mouth and nostrils. There is also a corresponding process of inhalation through the mouth or nostrils, and of exhalation through the pores. The inhalation through the pores appears to take place nearly at the same time as the exhalation through the mouth; and conversely. The internal fire is in either case the propelling cause outwards--the inhaled air, when heated by it, having a natural tendency to move out of the body to the place of fire; while the impossibility of a vacuum is the propelling cause inwards.

Thus we see that this singular theory is dependent on two principles largely employed by Plato in explaining the operations of nature, the impossibility of a vacuum and the attraction of like to like. To these there has to be added a third principle, which is the condition of the action of the other two,--the interpenetration of particles in proportion to their density or rarity. It is this which enables fire and air to permeate the flesh.

Plato's account of digestion and the circulation of the blood is closely connected with his theory of respiration. Digestion is supposed to be effected by the action of the internal fire, which in the process of respiration moves into the stomach and minces the food. As the fire returns to its place, it takes with it the minced food or blood; and in this way the veins are replenished. Plato does not enquire how the blood is separated from the faeces.
Of the anatomy and functions of the body he knew very little,—e.g. of the uses of the nerves in conveying motion and sensation, which he supposed to be communicated by the bones and veins; he was also ignorant of the distinction between veins and arteries;—the latter term he applies to the vessels which conduct air from the mouth to the lungs;—he supposes the lung to be hollow and bloodless; the spinal marrow he conceives to be the seed of generation; he confuses the parts of the body with the states of the body,—the network of fire and air is spoken of as a bodily organ; he has absolutely no idea of the phenomena of respiration, which he attributes to a law of equalization in nature, the air which is breathed out displacing other air which finds a way in; he is wholly unacquainted with the process of digestion. Except the general divisions into the spleen, the liver, the belly, and the lungs, and the obvious distinctions of flesh, bones, and the limbs of the body, we find nothing that reminds us of anatomical facts. But we find much which is derived from his theory of the universe, and transferred to man, as there is much also in his theory of the universe which is suggested by man. The microcosm of the human body is the lesser image of the macrocosm. The courses of the same and the other affect both; they are made of the same elements and therefore in the same proportions. Both are intelligent natures endued with the power of self-motion, and the same equipoise is maintained in both. The animal is a sort of 'world' to the particles of the blood which circulate in it. All the four elements entered into the original composition of the human frame; the bone was formed out of smooth earth; liquids of various kinds pass to and fro; the network of fire and air irrigates the veins. Infancy and childhood is the chaos or first turbid flux of sense prior to the establishment of order; the intervals of time which may be observed in some intermittent fevers correspond to the density of the elements. The spinal marrow, including the brain, is formed out of the finest sorts of triangles, and is the connecting link between body and mind. Health is only to be preserved by imitating the motions of the world in space, which is the mother and nurse of generation. The work of digestion is carried on by the superior sharpness of the triangles forming the substances of the human body to those which are introduced into it in the shape of food. The freshest and acutest forms of triangles are those that are found in children, but they become more obtuse with advancing years; and when they finally wear out and fall to pieces, old age and death supervene.

As in the Republic, Plato is still the enemy of the purgative treatment of physicians, which, except in extreme cases, no man of sense will ever adopt. For, as he adds, with an insight into the truth, 'every disease is akin to the nature of the living being and is only irritated by stimulants.' He is of opinion that nature should be left to herself, and is inclined to think that physicians are in vain (Laws—where he says that warm baths would be more beneficial to the limbs of the aged rustic than the prescriptions of a not over-wise doctor). If he seems to be extreme in
his condemnation of medicine and to rely too much on diet and exercise, he
might appeal to nearly all the best physicians of our own age in support of
his opinions, who often speak to their patients of the worthlessness of
drugs. For we ourselves are sceptical about medicine, and very unwilling
to submit to the purgative treatment of physicians. May we not claim for
Plato an anticipation of modern ideas as about some questions of astronomy
and physics, so also about medicine? As in the Charmides he tells us that
the body cannot be cured without the soul, so in the Timaeus he strongly
asserts the sympathy of soul and body; any defect of either is the occasion
of the greatest discord and disproportion in the other. Here too may be a
presentiment that in the medicine of the future the interdependence of mind
and body will be more fully recognized, and that the influence of the one
over the other may be exerted in a manner which is not now thought
possible.

Section 7.

In Plato's explanation of sensation we are struck by the fact that he has
not the same distinct conception of organs of sense which is familiar to
ourselves. The senses are not instruments, but rather passages, through
which external objects strike upon the mind. The eye is the aperture
through which the stream of vision passes, the ear is the aperture through
which the vibrations of sound pass. But that the complex structure of the
eye or the ear is in any sense the cause of sight and hearing he seems
hardly to be aware.

The process of sight is the most complicated (Rep.), and consists of three
elements—the light which is supposed to reside within the eye, the light
of the sun, and the light emitted from external objects. When the light of
the eye meets the light of the sun, and both together meet the light
issuing from an external object, this is the simple act of sight. When the
particles of light which proceed from the object are exactly equal to the
particles of the visual ray which meet them from within, then the body is
transparent. If they are larger and contract the visual ray, a black
colour is produced; if they are smaller and dilate it, a white. Other
phenomena are produced by the variety and motion of light. A sudden flash
of fire at once elicits light and moisture from the eye, and causes a
bright colour. A more subdued light, on mingling with the moisture of the
eye, produces a red colour. Out of these elements all other colours are
derived. All of them are combinations of bright and red with white and
black. Plato himself tells us that he does not know in what proportions
they combine, and he is of opinion that such knowledge is granted to the
gods only. To have seen the affinity of them to each other and their
connection with light, is not a bad basis for a theory of colours. We must
remember that they were not distinctly defined to his, as they are to our
eyes; he saw them, not as they are divided in the prism, or artificially
manufactured for the painter's use, but as they exist in nature, blended
We can hardly agree with him when he tells us that smells do not admit of kinds. He seems to think that no definite qualities can attach to bodies which are in a state of transition or evaporation; he also makes the subtle observation that smells must be denser than air, though thinner than water, because when there is an obstruction to the breathing, air can penetrate, but not smell.

The affections peculiar to the tongue are of various kinds, and, like many other affections, are caused by contraction and dilation. Some of them are produced by rough, others by abstrangent, others by inflammatory substances,—these act upon the testing instruments of the tongue, and produce a more or less disagreeable sensation, while other particles congenial to the tongue soften and harmonize them. The instruments of taste reach from the tongue to the heart. Plato has a lively sense of the manner in which sensation and motion are communicated from one part of the body to the other, though he confuses the affections with the organs. Hearing is a blow which passes through the ear and ends in the region of the liver, being transmitted by means of the air, the brain, and the blood to the soul. The swifter sound is acute, the sound which moves slowly is grave. A great body of sound is loud, the opposite is low. Discord is produced by the swifter and slower motions of two sounds, and is converted into harmony when the swifter motions begin to pause and are overtaken by the slower.

The general phenomena of sensation are partly internal, but the more violent are caused by conflict with external objects. Proceeding by a method of superficial observation, Plato remarks that the more sensitive parts of the human frame are those which are least covered by flesh, as is the case with the head and the elbows. Man, if his head had been covered with a thicker pulp of flesh, might have been a longer-lived animal than he is, but could not have had as quick perceptions. On the other hand, the tongue is one of the most sensitive of organs; but then this is made, not to be a covering to the bones which contain the marrow or source of life, but with an express purpose, and in a separate mass.

Section 8.

We have now to consider how far in any of these speculations Plato approximated to the discoveries of modern science. The modern physical philosopher is apt to dwell exclusively on the absurdities of ancient ideas about science, on the haphazard fancies and a priori assumptions of ancient teachers, on their confusion of facts and ideas, on their inconsistency and blindness to the most obvious phenomena. He measures them not by what preceded them, but by what has followed them. He does not consider that ancient physical philosophy was not a free enquiry, but a
growth, in which the mind was passive rather than active, and was incapable of resisting the impressions which flowed in upon it. He hardly allows to the notions of the ancients the merit of being the stepping-stones by which he has himself risen to a higher knowledge. He never reflects, how great a thing it was to have formed a conception, however imperfect, either of the human frame as a whole, or of the world as a whole. According to the view taken in these volumes the errors of ancient physicists were not separable from the intellectual conditions under which they lived. Their genius was their own; and they were not the rash and hasty generalizers which, since the days of Bacon, we have been apt to suppose them. The thoughts of men widened to receive experience; at first they seemed to know all things as in a dream: after a while they look at them closely and hold them in their hands. They begin to arrange them in classes and to connect causes with effects. General notions are necessary to the apprehension of particular facts, the metaphysical to the physical. Before men can observe the world, they must be able to conceive it.

To do justice to the subject, we should consider the physical philosophy of the ancients as a whole; we should remember, (1) that the nebular theory was the received belief of several of the early physicists; (2) that the development of animals out of fishes who came to land, and of man out of the animals, was held by Anaximander in the sixth century before Christ (Plut. Symp. Quaest; Plac. Phil.); (3) that even by Philolaus and the early Pythagoreans, the earth was held to be a body like the other stars revolving in space around the sun or a central fire; (4) that the beginnings of chemistry are discernible in the 'similar particles' of Anaxagoras. Also they knew or thought (5) that there was a sex in plants as well as in animals; (6) they were aware that musical notes depended on the relative length or tension of the strings from which they were emitted, and were measured by ratios of number; (7) that mathematical laws pervaded the world; and even qualitative differences were supposed to have their origin in number and figure; (8) the annihilation of matter was denied by several of them, and the seeming disappearance of it held to be a transformation only. For, although one of these discoveries might have been supposed to be a happy guess, taken together they seem to imply a great advance and almost maturity of natural knowledge.

We should also remember, when we attribute to the ancients hasty generalizations and delusions of language, that physical philosophy and metaphysical too have been guilty of similar fallacies in quite recent times. We by no means distinguish clearly between mind and body, between ideas and facts. Have not many discussions arisen about the Atomic theory in which a point has been confused with a material atom? Have not the natures of things been explained by imaginary entities, such as life or phlogiston, which exist in the mind only? Has not disease been regarded, like sin, sometimes as a negative and necessary, sometimes as a positive or malignant principle? The 'idols' of Bacon are nearly as common now as
ever; they are inherent in the human mind, and when they have the most complete dominion over us, we are least able to perceive them. We recognize them in the ancients, but we fail to see them in ourselves.

Such reflections, although this is not the place in which to dwell upon them at length, lead us to take a favourable view of the speculations of the Timaeus. We should consider not how much Plato actually knew, but how far he has contributed to the general ideas of physics, or supplied the notions which, whether true or false, have stimulated the minds of later generations in the path of discovery. Some of them may seem old-fashioned, but may nevertheless have had a great influence in promoting system and assisting enquiry, while in others we hear the latest word of physical or metaphysical philosophy. There is also an intermediate class, in which Plato falls short of the truths of modern science, though he is not wholly unacquainted with them. (1) To the first class belongs the teleological theory of creation. Whether all things in the world can be explained as the result of natural laws, or whether we must not admit of tendencies and marks of design also, has been a question much disputed of late years. Even if all phenomena are the result of natural forces, we must admit that there are many things in heaven and earth which are as well expressed under the image of mind or design as under any other. At any rate, the language of Plato has been the language of natural theology down to our own time, nor can any description of the world wholly dispense with it. The notion of first and second or co-operative causes, which originally appears in the Timaeus, has likewise survived to our own day, and has been a great peacemaker between theology and science. Plato also approaches very near to our doctrine of the primary and secondary qualities of matter. (2) Another popular notion which is found in the Timaeus, is the feebleness of the human intellect—'God knows the original qualities of things; man can only hope to attain to probability.' We speak in almost the same words of human intelligence, but not in the same manner of the uncertainty of our knowledge of nature. The reason is that the latter is assured to us by experiment, and is not contrasted with the certainty of ideal or mathematical knowledge. But the ancient philosopher never experimented: in the Timaeus Plato seems to have thought that there would be impiety in making the attempt; he, for example, who tried experiments in colours would 'forget the difference of the human and divine natures.' Their indefiniteness is probably the reason why he singles them out, as especially incapable of being tested by experiment. (Compare the saying of Anaxagoras—Sext. Pyrrh.—that since snow is made of water and water is black, snow ought to be black.)

The greatest 'divination' of the ancients was the supremacy which they assigned to mathematics in all the realms of nature; for in all of them there is a foundation of mechanics. Even physiology partakes of figure and number; and Plato is not wrong in attributing them to the human frame, but in the omission to observe how little could be explained by them. Thus we
may remark in passing that the most fanciful of ancient philosophies is also the most nearly verified in fact. The fortunate guess that the world is a sum of numbers and figures has been the most fruitful of anticipations. The 'diatonic' scale of the Pythagoreans and Plato suggested to Kepler that the secret of the distances of the planets from one another was to be found in mathematical proportions. The doctrine that the heavenly bodies all move in a circle is known by us to be erroneous; but without such an error how could the human mind have comprehended the heavens? Astronomy, even in modern times, has made far greater progress by the high a priori road than could have been attained by any other. Yet, strictly speaking--and the remark applies to ancient physics generally--this high a priori road was based upon a posteriori grounds. For there were no facts of which the ancients were so well assured by experience as facts of number. Having observed that they held good in a few instances, they applied them everywhere; and in the complexity, of which they were capable, found the explanation of the equally complex phenomena of the universe. They seemed to see them in the least things as well as in the greatest; in atoms, as well as in suns and stars; in the human body as well as in external nature. And now a favourite speculation of modern chemistry is the explanation of qualitative difference by quantitative, which is at present verified to a certain extent and may hereafter be of far more universal application. What is this but the atoms of Democritus and the triangles of Plato? The ancients should not be wholly deprived of the credit of their guesses because they were unable to prove them. May they not have had, like the animals, an instinct of something more than they knew?

Besides general notions we seem to find in the Timaeus some more precise approximations to the discoveries of modern physical science. First, the doctrine of equipoise. Plato affirms, almost in so many words, that nature abhors a vacuum. Whenever a particle is displaced, the rest push and thrust one another until equality is restored. We must remember that these ideas were not derived from any definite experiment, but were the original reflections of man, fresh from the first observation of nature. The latest word of modern philosophy is continuity and development, but to Plato this is the beginning and foundation of science; there is nothing that he is so strongly persuaded of as that the world is one, and that all the various existences which are contained in it are only the transformations of the same soul of the world acting on the same matter. He would have readily admitted that out of the protoplasm all things were formed by the gradual process of creation; but he would have insisted that mind and intelligence --not meaning by this, however, a conscious mind or person--were prior to them, and could alone have created them. Into the workings of this eternal mind or intelligence he does not enter further; nor would there have been any use in attempting to investigate the things which no eye has seen nor any human language can express.
Lastly, there remain two points in which he seems to touch great discoveries of modern times—the law of gravitation, and the circulation of the blood.

(1) The law of gravitation, according to Plato, is a law, not only of the attraction of lesser bodies to larger ones, but of similar bodies to similar, having a magnetic power as well as a principle of gravitation. He observed that earth, water, and air had settled down to their places, and he imagined fire or the exterior aether to have a place beyond air. When air seemed to go upwards and fire to pierce through air—when water and earth fell downward, they were seeking their native elements. He did not remark that his own explanation did not suit all phenomena; and the simpler explanation, which assigns to bodies degrees of heaviness and lightness proportioned to the mass and distance of the bodies which attract them, never occurred to him. Yet the affinities of similar substances have some effect upon the composition of the world, and of this Plato may be thought to have had an anticipation. He may be described as confusing the attraction of gravitation with the attraction of cohesion. The influence of such affinities and the chemical action of one body upon another in long periods of time have become a recognized principle of geology.

(2) Plato is perfectly aware—and he could hardly be ignorant—that blood is a fluid in constant motion. He also knew that blood is partly a solid substance consisting of several elements, which, as he might have observed in the use of 'cupping-glasses', decompose and die, when no longer in motion. But the specific discovery that the blood flows out on one side of the heart through the arteries and returns through the veins on the other, which is commonly called the circulation of the blood, was absolutely unknown to him.

A further study of the Timaeus suggests some after-thoughts which may be conveniently brought together in this place. The topics which I propose briefly to reconsider are (a) the relation of the Timaeus to the other dialogues of Plato and to the previous philosophy; (b) the nature of God and of creation (c) the morality of the Timaeus:—

(a) The Timaeus is more imaginative and less scientific than any other of the Platonic dialogues. It is conjectural astronomy, conjectural natural philosophy, conjectural medicine. The writer himself is constantly repeating that he is speaking what is probable only. The dialogue is put into the mouth of Timaeus, a Pythagorean philosopher, and therefore here, as in the Parmenides, we are in doubt how far Plato is expressing his own sentiments. Hence the connexion with the other dialogues is comparatively slight. We may fill up the lacunae of the Timaeus by the help of the Republic or Phaedrus: we may identify the same and other with the (Greek) of the Philebus. We may find in the Laws or in the Statesman parallels with the account of creation and of the first origin of man. It would be
possible to frame a scheme in which all these various elements might have a place. But such a mode of proceeding would be unsatisfactory, because we have no reason to suppose that Plato intended his scattered thoughts to be collected in a system. There is a common spirit in his writings, and there are certain general principles, such as the opposition of the sensible and intellectual, and the priority of mind, which run through all of them; but he has no definite forms of words in which he consistently expresses himself. While the determinations of human thought are in process of creation he is necessarily tentative and uncertain. And there is least of definiteness, whenever either in describing the beginning or the end of the world, he has recourse to myths. These are not the fixed modes in which spiritual truths are revealed to him, but the efforts of imagination, by which at different times and in various manners he seeks to embody his conceptions. The clouds of mythology are still resting upon him, and he has not yet pierced 'to the heaven of the fixed stars' which is beyond them. It is safer then to admit the inconsistencies of the Timaeus, or to endeavour to fill up what is wanting from our own imagination, inspired by a study of the dialogue, than to refer to other Platonic writings,--and still less should we refer to the successors of Plato,--for the elucidation of it.

More light is thrown upon the Timaeus by a comparison of the previous philosophies. For the physical science of the ancients was traditional, descending through many generations of Ionian and Pythagorean philosophers. Plato does not look out upon the heavens and describe what he sees in them, but he builds upon the foundations of others, adding something out of the 'depths of his own self-consciousness.' Socrates had already spoken of God the creator, who made all things for the best. While he ridiculed the superficial explanations of phenomena which were current in his age, he recognised the marks both of benevolence and of design in the frame of man and in the world. The apparatus of winds and waters is contemptuously rejected by him in the Phaedo, but he thinks that there is a power greater than that of any Atlas in the 'Best' (Phaedo; Arist. Met.). Plato, following his master, affirms this principle of the best, but he acknowledges that the best is limited by the conditions of matter. In the generation before Socrates, Anaxagoras had brought together 'Chaos' and 'Mind'; and these are connected by Plato in the Timaeus, but in accordance with his own mode of thinking he has interposed between them the idea or pattern according to which mind worked. The circular impulse (Greek) of the one philosopher answers to the circular movement (Greek) of the other. But unlike Anaxagoras, Plato made the sun and stars living beings and not masses of earth or metal. The Pythagoreans again had framed a world out of numbers, which they constructed into figures. Plato adopted their speculations and improved upon them by a more exact knowledge of geometry. The Atomists too made the world, if not out of geometrical figures, at least out of different forms of atoms, and these atoms resembled the triangles of Plato in being too small to be visible. But though the
physiology of the Timaeus is partly borrowed from them, they are either ignored by Plato or referred to with a secret contempt and dislike. He looks with more favour on the Pythagoreans, whose intervals of number applied to the distances of the planets reappear in the Timaeus. It is probable that among the Pythagoreans living in the fourth century B.C., there were already some who, like Plato, made the earth their centre. Whether he obtained his circles of the Same and Other from any previous thinker is uncertain. The four elements are taken from Empedocles; the interstices of the Timaeus may also be compared with his (Greek). The passage of one element into another is common to Heracleitus and several of the Ionian philosophers. So much of a syncretist is Plato, though not after the manner of the Neoplatonists. For the elements which he borrows from others are fused and transformed by his own genius. On the other hand we find fewer traces in Plato of early Ionic or Eleatic speculation. He does not imagine the world of sense to be made up of opposites or to be in a perpetual flux, but to vary within certain limits which are controlled by what he calls the principle of the same. Unlike the Eleatics, who relegated the world to the sphere of not-being, he admits creation to have an existence which is real and even eternal, although dependent on the will of the creator. Instead of maintaining the doctrine that the void has a necessary place in the existence of the world, he rather affirms the modern thesis that nature abhors a vacuum, as in the Sophist he also denies the reality of not-being (Aristot. Metaph.). But though in these respects he differs from them, he is deeply penetrated by the spirit of their philosophy; he differs from them with reluctance, and gladly recognizes the 'generous depth' of Parmenides (Theaet.).

There is a similarity between the Timaeus and the fragments of Philolaus, which by some has been thought to be so great as to create a suspicion that they are derived from it. Philolaus is known to us from the Phaedo of Plato as a Pythagorean philosopher residing at Thebes in the latter half of the fifth century B.C., after the dispersion of the original Pythagorean society. He was the teacher of Simmias and Cebes, who became disciples of Socrates. We have hardly any other information about him. The story that Plato had purchased three books of his writings from a relation is not worth repeating; it is only a fanciful way in which an ancient biographer dresses up the fact that there was supposed to be a resemblance between the two writers. Similar gossiping stories are told about the sources of the Republic and the Phaedo. That there really existed in antiquity a work passing under the name of Philolaus there can be no doubt. Fragments of this work are preserved to us, chiefly in Stobaeus, a few in Boethius and other writers. They remind us of the Timaeus, as well as of the Phaedrus and Philebus. When the writer says (Stob. Eclog.) that all things are either finite (definite) or infinite (indefinite), or a union of the two, and that this antithesis and synthesis pervades all art and nature, we are reminded of the Philebus. When he calls the centre of the world (Greek), we have a parallel to the Phaedrus. His distinction between the world of
order, to which the sun and moon and the stars belong, and the world of disorder, which lies in the region between the moon and the earth, approximates to Plato's sphere of the Same and of the Other. Like Plato (Tim.), he denied the above and below in space, and said that all things were the same in relation to a centre. He speaks also of the world as one and indestructible: 'for neither from within nor from without does it admit of destruction' (Tim). He mentions ten heavenly bodies, including the sun and moon, the earth and the counter-earth (Greek), and in the midst of them all he places the central fire, around which they are moving--this is hidden from the earth by the counter-earth. Of neither is there any trace in Plato, who makes the earth the centre of his system. Philolaus magnifies the virtues of particular numbers, especially of the number 10 (Stob. Eclog.), and descants upon odd and even numbers, after the manner of the later Pythagoreans. It is worthy of remark that these mystical fancies are nowhere to be found in the writings of Plato, although the importance of number as a form and also an instrument of thought is ever present to his mind. Both Philolaus and Plato agree in making the world move in certain numerical ratios according to a musical scale: though Bockh is of opinion that the two scales, of Philolaus and of the Timaeus, do not correspond...We appear not to be sufficiently acquainted with the early Pythagoreans to know how far the statements contained in these fragments corresponded with their doctrines; and we therefore cannot pronounce, either in favour of the genuineness of the fragments, with Bockh and Zeller, or, with Valentine Rose and Schaarschmidt, against them. But it is clear that they throw but little light upon the Timaeus, and that their resemblance to it has been exaggerated.

That there is a degree of confusion and indistinctness in Plato's account both of man and of the universe has been already acknowledged. We cannot tell (nor could Plato himself have told) where the figure or myth ends and the philosophical truth begins; we cannot explain (nor could Plato himself have explained to us) the relation of the ideas to appearance, of which one is the copy of the other, and yet of all things in the world they are the most opposed and unlike. This opposition is presented to us in many forms, as the antithesis of the one and many, of the finite and infinite, of the intelligible and sensible, of the unchangeable and the changing, of the indivisible and the divisible, of the fixed stars and the planets, of the creative mind and the primeval chaos. These pairs of opposites are so many aspects of the great opposition between ideas and phenomena--they easily pass into one another; and sometimes the two members of the relation differ in kind, sometimes only in degree. As in Aristotle's matter and form the connexion between them is really inseparable; for if we attempt to separate them they become devoid of content and therefore indistinguishable; there is no difference between the idea of which nothing can be predicated, and the chaos or matter which has no perceptible qualities--between Being in the abstract and Nothing. Yet we are frequently told that the one class of them is the reality and the other appearance; and one is often spoken of as
the double or reflection of the other. For Plato never clearly saw that both elements had an equal place in mind and in nature; and hence, especially when we argue from isolated passages in his writings, or attempt to draw what appear to us to be the natural inferences from them, we are full of perplexity. There is a similar confusion about necessity and free-will, and about the state of the soul after death. Also he sometimes supposes that God is immanent in the world, sometimes that he is transcendent. And having no distinction of objective and subjective, he passes imperceptibly from one to the other; from intelligence to soul, from eternity to time. These contradictions may be softened or concealed by a judicious use of language, but they cannot be wholly got rid of. That an age of intellectual transition must also be one of inconsistency; that the creative is opposed to the critical or defining habit of mind or time, has been often repeated by us. But, as Plato would say, 'there is no harm in repeating twice or thrice' (Laws) what is important for the understanding of a great author.

It has not, however, been observed, that the confusion partly arises out of the elements of opposing philosophies which are preserved in him. He holds these in solution, he brings them into relation with one another, but he does not perfectly harmonize them. They are part of his own mind, and he is incapable of placing himself outside of them and criticizing them. They grow as he grows; they are a kind of composition with which his own philosophy is overlaid. In early life he fancies that he has mastered them: but he is also mastered by them; and in language (Sophist) which may be compared with the hesitating tone of the Timaeus, he confesses in his later years that they are full of obscurity to him. He attributes new meanings to the words of Parmenides and Heracleitus; but at times the old Eleatic philosophy appears to go beyond him; then the world of phenomena disappears, but the doctrine of ideas is also reduced to nothingness. All of them are nearer to one another than they themselves supposed, and nearer to him than he supposed. All of them are antagonistic to sense and have an affinity to number and measure and a presentiment of ideas. Even in Plato they still retain their contentious or controversial character, which was developed by the growth of dialectic. He is never able to reconcile the first causes of the pre-Socratic philosophers with the final causes of Socrates himself. There is no intelligible account of the relation of numbers to the universal ideas, or of universals to the idea of good. He found them all three, in the Pythagorean philosophy and in the teaching of Socrates and of the Megarians respectively; and, because they all furnished modes of explaining and arranging phenomena, he is unwilling to give up any of them, though he is unable to unite them in a consistent whole.

Lastly, Plato, though an idealist philosopher, is Greek and not Oriental in spirit and feeling. He is no mystic or ascetic; he is not seeking in vain to get rid of matter or to find absorption in the divine nature, or in the Soul of the universe. And therefore we are not surprised to find that his
philosophy in the Timaeus returns at last to a worship of the heavens, and that to him, as to other Greeks, nature, though containing a remnant of evil, is still glorious and divine. He takes away or drops the veil of mythology, and presents her to us in what appears to him to be the form-fairer and truer far—of mathematical figures. It is this element in the Timaeus, no less than its affinity to certain Pythagorean speculations, which gives it a character not wholly in accordance with the other dialogues of Plato.

(b) The Timaeus contains an assertion perhaps more distinct than is found in any of the other dialogues (Rep.; Laws) of the goodness of God. 'He was good himself, and he fashioned the good everywhere.' He was not 'a jealous God,' and therefore he desired that all other things should be equally good. He is the IDEA of good who has now become a person, and speaks and is spoken of as God. Yet his personality seems to appear only in the act of creation. In so far as he works with his eye fixed upon an eternal pattern he is like the human artificer in the Republic. Here the theory of Platonic ideas intrudes upon us. God, like man, is supposed to have an ideal of which Plato is unable to tell us the origin. He may be said, in the language of modern philosophy, to resolve the divine mind into subject and object.

The first work of creation is perfected, the second begins under the direction of inferior ministers. The supreme God is withdrawn from the world and returns to his own accustomed nature (Tim.). As in the Statesman, he retires to his place of view. So early did the Epicurean doctrine take possession of the Greek mind, and so natural is it to the heart of man, when he has once passed out of the stage of mythology into that of rational religion. For he sees the marks of design in the world; but he no longer sees or fancies that he sees God walking in the garden or haunting stream or mountain. He feels also that he must put God as far as possible out of the way of evil, and therefore he banishes him from an evil world. Plato is sensible of the difficulty; and he often shows that he is desirous of justifying the ways of God to man. Yet on the other hand, in the Tenth Book of the Laws he passes a censure on those who say that the Gods have no care of human things.

The creation of the world is the impression of order on a previously existing chaos. The formula of Anaxagoras--'all things were in chaos or confusion, and then mind came and disposed them'--is a summary of the first part of the Timaeus. It is true that of a chaos without differences no idea could be formed. All was not mixed but one; and therefore it was not difficult for the later Platonists to draw inferences by which they were enabled to reconcile the narrative of the Timaeus with the Mosaic account of the creation. Neither when we speak of mind or intelligence, do we seem to get much further in our conception than circular motion, which was deemed to be the most perfect. Plato, like Anaxagoras, while commencing
his theory of the universe with ideas of mind and of the best, is compelled
in the execution of his design to condescend to the crudest physics.

(c) The morality of the Timaeus is singular, and it is difficult to adjust
the balance between the two elements of it. The difficulty which Plato
feels, is that which all of us feel, and which is increased in our own day
by the progress of physical science, how the responsibility of man is to be
reconciled with his dependence on natural causes. And sometimes, like
other men, he is more impressed by one aspect of human life, sometimes by
the other. In the Republic he represents man as freely choosing his own
lot in a state prior to birth—a conception which, if taken literally,
would still leave him subject to the dominion of necessity in his after
life; in the Statesman he supposes the human race to be preserved in the
world only by a divine interposition; while in the Timaeus the supreme God
commissions the inferior deities to avert from him all but self-inflicted
evils—words which imply that all the evils of men are really self-
inflicted. And here, like Plato (the insertion of a note in the text of an
ancient writer is a literary curiosity worthy of remark), we may take
occasion to correct an error. For we too hastily said that Plato in the
Timaeus regarded all 'vices and crimes as involuntary.' But the fact is
that he is inconsistent with himself; in one and the same passage vice is
attributed to the relaxation of the bodily frame, and yet we are exhorted
to avoid it and pursue virtue. It is also admitted that good and evil
conduct are to be attributed respectively to good and evil laws and
institutions. These cannot be given by individuals to themselves; and
therefore human actions, in so far as they are dependent upon them, are
regarded by Plato as involuntary rather than voluntary. Like other writers
on this subject, he is unable to escape from some degree of self-
contradiction. He had learned from Socrates that vice is ignorance, and
suddenly the doctrine seems to him to be confirmed by observing how much of
the good and bad in human character depends on the bodily constitution. So
in modern times the speculative doctrine of necessity has often been
supported by physical facts.

The Timaeus also contains an anticipation of the stoical life according to
nature. Man contemplating the heavens is to regulate his erring life
according to them. He is to partake of the repose of nature and of the
order of nature, to bring the variable principle in himself into harmony
with the principle of the same. The ethics of the Timaeus may be summed up
in the single idea of 'law.' To feel habitually that he is part of the
order of the universe, is one of the highest ethical motives of which man
is capable. Something like this is what Plato means when he speaks of the
soul 'moving about the same in unchanging thought of the same.' He does
not explain how man is acted upon by the lesser influences of custom or of
opinion; or how the commands of the soul watching in the citadel are
conveyed to the bodily organs. But this perhaps, to use once more
expressions of his own, 'is part of another subject' or 'may be more
suitably discussed on some other occasion.'

There is no difficulty, by the help of Aristotle and later writers, in criticizing the Timaeus of Plato, in pointing out the inconsistencies of the work, in dwelling on the ignorance of anatomy displayed by the author, in showing the fancifulness or unmeaningness of some of his reasons. But the Timaeus still remains the greatest effort of the human mind to conceive the world as a whole which the genius of antiquity has bequeathed to us.

...

One more aspect of the Timaeus remains to be considered--the mythological or geographical. Is it not a wonderful thing that a few pages of one of Plato's dialogues have grown into a great legend, not confined to Greece only, but spreading far and wide over the nations of Europe and reaching even to Egypt and Asia? Like the tale of Troy, or the legend of the Ten Tribes (Ewald, Hist. of Isr.), which perhaps originated in a few verses of II Esdras, it has become famous, because it has coincided with a great historical fact. Like the romance of King Arthur, which has had so great a charm, it has found a way over the seas from one country and language to another. It inspired the navigators of the fifteenth and sixteenth centuries; it foreshadowed the discovery of America. It realized the fiction so natural to the human mind, because it answered the enquiry about the origin of the arts, that there had somewhere existed an ancient primitive civilization. It might find a place wherever men chose to look for it; in North, South, East, or West; in the Islands of the Blest; before the entrance of the Straits of Gibraltar, in Sweden or in Palestine. It mattered little whether the description in Plato agreed with the locality assigned to it or not. It was a legend so adapted to the human mind that it made a habitation for itself in any country. It was an island in the clouds, which might be seen anywhere by the eye of faith. It was a subject especially congenial to the ponderous industry of certain French and Swedish writers, who delighted in heaping up learning of all sorts but were incapable of using it.

M. Martin has written a valuable dissertation on the opinions entertained respecting the Island of Atlantis in ancient and modern times. It is a curious chapter in the history of the human mind. The tale of Atlantis is the fabric of a vision, but it has never ceased to interest mankind. It was variously regarded by the ancients themselves. The stronger heads among them, like Strabo and Longinus, were as little disposed to believe in the truth of it as the modern reader in Gulliver or Robinson Crusoe. On the other hand there is no kind or degree of absurdity or fancy in which the more foolish writers, both of antiquity and of modern times, have not indulged respecting it. The Neo-Platonists, loyal to their master, like some commentators on the Christian Scriptures, sought to give an allegorical meaning to what they also believed to be an historical fact.
It was as if some one in our own day were to convert the poems of Homer into an allegory of the Christian religion, at the same time maintaining them to be an exact and veritable history. In the Middle Ages the legend seems to have been half-forgotten until revived by the discovery of America. It helped to form the Utopia of Sir Thomas More and the New Atlantis of Bacon, although probably neither of those great men were at all imposed upon by the fiction. It was most prolific in the seventeenth or in the early part of the eighteenth century, when the human mind, seeking for Utopias or inventing them, was glad to escape out of the dulness of the present into the romance of the past or some ideal of the future. The later forms of such narratives contained features taken from the Edda, as well as from the Old and New Testament; also from the tales of missionaries and the experiences of travellers and of colonists.

The various opinions respecting the Island of Atlantis have no interest for us except in so far as they illustrate the extravagances of which men are capable. But this is a real interest and a serious lesson, if we remember that now as formerly the human mind is liable to be imposed upon by the illusions of the past, which are ever assuming some new form.

When we have shaken off the rubbish of ages, there remain one or two questions of which the investigation has a permanent value:--

1. Did Plato derive the legend of Atlantis from an Egyptian source? It may be replied that there is no such legend in any writer previous to Plato; neither in Homer, nor in Pindar, nor in Herodotus is there any mention of an Island of Atlantis, nor any reference to it in Aristotle, nor any citation of an earlier writer by a later one in which it is to be found. Nor have any traces been discovered hitherto in Egyptian monuments of a connexion between Greece and Egypt older than the eighth or ninth century B.C. It is true that Proclus, writing in the fifth century after Christ, tells us of stones and columns in Egypt on which the history of the Island of Atlantis was engraved. The statement may be false--there are similar tales about columns set up 'by the Canaanites whom Joshua drove out' (Procop.); but even if true, it would only show that the legend, 800 years after the time of Plato, had been transferred to Egypt, and inscribed, not, like other forgeries, in books, but on stone. Probably in the Alexandrian age, when Egypt had ceased to have a history and began to appropriate the legends of other nations, many such monuments were to be found of events which had become famous in that or other countries. The oldest witness to the story is said to be Crantor, a Stoic philosopher who lived a generation later than Plato, and therefore may have borrowed it from him. The statement is found in Proclus; but we require better assurance than Proclus can give us before we accept this or any other statement which he makes.

Secondly, passing from the external to the internal evidence, we may remark
that the story is far more likely to have been invented by Plato than to have been brought by Solon from Egypt. That is another part of his legend which Plato also seeks to impose upon us. The verisimilitude which he has given to the tale is a further reason for suspecting it; for he could easily 'invent Egyptian or any other tales' (Phaedrus). Are not the words, 'The truth of the story is a great advantage,' if we read between the lines, an indication of the fiction? It is only a legend that Solon went to Egypt, and if he did he could not have conversed with Egyptian priests or have read records in their temples. The truth is that the introduction is a mosaic work of small touches which, partly by their minuteness, and also by their seeming probability, win the confidence of the reader. Who would desire better evidence than that of Critias, who had heard the narrative in youth when the memory is strongest at the age of ten from his grandfather Critias, an old man of ninety, who in turn had heard it from Solon himself? Is not the famous expression--'You Hellenes are ever children and there is no knowledge among you hoary with age,' really a compliment to the Athenians who are described in these words as 'ever young'? And is the thought expressed in them to be attributed to the learning of the Egyptian priest, and not rather to the genius of Plato? Or when the Egyptian says--'Hereafter at our leisure we will take up the written documents and examine in detail the exact truth about these things'--what is this but a literary trick by which Plato sets off his narrative? Could any war between Athens and the Island of Atlantis have really coincided with the struggle between the Greeks and Persians, as is sufficiently hinted though not expressly stated in the narrative of Plato? And whence came the tradition to Egypt? or in what does the story consist except in the war between the two rival powers and the submersion of both of them? And how was the tale transferred to the poem of Solon? 'It is not improbable,' says Mr. Grote, 'that Solon did leave an unfinished Egyptian poem' (Plato). But are probabilities for which there is not a tittle of evidence, and which are without any parallel, to be deemed worthy of attention by the critic? How came the poem of Solon to disappear in antiquity? or why did Plato, if the whole narrative was known to him, break off almost at the beginning of it?

While therefore admiring the diligence and erudition of M. Martin, we cannot for a moment suppose that the tale was told to Solon by an Egyptian priest, nor can we believe that Solon wrote a poem upon the theme which was thus suggested to him--a poem which disappeared in antiquity; or that the Island of Atlantis or the antediluvian Athens ever had any existence except in the imagination of Plato. Martin is of opinion that Plato would have been terrified if he could have foreseen the endless fancies to which his Island of Atlantis has given occasion. Rather he would have been infinitely amused if he could have known that his gift of invention would have deceived M. Martin himself into the belief that the tradition was brought from Egypt by Solon and made the subject of a poem by him. M. Martin may also be gently censured for citing without sufficient
discrimination ancient authors having very different degrees of authority and value.

2. It is an interesting and not unimportant question which is touched upon by Martin, whether the Atlantis of Plato in any degree held out a guiding light to the early navigators. He is inclined to think that there is no real connexion between them. But surely the discovery of the New World was preceded by a prophetic anticipation of it, which, like the hope of a Messiah, was entering into the hearts of men? And this hope was nursed by ancient tradition, which had found expression from time to time in the celebrated lines of Seneca and in many other places. This tradition was sustained by the great authority of Plato, and therefore the legend of the Island of Atlantis, though not closely connected with the voyages of the early navigators, may be truly said to have contributed indirectly to the great discovery.

The Timaeus of Plato, like the Protagoras and several portions of the Phaedrus and Republic, was translated by Cicero into Latin. About a fourth, comprehending with lacunae the first portion of the dialogue, is preserved in several MSS. These generally agree, and therefore may be supposed to be derived from a single original. The version is very faithful, and is a remarkable monument of Cicero's skill in managing the difficult and intractable Greek. In his treatise De Natura Deorum, he also refers to the Timaeus, which, speaking in the person of Velleius the Epicurean, he severely criticises.

The commentary of Proclus on the Timaeus is a wonderful monument of the silliness and prolixity of the Alexandrian Age. It extends to about thirty pages of the book, and is thirty times the length of the original. It is surprising that this voluminous work should have found a translator (Thomas Taylor, a kindred spirit, who was himself a Neo-Platonist, after the fashion, not of the fifth or sixteenth, but of the nineteenth century A.D.). The commentary is of little or no value, either in a philosophical or philological point of view. The writer is unable to explain particular passages in any precise manner, and he is equally incapable of grasping the whole. He does not take words in their simple meaning or sentences in their natural connexion. He is thinking, not of the context in Plato, but of the contemporary Pythagorean philosophers and their wordy strife. He finds nothing in the text which he does not bring to it. He is full of Porphyry, Iamblichus and Plotinus, of misapplied logic, of misunderstood grammar, and of the Orphic theology.

Although such a work can contribute little or nothing to the understanding of Plato, it throws an interesting light on the Alexandrian times; it realizes how a philosophy made up of words only may create a deep and widespread enthusiasm, how the forms of logic and rhetoric may usurp the place of reason and truth, how all philosophies grow faded and discoloured,
and are patched and made up again like worn-out garments, and retain only a second-hand existence. He who would study this degeneracy of philosophy and of the Greek mind in the original cannot do better than devote a few of his days and nights to the commentary of Proclus on the Timaeus.

A very different account must be given of the short work entitled 'Timaeus Locrus,' which is a brief but clear analysis of the Timaeus of Plato, omitting the introduction or dialogue and making a few small additions. It does not allude to the original from which it is taken; it is quite free from mysticism and Neo-Platonism. In length it does not exceed a fifth part of the Timaeus. It is written in the Doric dialect, and contains several words which do not occur in classical Greek. No other indication of its date, except this uncertain one of language, appears in it. In several places the writer has simplified the language of Plato, in a few others he has embellished and exaggerated it. He generally preserves the thought of the original, but does not copy the words. On the whole this little tract faithfully reflects the meaning and spirit of the Timaeus.

>From the garden of the Timaeus, as from the other dialogues of Plato, we may still gather a few flowers and present them at parting to the reader. There is nothing in Plato grander and simpler than the conversation between Solon and the Egyptian priest, in which the youthfulness of Hellas is contrasted with the antiquity of Egypt. Here are to be found the famous words, 'O Solon, Solon, you Hellenes are ever young, and there is not an old man among you'--which may be compared to the lively saying of Hegel, that 'Greek history began with the youth Achilles and left off with the youth Alexander.' The numerous arts of verisimilitude by which Plato insinuates into the mind of the reader the truth of his narrative have been already referred to. Here occur a sentence or two not wanting in Platonic irony (Greek--a word to the wise). 'To know or tell the origin of the other divinities is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the Gods--that is what they say--and they must surely have known their own ancestors. How can we doubt the word of the children of the Gods? Although they give no probable or certain proofs, still, as they declare that they are speaking of what took place in their own family, we must conform to custom and believe them.' 'Our creators well knew that women and other animals would some day be framed out of men, and they further knew that many animals would require the use of nails for many purposes; wherefore they fashioned in men at their first creation the rudiments of nails.' Or once more, let us reflect on two serious passages in which the order of the world is supposed to find a place in the human soul and to infuse harmony into it. 'The soul, when touching anything that has essence, whether dispersed in parts or undivided, is stirred through all her powers to declare the sameness or difference of that thing and some other; and to what individuals are related, and by what affected, in what way and how and when, both in the world of generation and in the world of immutable being.
And when reason, which works with equal truth, whether she be in the circle of the diverse or of the same,--in voiceless silence holding her onward course in the sphere of the self-moving,--when reason, I say, is hovering around the sensible world, and when the circle of the diverse also moving truly imparts the intimations of sense to the whole soul, then arise opinions and beliefs sure and certain. But when reason is concerned with the rational, and the circle of the same moving smoothly declares it, then intelligence and knowledge are necessarily perfected; where, proceeding in a similar path of contemplation, he supposes the inward and the outer world mutually to imply each other. 'God invented and gave us sight to the end that we might behold the courses of intelligence in the heaven, and apply them to the courses of our own intelligence which are akin to them, the unperturbed to the perturbed; and that we, learning them and partaking of the natural truth of reason, might imitate the absolutely unerring courses of God and regulate our own vagaries.' Or let us weigh carefully some other profound thoughts, such as the following. 'He who neglects education walks lame to the end of his life, and returns imperfect and good for nothing to the world below.' 'The father and maker of all this universe is past finding out; and even if we found him, to tell of him to all men would be impossible.' 'Let me tell you then why the Creator made this world of generation. He was good, and the good can never have jealousy of anything. And being free from jealousy, he desired that all things should be as like himself as they could be. This is in the truest sense the origin of creation and of the world, as we shall do well in believing on the testimony of wise men: God desired that all things should be good and nothing bad, so far as this was attainable.' This is the leading thought in the Timaeus, just as the IDEA of Good is the leading thought of the Republic, the one expression describing the personal, the other the impersonal Good or God, differing in form rather than in substance, and both equally implying to the mind of Plato a divine reality. The slight touch, perhaps ironical, contained in the words, 'as we shall do well in believing on the testimony of wise men,' is very characteristic of Plato.

TIMAEUS.

PERSONS OF THE DIALOGUE: Socrates, Critias, Timaeus, Hermocrates.

SOCRATES: One, two, three; but where, my dear Timaeus, is the fourth of those who were yesterday my guests and are to be my entertainers to-day?

TIMAEUS: He has been taken ill, Socrates; for he would not willingly have been absent from this gathering.
SOCRATES: Then, if he is not coming, you and the two others must supply his place.

TIMAEUS: Certainly, and we will do all that we can; having been handsomely entertained by you yesterday, those of us who remain should be only too glad to return your hospitality.

SOCRATES: Do you remember what were the points of which I required you to speak?

TIMAEUS: We remember some of them, and you will be here to remind us of anything which we have forgotten: or rather, if we are not troubling you, will you briefly recapitulate the whole, and then the particulars will be more firmly fixed in our memories?

SOCRATES: To be sure I will: the chief theme of my yesterday's discourse was the State--how constituted and of what citizens composed it would seem likely to be most perfect.

TIMAEUS: Yes, Socrates; and what you said of it was very much to our mind.

SOCRATES: Did we not begin by separating the husbandmen and the artisans from the class of defenders of the State?

TIMAEUS: Yes.

SOCRATES: And when we had given to each one that single employment and particular art which was suited to his nature, we spoke of those who were intended to be our warriors, and said that they were to be guardians of the city against attacks from within as well as from without, and to have no other employment; they were to be merciful in judging their subjects, of whom they were by nature friends, but fierce to their enemies, when they came across them in battle.

TIMAEUS: Exactly.

SOCRATES: We said, if I am not mistaken, that the guardians should be gifted with a temperament in a high degree both passionate and philosophical; and that then they would be as they ought to be, gentle to their friends and fierce with their enemies.

TIMAEUS: Certainly.

SOCRATES: And what did we say of their education? Were they not to be trained in gymnastic, and music, and all other sorts of knowledge which were proper for them?
TIMAEUS: Very true.

SOCRATES: And being thus trained they were not to consider gold or silver or anything else to be their own private property; they were to be like hired troops, receiving pay for keeping guard from those who were protected by them—the pay was to be no more than would suffice for men of simple life; and they were to spend in common, and to live together in the continual practice of virtue, which was to be their sole pursuit.

TIMAEUS: That was also said.

SOCRATES: Neither did we forget the women; of whom we declared, that their natures should be assimilated and brought into harmony with those of the men, and that common pursuits should be assigned to them both in time of war and in their ordinary life.

TIMAEUS: That, again, was as you say.

SOCRATES: And what about the procreation of children? Or rather was not the proposal too singular to be forgotten? for all wives and children were to be in common, to the intent that no one should ever know his own child, but they were to imagine that they were all one family; those who were within a suitable limit of age were to be brothers and sisters, those who were of an elder generation parents and grandparents, and those of a younger, children and grandchildren.

TIMAEUS: Yes, and the proposal is easy to remember, as you say.

SOCRATES: And do you also remember how, with a view of securing as far as we could the best breed, we said that the chief magistrates, male and female, should contrive secretly, by the use of certain lots, so to arrange the nuptial meeting, that the bad of either sex and the good of either sex might pair with their like; and there was to be no quarrelling on this account, for they would imagine that the union was a mere accident, and was to be attributed to the lot?

TIMAEUS: I remember.

SOCRATES: And you remember how we said that the children of the good parents were to be educated, and the children of the bad secretly dispersed among the inferior citizens; and while they were all growing up the rulers were to be on the look-out, and to bring up from below in their turn those who were worthy, and those among themselves who were unworthy were to take the places of those who came up?

TIMAEUS: True.
SOCRATES: Then have I now given you all the heads of our yesterday's discussion? Or is there anything more, my dear Timaeus, which has been omitted?

TIMAEUS: Nothing, Socrates; it was just as you have said.

SOCRATES: I should like, before proceeding further, to tell you how I feel about the State which we have described. I might compare myself to a person who, on beholding beautiful animals either created by the painter's art, or, better still, alive but at rest, is seized with a desire of seeing them in motion or engaged in some struggle or conflict to which their forms appear suited; this is my feeling about the State which we have been describing. There are conflicts which all cities undergo, and I should like to hear some one tell of our own city carrying on a struggle against her neighbours, and how she went out to war in a becoming manner, and when at war showed by the greatness of her actions and the magnanimity of her words in dealing with other cities a result worthy of her training and education. Now I, Critias and Hermocrates, am conscious that I myself should never be able to celebrate the city and her citizens in a befitting manner, and I am not surprised at my own incapacity; to me the wonder is rather that the poets present as well as past are no better—not that I mean to depreciate them; but every one can see that they are a tribe of imitators, and will imitate best and most easily the life in which they have been brought up; while that which is beyond the range of a man's education he finds hard to carry out in action, and still harder adequately to represent in language. I am aware that the Sophists have plenty of brave words and fair conceits, but I am afraid that being only wanderers from one city to another, and having never had habitations of their own, they may fail in their conception of philosophers and statesmen, and may not know what they do and say in time of war, when they are fighting or holding parley with their enemies. And thus people of your class are the only ones remaining who are fitted by nature and education to take part at once both in politics and philosophy. Here is Timaeus, of Locris in Italy, a city which has admirable laws, and who is himself in wealth and rank the equal of any of his fellow-citizens; he has held the most important and honourable offices in his own state, and, as I believe, has scaled the heights of all philosophy; and here is Critias, whom every Athenian knows to be no novice in the matters of which we are speaking; and as to Hermocrates, I am assured by many witnesses that his genius and education qualify him to take part in any speculation of the kind. And therefore yesterday when I saw that you wanted me to describe the formation of the State, I readily assented, being very well aware, that, if you only would, none were better qualified to carry the discussion further, and that when you had engaged our city in a suitable war, you of all men living could best exhibit her playing a fitting part. When I had completed my task, I in return imposed this other task upon you. You conferred together and agreed to entertain me to-day, as I had entertained you, with a feast of
discourse. Here am I in festive array, and no man can be more ready for the promised banquet.

HERMOCRATES: And we too, Socrates, as Timaeus says, will not be wanting in enthusiasm; and there is no excuse for not complying with your request. As soon as we arrived yesterday at the guest-chamber of Critias, with whom we are staying, or rather on our way thither, we talked the matter over, and he told us an ancient tradition, which I wish, Critias, that you would repeat to Socrates, so that he may help us to judge whether it will satisfy his requirements or not.

CRITIAS: I will, if Timaeus, who is our other partner, approves.

TIMAEUS: I quite approve.

CRITIAS: Then listen, Socrates, to a tale which, though strange, is certainly true, having been attested by Solon, who was the wisest of the seven sages. He was a relative and a dear friend of my great-grandfather, Dropides, as he himself says in many passages of his poems; and he told the story to Critias, my grandfather, who remembered and repeated it to us. There were of old, he said, great and marvellous actions of the Athenian city, which have passed into oblivion through lapse of time and the destruction of mankind, and one in particular, greater than all the rest. This we will now rehearse. It will be a fitting monument of our gratitude to you, and a hymn of praise true and worthy of the goddess, on this her day of festival.

SOCRATES: Very good. And what is this ancient famous action of the Athenians, which Critias declared, on the authority of Solon, to be not a mere legend, but an actual fact?

CRITIAS: I will tell an old-world story which I heard from an aged man; for Critias, at the time of telling it, was, as he said, nearly ninety years of age, and I was about ten. Now the day was that day of the Apaturia which is called the Registration of Youth, at which, according to custom, our parents gave prizes for recitations, and the poems of several poets were recited by us boys, and many of us sang the poems of Solon, which at that time had not gone out of fashion. One of our tribe, either because he thought so or to please Critias, said that in his judgment Solon was not only the wisest of men, but also the noblest of poets. The old man, as I very well remember, brightened up at hearing this and said, smiling: Yes, Amynander, if Solon had only, like other poets, made poetry the business of his life, and had completed the tale which he brought with him from Egypt, and had not been compelled, by reason of the factions and troubles which he found stirring in his own country when he came home, to attend to other matters, in my opinion he would have been as famous as Homer or Hesiod, or any poet.
And what was the tale about, Critias? said Amynander.

About the greatest action which the Athenians ever did, and which ought to have been the most famous, but, through the lapse of time and the destruction of the actors, it has not come down to us.

Tell us, said the other, the whole story, and how and from whom Solon heard this veritable tradition.

He replied:--In the Egyptian Delta, at the head of which the river Nile divides, there is a certain district which is called the district of Sais, and the great city of the district is also called Sais, and is the city from which King Amasis came. The citizens have a deity for their foundress; she is called in the Egyptian tongue Neith, and is asserted by them to be the same whom the Hellenes call Athene; they are great lovers of the Athenians, and say that they are in some way related to them. To this city came Solon, and was received there with great honour; he asked the priests who were most skilful in such matters, about antiquity, and made the discovery that neither he nor any other Hellene knew anything worth mentioning about the times of old. On one occasion, wishing to draw them on to speak of antiquity, he began to tell about the most ancient things in our part of the world--about Phoroneus, who is called 'the first man,' and about Niobe; and after the Deluge, of the survival of Deucalion and Pyrrha; and he traced the genealogy of their descendants, and reckoning up the dates, tried to compute how many years ago the events of which he was speaking happened. Thereupon one of the priests, who was of a very great age, said: O Solon, Solon, you Hellenes are never anything but children, and there is not an old man among you. Solon in return asked him what he meant. I mean to say, he replied, that in mind you are all young; there is no old opinion handed down among you by ancient tradition, nor any science which is hoary with age. And I will tell you why. There have been, and will be again, many destructions of mankind arising out of many causes; the greatest have been brought about by the agencies of fire and water, and other lesser ones by innumerable other causes. There is a story, which even you have preserved, that once upon a time Paethon, the son of Helios, having yoked the steeds in his father's chariot, because he was not able to drive them in the path of his father, burnt up all that was upon the earth, and was himself destroyed by a thunderbolt. Now this has the form of a myth, but really signifies a declination of the bodies moving in the heavens around the earth, and a great conflagration of things upon the earth, which recurs after long intervals; at such times those who live upon the mountains and in dry and lofty places are more liable to destruction than those who dwell by rivers or on the seashore. And from this calamity the Nile, who is our never-failing saviour, delivers and preserves us. When, on the other hand, the gods purge the earth with a deluge of water, the survivors in your country are herdsmen and shepherds who dwell on the
mountains, but those who, like you, live in cities are carried by the rivers into the sea. Whereas in this land, neither then nor at any other time, does the water come down from above on the fields, having always a tendency to come up from below; for which reason the traditions preserved here are the most ancient. The fact is, that wherever the extremity of winter frost or of summer sun does not prevent, mankind exist, sometimes in greater, sometimes in lesser numbers. And whatever happened either in your country or in ours, or in any other region of which we are informed--if there were any actions noble or great or in any other way remarkable, they have all been written down by us of old, and are preserved in our temples. Whereas just when you and other nations are beginning to be provided with letters and the other requisites of civilized life, after the usual interval, the stream from heaven, like a pestilence, comes pouring down, and leaves only those of you who are destitute of letters and education; and so you have to begin all over again like children, and know nothing of what happened in ancient times, either among us or among yourselves. As for those genealogies of yours which you just now recounted to us, Solon, they are no better than the tales of children. In the first place you remember a single deluge only, but there were many previous ones; in the next place, you do not know that there formerly dwelt in your land the fairest and noblest race of men which ever lived, and that you and your whole city are descended from a small seed or remnant of them which survived. And this was unknown to you, because, for many generations, the survivors of that destruction died, leaving no written word. For there was a time, Solon, before the great deluge of all, when the city which now is Athens was first in war and in every way the best governed of all cities, is said to have performed the noblest deeds and to have had the fairest constitution of any of which tradition tells, under the face of heaven. Solon marvelled at his words, and earnestly requested the priests to inform him exactly and in order about these former citizens. You are welcome to hear about them, Solon, said the priest, both for your own sake and for that of your city, and above all, for the sake of the goddess who is the common patron and parent and educator of both our cities. She founded your city a thousand years before ours (Observe that Plato gives the same date (9000 years ago) for the foundation of Athens and for the repulse of the invasion from Atlantis (Crit.), receiving from the Earth and Hephaestus the seed of your race, and afterwards she founded ours, of which the constitution is recorded in our sacred registers to be 8000 years old. As touching your citizens of 9000 years ago, I will briefly inform you of their laws and of their most famous action; the exact particulars of the whole we will hereafter go through at our leisure in the sacred registers themselves. If you compare these very laws with ours you will find that many of ours are the counterpart of yours as they were in the olden time. In the first place, there is the caste of priests, which is separated from all the others; next, there are the artificers, who ply their several crafts by themselves and do not intermix; and also there is the class of shepherds and of hunters, as well as that of husbandmen; and you will
observe, too, that the warriors in Egypt are distinct from all the other classes, and are commanded by the law to devote themselves solely to military pursuits; moreover, the weapons which they carry are shields and spears, a style of equipment which the goddess taught of Asiatics first to us, as in your part of the world first to you. Then as to wisdom, do you observe how our law from the very first made a study of the whole order of things, extending even to prophecy and medicine which gives health, out of these divine elements deriving what was needful for human life, and adding every sort of knowledge which was akin to them. All this order and arrangement the goddess first imparted to you when establishing your city; and she chose the spot of earth in which you were born, because she saw that the happy temperament of the seasons in that land would produce the wisest of men. Wherefore the goddess, who was a lover both of war and of wisdom, selected and first of all settled that spot which was the most likely to produce men likest herself. And there you dwelt, having such laws as these and still better ones, and excelled all mankind in all virtue, as became the children and disciples of the gods.

Many great and wonderful deeds are recorded of your state in our histories. But one of them exceeds all the rest in greatness and valour. For these histories tell of a mighty power which unprovoked made an expedition against the whole of Europe and Asia, and to which your city put an end. This power came forth out of the Atlantic Ocean, for in those days the Atlantic was navigable; and there was an island situated in front of the straits which are by you called the Pillars of Heracles; the island was larger than Libya and Asia put together, and was the way to other islands, and from these you might pass to the whole of the opposite continent which surrounded the true ocean; for this sea which is within the Straits of Heracles is only a harbour, having a narrow entrance, but that other is a real sea, and the surrounding land may be most truly called a boundless continent. Now in this island of Atlantis there was a great and wonderful empire which had rule over the whole island and several others, and over parts of the continent, and, furthermore, the men of Atlantis had subjected the parts of Libya within the columns of Heracles as far as Egypt, and of Europe as far as Tyrrenhia. This vast power, gathered into one, endeavoured to subdue at a blow our country and yours and the whole of the region within the straits; and then, Solon, your country shone forth, in the excellence of her virtue and strength, among all mankind. She was pre-eminent in courage and military skill, and was the leader of the Hellenes. And when the rest fell off from her, being compelled to stand alone, after having undergone the very extremity of danger, she defeated and triumphed over the invaders, and preserved from slavery those who were not yet subjugated, and generously liberated all the rest of us who dwell within the pillars. But afterwards there occurred violent earthquakes and floods; and in a single day and night of misfortune all your warlike men in a body sank into the earth, and the island of Atlantis in like manner disappeared in the depths of the sea. For which reason the sea in those
parts is impassable and impenetrable, because there is a shoal of mud in
the way; and this was caused by the subsidence of the island.

I have told you briefly, Socrates, what the aged Critias heard from Solon
and related to us. And when you were speaking yesterday about your city
and citizens, the tale which I have just been repeating to you came into my
mind, and I remarked with astonishment how, by some mysterious coincidence,
you agreed in almost every particular with the narrative of Solon; but I
did not like to speak at the moment. For a long time had elapsed, and I
had forgotten too much; I thought that I must first of all run over the
narrative in my own mind, and then I would speak. And so I readily
assented to your request yesterday, considering that in all such cases the
chief difficulty is to find a tale suitable to our purpose, and that with
such a tale we should be fairly well provided.

And therefore, as Hermocrates has told you, on my way home yesterday I at
once communicated the tale to my companions as I remembered it; and after I
left them, during the night by thinking I recovered nearly the whole of it.
Truly, as is often said, the lessons of our childhood make a wonderful
impression on our memories; for I am not sure that I could remember all the
discourse of yesterday, but I should be much surprised if I forgot any of
these things which I have heard very long ago. I listened at the time with
childlike interest to the old man's narrative; he was very ready to teach
me, and I asked him again and again to repeat his words, so that like an
indelible picture they were branded into my mind. As soon as the day
broke, I rehearsed them as he spoke them to my companions, that they, as
well as myself, might have something to say. And now, Socrates, to make an
end of my preface, I am ready to tell you the whole tale. I will give you
not only the general heads, but the particulars, as they were told to me.
The city and citizens, which you yesterday described to us in fiction, we
will now transfer to the world of reality. It shall be the ancient city of
Athens, and we will suppose that the citizens whom you imagined, were our
veritable ancestors, of whom the priest spoke; they will perfectly
harmonize, and there will be no inconsistency in saying that the citizens
of your republic are these ancient Athenians. Let us divide the subject
among us, and all endeavour according to our ability gracefully to execute
the task which you have imposed upon us. Consider then, Socrates, if this
narrative is suited to the purpose, or whether we should seek for some
other instead.

SOCRATES: And what other, Critias, can we find that will be better than
this, which is natural and suitable to the festival of the goddess, and has
the very great advantage of being a fact and not a fiction? How or where
shall we find another if we abandon this? We cannot, and therefore you
must tell the tale, and good luck to you; and I in return for my
yesterday's discourse will now rest and be a listener.
CRITIAS: Let me proceed to explain to you, Socrates, the order in which we have arranged our entertainment. Our intention is, that Timaeus, who is the most of an astronomer amongst us, and has made the nature of the universe his special study, should speak first, beginning with the generation of the world and going down to the creation of man; next, I am to receive the men whom he has created, and of whom some will have profited by the excellent education which you have given them; and then, in accordance with the tale of Solon, and equally with his law, we will bring them into court and make them citizens, as if they were those very Athenians whom the sacred Egyptian record has recovered from oblivion, and thenceforward we will speak of them as Athenians and fellow-citizens.

SOCRATES: I see that I shall receive in my turn a perfect and splendid feast of reason. And now, Timaeus, you, I suppose, should speak next, after duly calling upon the Gods.

TIMAEUS: All men, Socrates, who have any degree of right feeling, at the beginning of every enterprise, whether small or great, always call upon God. And we, too, who are going to discourse of the nature of the universe, how created or how existing without creation, if we be not altogether out of our wits, must invoke the aid of Gods and Goddesses and pray that our words may be acceptable to them and consistent with themselves. Let this, then, be our invocation of the Gods, to which I add an exhortation of myself to speak in such manner as will be most intelligible to you, and will most accord with my own intent.

First then, in my judgment, we must make a distinction and ask, What is that which always is and has no becoming; and what is that which is always becoming and never is? That which is apprehended by intelligence and reason is always in the same state; but that which is conceived by opinion with the help of sensation and without reason, is always in a process of becoming and perishing and never really is. Now everything that becomes or is created must of necessity be created by some cause, for without a cause nothing can be created. The work of the creator, whenever he looks to the unchangeable and fashions the form and nature of his work after an unchangeable pattern, must necessarily be made fair and perfect; but when he looks to the created only, and uses a created pattern, it is not fair or perfect. Was the heaven then or the world, whether called by this or by any other more appropriate name--assuming the name, I am asking a question which has to be asked at the beginning of an enquiry about anything--was the world, I say, always in existence and without beginning? or created, and had it a beginning? Created, I reply, being visible and tangible and having a body, and therefore sensible; and all sensible things are apprehended by opinion and sense and are in a process of creation and created. Now that which is created must, as we affirm, of necessity be created by a cause. But the father and maker of all this universe is past finding out; and even if we found him, to tell of him to all men would be
impossible. And there is still a question to be asked about him: Which of the patterns had the artificer in view when he made the world--the pattern of the unchangeable, or of that which is created? If the world be indeed fair and the artificer good, it is manifest that he must have looked to that which is eternal; but if what cannot be said without blasphemy is true, then to the created pattern. Every one will see that he must have looked to the eternal; for the world is the fairest of creations and he is the best of causes. And having been created in this way, the world has been framed in the likeness of that which is apprehended by reason and mind and is unchangeable, and must therefore of necessity, if this is admitted, be a copy of something. Now it is all-important that the beginning of everything should be according to nature. And in speaking of the copy and the original we may assume that words are akin to the matter which they describe; when they relate to the lasting and permanent and intelligible, they ought to be lasting and unalterable, and, as far as their nature allows, irrefutable and immovable--nothing less. But when they express only the copy or likeness and not the eternal things themselves, they need only be likely and analogous to the real words. As being is to becoming, so is truth to belief. If then, Socrates, amid the many opinions about the gods and the generation of the universe, we are not able to give notions which are altogether and in every respect exact and consistent with one another, do not be surprised. Enough, if we adduce probabilities as likely as any others; for we must remember that I who am the speaker, and you who are the judges, are only mortal men, and we ought to accept the tale which is probable and enquire no further.

SOCRATES: Excellent, Timaeus; and we will do precisely as you bid us. The prelude is charming, and is already accepted by us--may we beg of you to proceed to the strain?

TIMAEUS: Let me tell you then why the creator made this world of generation. He was good, and the good can never have any jealousy of anything. And being free from jealousy, he desired that all things should be as like himself as they could be. This is in the truest sense the origin of creation and of the world, as we shall do well in believing on the testimony of wise men: God desired that all things should be good and nothing bad, so far as this was attainable. Wherefore also finding the whole visible sphere not at rest, but moving in an irregular and disorderly fashion, out of disorder he brought order, considering that this was in every way better than the other. Now the deeds of the best could never be or have been other than the fairest; and the creator, reflecting on the things which are by nature visible, found that no unintelligent creature taken as a whole was fairer than the intelligent taken as a whole; and that intelligence could not be present in anything which was devoid of soul. For which reason, when he was framing the universe, he put intelligence in soul, and soul in body, that he might be the creator of a work which was by nature fairest and best. Wherefore, using the language of probability, we
may say that the world became a living creature truly endowed with soul and intelligence by the providence of God.

This being supposed, let us proceed to the next stage: In the likeness of what animal did the Creator make the world? It would be an unworthy thing to liken it to any nature which exists as a part only; for nothing can be beautiful which is like any imperfect thing; but let us suppose the world to be the very image of that whole of which all other animals both individually and in their tribes are portions. For the original of the universe contains in itself all intelligible beings, just as this world comprehends us and all other visible creatures. For the Deity, intending to make this world like the fairest and most perfect of intelligible beings, framed one visible animal comprehending within itself all other animals of a kindred nature. Are we right in saying that there is one world, or that they are many and infinite? There must be one only, if the created copy is to accord with the original. For that which includes all other intelligible creatures cannot have a second or companion; in that case there would be need of another living being which would include both, and of which they would be parts, and the likeness would be more truly said to resemble not them, but that other which included them. In order then that the world might be solitary, like the perfect animal, the creator made not two worlds or an infinite number of them; but there is and ever will be one only-begotten and created heaven.

Now that which is created is of necessity corporeal, and also visible and tangible. And nothing is visible where there is no fire, or tangible which has no solidity, and nothing is solid without earth. Wherefore also God in the beginning of creation made the body of the universe to consist of fire and earth. But two things cannot be rightly put together without a third; there must be some bond of union between them. And the fairest bond is that which makes the most complete fusion of itself and the things which it combines; and proportion is best adapted to effect such a union. For whenever in any three numbers, whether cube or square, there is a mean, which is to the last term what the first term is to it; and again, when the mean is to the first term as the last term is to the mean--then the mean becoming first and last, and the first and last both becoming means, they will all of them of necessity come to be the same, and having become the same with one another will be all one. If the universal frame had been created a surface only and having no depth, a single mean would have sufficed to bind together itself and the other terms; but now, as the world must be solid, and solid bodies are always compacted not by one mean but by two, God placed water and air in the mean between fire and earth, and made them to have the same proportion so far as was possible (as fire is to air so is air to water, and as air is to water so is water to earth); and thus he bound and put together a visible and tangible heaven. And for these reasons, and out of such elements which are in number four, the body of the world was created, and it was harmonized by proportion, and therefore has
the spirit of friendship; and having been reconciled to itself, it was indissoluble by the hand of any other than the framer.

Now the creation took up the whole of each of the four elements; for the Creator compounded the world out of all the fire and all the water and all the air and all the earth, leaving no part of any of them nor any power of them outside. His intention was, in the first place, that the animal should be as far as possible a perfect whole and of perfect parts: secondly, that it should be one, leaving no remnants out of which another such world might be created: and also that it should be free from old age and unaffected by disease. Considering that if heat and cold and other powerful forces which unite bodies surround and attack them from without when they are unprepared, they decompose them, and by bringing diseases and old age upon them, make them waste away--for this cause and on these grounds he made the world one whole, having every part entire, and being therefore perfect and not liable to old age and disease. And he gave to the world the figure which was suitable and also natural. Now to the animal which was to comprehend all animals, that figure was suitable which comprehends within itself all other figures. Wherefore he made the world in the form of a globe, round as from a lathe, having its extremes in every direction equidistant from the centre, the most perfect and the most like itself of all figures; for he considered that the like is infinitely fairer than the unlike. This he finished off, making the surface smooth all round for many reasons; in the first place, because the living being had no need of eyes when there was nothing remaining outside him to be seen; nor of ears when there was nothing to be heard; and there was no surrounding atmosphere to be breathed; nor would there have been any use of organs by the help of which he might receive his food or get rid of what he had already digested, since there was nothing which went from him or came into him: for there was nothing beside him. Of design he was created thus, his own waste providing his own food, and all that he did or suffered taking place in and by himself. For the Creator conceived that a being which was self-sufficient would be far more excellent than one which lacked anything; and, as he had no need to take anything or defend himself against any one, the Creator did not think it necessary to bestow upon him hands: nor had he any need of feet, nor of the whole apparatus of walking; but the movement suited to his spherical form was assigned to him, being of all the seven that which is most appropriate to mind and intelligence; and he was made to move in the same manner and on the same spot, within his own limits revolving in a circle. All the other six motions were taken away from him, and he was made not to partake of their deviations. And as this circular movement required no feet, the universe was created without legs and without feet.

Such was the whole plan of the eternal God about the god that was to be, to whom for this reason he gave a body, smooth and even, having a surface in every direction equidistant from the centre, a body entire and perfect, and
formed out of perfect bodies. And in the centre he put the soul, which he diffused throughout the body, making it also to be the exterior environment of it; and he made the universe a circle moving in a circle, one and solitary, yet by reason of its excellence able to converse with itself, and needing no other friendship or acquaintance. Having these purposes in view he created the world a blessed god.

Now God did not make the soul after the body, although we are speaking of them in this order; for having brought them together he would never have allowed that the elder should be ruled by the younger; but this is a random manner of speaking which we have, because somehow we ourselves too are very much under the dominion of chance. Whereas he made the soul in origin and excellence prior to and older than the body, to be the ruler and mistress, of whom the body was to be the subject. And he made her out of the following elements and on this wise: Out of the indivisible and unchangeable, and also out of that which is divisible and has to do with material bodies, he compounded a third and intermediate kind of essence, partaking of the nature of the same and of the other, and this compound he placed accordingly in a mean between the indivisible, and the divisible and material. He took the three elements of the same, the other, and the essence, and mingled them into one form, compressing by force the reluctant and unsociable nature of the other into the same. When he had mingled them with the essence and out of three made one, he again divided this whole into as many portions as was fitting, each portion being a compound of the same, the other, and the essence. And he proceeded to divide after this manner:--First of all, he took away one part of the whole (1), and then he separated a second part which was double the first (2), and then he took away a third part which was half as much again as the second and three times as much as the first (3), and then he took a fourth part which was twice as much as the second (4), and a fifth part which was three times the third (9), and a sixth part which was eight times the first (8), and a seventh part which was twenty-seven times the first (27). After this he filled up the double intervals (i.e. between 1, 2, 4, 8) and the triple (i.e. between 1, 3, 9, 27) cutting off yet other portions from the mixture and placing them in the intervals, so that in each interval there were two kinds of means, the one exceeding and exceeded by equal parts of its extremes (as for example 1, 4/3, 2, in which the mean 4/3 is one-third of 1 more than 1, and one-third of 2 less than 2), the other being that kind of mean which exceeds and is exceeded by an equal number (e.g.

- over 1, 4/3, 3/2, - over 2, 8/3, 3, - over 4, 16/3, 6, - over 8; and
- over 1, 3/2, 2, - over 3, 9/2, 6, - over 9, 27/2, 18, - over 27.)

Where there were intervals of 3/2 and of 4/3 and of 9/8, made by the connecting terms in the former intervals, he filled up all the intervals of 4/3 with the interval of 9/8, leaving a fraction over; and the interval which this fraction expressed was in the ratio of 256 to 243 (e.g.
And thus the whole mixture out of which he cut these portions was all
eexhausted by him. This entire compound he divided lengthways into two
parts, which he joined to one another at the centre like the letter X, and
bent them into a circular form, connecting them with themselves and each
other at the point opposite to their original meeting-point; and,
comprehending them in a uniform revolution upon the same axis, he made the
one the outer and the other the inner circle. Now the motion of the outer
circle he called the motion of the same, and the motion of the inner circle
the motion of the other or diverse. The motion of the same he carried
round by the side (i.e. of the rectangular figure supposed to be inscribed
in the circle of the Same) to the right, and the motion of the diverse
diagonally (i.e. across the rectangular figure from corner to corner) to
the left. And he gave dominion to the motion of the same and like, for
that he left single and undivided; but the inner motion he divided in
six places and made seven unequal circles having their intervals in
ratios of two and three, three of each, and bade the orbits proceed in a
direction opposite to one another; and three (Sun, Mercury, Venus) he made
to move with equal swiftness, and the remaining four (Moon, Saturn, Mars,
Jupiter) to move with unequal swiftness to the three and to one another,
but in due proportion.

Now when the Creator had framed the soul according to his will, he formed
within her the corporeal universe, and brought the two together, and united
them centre to centre. The soul, interfused everywhere from the centre to
the circumference of heaven, of which also she is the external envelopment,
herself turning in herself, began a divine beginning of never-ceasing and
rational life enduring throughout all time. The body of heaven is visible,
but the soul is invisible, and partakes of reason and harmony, and being
made by the best of intellectual and everlasting natures, is the best of
things created. And because she is composed of the same and of the other
and of the essence, these three, and is divided and united in due
proportion, and in her revolutions returns upon herself, the soul, when
touching anything which has essence, whether dispersed in parts or
undivided, is stirred through all her powers, to declare the sameness or
difference of that thing and some other; and to what individuals are
related, and by what affected, and in what way and how and when, both in
the world of generation and in the world of immutable being. And when
reason, which works with equal truth, whether she be in the circle of the
diverse or of the same—in voiceless silence holding her onward course in
the sphere of the self-moving—when reason, I say, is hovering around the
sensible world and when the circle of the diverse also moving truly imparts
the intimations of sense to the whole soul, then arise opinions and beliefs
sure and certain. But when reason is concerned with the rational, and the
circle of the same moving smoothly declares it, then intelligence and
knowledge are necessarily perfected. And if any one affirms that in which these two are found to be other than the soul, he will say the very opposite of the truth.

When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods, he rejoiced, and in his joy determined to make the copy still more like the original; and as this was eternal, he sought to make the universe eternal, so far as might be. Now the nature of the ideal being was everlasting, but to bestow this attribute in its fulness upon a creature was impossible. Wherefore he resolved to have a moving image of eternity, and when he set in order the heaven, he made this image eternal but moving according to number, while eternity itself rests in unity; and this image we call time. For there were no days and nights and months and years before the heaven was created, but when he constructed the heaven he created them also. They are all parts of time, and the past and future are created species of time, which we unconsciously but wrongly transfer to the eternal essence; for we say that he 'was,' he 'is,' he 'will be,' but the truth is that 'is' alone is properly attributed to him, and that 'was' and 'will be' are only to be spoken of becoming in time, for they are motions, but that which is immovably the same cannot become older or younger by time, nor ever did or has become, or hereafter will be, older or younger, nor is subject at all to any of those states which affect moving and sensible things and of which generation is the cause. These are the forms of time, which imitates eternity and revolves according to a law of number. Moreover, when we say that what has become IS become and what becomes IS becoming, and that what will become IS about to become and that the non-existent IS non-existent--all these are inaccurate modes of expression (compare Parmen.). But perhaps this whole subject will be more suitably discussed on some other occasion.

Time, then, and the heaven came into being at the same instant in order that, having been created together, if ever there was to be a dissolution of them, they might be dissolved together. It was framed after the pattern of the eternal nature, that it might resemble this as far as was possible; for the pattern exists from eternity, and the created heaven has been, and is, and will be, in all time. Such was the mind and thought of God in the creation of time. The sun and moon and five other stars, which are called the planets, were created by him in order to distinguish and preserve the numbers of time; and when he had made their several bodies, he placed them in the orbits in which the circle of the other was revolving,—in seven orbits seven stars. First, there was the moon in the orbit nearest the earth, and next the sun, in the second orbit above the earth; then came the morning star and the star sacred to Hermes, moving in orbits which have an equal swiftness with the sun, but in an opposite direction; and this is the reason why the sun and Hermes and Lucifer overtake and are overtaken by each other. To enumerate the places which he assigned to the other stars, and to give all the reasons why he assigned them, although a secondary
matter, would give more trouble than the primary. These things at some future time, when we are at leisure, may have the consideration which they deserve, but not at present.

Now, when all the stars which were necessary to the creation of time had attained a motion suitable to them, and had become living creatures having bodies fastened by vital chains, and learnt their appointed task, moving in the motion of the diverse, which is diagonal, and passes through and is governed by the motion of the same, they revolved, some in a larger and some in a lesser orbit--those which had the lesser orbit revolving faster, and those which had the larger more slowly. Now by reason of the motion of the same, those which revolved fastest appeared to be overtaken by those which moved slower although they really overtook them; for the motion of the same made them all turn in a spiral, and, because some went one way and some another, that which receded most slowly from the sphere of the same, which was the swiftest, appeared to follow it most nearly. That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits, that it might give light to the whole of heaven, and that the animals, as many as nature intended, might participate in number, learning arithmetic from the revolution of the same and the like. Thus then, and for this reason the night and the day were created, being the period of the one most intelligent revolution. And the month is accomplished when the moon has completed her orbit and overtaken the sun, and the year when the sun has completed his own orbit. Mankind, with hardly an exception, have not remarked the periods of the other stars, and they have no name for them, and do not measure them against one another by the help of number, and hence they can scarcely be said to know that their wanderings, being infinite in number and admirable for their variety, make up time. And yet there is no difficulty in seeing that the perfect number of time fulfils the perfect year when all the eight revolutions, having their relative degrees of swiftness, are accomplished together and attain their completion at the same time, measured by the rotation of the same and equally moving. After this manner, and for these reasons, came into being such of the stars as in their heavenly progress received reversals of motion, to the end that the created heaven might imitate the eternal nature, and be as like as possible to the perfect and intelligible animal.

Thus far and until the birth of time the created universe was made in the likeness of the original, but inasmuch as all animals were not yet comprehended therein, it was still unlike. What remained, the creator then proceeded to fashion after the nature of the pattern. Now as in the ideal animal the mind perceives ideas or species of a certain nature and number, he thought that this created animal ought to have species of a like nature and number. There are four such; one of them is the heavenly race of the gods; another, the race of birds whose way is in the air; the third, the
watery species; and the fourth, the pedestrian and land creatures. Of the heavenly and divine, he created the greater part out of fire, that they might be the brightest of all things and fairest to behold, and he fashioned them after the likeness of the universe in the figure of a circle, and made them follow the intelligent motion of the supreme, distributing them over the whole circumference of heaven, which was to be a true cosmos or glorious world spangled with them all over. And he gave to each of them two movements: the first, a movement on the same spot after the same manner, whereby they ever continue to think consistently the same thoughts about the same things; the second, a forward movement, in which they are controlled by the revolution of the same and the like; but by the other five motions they were unaffected, in order that each of them might attain the highest perfection. And for this reason the fixed stars were created, to be divine and eternal animals, ever-abiding and revolving after the same manner and on the same spot; and the other stars which reverse their motion and are subject to deviations of this kind, were created in the manner already described. The earth, which is our nurse, clinging (or 'circling') around the pole which is extended through the universe, he framed to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven. Vain would be the attempt to tell all the figures of them circling as in dance, and their juxtapositions, and the return of them in their revolutions upon themselves, and their approximations, and to say which of these deities in their conjunctions meet, and which of them are in opposition, and in what order they get behind and before one another, and when they are severally eclipsed to our sight and again reappear, sending terrors and intimations of the future to those who cannot calculate their movements--to attempt to tell of all this without a visible representation of the heavenly system would be labour in vain. Enough on this head; and now let what we have said about the nature of the created and visible gods have an end.

To know or tell the origin of the other divinities is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the gods--that is what they say--and they must surely have known their own ancestors. How can we doubt the word of the children of the gods? Although they give no probable or certain proofs, still, as they declare that they are speaking of what took place in their own family, we must conform to custom and believe them. In this manner, then, according to them, the genealogy of these gods is to be received and set forth.

Oceanus and Tethys were the children of Earth and Heaven, and from these sprang Phorcys and Cronos and Rhea, and all that generation; and from Cronos and Rhea sprang Zeus and Here, and all those who are said to be their brethren, and others who were the children of these.

Now, when all of them, both those who visibly appear in their revolutions
as well as those other gods who are of a more retiring nature, had come
into being, the creator of the universe addressed them in these words:
'Gods, children of gods, who are my works, and of whom I am the artificer
and father, my creations are indissoluble, if so I will. All that is bound
may be undone, but only an evil being would wish to undo that which is
harmonious and happy. Wherefore, since ye are but creatures, ye are not
altogether immortal and indissoluble, but ye shall certainly not be
dissolved, nor be liable to the fate of death, having in my will a greater
and mightier bond than those with which ye were bound at the time of your
birth. And now listen to my instructions:--Three tribes of mortal beings
remain to be created--without them the universe will be incomplete, for it
will not contain every kind of animal which it ought to contain, if it is
to be perfect. On the other hand, if they were created by me and received
life at my hands, they would be on an equality with the gods. In order
then that they may be mortal, and that this universe may be truly
universal, do ye, according to your natures, betake yourselves to the
formation of animals, imitating the power which was shown by me in creating
you. The part of them worthy of the name immortal, which is called divine
and is the guiding principle of those who are willing to follow justice and
you--of that divine part I will myself sow the seed, and having made a
beginning, I will hand the work over to you. And do ye then interweave the
mortal with the immortal, and make and beget living creatures, and give
them food, and make them to grow, and receive them again in death.'

Thus spake, and once more into the cup in which he had previously
mingled the soul of the universe he poured the remains of the elements, and
mingled them in much the same manner; they were not, however, pure as
before, but diluted to the second and third degree. And having made it he
divided the whole mixture into souls equal in number to the stars, and
assigned each soul to a star; and having there placed them as in a chariot,
he showed them the nature of the universe, and declared to them the laws of
destiny, according to which their first birth would be one and the same for
all,--no one should suffer a disadvantage at his hands; they were to be
sown in the instruments of time severally adapted to them, and to come
forth the most religious of animals; and as human nature was of two kinds,
the superior race would hereafter be called man. Now, when they should be
implanted in bodies by necessity, and be always gaining or losing some part
of their bodily substance, then in the first place it would be necessary
that they should all have in them one and the same faculty of sensation,
arising out of irresistible impressions; in the second place, they must
have love, in which pleasure and pain mingle; also fear and anger, and the
feelings which are akin or opposite to them; if they conquered these they
would live righteously, and if they were conquered by them, unrighteously.
He who lived well during his appointed time was to return and dwell in his
native star, and there he would have a blessed and congenial existence.
But if he failed in attaining this, at the second birth he would pass into
a woman, and if, when in that state of being, he did not desist from evil,
he would continually be changed into some brute who resembled him in the evil nature which he had acquired, and would not cease from his toils and transformations until he followed the revolution of the same and the like within him, and overcame by the help of reason the turbulent and irrational mob of later accretions, made up of fire and air and water and earth, and returned to the form of his first and better state. Having given all these laws to his creatures, that he might be guiltless of future evil in any of them, the creator sowed some of them in the earth, and some in the moon, and some in the other instruments of time; and when he had sown them he committed to the younger gods the fashioning of their mortal bodies, and desired them to furnish what was still lacking to the human soul, and having made all the suitable additions, to rule over them, and to pilot the mortal animal in the best and wisest manner which they could, and avert from him all but self-inflicted evils.

When the creator had made all these ordinances he remained in his own accustomed nature, and his children heard and were obedient to their father's word, and receiving from him the immortal principle of a mortal creature, in imitation of their own creator they borrowed portions of fire, and earth, and water, and air from the world, which were hereafter to be restored--these they took and welded them together, not with the indissoluble chains by which they were themselves bound, but with little pegs too small to be visible, making up out of all the four elements each separate body, and fastening the courses of the immortal soul in a body which was in a state of perpetual influx and efflux. Now these courses, detained as in a vast river, neither overcame nor were overcome; but were hurrying and hurried to and fro, so that the whole animal was moved and progressed, irregularly however and irrationally and anyhow, in all the six directions of motion, wandering backwards and forwards, and right and left, and up and down, and in all the six directions. For great as was the advancing and retiring flood which provided nourishment, the affections produced by external contact caused still greater tumult--when the body of any one met and came into collision with some external fire, or with the solid earth or the gliding waters, or was caught in the tempest borne on the air, and the motions produced by any of these impulses were carried through the body to the soul. All such motions have consequently received the general name of 'sensations,' which they still retain. And they did in fact at that time create a very great and mighty movement; uniting with the ever-flowing stream in stirring up and violently shaking the courses of the soul, they completely stopped the revolution of the same by their opposing current, and hindered it from predominating and advancing; and they so disturbed the nature of the other or diverse, that the three double intervals (i.e. between 1, 2, 4, 8), and the three triple intervals (i.e. between 1, 3, 9, 27), together with the mean terms and connecting links which are expressed by the ratios of 3:2, and 4:3, and of 9:8--these, although they cannot be wholly undone except by him who united them, were twisted by them in all sorts of ways, and the circles were broken and
disordered in every possible manner, so that when they moved they were tumbling to pieces, and moved irrationally, at one time in a reverse direction, and then again obliquely, and then upside down, as you might imagine a person who is upside down and has his head leaning upon the ground and his feet up against something in the air; and when he is in such a position, both he and the spectator fancy that the right of either is his left, and the left right. If, when powerfully experiencing these and similar effects, the revolutions of the soul come in contact with some external thing, either of the class of the same or of the other, they speak of the same or of the other in a manner the very opposite of the truth; and they become false and foolish, and there is no course or revolution in them which has a guiding or directing power; and if again any sensations enter in violently from without and drag after them the whole vessel of the soul, then the courses of the soul, though they seem to conquer, are really conquered.

And by reason of all these affections, the soul, when encased in a mortal body, now, as in the beginning, is at first without intelligence; but when the flood of growth and nutriment abates, and the courses of the soul, calming down, go their own way and become steadier as time goes on, then the several circles return to their natural form, and their revolutions are corrected, and they call the same and the other by their right names, and make the possessor of them to become a rational being. And if these combine in him with any true nurture or education, he attains the fulness and health of the perfect man, and escapes the worst disease of all; but if he neglects education he walks lame to the end of his life, and returns imperfect and good for nothing to the world below. This, however, is a later stage; at present we must treat more exactly the subject before us, which involves a preliminary enquiry into the generation of the body and its members, and as to how the soul was created—for what reason and by what providence of the gods; and holding fast to probability, we must pursue our way.

First, then, the gods, imitating the spherical shape of the universe, enclosed the two divine courses in a spherical body, that, namely, which we now term the head, being the most divine part of us and the lord of all that is in us: to this the gods, when they put together the body, gave all the other members to be servants, considering that it partook of every sort of motion. In order then that it might not tumble about among the high and deep places of the earth, but might be able to get over the one and out of the other, they provided the body to be its vehicle and means of locomotion; which consequently had length and was furnished with four limbs extended and flexible; these God contrived to be instruments of locomotion with which it might take hold and find support, and so be able to pass through all places, carrying on high the dwelling-place of the most sacred and divine part of us. Such was the origin of legs and hands, which for this reason were attached to every man; and the gods, deeming the front
part of man to be more honourable and more fit to command than the hinder part, made us to move mostly in a forward direction. Therefore man must needs have his front part unlike and distinguished from the rest of his body.

And so in the vessel of the head, they first of all put a face in which they inserted organs to minister in all things to the providence of the soul, and they appointed this part, which has authority, to be by nature the part which is in front. And of the organs they first contrived the eyes to give light, and the principle according to which they were inserted was as follows: So much of fire as would not burn, but gave a gentle light, they formed into a substance akin to the light of every-day life; and the pure fire which is within us and related thereto they made to flow through the eyes in a stream smooth and dense, compressing the whole eye, and especially the centre part, so that it kept out everything of a coarser nature, and allowed to pass only this pure element. When the light of day surrounds the stream of vision, then like falls upon like, and they coalesce, and one body is formed by natural affinity in the line of vision, wherever the light that falls from within meets with an external object. And the whole stream of vision, being similarly affected in virtue of similarity, diffuses the motions of what it touches or what touches it over the whole body, until they reach the soul, causing that perception which we call sight. But when night comes on and the external and kindred fire departs, then the stream of vision is cut off; for going forth to an unlike element it is changed and extinguished, being no longer of one nature with the surrounding atmosphere which is now deprived of fire: and so the eye no longer sees, and we feel disposed to sleep. For when the eyelids, which the gods invented for the preservation of sight, are closed, they keep in the internal fire; and the power of the fire diffuses and equalizes the inward motions; when they are equalized, there is rest, and when the rest is profound, sleep comes over us scarce disturbed by dreams; but where the greater motions still remain, of whatever nature and in whatever locality, they engender corresponding visions in dreams, which are remembered by us when we are awake and in the external world. And now there is no longer any difficulty in understanding the creation of images in mirrors and all smooth and bright surfaces. For from the communion of the internal and external fires, and again from the union of them and their numerous transformations when they meet in the mirror, all these appearances of necessity arise, when the fire from the face coalesces with the fire from the eye on the bright and smooth surface. And right appears left and left right, because the visual rays come into contact with the rays emitted by the object in a manner contrary to the usual mode of meeting; but the right appears right, and the left left, when the position of one of the two concurring lights is reversed; and this happens when the mirror is concave and its smooth surface repels the right stream of vision to the left side, and the left to the right (He is speaking of two kinds of mirrors, first the plane, secondly the concave; and the latter is supposed to be placed,
first horizontally, and then vertically.). Or if the mirror be turned vertically, then the concavity makes the countenance appear to be all upside down, and the lower rays are driven upwards and the upper downwards.

All these are to be reckoned among the second and co-operative causes which God, carrying into execution the idea of the best as far as possible, uses as his ministers. They are thought by most men not to be the second, but the prime causes of all things, because they freeze and heat, and contract and dilate, and the like. But they are not so, for they are incapable of reason or intellect; the only being which can properly have mind is the invisible soul, whereas fire and water, and earth and air, are all of them visible bodies. The lover of intellect and knowledge ought to explore causes of intelligent nature first of all, and, secondly, of those things which, being moved by others, are compelled to move others. And this is what we too must do. Both kinds of causes should be acknowledged by us, but a distinction should be made between those which are endowed with mind and are the workers of things fair and good, and those which are deprived of intelligence and always produce chance effects without order or design.

Of the second or co-operative causes of sight, which help to give to the eyes the power which they now possess, enough has been said. I will therefore now proceed to speak of the higher use and purpose for which God has given them to us. The sight in my opinion is the source of the greatest benefit to us, for had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the months and the revolutions of the years, have created number, and have given us a conception of time, and the power of enquiring about the nature of the universe; and from this source we have derived philosophy, than which no greater good ever was or will be given by the gods to mortal man. This is the greatest boon of sight: and of the lesser benefits why should I speak? even the ordinary man if he were deprived of them would bewail his loss, but in vain. Thus much let me say however: God invented and gave us sight to the end that we might behold the courses of intelligence in the heaven, and apply them to the courses of our own intelligence which are akin to them, the unperturbed to the perturbed; and that we, learning them and partaking of the natural truth of reason, might imitate the absolutely unerring courses of God and regulate our own vagaries. The same may be affirmed of speech and hearing: they have been given by the gods to the same end and for a like reason. For this is the principal end of speech, whereto it most contributes. Moreover, so much of music as is adapted to the sound of the voice and to the sense of hearing is granted to us for the sake of harmony; and harmony, which has motions akin to the revolutions of our souls, is not regarded by the intelligent votary of the Muses as given by them with a view to irrational pleasure, which is deemed to be the purpose of it in our day, but as meant to correct any discord which may have arisen in the courses of the soul, and to be our ally in bringing her into harmony and agreement with herself; and rhythm too was given by them
for the same reason, on account of the irregular and graceless ways which prevail among mankind generally, and to help us against them.

Thus far in what we have been saying, with small exception, the works of intelligence have been set forth; and now we must place by the side of them in our discourse the things which come into being through necessity--for the creation is mixed, being made up of necessity and mind. Mind, the ruling power, persuaded necessity to bring the greater part of created things to perfection, and thus and after this manner in the beginning, when the influence of reason got the better of necessity, the universe was created. But if a person will truly tell of the way in which the work was accomplished, he must include the other influence of the variable cause as well. Wherefore, we must return again and find another suitable beginning, as about the former matters, so also about these. To which end we must consider the nature of fire, and water, and air, and earth, such as they were prior to the creation of the heaven, and what was happening to them in this previous state; for no one has as yet explained the manner of their generation, but we speak of fire and the rest of them, whatever they mean, as though men knew their natures, and we maintain them to be the first principles and letters or elements of the whole, when they cannot reasonably be compared by a man of any sense even to syllables or first compounds. And let me say thus much: I will not now speak of the first principle or principles of all things, or by whatever name they are to be called, for this reason--because it is difficult to set forth my opinion according to the method of discussion which we are at present employing. Do not imagine, any more than I can bring myself to imagine, that I should be right in undertaking so great and difficult a task. Remembering what I said at first about probability, I will do my best to give as probable an explanation as any other--or rather, more probable; and I will first go back to the beginning and try to speak of each thing and of all. Once more, then, at the commencement of my discourse, I call upon God, and beg him to be our saviour out of a strange and unwonted enquiry, and to bring us to the haven of probability. So now let us begin again.

This new beginning of our discussion of the universe requires a fuller division than the former; for then we made two classes, now a third must be revealed. The two sufficed for the former discussion: one, which we assumed, was a pattern intelligible and always the same; and the second was only the imitation of the pattern, generated and visible. There is also a third kind which we did not distinguish at the time, conceiving that the two would be enough. But now the argument seems to require that we should set forth in words another kind, which is difficult of explanation and dimly seen. What nature are we to attribute to this new kind of being? We reply, that it is the receptacle, and in a manner the nurse, of all generation. I have spoken the truth; but I must express myself in clearer language, and this will be an arduous task for many reasons, and in particular because I must first raise questions concerning fire and the
other elements, and determine what each of them is; for to say, with any probability or certitude, which of them should be called water rather than fire, and which should be called any of them rather than all or some one of them, is a difficult matter. How, then, shall we settle this point, and what questions about the elements may be fairly raised?

In the first place, we see that what we just now called water, by condensation, I suppose, becomes stone and earth; and this same element, when melted and dispersed, passes into vapour and air. Air, again, when inflamed, becomes fire; and again fire, when condensed and extinguished, passes once more into the form of air; and once more, air, when collected and condensed, produces cloud and mist; and from these, when still more compressed, comes flowing water, and from water comes earth and stones once more; and thus generation appears to be transmitted from one to the other in a circle. Thus, then, as the several elements never present themselves in the same form, how can any one have the assurance to assert positively that any of them, whatever it may be, is one thing rather than another? No one can. But much the safest plan is to speak of them as follows:--

Anything which we see to be continually changing, as, for example, fire, we must not call 'this' or 'that,' but rather say that it is 'of such a nature'; nor let us speak of water as 'this'; but always as 'such'; nor must we imply that there is any stability in any of those things which we indicate by the use of the words 'this' and 'that,' supposing ourselves to signify something thereby; for they are too volatile to be detained in any such expressions as 'this,' or 'that,' or 'relative to this,' or any other mode of speaking which represents them as permanent. We ought not to apply 'this' to any of them, but rather the word 'such'; which expresses the similar principle circulating in each and all of them; for example, that should be called 'fire' which is of such a nature always, and so of everything that has generation. That in which the elements severally grow up, and appear, and decay, is alone to be called by the name 'this' or 'that'; but that which is of a certain nature, hot or white, or anything which admits of opposite qualities, and all things that are compounded of them, ought not to be so denominated. Let me make another attempt to explain my meaning more clearly. Suppose a person to make all kinds of figures of gold and to be always transmuting one form into all the rest;--somebody points to one of them and asks what it is. By far the safest and truest answer is, That is gold; and not to call the triangle or any other figures which are formed in the gold 'these,' as though they had existence, since they are in process of change while he is making the assertion; but if the questioner be willing to take the safe and indefinite expression, 'such,' we should be satisfied. And the same argument applies to the universal nature which receives all bodies--that must be always called the same; for, while receiving all things, she never departs at all from her own nature, and never in any way, or at any time, assumes a form like that of any of the things which enter into her; she is the natural recipient of all impressions, and is stirred and informed by them, and appears different
from time to time by reason of them. But the forms which enter into and go out of her are the likenesses of real existences modelled after their patterns in a wonderful and inexplicable manner, which we will hereafter investigate. For the present we have only to conceive of three natures: first, that which is in process of generation; secondly, that in which the generation takes place; and thirdly, that of which the thing generated is a resemblance. And we may liken the receiving principle to a mother, and the source or spring to a father, and the intermediate nature to a child; and may remark further, that if the model is to take every variety of form, then the matter in which the model is fashioned will not be duly prepared, unless it is formless, and free from the impress of any of those shapes which it is hereafter to receive from without. For if the matter were like any of the supervening forms, then whenever any opposite or entirely different nature was stamped upon its surface, it would take the impression badly, because it would intrude its own shape. Wherefore, that which is to receive all forms should have no form; as in making perfumes they first contrive that the liquid substance which is to receive the scent shall be as inodorous as possible; or as those who wish to impress figures on soft substances do not allow any previous impression to remain, but begin by making the surface as even and smooth as possible. In the same way that which is to receive perpetually and through its whole extent the resemblances of all eternal beings ought to be devoid of any particular form. Wherefore, the mother and receptacle of all created and visible and in any way sensible things, is not to be termed earth, or air, or fire, or water, or any of their compounds or any of the elements from which these are derived, but is an invisible and formless being which receives all things and in some mysterious way partakes of the intelligible, and is most incomprehensible. In saying this we shall not be far wrong; as far, however, as we can attain to a knowledge of her from the previous considerations, we may truly say that fire is that part of her nature which from time to time is inflamed, and water that which is moistened, and that the mother substance becomes earth and air, in so far as she receives the impressions of them.

Let us consider this question more precisely. Is there any self-existent fire? and do all those things which we call self-existent exist? or are only those things which we see, or in some way perceive through the bodily organs, truly existent, and nothing whatever besides them? And is all that which we call an intelligible essence nothing at all, and only a name? Here is a question which we must not leave unexamined or undetermined, nor must we affirm too confidently that there can be no decision; neither must we interpolate in our present long discourse a digression equally long, but if it is possible to set forth a great principle in a few words, that is just what we want.

Thus I state my view:--If mind and true opinion are two distinct classes, then I say that there certainly are these self-existent ideas unperceived
by sense, and apprehended only by the mind; if, however, as some say, true opinion differs in no respect from mind, then everything that we perceive through the body is to be regarded as most real and certain. But we must affirm them to be distinct, for they have a distinct origin and are of a different nature; the one is implanted in us by instruction, the other by persuasion; the one is always accompanied by true reason, the other is without reason; the one cannot be overcome by persuasion, but the other can: and lastly, every man may be said to share in true opinion, but mind is the attribute of the gods and of very few men. Wherefore also we must acknowledge that there is one kind of being which is always the same, uncreated and indestructible, never receiving anything into itself from without, nor itself going out to any other, but invisible and imperceptible by any sense, and of which the contemplation is granted to intelligence only. And there is another nature of the same name with it, and like to it, perceived by sense, created, always in motion, becoming in place and again vanishing out of place, which is apprehended by opinion and sense. And there is a third nature, which is space, and is eternal, and admits not of destruction and provides a home for all created things, and is apprehended without the help of sense, by a kind of spurious reason, and is hardly real; which we beholding as in a dream, say of all existence that it must of necessity be in some place and occupy a space, but that what is neither in heaven nor in earth has no existence. Of these and other things of the same kind, relating to the true and waking reality of nature, we have only this dreamlike sense, and we are unable to cast off sleep and determine the truth about them. For an image, since the reality, after which it is modelled, does not belong to it, and it exists ever as the fleeting shadow of some other, must be inferred to be in another (i.e. in space), grasping existence in some way or other, or it could not be at all. But true and exact reason, vindicating the nature of true being, maintains that while two things (i.e. the image and space) are different they cannot exist one of them in the other and so be one and also two at the same time.

Thus have I concisely given the result of my thoughts; and my verdict is that being and space and generation, these three, existed in their three ways before the heaven; and that the nurse of generation, moistened by water and inflamed by fire, and receiving the forms of earth and air, and experiencing all the affections which accompany these, presented a strange variety of appearances; and being full of powers which were neither similar nor equally balanced, was never in any part in a state of equipoise, but swaying unevenly hither and thither, was shaken by them, and by its motion again shook them; and the elements when moved were separated and carried continually, some one way, some another; as, when grain is shaken and winnowed by fans and other instruments used in the threshing of corn, the close and heavy particles are borne away and settle in one direction, and the loose and light particles in another. In this manner, the four kinds or elements were then shaken by the receiving vessel, which, moving like a winnowing machine, scattered far away from one another the elements most
unlike, and forced the most similar elements into close contact. Wherefore also the various elements had different places before they were arranged so as to form the universe. At first, they were all without reason and measure. But when the world began to get into order, fire and water and earth and air had only certain faint traces of themselves, and were altogether such as everything might be expected to be in the absence of God; this, I say, was their nature at that time, and God fashioned them by form and number. Let it be consistently maintained by us in all that we say that God made them as far as possible the fairest and best, out of things which were not fair and good. And now I will endeavour to show you the disposition and generation of them by an unaccustomed argument, which I am compelled to use; but I believe that you will be able to follow me, for your education has made you familiar with the methods of science.

In the first place, then, as is evident to all, fire and earth and water and air are bodies. And every sort of body possesses solidity, and every solid must necessarily be contained in planes; and every plane rectilinear figure is composed of triangles; and all triangles are originally of two kinds, both of which are made up of one right and two acute angles; one of them has at either end of the base the half of a divided right angle, having equal sides, while in the other the right angle is divided into unequal parts, having unequal sides. These, then, proceeding by a combination of probability with demonstration, we assume to be the original elements of fire and the other bodies; but the principles which are prior to these God only knows, and he of men who is the friend of God. And next we have to determine what are the four most beautiful bodies which are unlike one another, and of which some are capable of resolution into one another; for having discovered thus much, we shall know the true origin of earth and fire and of the proportionate and intermediate elements. And then we shall not be willing to allow that there are any distinct kinds of visible bodies fairer than these. Wherefore we must endeavour to construct the four forms of bodies which excel in beauty, and then we shall be able to say that we have sufficiently apprehended their nature. Now of the two triangles, the isosceles has one form only; the scalene or unequal-sided has an infinite number. Of the infinite forms we must select the most beautiful, if we are to proceed in due order, and any one who can point out a more beautiful form than ours for the construction of these bodies, shall carry off the palm, not as an enemy, but as a friend. Now, the one which we maintain to be the most beautiful of all the many triangles (and we need not speak of the others) is that of which the double forms a third triangle which is equilateral; the reason of this would be long to tell; he who disproves what we are saying, and shows that we are mistaken, may claim a friendly victory. Then let us choose two triangles, out of which fire and the other elements have been constructed, one isosceles, the other having the square of the longer side equal to three times the square of the lesser side.
Now is the time to explain what was before obscurely said: there was an error in imagining that all the four elements might be generated by and into one another; this, I say, was an erroneous supposition, for there are generated from the triangles which we have selected four kinds—three from the one which has the sides unequal; the fourth alone is framed out of the isosceles triangle. Hence they cannot all be resolved into one another, a great number of small bodies being combined into a few large ones, or the converse. But three of them can be thus resolved and compounded, for they all spring from one, and when the greater bodies are broken up, many small bodies will spring up out of them and take their own proper figures; or, again, when many small bodies are dissolved into their triangles, if they become one, they will form one large mass of another kind. So much for their passage into one another. I have now to speak of their several kinds, and show out of what combinations of numbers each of them was formed. The first will be the simplest and smallest construction, and its element is that triangle which has its hypotenuse twice the lesser side. When two such triangles are joined at the diagonal, and this is repeated three times, and the triangles rest their diagonals and shorter sides on the same point as a centre, a single equilateral triangle is formed out of six triangles; and four equilateral triangles, if put together, make out of every three plane angles one solid angle, being that which is nearest to the most obtuse of plane angles; and out of the combination of these four angles arises the first solid form which distributes into equal and similar parts the whole circle in which it is inscribed. The second species of solid is formed out of the same triangles, which unite as eight equilateral triangles and form one solid angle out of four plane angles, and out of six such angles the second body is completed. And the third body is made up of 120 triangular elements, forming twelve solid angles, each of them included in five plane equilateral triangles, having altogether twenty bases, each of which is an equilateral triangle. The one element (that is, the triangle which has its hypotenuse twice the lesser side) having generated these figures, generated no more; but the isosceles triangle produced the fourth elementary figure, which is compounded of four such triangles, joining their right angles in a centre, and forming one equilateral quadrangle. Six of these united form eight solid angles, each of which is made by the combination of three plane right angles; the figure of the body thus composed is a cube, having six plane quadrangular equilateral bases. There was yet a fifth combination which God used in the delineation of the universe.

Now, he who, duly reflecting on all this, enquires whether the worlds are to be regarded as indefinite or definite in number, will be of opinion that the notion of their indefiniteness is characteristic of a sadly indefinite and ignorant mind. He, however, who raises the question whether they are to be truly regarded as one or five, takes up a more reasonable position. Arguing from probabilities, I am of opinion that they are one; another, regarding the question from another point of view, will be of another mind.
But, leaving this enquiry, let us proceed to distribute the elementary forms, which have now been created in idea, among the four elements.

To earth, then, let us assign the cubical form; for earth is the most immoveable of the four and the most plastic of all bodies, and that which has the most stable bases must of necessity be of such a nature. Now, of the triangles which we assumed at first, that which has two equal sides is by nature more firmly based than that which has unequal sides; and of the compound figures which are formed out of either, the plane equilateral quadrangle has necessarily a more stable basis than the equilateral triangle, both in the whole and in the parts. Wherefore, in assigning this figure to earth, we adhere to probability; and to water we assign that one of the remaining forms which is the least moveable; and the most moveable of them to fire; and to air that which is intermediate. Also we assign the smallest body to fire, and the greatest to water, and the intermediate in size to air; and, again, the acutest body to fire, and the next in acuteness to air, and the third to water. Of all these elements, that which has the fewest bases must necessarily be the most moveable, for it must be the acutest and most penetrating in every way, and also the lightest as being composed of the smallest number of similar particles: and the second body has similar properties in a second degree, and the third body in the third degree. Let it be agreed, then, both according to strict reason and according to probability, that the pyramid is the solid which is the original element and seed of fire; and let us assign the element which was next in the order of generation to air, and the third to water. We must imagine all these to be so small that no single particle of any of the four kinds is seen by us on account of their smallness: but when many of them are collected together their aggregates are seen. And the ratios of their numbers, motions, and other properties, everywhere God, as far as necessity allowed or gave consent, has exactly perfected, and harmonized in due proportion.

>From all that we have just been saying about the elements or kinds, the most probable conclusion is as follows:--earth, when meeting with fire and dissolved by its sharpness, whether the dissolution take place in the fire itself or perhaps in some mass of air or water, is borne hither and thither, until its parts, meeting together and mutually harmonising, again become earth; for they can never take any other form. But water, when divided by fire or by air, on re-forming, may become one part fire and two parts air; and a single volume of air divided becomes two of fire. Again, when a small body of fire is contained in a larger body of air or water or earth, and both are moving, and the fire struggling is overcome and broken up, then two volumes of fire form one volume of air; and when air is overcome and cut up into small pieces, two and a half parts of air are condensed into one part of water. Let us consider the matter in another way. When one of the other elements is fastened upon by fire, and is cut by the sharpness of its angles and sides, it coalesces with the fire, and
then ceases to be cut by them any longer. For no element which is one and the same with itself can be changed by or change another of the same kind and in the same state. But so long as in the process of transition the weaker is fighting against the stronger, the dissolution continues. Again, when a few small particles, enclosed in many larger ones, are in process of decomposition and extinction, they only cease from their tendency to extinction when they consent to pass into the conquering nature, and fire becomes air and air water. But if bodies of another kind go and attack them (i.e. the small particles), the latter continue to be dissolved until, being completely forced back and dispersed, they make their escape to their own kindred, or else, being overcome and assimilated to the conquering power, they remain where they are and dwell with their victors, and from being many become one. And owing to these affections, all things are changing their place, for by the motion of the receiving vessel the bulk of each class is distributed into its proper place; but those things which become unlike themselves and like other things, are hurried by the shaking into the place of the things to which they grow like.

Now all unmixed and primary bodies are produced by such causes as these. As to the subordinate species which are included in the greater kinds, they are to be attributed to the varieties in the structure of the two original triangles. For either structure did not originally produce the triangle of one size only, but some larger and some smaller, and there are as many sizes as there are species of the four elements. Hence when they are mingled with themselves and with one another there is an endless variety of them, which those who would arrive at the probable truth of nature ought duly to consider.

Unless a person comes to an understanding about the nature and conditions of rest and motion, he will meet with many difficulties in the discussion which follows. Something has been said of this matter already, and something more remains to be said, which is, that motion never exists in what is uniform. For to conceive that anything can be moved without a mover is hard or indeed impossible, and equally impossible to conceive that there can be a mover unless there be something which can be moved--motion cannot exist where either of these are wanting, and for these to be uniform is impossible; wherefore we must assign rest to uniformity and motion to the want of uniformity. Now inequality is the cause of the nature which is wanting in uniformity; and of this we have already described the origin. But there still remains the further point--why things when divided after their kinds do not cease to pass through one another and to change their place--which we will now proceed to explain. In the revolution of the universe are comprehended all the four elements, and this being circular and having a tendency to come together, compresses everything and will not allow any place to be left void. Wherefore, also, fire above all things penetrates everywhere, and air next, as being next in rarity of the elements; and the two other elements in like manner penetrate according to
their degrees of rarity. For those things which are composed of the largest particles have the largest void left in their compositions, and those which are composed of the smallest particles have the least. And the contraction caused by the compression thrusts the smaller particles into the interstices of the larger. And thus, when the small parts are placed side by side with the larger, and the lesser divide the greater and the greater unite the lesser, all the elements are borne up and down and hither and thither towards their own places; for the change in the size of each changes its position in space. And these causes generate an inequality which is always maintained, and is continually creating a perpetual motion of the elements in all time.

In the next place we have to consider that there are divers kinds of fire. There are, for example, first, flame; and secondly, those emanations of flame which do not burn but only give light to the eyes; thirdly, the remains of fire, which are seen in red-hot embers after the flame has been extinguished. There are similar differences in the air; of which the brightest part is called the aether, and the most turbid sort mist and darkness; and there are various other nameless kinds which arise from the inequality of the triangles. Water, again, admits in the first place of a division into two kinds; the one liquid and the other fusile. The liquid kind is composed of the small and unequal particles of water; and moves itself and is moved by other bodies owing to the want of uniformity and the shape of its particles; whereas the fusile kind, being formed of large and uniform particles, is more stable than the other, and is heavy and compact by reason of its uniformity. But when fire gets in and dissolves the particles and destroys the uniformity, it has greater mobility, and becoming fluid is thrust forth by the neighbouring air and spreads upon the earth; and this dissolution of the solid masses is called melting, and their spreading out upon the earth flowing. Again, when the fire goes out of the fusile substance, it does not pass into a vacuum, but into the neighbouring air; and the air which is displaced forces together the liquid and still moveable mass into the place which was occupied by the fire, and unites it with itself. Thus compressed the mass resumes its equability, and is again at unity with itself, because the fire which was the author of the inequality has retreated; and this departure of the fire is called cooling, and the coming together which follows upon it is termed congealment. Of all the kinds termed fusile, that which is the densest and is formed out of the finest and most uniform parts is that most precious possession called gold, which is hardened by filtration through rock; this is unique in kind, and has both a glittering and a yellow colour. A shoot of gold, which is so dense as to be very hard, and takes a black colour, is termed adamant. There is also another kind which has parts nearly like gold, and of which there are several species; it is denser than gold, and it contains a small and fine portion of earth, and is therefore harder, yet also lighter because of the great interstices which it has within itself; and this substance, which is one of the bright and denser kinds of water,
when solidified is called copper. There is an alloy of earth mingled with it, which, when the two parts grow old and are disunited, shows itself separately and is called rust. The remaining phenomena of the same kind there will be no difficulty in reasoning out by the method of probabilities. A man may sometimes set aside meditations about eternal things, and for recreation turn to consider the truths of generation which are probable only; he will thus gain a pleasure not to be repented of, and secure for himself while he lives a wise and moderate pastime. Let us grant ourselves this indulgence, and go through the probabilities relating to the same subjects which follow next in order.

Water which is mingled with fire, so much as is fine and liquid (being so called by reason of its motion and the way in which it rolls along the ground), and soft, because its bases give way and are less stable than those of earth, when separated from fire and air and isolated, becomes more uniform, and by their retirement is compressed into itself; and if the condensation be very great, the water above the earth becomes hail, but on the earth, ice; and that which is congealed in a less degree and is only half solid, when above the earth is called snow, and when upon the earth, and condensed from dew, hoar-frost. Then, again, there are the numerous kinds of water which have been mingled with one another, and are distilled through plants which grow in the earth; and this whole class is called by the name of juices or saps. The unequal admixture of these fluids creates a variety of species; most of them are nameless, but four which are of a fiery nature are clearly distinguished and have names. First, there is wine, which warms the soul as well as the body: secondly, there is the oily nature, which is smooth and divides the visual ray, and for this reason is bright and shining and of a glistening appearance, including pitch, the juice of the castor berry, oil itself, and other things of a like kind:thirdly, there is the class of substances which expand the contracted parts of the mouth, until they return to their natural state, and by reason of this property create sweetness;--these are included under the general name of honey: and, lastly, there is a frothy nature, which differs from all juices, having a burning quality which dissolves the flesh; it is called opos (a vegetable acid).

As to the kinds of earth, that which is filtered through water passes into stone in the following manner:--The water which mixes with the earth and is broken up in the process changes into air, and taking this form mounts into its own place. But as there is no surrounding vacuum it thrusts away the neighbouring air, and this being rendered heavy, and, when it is displaced, having been poured around the mass of earth, forcibly compresses it and drives it into the vacant space whence the new air had come up; and the earth when compressed by the air into an indissoluble union with water becomes rock. The fairer sort is that which is made up of equal and similar parts and is transparent; that which has the opposite qualities is inferior. But when all the watery part is suddenly drawn out by fire, a
more brittle substance is formed, to which we give the name of pottery. Sometimes also moisture may remain, and the earth which has been fused by fire becomes, when cool, a certain stone of a black colour. A like separation of the water which had been copiously mingled with them may occur in two substances composed of finer particles of earth and of a briny nature; out of either of them a half-solid-body is then formed, soluble in water—the one, soda, which is used for purging away oil and earth, the other, salt, which harmonizes so well in combinations pleasing to the palate, and is, as the law testifies, a substance dear to the gods. The compounds of earth and water are not soluble by water, but by fire only, and for this reason:—Neither fire nor air melt masses of earth; for their particles, being smaller than the interstices in its structure, have plenty of room to move without forcing their way, and so they leave the earth unmelted and undissolved; but particles of water, which are larger, force a passage, and dissolve and melt the earth. Wherefore earth when not consolidated by force is dissolved by water only; when consolidated, by nothing but fire; for this is the only body which can find an entrance. The cohesion of water again, when very strong, is dissolved by fire only—when weaker, then either by air or fire—the former entering the interstices, and the latter penetrating even the triangles. But nothing can dissolve air, when strongly condensed, which does not reach the elements or triangles; or if not strongly condensed, then only fire can dissolve it. As to bodies composed of earth and water, while the water occupies the vacant interstices of the earth in them which are compressed by force, the particles of water which approach them from without, finding no entrance, flow around the entire mass and leave it undissolved; but the particles of fire, entering into the interstices of the water, do to the water what water does to earth and fire to air (The text seems to be corrupt.), and are the sole causes of the compound body of earth and water liquefying and becoming fluid. Now these bodies are of two kinds; some of them, such as glass and the fusible sort of stones, have less water than they have earth; on the other hand, substances of the nature of wax and incense have more of water entering into their composition.

I have thus shown the various classes of bodies as they are diversified by their forms and combinations and changes into one another, and now I must endeavour to set forth their affections and the causes of them. In the first place, the bodies which I have been describing are necessarily objects of sense. But we have not yet considered the origin of flesh, or what belongs to flesh, or of that part of the soul which is mortal. And these things cannot be adequately explained without also explaining the affections which are concerned with sensation, nor the latter without the former: and yet to explain them together is hardly possible; for which reason we must assume first one or the other and afterwards examine the nature of our hypothesis. In order, then, that the affections may follow regularly after the elements, let us presuppose the existence of body and soul.
First, let us enquire what we mean by saying that fire is hot; and about this we may reason from the dividing or cutting power which it exercises on our bodies. We all of us feel that fire is sharp; and we may further consider the fineness of the sides, and the sharpness of the angles, and the smallness of the particles, and the swiftness of the motion—all this makes the action of fire violent and sharp, so that it cuts whatever it meets. And we must not forget that the original figure of fire (i.e. the pyramid), more than any other form, has a dividing power which cuts our bodies into small pieces (Kepmatizei), and thus naturally produces that affection which we call heat; and hence the origin of the name (thepmos, Kepma). Now, the opposite of this is sufficiently manifest; nevertheless we will not fail to describe it. For the larger particles of moisture which surround the body, entering in and driving out the lesser, but not being able to take their places, compress the moist principle in us; and this from being unequal and disturbed, is forced by them into a state of rest, which is due to equability and compression. But things which are contracted contrary to nature are by nature at war, and force themselves apart; and to this war and convulsion the name of shivering and trembling is given; and the whole affection and the cause of the affection are both termed cold. That is called hard to which our flesh yields, and soft which yields to our flesh; and things are also termed hard and soft relatively to one another. That which yields has a small base; but that which rests on quadrangular bases is firmly posed and belongs to the class which offers the greatest resistance; so too does that which is the most compact and therefore most repellent. The nature of the light and the heavy will be best understood when examined in connexion with our notions of above and below; for it is quite a mistake to suppose that the universe is parted into two regions, separate from and opposite to each other, the one a lower to which all things tend which have any bulk, and an upper to which things only ascend against their will. For as the universe is in the form of a sphere, all the extremities, being equidistant from the centre, are equally extremities, and the centre, which is equidistant from them, is equally to be regarded as the opposite of them all. Such being the nature of the world, when a person says that any of these points is above or below, may he not be justly charged with using an improper expression? For the centre of the world cannot be rightly called either above or below, but is the centre and nothing else; and the circumference is not the centre, and has in no one part of itself a different relation to the centre from what it has in any of the opposite parts. Indeed, when it is in every direction similar, how can one rightly give to it names which imply opposition? For if there were any solid body in equipoise at the centre of the universe, there would be nothing to draw it to this extreme rather than to that, for they are all perfectly similar; and if a person were to go round the world in a circle, he would often, when standing at the antipodes of his former position, speak of the same point as above and below; for, as I was saying just now, to speak of the whole which is in the form of a globe as having
one part above and another below is not like a sensible man. The reason why these names are used, and the circumstances under which they are ordinarily applied by us to the division of the heavens, may be elucidated by the following supposition:--if a person were to stand in that part of the universe which is the appointed place of fire, and where there is the great mass of fire to which fiery bodies gather--if, I say, he were to ascend thither, and, having the power to do this, were to abstract particles of fire and put them in scales and weigh them, and then, raising the balance, were to draw the fire by force towards the uncongenial element of the air, it would be very evident that he could compel the smaller mass more readily than the larger; for when two things are simultaneously raised by one and the same power, the smaller body must necessarily yield to the superior power with less reluctance than the larger; and the larger body is called heavy and said to tend downwards, and the smaller body is called light and said to tend upwards. And we may detect ourselves who are upon the earth doing precisely the same thing. For we often separate earthy natures, and sometimes earth itself, and draw them into the uncongenial element of air by force and contrary to nature, both clinging to their kindred elements. But that which is smaller yields to the impulse given by us towards the dissimilar element more easily than the larger; and so we call the former light, and the place towards which it is impelled we call above, and the contrary state and place we call heavy and below respectively. Now the relations of these must necessarily vary, because the principal masses of the different elements hold opposite positions; for that which is light, heavy, below or above in one place will be found to be and become contrary and transverse and every way diverse in relation to that which is light, heavy, below or above in an opposite place. And about all of them this has to be considered:--that the tendency of each towards its kindred element makes the body which is moved heavy, and the place towards which the motion tends below, but things which have an opposite tendency we call by an opposite name. Such are the causes which we assign to these phenomena. As to the smooth and the rough, any one who sees them can explain the reason of them to another. For roughness is hardness mingled with irregularity, and smoothness is produced by the joint effect of uniformity and density.

The most important of the affections which concern the whole body remains to be considered--that is, the cause of pleasure and pain in the perceptions of which I have been speaking, and in all other things which are perceived by sense through the parts of the body, and have both pains and pleasures attendant on them. Let us imagine the causes of every affection, whether of sense or not, to be of the following nature, remembering that we have already distinguished between the nature which is easy and which is hard to move; for this is the direction in which we must hunt the prey which we mean to take. A body which is of a nature to be easily moved, on receiving an impression however slight, spreads abroad the motion in a circle, the parts communicating with each other, until at last,
reaching the principle of mind, they announce the quality of the agent. But a body of the opposite kind, being immobile, and not extending to the surrounding region, merely receives the impression, and does not stir any of the neighbouring parts; and since the parts do not distribute the original impression to other parts, it has no effect of motion on the whole animal, and therefore produces no effect on the patient. This is true of the bones and hair and other more earthy parts of the human body; whereas what was said above relates mainly to sight and hearing, because they have in them the greatest amount of fire and air. Now we must conceive of pleasure and pain in this way. An impression produced in us contrary to nature and violent, if sudden, is painful; and, again, the sudden return to nature is pleasant; but a gentle and gradual return is imperceptible and vice versa. On the other hand the impression of sense which is most easily produced is most readily felt, but is not accompanied by pleasure or pain; such, for example, are the affections of the sight, which, as we said above, is a body naturally uniting with our body in the day-time; for cuttings and burnings and other affections which happen to the sight do not give pain, nor is there pleasure when the sight returns to its natural state; but the sensations are clearest and strongest according to the manner in which the eye is affected by the object, and itself strikes and touches it; there is no violence either in the contraction or dilation of the eye. But bodies formed of larger particles yield to the agent only with a struggle; and then they impart their motions to the whole and cause pleasure and pain--pain when alienated from their natural conditions, and pleasure when restored to them. Things which experience gradual withdrawals and emptyings of their nature, and great and sudden replenishments, fail to perceive the emptying, but are sensible of the replenishment; and so they occasion no pain, but the greatest pleasure, to the mortal part of the soul, as is manifest in the case of perfumes. But things which are changed all of a sudden, and only gradually and with difficulty return to their own nature, have effects in every way opposite to the former, as is evident in the case of burnings and cuttings of the body.

Thus have we discussed the general affections of the whole body, and the names of the agents which produce them. And now I will endeavour to speak of the affections of particular parts, and the causes and agents of them, as far as I am able. In the first place let us set forth what was omitted when we were speaking of juices, concerning the affections peculiar to the tongue. These too, like most of the other affections, appear to be caused by certain contractions and dilations, but they have besides more of roughness and smoothness than is found in other affections; for whenever earthy particles enter into the small veins which are the testing instruments of the tongue, reaching to the heart, and fall upon the moist, delicate portions of flesh--when, as they are dissolved, they contract and dry up the little veins, they are astringent if they are rougher, but if not so rough, then only harsh. Those of them which are of an abstrangent
nature, and purge the whole surface of the tongue, if they do it in excess, and so encroach as to consume some part of the flesh itself, like potash and soda, are all termed bitter. But the particles which are deficient in the alkaline quality, and which cleanse only moderately, are called salt, and having no bitterness or roughness, are regarded as rather agreeable than otherwise. Bodies which share in and are made smooth by the heat of the mouth, and which are inflamed, and again in turn inflame that which heats them, and which are so light that they are carried upwards to the sensations of the head, and cut all that comes in their way, by reason of these qualities in them, are all termed pungent. But when these same particles, refined by putrefaction, enter into the narrow veins, and are duly proportioned to the particles of earth and air which are there, they set them whirling about one another, and while they are in a whirl cause them to dash against and enter into one another, and so form hollows surrounding the particles that enter--which watery vessels of air (for a film of moisture, sometimes earthy, sometimes pure, is spread around the air) are hollow spheres of water; and those of them which are pure, are transparent, and are called bubbles, while those composed of the earthy liquid, which is in a state of general agitation and effervescence, are said to boil or ferment--of all these affections the cause is termed acid.

And there is the opposite affection arising from an opposite cause, when the mass of entering particles, immersed in the moisture of the mouth, is congenial to the tongue, and smooths and oils over the roughness, and relaxes the parts which are unnaturally contracted, and contracts the parts which are relaxed, and disposes them all according to their nature;--that sort of remedy of violent affections is pleasant and agreeable to every man, and has the name sweet. But enough of this.

The faculty of smell does not admit of differences of kind; for all smells are of a half-formed nature, and no element is so proportioned as to have any smell. The veins about the nose are too narrow to admit earth and water, and too wide to detain fire and air; and for this reason no one ever perceives the smell of any of them; but smells always proceed from bodies that are damp, or putrefying, or liquefying, or evaporating, and are perceptible only in the intermediate state, when water is changing into air and air into water; and all of them are either vapour or mist. That which is passing out of air into water is mist, and that which is passing from water into air is vapour; and hence all smells are thinner than water and thicker than air. The proof of this is, that when there is any obstruction to the respiration, and a man draws in his breath by force, then no smell filters through, but the air without the smell alone penetrates. Wherefore the varieties of smell have no name, and they have not many, or definite and simple kinds; but they are distinguished only as painful and pleasant, the one sort irritating and disturbing the whole cavity which is situated between the head and the navel, the other having a soothing influence, and restoring this same region to an agreeable and natural condition.
In considering the third kind of sense, hearing, we must speak of the causes in which it originates. We may in general assume sound to be a blow which passes through the ears, and is transmitted by means of the air, the brain, and the blood, to the soul, and that hearing is the vibration of this blow, which begins in the head and ends in the region of the liver. The sound which moves swiftly is acute, and the sound which moves slowly is grave, and that which is regular is equable and smooth, and the reverse is harsh. A great body of sound is loud, and a small body of sound the reverse. Respecting the harmonies of sound I must hereafter speak.

There is a fourth class of sensible things, having many intricate varieties, which must now be distinguished. They are called by the general name of colours, and are a flame which emanates from every sort of body, and has particles corresponding to the sense of sight. I have spoken already, in what has preceded, of the causes which generate sight, and in this place it will be natural and suitable to give a rational theory of colours.

Of the particles coming from other bodies which fall upon the sight, some are smaller and some are larger, and some are equal to the parts of the sight itself. Those which are equal are imperceptible, and we call them transparent. The larger produce contraction, the smaller dilation, in the sight, exercising a power akin to that of hot and cold bodies on the flesh, or of astringent bodies on the tongue, or of those heating bodies which we termed pungent. White and black are similar effects of contraction and dilation in another sphere, and for this reason have a different appearance. Wherefore, we ought to term white that which dilates the visual ray, and the opposite of this is black. There is also a swifter motion of a different sort of fire which strikes and dilates the ray of sight until it reaches the eyes, forcing a way through their passages and melting them, and eliciting from them a union of fire and water which we call tears, being itself an opposite fire which comes to them from an opposite direction--the inner fire flashes forth like lightning, and the outer finds a way in and is extinguished in the moisture, and all sorts of colours are generated by the mixture. This affection is termed dazzling, and the object which produces it is called bright and flashing. There is another sort of fire which is intermediate, and which reaches and mingles with the moisture of the eye without flashing; and in this, the fire mingling with the ray of the moisture, produces a colour like blood, to which we give the name of red. A bright hue mingled with red and white gives the colour called auburn (Greek). The law of proportion, however, according to which the several colours are formed, even if a man knew he would be foolish in telling, for he could not give any necessary reason, nor indeed any tolerable or probable explanation of them. Again, red, when mingled with black and white, becomes purple, but it becomes umber (Greek) when the colours are burnt as well as mingled and the black is more thoroughly mixed with them. Flame-colour (Greek) is produced by a union of
auburn and dun (Greek), and dun by an admixture of black and white; pale yellow (Greek), by an admixture of white and auburn. White and bright meeting, and falling upon a full black, become dark blue (Greek), and when dark blue mingles with white, a light blue (Greek) colour is formed, as flame-colour with black makes leek green (Greek). There will be no difficulty in seeing how and by what mixtures the colours derived from these are made according to the rules of probability. He, however, who should attempt to verify all this by experiment, would forget the difference of the human and divine nature. For God only has the knowledge and also the power which are able to combine many things into one and again resolve the one into many. But no man either is or ever will be able to accomplish either the one or the other operation.

These are the elements, thus of necessity then subsisting, which the creator of the fairest and best of created things associated with himself, when he made the self-sufficing and most perfect God, using the necessary causes as his ministers in the accomplishment of his work, but himself contriving the good in all his creations. Wherefore we may distinguish two sorts of causes, the one divine and the other necessary, and may seek for the divine in all things, as far as our nature admits, with a view to the blessed life; but the necessary kind only for the sake of the divine, considering that without them and when isolated from them, these higher things for which we look cannot be apprehended or received or in any way shared by us.

Seeing, then, that we have now prepared for our use the various classes of causes which are the material out of which the remainder of our discourse must be woven, just as wood is the material of the carpenter, let us revert in a few words to the point at which we began, and then endeavour to add on a suitable ending to the beginning of our tale.

As I said at first, when all things were in disorder God created in each thing in relation to itself, and in all things in relation to each other, all the measures and harmonies which they could possibly receive. For in those days nothing had any proportion except by accident; nor did any of the things which now have names deserve to be named at all--as, for example, fire, water, and the rest of the elements. All these the creator first set in order, and out of them he constructed the universe, which was a single animal comprehending in itself all other animals, mortal and immortal. Now of the divine, he himself was the creator, but the creation of the mortal he committed to his offspring. And they, imitating him, received from him the immortal principle of the soul; and around this they proceeded to fashion a mortal body, and made it to be the vehicle of the soul, and constructed within the body a soul of another nature which was mortal, subject to terrible and irresistible affections,--first of all, pleasure, the greatest incitement to evil; then, pain, which deters from good; also rashness and fear, two foolish counsellors, anger hard to be
appeased, and hope easily led astray;--these they mingled with irrational sense and with all-daring love according to necessary laws, and so framed man. Wherefore, fearing to pollute the divine any more than was absolutely unavoidable, they gave to the mortal nature a separate habitation in another part of the body, placing the neck between them to be the isthmus and boundary, which they constructed between the head and breast, to keep them apart. And in the breast, and in what is termed the thorax, they encased the mortal soul; and as the one part of this was superior and the other inferior they divided the cavity of the thorax into two parts, as the women's and men's apartments are divided in houses, and placed the midriff to be a wall of partition between them. That part of the inferior soul which is endowed with courage and passion and loves contention they settled nearer the head, midway between the midriff and the neck, in order that it might be under the rule of reason and might join with it in controlling and restraining the desires when they are no longer willing of their own accord to obey the word of command issuing from the citadel.

The heart, the knot of the veins and the fountain of the blood which races through all the limbs, was set in the place of guard, that when the might of passion was roused by reason making proclamation of any wrong assailing them from without or being perpetrated by the desires within, quickly the whole power of feeling in the body, perceiving these commands and threats, might obey and follow through every turn and alley, and thus allow the principle of the best to have the command in all of them. But the gods, foreknowing that the palpitation of the heart in the expectation of danger and the swelling and excitement of passion was caused by fire, formed and implanted as a supporter to the heart the lung, which was, in the first place, soft and bloodless, and also had within hollows like the pores of a sponge, in order that by receiving the breath and the drink, it might give coolness and the power of respiration and alleviate the heat. Wherefore they cut the air-channels leading to the lung, and placed the lung about the heart as a soft spring, that, when passion was rife within, the heart, beating against a yielding body, might be cooled and suffer less, and might thus become more ready to join with passion in the service of reason.

The part of the soul which desires meats and drinks and the other things of which it has need by reason of the bodily nature, they placed between the midriff and the boundary of the navel, contriving in all this region a sort of manger for the food of the body; and there they bound it down like a wild animal which was chained up with man, and must be nourished if man was to exist. They appointed this lower creation his place here in order that he might be always feeding at the manger, and have his dwelling as far as might be from the council-chamber, making as little noise and disturbance as possible, and permitting the best part to advise quietly for the good of the whole. And knowing that this lower principle in man would not comprehend reason, and even if attaining to some degree of perception would never naturally care for rational notions, but that it would be led away by
phantoms and visions night and day,—to be a remedy for this, God combined with it the liver, and placed it in the house of the lower nature, contriving that it should be solid and smooth, and bright and sweet, and should also have a bitter quality, in order that the power of thought, which proceeds from the mind, might be reflected as in a mirror which receives likenesses of objects and gives back images of them to the sight; and so might strike terror into the desires, when, making use of the bitter part of the liver, to which it is akin, it comes threatening and invading, and diffusing this bitter element swiftly through the whole liver produces colours like bile, and contracting every part makes it wrinkled and rough; and twisting out of its right place and contorting the lobe and closing and shutting up the vessels and gates, causes pain and loathing. And the converse happens when some gentle inspiration of the understanding pictures images of an opposite character, and allays the bile and bitterness by refusing to stir or touch the nature opposed to itself, but by making use of the natural sweetness of the liver, corrects all things and makes them to be right and smooth and free, and renders the portion of the soul which resides about the liver happy and joyful, enabling it to pass the night in peace, and to practise divination in sleep, inasmuch as it has no share in mind and reason. For the authors of our being, remembering the command of their father when he bade them create the human race as good as they could, that they might correct our inferior parts and make them to attain a measure of truth, placed in the liver the seat of divination. And herein is a proof that God has given the art of divination not to the wisdom, but to the foolishness of man. No man, when in his wits, attains prophetic truth and inspiration; but when he receives the inspired word, either his intelligence is enthralled in sleep, or he is demented by some distemper or possession. And he who would understand what he remembers to have been said, whether in a dream or when he was awake, by the prophetic and inspired nature, or would determine by reason the meaning of the apparitions which he has seen, and what indications they afford to this man or that, of past, present or future good and evil, must first recover his wits. But, while he continues demented, he cannot judge of the visions which he sees or the words which he utters; the ancient saying is very true, that 'only a man who has his wits can act or judge about himself and his own affairs.' And for this reason it is customary to appoint interpreters to be judges of the true inspiration. Some persons call them prophets; they are quite unaware that they are only the expositors of dark sayings and visions, and are not to be called prophets at all, but only interpreters of prophecy.

Such is the nature of the liver, which is placed as we have described in order that it may give prophetic intimations. During the life of each individual these intimations are plainer, but after his death the liver becomes blind, and delivers oracles too obscure to be intelligible. The neighbouring organ (the spleen) is situated on the left-hand side, and is constructed with a view of keeping the liver bright and pure,—like a
napkin, always ready prepared and at hand to clean the mirror. And hence, when any impurities arise in the region of the liver by reason of disorders of the body, the loose nature of the spleen, which is composed of a hollow and bloodless tissue, receives them all and clears them away, and when filled with the unclean matter, swells and festers, but, again, when the body is purged, settles down into the same place as before, and is humbled.

Concerning the soul, as to which part is mortal and which divine, and how and why they are separated, and where located, if God acknowledges that we have spoken the truth, then, and then only, can we be confident; still, we may venture to assert that what has been said by us is probable, and will be rendered more probable by investigation. Let us assume thus much.

The creation of the rest of the body follows next in order, and this we may investigate in a similar manner. And it appears to be very meet that the body should be framed on the following principles:--

The authors of our race were aware that we should be intemperate in eating and drinking, and take a good deal more than was necessary or proper, by reason of gluttony. In order then that disease might not quickly destroy us, and lest our mortal race should perish without fulfilling its end--intending to provide against this, the gods made what is called the lower belly, to be a receptacle for the superfluous meat and drink, and formed the convolution of the bowels, so that the food might be prevented from passing quickly through and compelling the body to require more food, thus producing insatiable gluttony, and making the whole race an enemy to philosophy and music, and rebellious against the divinest element within us.

The bones and flesh, and other similar parts of us, were made as follows. The first principle of all of them was the generation of the marrow. For the bonds of life which unite the soul with the body are made fast there, and they are the root and foundation of the human race. The marrow itself is created out of other materials: God took such of the primary triangles as were straight and smooth, and were adapted by their perfection to produce fire and water, and air and earth--these, I say, he separated from their kinds, and mingling them in due proportions with one another, made the marrow out of them to be a universal seed of the whole race of mankind; and in this seed he then planted and enclosed the souls, and in the original distribution gave to the marrow as many and various forms as the different kinds of souls were hereafter to receive. That which, like a field, was to receive the divine seed, he made round every way, and called that portion of the marrow, brain, intending that, when an animal was perfected, the vessel containing this substance should be the head; but that which was intended to contain the remaining and mortal part of the soul he distributed into figures at once round and elongated, and he called them all by the name 'marrow'; and to these, as to anchors, fastening the
bonds of the whole soul, he proceeded to fashion around them the entire framework of our body, constructing for the marrow, first of all a complete covering of bone.

Bone was composed by him in the following manner. Having sifted pure and smooth earth he kneaded it and wetted it with marrow, and after that he put it into fire and then into water, and once more into fire and again into water—in this way by frequent transfers from one to the other he made it insoluble by either. Out of this he fashioned, as in a lathe, a globe made of bone, which he placed around the brain, and in this he left a narrow opening; and around the marrow of the neck and back he formed vertebrae which he placed under one another like pivots, beginning at the head and extending through the whole of the trunk. Thus wishing to preserve the entire seed, he enclosed it in a stone-like casing, inserting joints, and using in the formation of them the power of the other or diverse as an intermediate nature, that they might have motion and flexure. Then again, considering that the bone would be too brittle and inflexible, and when heated and again cooled would soon mortify and destroy the seed within—having this in view, he contrived the sinews and the flesh, that so binding all the members together by the sinews, which admitted of being stretched and relaxed about the vertebrae, he might thus make the body capable of flexion and extension, while the flesh would serve as a protection against the summer heat and against the winter cold, and also against falls, softly and easily yielding to external bodies, like articles made of felt; and containing in itself a warm moisture which in summer exudes and makes the surface damp, would impart a natural coolness to the whole body; and again in winter by the help of this internal warmth would form a very tolerable defence against the frost which surrounds it and attacks it from without. He who modelled us, considering these things, mixed earth with fire and water and blended them; and making a ferment of acid and salt, he mingled it with them and formed soft and succulent flesh. As for the sinews, he made them of a mixture of bone and unfermented flesh, tempered so as to be in a mean, and gave them a yellow colour; wherefore the sinews have a firmer and more glutinous nature than flesh, but a softer and moister nature than the bones. With these God covered the bones and marrow, binding them together by sinews, and then enshrouded them all in an upper covering of flesh. The more living and sensitive of the bones he enclosed in the thinnest film of flesh, and those which had the least life within them in the thickest and most solid flesh. So again on the joints of the bones, where reason indicated that no more was required, he placed only a thin covering of flesh, that it might not interfere with the flexion of our bodies and make them unwieldy because difficult to move; and also that it might not, by being crowded and pressed and matted together, destroy sensation by reason of its hardness, and impair the memory and dull the edge of intelligence. Wherefore also the thighs and the shanks and the hips, and the bones of the arms and the forearms, and other parts which have no joints, and the inner bones, which on account of the rarity of the
soul in the marrow are destitute of reason--all these are abundantly provided with flesh; but such as have mind in them are in general less fleshy, except where the creator has made some part solely of flesh in order to give sensation,--as, for example, the tongue. But commonly this is not the case. For the nature which comes into being and grows up in us by a law of necessity, does not admit of the combination of solid bone and much flesh with acute perceptions. More than any other part the framework of the head would have had them, if they could have co-existed, and the human race, having a strong and fleshy and sinewy head, would have had a life twice or many times as long as it now has, and also more healthy and free from pain. But our creators, considering whether they should make a longer-lived race which was worse, or a shorter-lived race which was better, came to the conclusion that every one ought to prefer a shorter span of life, which was better, to a longer one, which was worse; and therefore they covered the head with thin bone, but not with flesh and sinews, since it had no joints; and thus the head was added, having more wisdom and sensation than the rest of the body, but also being in every man far weaker. For these reasons and after this manner God placed the sinews at the extremity of the head, in a circle round the neck, and glued them together by the principle of likeness and fastened the extremities of the jawbones to them below the face, and the other sinews he dispersed throughout the body, fastening limb to limb. The framers of us framed the mouth, as now arranged, having teeth and tongue and lips, with a view to the necessary and the good contriving the way in for necessary purposes, the way out for the best purposes; for that is necessary which enters in and gives food to the body; but the river of speech, which flows out of a man and ministers to the intelligence, is the fairest and noblest of all streams. Still the head could neither be left a bare frame of bones, on account of the extremes of heat and cold in the different seasons, nor yet be allowed to be wholly covered, and so become dull and senseless by reason of an overgrowth of flesh. The fleshy nature was not therefore wholly dried up, but a large sort of peel was parted off and remained over, which is now called the skin. This met and grew by the help of the cerebral moisture, and became the circular envelopment of the head. And the moisture, rising up under the sutures, watered and closed in the skin upon the crown, forming a sort of knot. The diversity of the sutures was caused by the power of the courses of the soul and of the food, and the more these struggled against one another the more numerous they became, and fewer if the struggle were less violent. This skin the divine power pierced all round with fire, and out of the punctures which were thus made the moisture issued forth, and the liquid and heat which was pure came away, and a mixed part which was composed of the same material as the skin, and had a fineness equal to the punctures, was borne up by its own impulse and extended far outside the head, but being too slow to escape, was thrust back by the external air, and rolled up underneath the skin, where it took root. Thus the hair sprang up in the skin, being akin to it because it is like threads of leather, but rendered harder and closer through the
pressure of the cold, by which each hair, while in process of separation from the skin, is compressed and cooled. Wherefore the creator formed the head hairy, making use of the causes which I have mentioned, and reflecting also that instead of flesh the brain needed the hair to be a light covering or guard, which would give shade in summer and shelter in winter, and at the same time would not impede our quickness of perception. From the combination of sinew, skin, and bone, in the structure of the finger, there arises a triple compound, which, when dried up, takes the form of one hard skin partaking of all three natures, and was fabricated by these second causes, but designed by mind which is the principal cause with an eye to the future. For our creators well knew that women and other animals would some day be framed out of men, and they further knew that many animals would require the use of nails for many purposes; wherefore they fashioned in men at their first creation the rudiments of nails. For this purpose and for these reasons they caused skin, hair, and nails to grow at the extremities of the limbs.

And now that all the parts and members of the mortal animal had come together, since its life of necessity consisted of fire and breath, and it therefore wasted away by dissolution and depletion, the gods contrived the following remedy: They mingled a nature akin to that of man with other forms and perceptions, and thus created another kind of animal. These are the trees and plants and seeds which have been improved by cultivation and are now domesticated among us; anciently there were only the wild kinds, which are older than the cultivated. For everything that partakes of life may be truly called a living being, and the animal of which we are now speaking partakes of the third kind of soul, which is said to be seated between the midriff and the navel, having no part in opinion or reason or mind, but only in feelings of pleasure and pain and the desires which accompany them. For this nature is always in a passive state, revolving in and about itself, repelling the motion from without and using its own, and accordingly is not endowed by nature with the power of observing or reflecting on its own concerns. Wherefore it lives and does not differ from a living being, but is fixed and rooted in the same spot, having no power of self-motion.

Now after the superior powers had created all these natures to be food for us who are of the inferior nature, they cut various channels through the body as through a garden, that it might be watered as from a running stream. In the first place, they cut two hidden channels or veins down the back where the skin and the flesh join, which answered severally to the right and left side of the body. These they let down along the backbone, so as to have the marrow of generation between them, where it was most likely to flourish, and in order that the stream coming down from above might flow freely to the other parts, and equalize the irrigation. In the next place, they divided the veins about the head, and interlacing them, they sent them in opposite directions; those coming from the right side
they sent to the left of the body, and those from the left they diverted
towards the right, so that they and the skin might together form a bond
which should fasten the head to the body, since the crown of the head was
not encircled by sinews; and also in order that the sensations from both
sides might be distributed over the whole body. And next, they ordered the
water-courses of the body in a manner which I will describe, and which will
be more easily understood if we begin by admitting that all things which
have lesser parts retain the greater, but the greater cannot retain the
lesser. Now of all natures fire has the smallest parts, and therefore
penetrates through earth and water and air and their compounds, nor can
anything hold it. And a similar principle applies to the human belly; for
when meats and drinks enter it, it holds them, but it cannot hold air and
fire, because the particles of which they consist are smaller than its own
structure.

These elements, therefore, God employed for the sake of distributing
moisture from the belly into the veins, weaving together a network of fire
and air like a weel, having at the entrance two lesser weels; further he
constructed one of these with two openings, and from the lesser weels he
extended cords reaching all round to the extremities of the network. All
the interior of the net he made of fire, but the lesser weels and their
cavity, of air. The network he took and spread over the newly-formed
animal in the following manner:--He let the lesser weels pass into the
mouth; there were two of them, and one he let down by the air-pipes into
the lungs, the other by the side of the air-pipes into the belly. The
former he divided into two branches, both of which he made to meet at the
channels of the nose, so that when the way through the mouth did not act,
the streams of the mouth as well were replenished through the nose. With
the other cavity (i.e. of the greater weel) he enveloped the hollow parts
of the body, and at one time he made all this to flow into the lesser
weels, quite gently, for they are composed of air, and at another time he
caused the lesser weels to flow back again; and the net he made to find a
way in and out through the pores of the body, and the rays of fire which
are bound fast within followed the passage of the air either way, never at
any time ceasing so long as the mortal being holds together. This process,
as we affirm, the name-giver named inspiration and expiration. And all
this movement, active as well as passive, takes place in order that the
body, being watered and cooled, may receive nourishment and life; for when
the respiration is going in and out, and the fire, which is fast bound
within, follows it, and ever and anon moving to and fro, enters through the
belly and reaches the meat and drink, it dissolves them, and dividing them
into small portions and guiding them through the passages where it goes,
pumps them as from a fountain into the channels of the veins, and makes the
stream of the veins flow through the body as through a conduit.

Let us once more consider the phenomena of respiration, and enquire into
the causes which have made it what it is. They are as follows:--Seeing
that there is no such thing as a vacuum into which any of those things which are moved can enter, and the breath is carried from us into the external air, the next point is, as will be clear to every one, that it does not go into a vacant space, but pushes its neighbour out of its place, and that which is thrust out in turn drives out its neighbour; and in this way everything of necessity at last comes round to that place from whence the breath came forth, and enters in there, and following the breath, fills up the vacant space; and this goes on like the rotation of a wheel, because there can be no such thing as a vacuum. Wherefore also the breast and the lungs, when they emit the breath, are replenished by the air which surrounds the body and which enters in through the pores of the flesh and is driven round in a circle; and again, the air which is sent away and passes out through the body forces the breath inwards through the passage of the mouth and the nostrils. Now the origin of this movement may be supposed to be as follows. In the interior of every animal the hottest part is that which is around the blood and veins; it is in a manner an internal fountain of fire, which we compare to the network of a creel, being woven all of fire and extended through the centre of the body, while the outer parts are composed of air. Now we must admit that heat naturally proceeds outward to its own place and to its kindred element; and as there are two exits for the heat, the one out through the body, and the other through the mouth and nostrils, when it moves towards the one, it drives round the air at the other, and that which is driven round falls into the fire and becomes warm, and that which goes forth is cooled. But when the heat changes its place, and the particles at the other exit grow warmer, the hotter air inclining in that direction and carried towards its native element, fire, pushes round the air at the other; and this being affected in the same way and communicating the same impulse, a circular motion swaying to and fro is produced by the double process, which we call inspiration and expiration.

The phenomena of medical cupping-glasses and of the swallowing of drink and of the projection of bodies, whether discharged in the air or bowled along the ground, are to be investigated on a similar principle; and swift and slow sounds, which appear to be high and low, and are sometimes discordant on account of their inequality, and then again harmonical on account of the equality of the motion which they excite in us. For when the motions of the antecedent swifter sounds begin to pause and the two are equalized, the slower sounds overtake the swifter and then propel them. When they overtake them they do not intrude a new and discordant motion, but introduce the beginnings of a slower, which answers to the swifter as it dies away, thus producing a single mixed expression out of high and low, whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sort of delight, being an imitation of divine harmony in mortal motions. Moreover, as to the flowing of water, the fall of the thunderbolt, and the marvels that are observed about the attraction of amber and the Heraclean stones,—in none of these cases is there any
attraction; but he who investigates rightly, will find that such wonderful phenomena are attributable to the combination of certain conditions—the non-existence of a vacuum, the fact that objects push one another round, and that they change places, passing severally into their proper positions as they are divided or combined.

Such as we have seen, is the nature and such are the causes of respiration,—the subject in which this discussion originated. For the fire cuts the food and following the breath surges up within, fire and breath rising together and filling the veins by drawing up out of the belly and pouring into them the cut portions of the food; and so the streams of food are kept flowing through the whole body in all animals. And fresh cuttings from kindred substances, whether the fruits of the earth or herb of the field, which God planted to be our daily food, acquire all sorts of colours by their inter-mixture; but red is the most pervading of them, being created by the cutting action of fire and by the impression which it makes on a moist substance; and hence the liquid which circulates in the body has a colour such as we have described. The liquid itself we call blood, which nourishes the flesh and the whole body, whence all parts are watered and empty places filled.

Now the process of repletion and evacuation is effected after the manner of the universal motion by which all kindred substances are drawn towards one another. For the external elements which surround us are always causing us to consume away, and distributing and sending off like to like; the particles of blood, too, which are divided and contained within the frame of the animal as in a sort of heaven, are compelled to imitate the motion of the universe. Each, therefore, of the divided parts within us, being carried to its kindred nature, replenishes the void. When more is taken away than flows in, then we decay, and when less, we grow and increase.

The frame of the entire creature when young has the triangles of each kind new, and may be compared to the keel of a vessel which is just off the stocks; they are locked firmly together and yet the whole mass is soft and delicate, being freshly formed of marrow and nurtured on milk. Now when the triangles out of which meats and drinks are composed come in from without, and are comprehended in the body, being older and weaker than the triangles already there, the frame of the body gets the better of them and its newer triangles cut them up, and so the animal grows great, being nourished by a multitude of similar particles. But when the roots of the triangles are loosened by having undergone many conflicts with many things in the course of time, they are no longer able to cut or assimilate the food which enters, but are themselves easily divided by the bodies which come in from without. In this way every animal is overcome and decays, and this affection is called old age. And at last, when the bonds by which the triangles of the marrow are united no longer hold, and are parted by the strain of existence, they in turn loosen the bonds of the soul, and she,
obtaining a natural release, flies away with joy. For that which takes
place according to nature is pleasant, but that which is contrary to nature
is painful. And thus death, if caused by disease or produced by wounds, is
painful and violent; but that sort of death which comes with old age and
fulfils the debt of nature is the easiest of deaths, and is accompanied
with pleasure rather than with pain.

Now every one can see whence diseases arise. There are four natures out of
which the body is compacted, earth and fire and water and air, and the
unnatural excess or defect of these, or the change of any of them from its
own natural place into another, or—since there are more kinds than one of
fire and of the other elements—the assumption by any of these of a wrong
kind, or any similar irregularity, produces disorders and diseases; for
when any of them is produced or changed in a manner contrary to nature, the
parts which were previously cool grow warm, and those which were dry become
moist, and the light become heavy, and the heavy light; all sorts of
changes occur. For, as we affirm, a thing can only remain the same with
itself, whole and sound, when the same is added to it, or subtracted from
it, in the same respect and in the same manner and in due proportion; and
whatever comes or goes away in violation of these laws causes all manner of
changes and infinite diseases and corruptions. Now there is a second class
of structures which are also natural, and this affords a second opportunity
of observing diseases to him who would understand them. For whereas marrow
and bone and flesh and sinews are composed of the four elements, and the
blood, though after another manner, is likewise formed out of them, most
diseases originate in the way which I have described; but the worst of all
owe their severity to the fact that the generation of these substances
proceeds in a wrong order; they are then destroyed. For the natural order
is that the flesh and sinews should be made of blood, the sinews out of the
fibres to which they are akin, and the flesh out of the clots which are
formed when the fibres are separated. And the glutinous and rich matter
which comes away from the sinews and the flesh, not only glues the flesh to
the bones, but nourishes and imparts growth to the bone which surrounds the
marrow; and by reason of the solidity of the bones, that which filters
through consists of the purest and smoothest and oiliest sort of triangles,
dropping like dew from the bones and watering the marrow. Now when each
process takes place in this order, health commonly results; when in the
opposite order, disease. For when the flesh becomes decomposed and sends
back the wasting substance into the veins, then an over-supply of blood of
diverse kinds, mingling with air in the veins, having variegated colours
and bitter properties, as well as acid and saline qualities, contains all
sorts of bile and serum and phlegm. For all things go the wrong way, and
having become corrupted, first they taint the blood itself, and then
ceasing to give nourishment to the body they are carried along the veins in
all directions, no longer preserving the order of their natural courses,
but at war with themselves, because they receive no good from one another,
and are hostile to the abiding constitution of the body, which they corrupt
and dissolve. The oldest part of the flesh which is corrupted, being hard
to decompose, from long burning grows black, and from being everywhere
corroded becomes bitter, and is injurious to every part of the body which
is still uncorrupted. Sometimes, when the bitter element is refined away,
the black part assumes an acidity which takes the place of the bitterness;
at other times the bitterness being tinged with blood has a redder colour;
and this, when mixed with black, takes the hue of grass; and again, an
auburn colour mingles with the bitter matter when new flesh is decomposed
by the fire which surrounds the internal flame;--to all which symptoms some
physician perhaps, or rather some philosopher, who had the power of seeing
in many dissimilar things one nature deserving of a name, has assigned the
common name of bile. But the other kinds of bile are variously
distinguished by their colours. As for serum, that sort which is the
watery part of blood is innocent, but that which is a secretion of black
and acid bile is malignant when mingled by the power of heat with any salt
substance, and is then called acid phlegm. Again, the substance which is
formed by the liquefaction of new and tender flesh when air is present, if
inflated and encased in liquid so as to form bubbles, which separately are
invisible owing to their small size, but when collected are of a bulk which
is visible, and have a white colour arising out of the generation of
foam--all this decomposition of tender flesh when intermingled with air is
termed by us white phlegm. And the whey or sediment of newly-formed phlegm
is sweat and tears, and includes the various daily discharges by which the
body is purified. Now all these become causes of disease when the blood is
not replenished in a natural manner by food and drink but gains bulk from
opposite sources in violation of the laws of nature. When the several
parts of the flesh are separated by disease, if the foundation remains, the
power of the disorder is only half as great, and there is still a prospect
of an easy recovery; but when that which binds the flesh to the bones is
diseased, and no longer being separated from the muscles and sinews, ceases
to give nourishment to the bone and to unite flesh and bone, and from being
oily and smooth and glutinous becomes rough and salt and dry, owing to bad
regimen, then all the substance thus corrupted crumbles away under the
flesh and the sinews, and separates from the bone, and the fleshy parts
fall away from their foundation and leave the sinews bare and full of
brine, and the flesh again gets into the circulation of the blood and makes
the previously-mentioned disorders still greater. And if these bodily
affections be severe, still worse are the prior disorders; as when the bone
itself, by reason of the density of the flesh, does not obtain sufficient
air, but becomes mouldy and hot and gangrened and receives no nutriment,
and the natural process is inverted, and the bone crumbling passes into the
food, and the food into the flesh, and the flesh again falling into the
blood makes all maladies that may occur more virulent than those already
mentioned. But the worst case of all is when the marrow is diseased,
either from excess or defect; and this is the cause of the very greatest
and most fatal disorders, in which the whole course of the body is
reversed.
There is a third class of diseases which may be conceived of as arising in three ways; for they are produced sometimes by wind, and sometimes by phlegm, and sometimes by bile. When the lung, which is the dispenser of the air to the body, is obstructed by rheums and its passages are not free, some of them not acting, while through others too much air enters, then the parts which are unrefreshed by air corrode, while in other parts the excess of air forcing its way through the veins distorts them and decomposing the body is enclosed in the midst of it and occupies the midriff; thus numberless painful diseases are produced, accompanied by copious sweats. And oftentimes when the flesh is dissolved in the body, wind, generated within and unable to escape, is the source of quite as much pain as the air coming in from without; but the greatest pain is felt when the wind gets about the sinews and the veins of the shoulders, and swells them up, and so twists back the great tendons and the sinews which are connected with them. These disorders are called tetanus and opisthotonus, by reason of the tension which accompanies them. The cure of them is difficult; relief is in most cases given by fever supervening. The white phlegm, though dangerous when detained within by reason of the air-bubbles, yet if it can communicate with the outside air, is less severe, and only discolours the body, generating leprous eruptions and similar diseases. When it is mingled with black bile and dispersed about the courses of the head, which are the divinest part of us, the attack if coming on in sleep, is not so severe; but when assailing those who are awake it is hard to be got rid of, and being an affection of a sacred part, is most justly called sacred. An acid and salt phlegm, again, is the source of all those diseases which take the form of catarrh, but they have many names because the places into which they flow are manifold.

Inflammations of the body come from burnings and inflamings, and all of them originate in bile. When bile finds a means of discharge, it boils up and sends forth all sorts of tumours; but when imprisoned within, it generates many inflammatory diseases, above all when mingled with pure blood; since it then displaces the fibres which are scattered about in the blood and are designed to maintain the balance of rare and dense, in order that the blood may not be so liquefied by heat as to exude from the pores of the body, nor again become too dense and thus find a difficulty in circulating through the veins. The fibres are so constituted as to maintain this balance; and if any one brings them all together when the blood is dead and in process of cooling, then the blood which remains becomes fluid, but if they are left alone, they soon congeal by reason of the surrounding cold. The fibres having this power over the blood, bile, which is only stale blood, and which from being flesh is dissolved again into blood, at the first influx coming in little by little, hot and liquid, is congealed by the power of the fibres; and so congealing and made to cool, it produces internal cold and shuddering. When it enters with more of a flood and overcomes the fibres by its heat, and boiling up throws them
into disorder, if it have power enough to maintain its supremacy, it penetrates the marrow and burns up what may be termed the cables of the soul, and sets her free; but when there is not so much of it, and the body though wasted still holds out, the bile is itself mastered, and is either utterly banished, or is thrust through the veins into the lower or upper belly, and is driven out of the body like an exile from a state in which there has been civil war; whence arise diarrhoeas and dysenteries, and all such disorders. When the constitution is disordered by excess of fire, continuous heat and fever are the result; when excess of air is the cause, then the fever is quotidian; when of water, which is a more sluggish element than either fire or air, then the fever is a tertian; when of earth, which is the most sluggish of the four, and is only purged away in a four-fold period, the result is a quartan fever, which can with difficulty be shaken off.

Such is the manner in which diseases of the body arise; the disorders of the soul, which depend upon the body, originate as follows. We must acknowledge disease of the mind to be a want of intelligence; and of this there are two kinds; to wit, madness and ignorance. In whatever state a man experiences either of them, that state may be called disease; and excessive pains and pleasures are justly to be regarded as the greatest diseases to which the soul is liable. For a man who is in great joy or in great pain, in his unreasonable eagerness to attain the one and to avoid the other, is not able to see or to hear anything rightly; but he is mad, and is at the time utterly incapable of any participation in reason. He who has the seed about the spinal marrow too plentiful and overflowing, like a tree overladen with fruit, has many throes, and also obtains many pleasures in his desires and their offspring, and is for the most part of his life deranged, because his pleasures and pains are so very great; his soul is rendered foolish and disordered by his body; yet he is regarded not as one diseased, but as one who is voluntarily bad, which is a mistake. The truth is that the intemperance of love is a disease of the soul due chiefly to the moisture and fluidity which is produced in one of the elements by the loose consistency of the bones. And in general, all that which is termed the incontinence of pleasure and is deemed a reproach under the idea that the wicked voluntarily do wrong is not justly a matter for reproach. For no man is voluntarily bad; but the bad become bad by reason of an ill disposition of the body and bad education, things which are hateful to every man and happen to him against his will. And in the case of pain too in like manner the soul suffers much evil from the body. For where the acid and briny phlegm and other bitter and bilious humours wander about in the body, and find no exit or escape, but are pent up within and mingle their own vapours with the motions of the soul, and are blended with them, they produce all sorts of diseases, more or fewer, and in every degree of intensity; and being carried to the three places of the soul, whichever they may severally assail, they create infinite varieties of ill-temper and melancholy, of rashness and cowardice, and also of
forgetfulness and stupidity. Further, when to this evil constitution of body evil forms of government are added and evil discourses are uttered in private as well as in public, and no sort of instruction is given in youth to cure these evils, then all of us who are bad become bad from two causes which are entirely beyond our control. In such cases the planters are to blame rather than the plants, the educators rather than the educated. But however that may be, we should endeavour as far as we can by education, and studies, and learning, to avoid vice and attain virtue; this, however, is part of another subject.

There is a corresponding enquiry concerning the mode of treatment by which the mind and the body are to be preserved, about which it is meet and right that I should say a word in turn; for it is more our duty to speak of the good than of the evil. Everything that is good is fair, and the fair is not without proportion, and the animal which is to be fair must have due proportion. Now we perceive lesser symmetries or proportions and reason about them, but of the highest and greatest we take no heed; for there is no proportion or disproportion more productive of health and disease, and virtue and vice, than that between soul and body. This however we do not perceive, nor do we reflect that when a weak or small frame is the vehicle of a great and mighty soul, or conversely, when a little soul is encased in a large body, then the whole animal is not fair, for it lacks the most important of all symmetries; but the due proportion of mind and body is the fairest and loveliest of all sights to him who has the seeing eye. Just as a body which has a leg too long, or which is unsymmetrical in some other respect, is an unpleasant sight, and also, when doing its share of work, is much distressed and makes convulsive efforts, and often stumbles through awkwardness, and is the cause of infinite evil to its own self—in like manner we should conceive of the double nature which we call the living being; and when in this compound there is an impassioned soul more powerful than the body, that soul, I say, convulses and fills with disorders the whole inner nature of man; and when eager in the pursuit of some sort of learning or study, causes wasting; or again, when teaching or disputing in private or in public, and strifes and controversies arise, inflames and dissolves the composite frame of man and introduces rheums; and the nature of this phenomenon is not understood by most professors of medicine, who ascribe it to the opposite of the real cause. And once more, when a body large and too strong for the soul is united to a small and weak intelligence, then inasmuch as there are two desires natural to man,—one of food for the sake of the body, and one of wisdom for the sake of the diviner part of us—then, I say, the motions of the stronger, getting the better and increasing their own power, but making the soul dull, and stupid, and forgetful, engender ignorance, which is the greatest of diseases. There is one protection against both kinds of disproportion:—that we should not move the body without the soul or the soul without the body, and thus they will be on their guard against each other, and be healthy and well balanced. And therefore the mathematician or any one else
whose thoughts are much absorbed in some intellectual pursuit, must allow
his body also to have due exercise, and practise gymnastic; and he who is
careful to fashion the body, should in turn impart to the soul its proper
motions, and should cultivate music and all philosophy, if he would deserve
to be called truly fair and truly good. And the separate parts should be
treated in the same manner, in imitation of the pattern of the universe;
for as the body is heated and also cooled within by the elements which
enter into it, and is again dried up and moistened by external things, and
experiences these and the like affections from both kinds of motions, the
result is that the body if given up to motion when in a state of quiescence
is overmastered and perishes; but if any one, in imitation of that which we
call the foster-mother and nurse of the universe, will not allow the body
ever to be inactive, but is always producing motions and agitations through
its whole extent, which form the natural defence against other motions both
internal and external, and by moderate exercise reduces to order according
to their affinities the particles and affections which are wandering about
the body, as we have already said when speaking of the universe, he will
not allow enemy placed by the side of enemy to stir up wars and disorders
in the body, but he will place friend by the side of friend, so as to
create health. Now of all motions that is the best which is produced in a
thing by itself, for it is most akin to the motion of thought and of the
universe; but that motion which is caused by others is not so good, and
worst of all is that which moves the body, when at rest, in parts only and
by some external agency. Wherefore of all modes of purifying and re-
uniting the body the best is gymnastic; the next best is a surging motion,
as in sailing or any other mode of conveyance which is not fatiguing; the
third sort of motion may be of use in a case of extreme necessity, but in
any other will be adopted by no man of sense: I mean the purgative
treatment of physicians; for diseases unless they are very dangerous should
not be irritated by medicines, since every form of disease is in a manner
akin to the living being, whose complex frame has an appointed term of
life. For not the whole race only, but each individual--barring inevitable
accidents--comes into the world having a fixed span, and the triangles in
us are originally framed with power to last for a certain time, beyond
which no man can prolong his life. And this holds also of the constitution
of diseases; if any one regardless of the appointed time tries to subdue
them by medicine, he only aggravates and multiplies them. Wherefore we
ought always to manage them by regimen, as far as a man can spare the time,
and not provoke a disagreeable enemy by medicines.

Enough of the composite animal, and of the body which is a part of him, and
of the manner in which a man may train and be trained by himself so as to
live most according to reason: and we must above and before all provide
that the element which is to train him shall be the fairest and best
adapted to that purpose. A minute discussion of this subject would be a
serious task; but if, as before, I am to give only an outline, the subject
may not unfitly be summed up as follows.
I have often remarked that there are three kinds of soul located within us, having each of them motions, and I must now repeat in the fewest words possible, that one part, if remaining inactive and ceasing from its natural motion, must necessarily become very weak, but that which is trained and exercised, very strong. Wherefore we should take care that the movements of the different parts of the soul should be in due proportion.

And we should consider that God gave the sovereign part of the human soul to be the divinity of each one, being that part which, as we say, dwells at the top of the body, and inasmuch as we are a plant not of an earthly but of a heavenly growth, raises us from earth to our kindred who are in heaven. And in this we say truly; for the divine power suspended the head and root of us from that place where the generation of the soul first began, and thus made the whole body upright. When a man is always occupied with the cravings of desire and ambition, and is eagerly striving to satisfy them, all his thoughts must be mortal, and, as far as it is possible altogether to become such, he must be mortal every whit, because he has cherished his mortal part. But he who has been earnest in the love of knowledge and of true wisdom, and has exercised his intellect more than any other part of him, must have thoughts immortal and divine, if he attain truth, and in so far as human nature is capable of sharing in immortality, he must altogether be immortal; and since he is ever cherishing the divine power, and has the divinity within him in perfect order, he will be perfectly happy. Now there is only one way of taking care of things, and this is to give to each the food and motion which are natural to it. And the motions which are naturally akin to the divine principle within us are the thoughts and revolutions of the universe. These each man should follow, and correct the courses of the head which were corrupted at our birth, and by learning the harmonies and revolutions of the universe, should assimilate the thinking being to the thought, renewing his original nature, and having assimilated them should attain to that perfect life which the gods have set before mankind, both for the present and the future.

Thus our original design of discoursing about the universe down to the creation of man is nearly completed. A brief mention may be made of the generation of other animals, so far as the subject admits of brevity; in this manner our argument will best attain a due proportion. On the subject of animals, then, the following remarks may be offered. Of the men who came into the world, those who were cowards or led unrighteous lives may with reason be supposed to have changed into the nature of women in the second generation. And this was the reason why at that time the gods created in us the desire of sexual intercourse, contriving in man one animated substance, and in woman another, which they formed respectively in the following manner. The outlet for drink by which liquids pass through the lung under the kidneys and into the bladder, which receives and then by
the pressure of the air emits them, was so fashioned by them as to penetrate also into the body of the marrow, which passes from the head along the neck and through the back, and which in the preceding discourse we have named the seed. And the seed having life, and becoming endowed with respiration, produces in that part in which it respires a lively desire of emission, and thus creates in us the love of procreation. Wherefore also in men the organ of generation becoming rebellious and masterful, like an animal disobedient to reason, and maddened with the sting of lust, seeks to gain absolute sway; and the same is the case with the so-called womb or matrix of women; the animal within them is desirous of procreating children, and when remaining unfruitful long beyond its proper time, gets discontented and angry, and wandering in every direction through the body, closes up the passages of the breath, and, by obstructing respiration, drives them to extremity, causing all varieties of disease, until at length the desire and love of the man and the woman, bringing them together and as it were plucking the fruit from the tree, sow in the womb, as in a field, animals unseen by reason of their smallness and without form; these again are separated and matured within; they are then finally brought out into the light, and thus the generation of animals is completed.

Thus were created women and the female sex in general. But the race of birds was created out of innocent light-minded men, who, although their minds were directed toward heaven, imagined, in their simplicity, that the clearest demonstration of the things above was to be obtained by sight; these were remodelled and transformed into birds, and they grew feathers instead of hair. The race of wild pedestrian animals, again, came from those who had no philosophy in any of their thoughts, and never considered at all about the nature of the heavens, because they had ceased to use the courses of the head, but followed the guidance of those parts of the soul which are in the breast. In consequence of these habits of theirs they had their front-legs and their heads resting upon the earth to which they were drawn by natural affinity; and the crowns of their heads were elongated and of all sorts of shapes, into which the courses of the soul were crushed by reason of disuse. And this was the reason why they were created quadrupeds and polypods: God gave the more senseless of them the more support that they might be more attracted to the earth. And the most foolish of them, who trail their bodies entirely upon the ground and have no longer any need of feet, he made without feet to crawl upon the earth. The fourth class were the inhabitants of the water: these were made out of the most entirely senseless and ignorant of all, whom the transformers did not think any longer worthy of pure respiration, because they possessed a soul which was made impure by all sorts of transgression; and instead of the subtle and pure medium of air, they gave them the deep and muddy sea to be their element of respiration; and hence arose the race of fishes and oysters, and other aquatic animals, which have received the most remote habitations as a punishment of their outlandish ignorance. These are the laws by which
animals pass into one another, now, as ever, changing as they lose or gain wisdom and folly.

We may now say that our discourse about the nature of the universe has an end. The world has received animals, mortal and immortal, and is fulfilled with them, and has become a visible animal containing the visible--the sensible God who is the image of the intellectual, the greatest, best, fairest, most perfect--the one only-begotten heaven.
